Butter this week was in small delivery, and prices from 26 to 28c.

We have advices from abroad to the third week in May. Our London correspondent says some new cheese has come to hand and sold readily. New American is quoted at 60s. to 68s.; old at 62s. to 66s.; second quality, 56s. to 60s. The other descriptions of cheese sell as follows: English Cheddar, 60s. to 74s.; Wiltshire double, 66s. to 74s.; Cheshire medium, 56s. to 60s.; fine, 64s. to 70s.; Scotch, new, 64s. to 71s. Dutch cheese—Edams, 44s. to 60s.; Derby shape, 50s. to 60s.; Gondas, 44 to 56s.

In butter our correspondent says that the change to cold weather clears the market of new. Corks, new, 92s. to 95s.; Normandy extra, 112c. to 116s. No Canadian in market. The corresponding prices last year were for Cork's butter, 130s.; and for new American cheese, 70s. The weather in Herkimer, N. Y., is cool and showery, and grass comes forward rapidly.

UTICA, N. Y., May 27.—Offerings larger than last week. Prices ranged from 13 to 14¾c., sales being principally at 13¾@14¾c. The competition among buyers is active.

LIVE STOCK MARKETS.

NEW YORK, May 30, 1872.

THE record of the past week shows a decrease in receipts of cattle with an increase in other kinds of live stock. Cool weather has favored trade, and beeves have rather advanced, sheep barely holding their own, while hogs have declined on account of abundance. Heavy contracts for cattle for the Indians give increasing confidence to this trade. Thousands of Texan beeves will be taken from the plains to feed the Indians with instead of sending them here for sale. Besides, as there are large contracts for salt and smoked beef, many cattle will be slaughtered at the West for this purpose. The strawberry season has now fairly opened in its abundance, but as yet there does not appear to be much diminution of the call for meats.

The following are the receipts of live stock shown in comparison with other years:

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week.....	7,918	93	4,658	18,439	42,019
" last week.....	8,506	105	4,413	16,652	28,919
Corresponding week last year.....	6,744	88	3,239	18,178	17,556
Average last year....	7,187	83	2,301	25,132	25,177

Beeves.—There has been rather a scarcity of cattle during the week just ended, and the markets have been well cleaned up each day, and at rather improving figures. Cherokees were sold at 11¾c. on the scales, 58 lbs. per cwt.; but they were good, scaling close upon 1,100 lbs. alive. Very few of the thin animals of any kind went as low as 11c., bulls selling at 5¾c. ₰ lb. live weight. At the last general market on Monday there were 152 car loads of cattle on sale at Communipaw, 134 cars at 130th St., and 8 at Weehawken, making a total of 4,743 head, all of which found early morning customers. Since then we have had 2,655 head, scattered over several days, and they, too, went off readily. Just at the close there is an unsupplied demand, and prices favor the seller. Drovers make money this week. There are negotiations still being carried on between the different railroads looking towards a harmony of interests in the live stock carrying trade and more equality in the distribution of the stock, but no results have yet been reached. As yet the New Jersey Central and the Hudson River roads deliver fully seven-eighths of the stock in our markets. The Erie is still out in the cold. Some of the late shippers over the New York Central road have recently changed to the Pennsylvania Central, on account of always having stock late in by the former route. No cattle are brought from Albany on the boats this season.

The quality of the cattle now coming forward averages fair, all the still-fed stock being in. Most of the good droves sell at 12@12½c., with prime at 13c., making an advance of ¼@½c. for the week.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₰ lb.....	12¾ @ 13	12¾ @ 12¾
Good to prime.....	12 @ 12¾	11¾ @ 12¾
Ordinary to medium.....	11¾ @ 12	11 @ 11¾
Lowest grade.....	10¾ @ 11	10¾ @ 10¾
Average sales.....	12 @ 12¾	11¾ @ —

Milch Cows.—Were we to take the average selling price of milk for our guide—less than $1 per can, last week—we should call the cow trade the hardest yet. It certainly is dull, but is not quite as depressed as is the milk market. There is an overstock of common and medium cows, while very few really good milkers are sent in for sale. One car of medium cows averaged $55 each, with 10 at $65, and a few prime at $80; poor selling at $40.

Veal Calves.—The calf trade is not as good, arrivals being large, while the advance of last week checked their use. People are turning more to lamb as its season approaches its hight. Calves run poorer in quality, more of those known as buttermilk and grass calves coming to market. Such have been sold at 4½@5c. per ₰. Thin milk veals are worth 6@6½c.; fair to good, 7@7¾c., with prime at 8c., and a few extras at 8½c. One lot of 34 State calves, 128 lbs., sold at 7¾c.; 75 of 110@130 lbs., at 6@7c.; 43 of 121 lbs., at 6¾c.

Sheep and Lambs.—While lambs are in good demand, and rather higher at the close, sheep drag even at ¼c. decline. They have ruled so high, the season through, that people have got out of the way of using them. Sheep are quoted at 6¾@7¼c. for such as are coming forward just now, though strictly prime might reach 7½c. Lambs sell at 11@11c. for quite common Western to extra fat Jerseys of 90 lbs. One lot of 50 lb. Va. lambs went at 11c., while a lot of 56 lb. Jerseys sold at 13c., and some of 61 lb, extras at 14c.

Hogs.—These are depressed again with large numbers offering. They sell at 5¾@6c. for heavy to light dressed. One car sold alive at 4 9-16c. The market closes dull and weak.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists.*

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 633 Broadway, New York.

New Advertisements.

LOOK OUT FOR IMPOSTORS.

The great demand for TIN-LINED LEAD PIPE has excited the cupidity of certain parties who are attempting to palm upon the public a Lead Pipe merely *washed with Tin* for TIN-LINED LEAD PIPE—the cheat is easily detected. Our patent TIN-LINED LEAD PIPE is a BLOCK TIN PIPE heavily coated with solid Lead; it may be distinguished from all other Pipe by the four small ribbed lines running lengthwise, at equal quarter distances. Samples sent by mail free.

Tin-Washed Lead Pipe no more compares in value with TIN-LINED LEAD PIPE than common Tin-Ware, which rusts and wears out in a short time, does with BLOCK TIN-WARE, which never rusts and is almost imperishable.

Tin-Washed Lead Pipe was made thirty years ago, and abandoned as utterly useless as a protection against Lead Poison. COLWELLS, SHAW & WILLARD MF'G CO., 213 Centre St., New York, manufacturers of TIN-LINED LEAD PIPE, BLOCK TIN PIPE, SHEET LEAD, LEAD PIPE, SOLDER, &c. Orders filled at sight. TIN-LINED LEAD PIPE is 15 cents a pound for all sizes.

"FAMILY FAVORITE!"
THE
WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

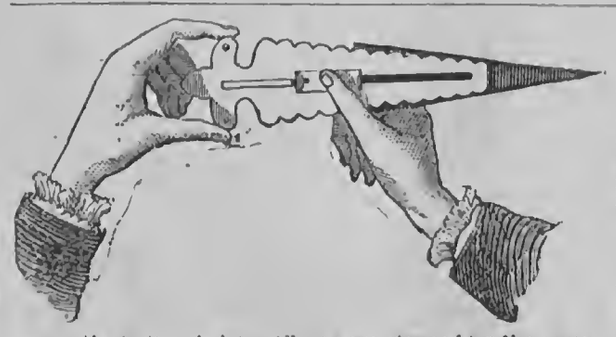
REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.
AGENTS WANTED WHERE NOT ALREADY ESTABLISHED.

THE PROTEAN LANCETTE.



Experience teaches that to secure for an article the favor and patronage of the LADIES, it must combine beauty and elegance of design, with practical utility. The favor with which our modification of the **BUTTON-HOLE CUTTER** has been received predicts that no Lady's Work Basket will be regarded as complete without it. It is also an admirable Envelope, Leaf and Paper Knife.

DIRECTIONS.

To extend the Lancet, hold the instrument as illustrated by the engraving; then holding it as you would a pen, with the cutting edge from you, insert the point (where you wish to commence the button-hole) until you are stopped by the gauge. Be careful not to extend the point too far at first, but cut and try until the hole is a sufficient size to allow the button to pass through; then observe at what point the slide is on the scale, that you may be able to retain the size.

The Lancet can be sharpened like an ordinary knife. Samples mailed post-paid on receipt of 50 cents.

FARMERS, DAIRYMEN AND BUTTER BUYERS!
PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.

Butter packed in this Pail brings **5 to 10 cents more** a pound in the New York City market than the same quality in any other package.

READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommends its general use by the dealers, dairymen and butter buyers who ship to this city.

Respectfully,

(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.

X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

Dairymen, send for a Circular! Dealers, send for a Price List! We are the sole manufacturers of **Westcott's Return Butter Pail,** and also manufacture very extensively Butter Firkins, Half-Firkin Tubs, 25-pound Butter Pails, Well Buckets, &c., &c.

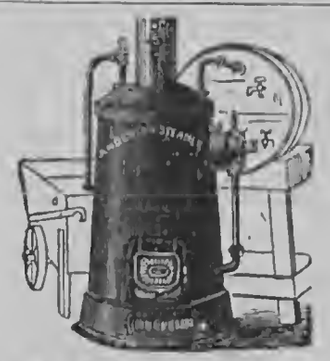
TWO GOLD MEDALS

Harder's Premium Railway Horse Power and Thresher and Cleaner, received,

THE FIRST PRIZE

At Great National Trial, at Auburn, N. Y.

For "*Slow and easy movement of horses, 15 rods less than 15 miles per hour, Mechanical Construction of the very best kind, thorough and consistent construction of machinery, nothing slighted, manship and material in every place, excellent work, &c.*" as shown by official Report of Judges. Threshers, Separators, Feeders, Saws, Seed Sowers and Planters, all of the best in Market. Catalogue with price, full information, and Judges Report of Auburn Trial sent free. Address MINARD HARDER, Cobleskill, Schoharie Co. N.Y.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats; Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler; No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water.* We are also manufacturing:

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

For further particulars address

Miscellaneous Advertisements.

A Railroad Watch.

Travelers by Railroad frequently find their Watches completely demoralized by the continuous jar of the train. To overcome this difficulty has long been a problem with watchmakers, and it is now successfully accomplished in the new grade made by the

American Watch Co. of Waltham.

This Watch is made in the most substantial manner, on the most approved principles, and combines all the recent improvements. It has a new micrometrical regulator, by which the slightest variation can be easily corrected. It is carefully adjusted, and may be entirely relied on to run accurately, wear well, and ENDURE THE HARDEST USAGE, without any derangement whatever. We confidently recommend this Watch to the trade and the public as the BEST WATCH FOR THE PRICE IN THIS MARKET.

The full trade-mark engraved on the plate of each Watch is

"American Watch Co., Crescent-St., Waltham, Mass.,"

and it is distinctively known as the CRESCENT-ST. Watch.

For sale by all leading Jewelers.

ROBBINS & APPLETON,
GENERAL AGENTS,
1 Bond Street, New York.

If You Write and Mail a Letter as follows:

Messrs. Howard & Co.,

No. 865 Broadway, New York:

Please send me your Price-List of Waltham Watches for 1872, *as per advertisement in the Rural New-Yorker.*

(Sign Name and Address in full.)

You will receive, post-paid, by return mail, a very interesting pamphlet, illustrated with fine engravings, describing the details of the Waltham Factory, and telling how the Watches are made. You will also receive our Price-List, which describes all the different grades of watches, gives weight and quality of the cases, with prices of each, and also explains our plan of sending Single Watches by Express to any part of the country, no matter how remote, with the privilege of examination before paying the bill. Two new Watches have been added to the list, the "Boy's Watch" and the "Railroad Time-keeper." Please keep in mind that we will REFUND the MONEY for any Watch that is not satisfactory. Address HOWARD & CO., No. 865 Broadway, New York.

Residents of California, Oregon, and other distant places will find a great advantage in dealing with us.

WHOLE NO. 1168.

NEW YORK, AND ROCHESTER, N. Y., JUNE 15, 1872.

PRICE SIX CENTS.
$2.50 PER YEAR.

[Entered according to Act of Congress, in the year 1872, by D. D. T. MOORE, in the office of the Librarian of Congress, at Washington.]

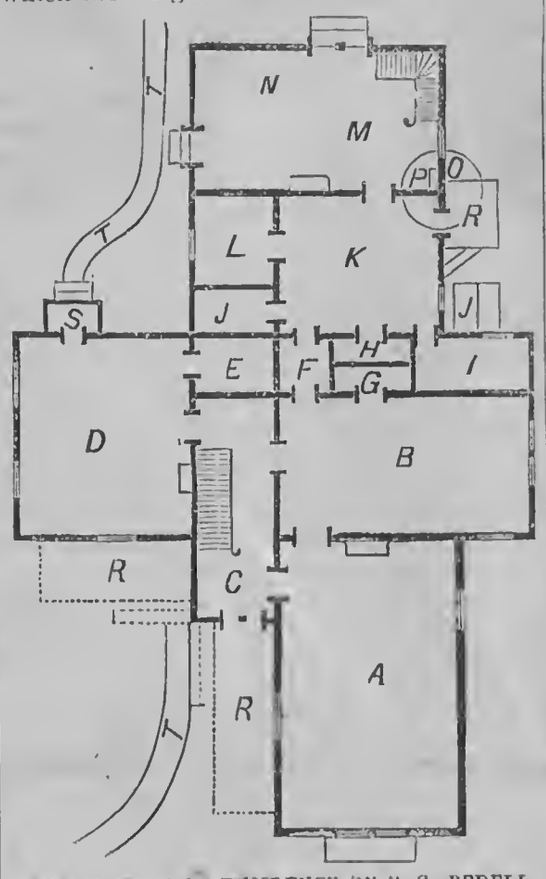
Rural Architecture.

A WOMAN'S PLAN OF A HOUSE.

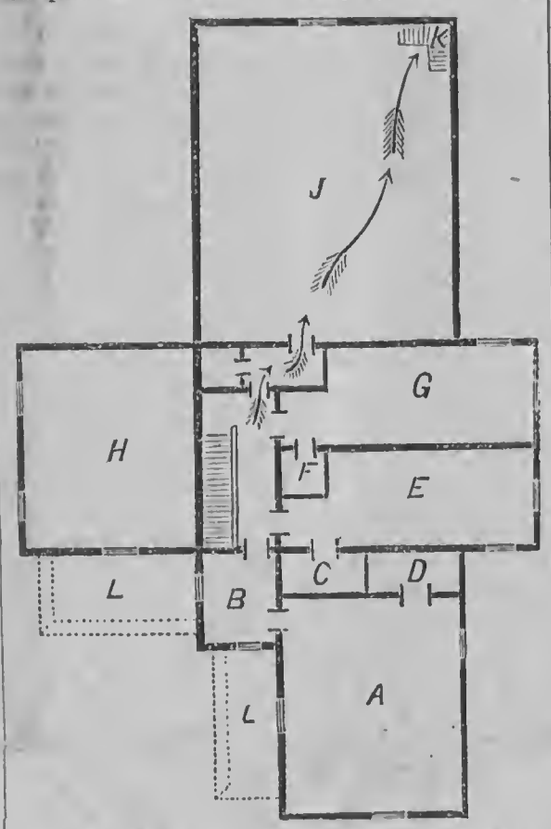
THE first thing to be considered in arranging a plan for a dwelling, is the necessities of your family; the second, and perhaps the most difficult thing to take into consideration, is the size of your pocket-book. It should be the aim, however, of the heads of every family to secure to themselves as good a home as their means will allow—that is, as good a home as they can possibly make for themselves, without incurring too great indebtedness, or jeopardizing their every day bread-and-butter income. In order to do this, young married people especially should bear in mind the excellent advice:—"Take care of the pennies, and the dollars will take care of themselves." It is a prevalent error with people to think, because it takes a thousand dollars to build such a house as they need, and they have in possession only five hundred, that, therefore, they will buy a horse and buggy, or spend the money on less desirable luxuries, and in so doing, they never attain to the desired thousand.

My husband and I are in partnership. Fifteen years ago when we entered into our present relations, he had sixty-five dollars and I had fifty dollars to put into the matrimonial business. He was a good printer, a man of most excellent habits, steady and industrious. I was a "school marm," the only thing then open for a young woman to do. The first half dozen years we spent in "waiting for something to turn up," and attended to that as faithfully as did ever WILKINS MICAWBER. Of course we managed to make our very insignificant "bills receivable" meet our "bills payable," and *vice versa*. We were slow to learn that it was by slow and steady accumulation that a competency would be gained. But when at last the desire for a home of our own took a deep root in our hearts, every thing to which we turned our attention became a financial success. A present of a beautiful building lot from my mother became the nucleus of our endeavors. Having no family we both continued active partners and both worked for the same end. When the assets of our bank rounded the second thousand we began to think of a plan for a house. My husband's forte being entirely confined to a newspaper office, the selection of a plan was left entirely to me.

Our family, present and prospective, consisted of my good mother an old friend and schoolmate, now a widow, and her little girl. My chief desire was to plan a house which should give to mother a most desirable apartment, where she could spend the excess of her "three score years and ten" in quiet and rest. So I employed the long winter evenings in endeavoring to bring out my dormant conception of our house, and as I had had considerable experience as a draughtsman (?) in mapping, etc., in the county office, where I rendered service for a number of years, while the sterner sex went forth to battle, I succeeded beyond my expectations.



GROUND PLAN OF RESIDENCE OF F. S. BEDELL.
A, parlor, 15 by 22 feet; B, dining room, 12 by 20; C, hall, 7½ by 9½; D, sitting room, 15 by 17; E, closet, 5 by 7½; F, passage; G, China closet, 2½ by 6; H, kitchen closet, 2½ by 6; I, pantry, 5 by 10; J, cellar stairs; K, kitchen, 14 by 14; L, girl's bed room, 7½ by 10; M, woodshed, 21 by 14; N, ground floor for wood; O, cistern; P, cistern pump.



CHAMBER PLAN OF RESIDENCE OF F. S. BEDELL.
A, bed room, 15 by 18; B, tower, 7½ by 7½; C, closet, 4 by 8; D, closet, 4 by 7; E, bed room, 9 by 18; F, closet, 4 by 5; G, bed room, 8 by 18; H, bed room, 15 by 17; I, passage into attic store room, 3½ by 7; J, attic store room, 22 by 28; K, back stairs; L L, balconies.

[In the ground plan R, R, R, are piazzas; S, latticed porch; T, T, T, walks.]

The cost of this house complete, including out-house, cellar and cistern, finished as represented in the engraving, was $3,250. This, of course, does not include the improvements necessary to the finest of city houses, but simply that of a first-class country residence. The inside work is finished with 2½-in. band molding on O. G. casings; the windows are all supplied with pulleys, the doors with mortice locks. Each room has its closet supplied with shelves, a drawer and hooks for hanging. The chimneys all are built from the foundation—each resting, in fact, upon a stone foundation of its own.

The pantry is supplied with shelves and drawers and a receptacle for two barrels of flour, having doors in front to receive barrels and a folding lid on top for every-day use. This closet is large enough to contain bread-bowl, board, etc., as well as barrels.

The China closet is supplied with a row of drawers on either side of the door, shelves, and also a slide eighteen inches square opening into the kitchen closet and affording means of passing food through without the usual amount of travel. The Kitchen closet is supplied with numerous shelves and drawers to accommodate its uses. The passage between the dining room and kitchen is of much value in my estimation in cutting off sounds and smell, as well as affording a convenient place for hanging a hat and shawl for ready use. The room marked "sitting room," in the original plan, was "mother's room" instead, and still retains the name with us, although the beloved occupant only enjoyed it about six months, when she went home to enjoy a heavenly palace in that "building of God, a house not made with hands."

The part which comprises the kitchen and wood shed is built with 12 feet studding, having 9 feet ceiling below and the remainder in the great attic store-room—a receptacle of the everything of housekeeping and also a place to dry clothes in winter. The main building of 20 feet studding, having 10 feet below and 9 feet above.

Back stairs are a necessity in such a house for reasons which will occur to housekeepers. But we leave the whole merit of our plan, whatever it may be, to be studied out by those interested.

MRS. L. G. BEDELL.
Crown Point, Ind.

RESIDENCE OF F. S. BEDELL, CROWN POINT, IND.

The Horseman.

WOLF'S TEETH IN HORSES.

A History of the Tradition which Obtains concerning Wolf's Teeth.

YOUR correspondent, "O. F. L.," Battle Creek, Mich., says, "I want to say in regard to wolf teeth in horses, that I know they will blind a horse." How is it then that old horses die with the wolf teeth, (so called) both in; and are not blind. And, per contra, old horses with both wolf teeth out are now living and are blind of one or both eyes? He recommends extracting both teeth, and to put honey in the eyes and butter in the ears. What for? Honey might be for eye-salve—as the eyes are affected—but I think it objectionable on account of bees, flies, &c.; but what he puts butter in the ears for I cannot divine. He further says:—"When I hear a horse doctor say they do not blind a horse, I advise all to beware of him." I am not a V. S. nor an M. D., but was brought up on a farm, and have consulted the best authors I could find, upon diseases of domestic animals, and have failed to find such reasoning.

Mr. JNO. MILLS, a distinguished author of England, says:—"There is no higher authority than M. PERCIVAL'S Lectures." "The many diseases," says M. PERCIVAL, "to which the eye of the domestic horse is obnoxious, compared to the many set down by ophthalmic writers to the organ of man, are certainly very few; yet there is among them that have proved in all ages of veterinary surgery so pestilential, and that, even at the present day, so obstinately pursues its end in spite of all remedial measures, that of itself it is a sufficient reason for us to become well acquainted with the anatomy and physiology of the eye and to pay more than ordinary attention to it in a state of disease." And he then gives the following unfavorable symptoms of the eyes: "Sunken or gloomy aspect; prominence of the *membrana nictitans*; a watery state of the eyes; dimness of the cornea, particularly around its margin; dullness or discoloration of the iris; *corpora nigra*, yellowish or spotty; pupil smaller than usual; perhaps milky or hazy, with white speck in the center, which is incipient cataract. The chief cause of blindness in horses has its origin in *inflammation*."

The artificial state in which domestic horses are kept, in hot and illy-ventilated stables, with steaming manure, etc., together with over-work, over-feeding, etc., over-heating the blood, changing them suddenly from a warm to a cold place, and *vice versa*, all tend to produce inflammation; and when the tendency is to the eye, will eventually produce cataract. Now, the first thing to do will be to reduce the inflammation, which is most speedily accomplished by physic and bleedings. A seton in the cheek, or rowel in the jaw, is a safe issue and speedy escape from the eyes. That the knocking out, or drawing teeth (called wolf teeth), may relieve the inflammation about the eyes, I have no doubt, and it is a very common practice; and this caused many to believe that the teeth caused blindness. But, as TUPPER says, "there is no wide-spread error but hath truth for its beginning." And so this practice had in the beginning; but is now supposed to be what Lord DUNDREARY calls "one of those things which no fellah can find out." This custom, near as I can learn from farriers' books, etc., had its origin in this wise: Prizes were offered in England for "Running Races" for colts of two and three years old, and by skillful manipulation of their teeth by farriers, "there is no doubt," says Mr. MILLS, "that many stakes were carried off by horses older than their qualifications allowed." And in knocking out the teeth of these "*colts*" (for they were *knocked* out, so that the owners could swear they had not *drawn* them out to make them appear like colts shedding their teeth), caused the blood to flow freely—as when bled in the mouth—and a soreness of the gums, which produced an irritation like that produced by the seton in the cheek, or a rowel in the jaw, and probably caused these "colts" no more pain than bleeding in the mouth, or a seton or rowel, did not appear so disgusting, and answered every purpose.

These farriers—many of whom are horse jockeys—were not slow to discover that this would answer in place of bleeding, roweling, etc., and did not take so long nor look so bad; and they selected the two teeth just forward of the double teeth in the upper jaw, which the horse can spare as well as any other, and called them "wolf teeth (mysterious name)! This did so well, that when a cow got sick, she got "the-wolf-in-the-tail." This is the same "wolf," Mr. Editor, and the same "Wolf-in-Sheep's-Clothing" got it up, for the purpose of mystifying the people, and get money out of them for curing their stock—cured in the same way by *bleeding*—*i. e.*, by cutting off the end of old Sook's tail, which lets the wolf out!

It, too, is the prevailing practice, and does not do the cow any more harm than to bleed in the neck, provided it is not cut off too often, and gets too short to keep off the flies; but what is her loss is the milkmaid's gain, as "Boss" can't slash her dirty tail in the maid's face.

I have been thus lengthy and minute in my explanations of this—which I believe to be a common error—because there are thousands who believe that the knocking out of the (so-called) wolf teeth will relieve inflammation of the eye; that, therefore, they cause blindness if left in; but, in my opinion, they are no more the cause of blindness in horses than the hairs and skin in the end of a cow's tail are the cause of her sickness, because if they are cut off the cow gets well. H. C.

Delaware, O.

WOLF TEETH AND RINGBONES.

Wolf Teeth in Horses.—I saw in the RURAL NEW-YORKER of May 25th a communication from L. M. V. in regard to wolf teeth and ringbones. Now it always seemed curious to me that a horse should ever have any superfluous teeth, or that they should be knocked out in order to preserve his sight. Any family that has raised children and knows the symptoms and effect of cutting teeth may have observed kindred effects in animals, and would be equally as sensible to knock out the child's teeth, as the horse's. We find in adult persons the cutting of their wisdom teeth often affects their eyes, and we seek other means of relief than knocking them out. In the case of the horse this may be done by bleeding in the mouth, near the teeth, or by giving saltpeter, or some other laxative to decrease the fever or inflammation. A great many horses have wolf teeth, as they are called, and about one horse in fifty is troubled in his eyes by it; better bleed him profusely at the end of his tail than to knock his teeth out.

So, also, in regard to black teeth in pigs; when they are cutting teeth they become feverish, and it gives them a runty appearance. If you give the mother plenty of raw potatoes or other vegetable diet a week or two before dropping her pigs, so that she does not have any fever, and has a good flow of milk at the time, you will never have any black teeth in your pigs.

Ringbone on Horses.—Now in regard to ringbone on horses: It is an old saying of old men that when you see a colt standing with his head down hill and his tail up hill he is not gaining or doing well; or, in other words, he is running down hill in flesh and constitution, or becoming sickly. The fact of it is the colt's toes are so long that his ankles ache, and he stands that way to rest them. This is the very time, if he capers or runs much, that ringbones, spavins, splints, curbs, etc., start; and they may be there for two years before you notice them or could find them. No horse has ringbones, splints, curbs or spavins, unless he has been strained; and this is the very time he receives those strains—when his muscles are weak and his toes are long, and when the ground is hard, which constitute the very nursery of all those complaints. The old saying that an ounce of prevention is worth a pound of cure, is true; and to use it let every man who has a colt be sure to have his toes trimmed short as soon as the ground freezes in the fall, and see to it three or four times in the winter; keep them short, and I will guarantee him against all those calamities.

Marshalltown, Iowa. A. A. S.

NOTES FOR HORSEMEN.

Chickory for Horses.—A. J. HINDS, Patchogue, L. I., writes the Farmers' Club: "Several years ago I raised about 1,800 bushels of chickory—a root our sandy soil is well adapted to, if highly manured. As the tops were very rank, I often turned my horse in, and he needed no watching to keep off from good clover and timothy growing in the same field. In winter I fed him the trimmings of the roots. I had about one ton that was moldy and unfit for market (not properly dried). I fed this to him next Summer, in place of grain, with so much success that I think of trying it again for that purpose only. Have others tried it for that purpose? If so, with what success?"

The Herdsman.

INDIANA FARMERS LOSING MONEY.

How they Lose by not Breeding Good Stock.

ONE of the most important considerations in marketing the farm products of the great West is the quality of the stock; and there is hardly any enumerating the millions of dollars lost to the farmers in feeding common stock, or poor breed. So far as hogs are concerned we are doing tolerably well; yet here there is room for great improvement. But when it comes to cattle, we are very poor—oh! so poor! Only to think that in a large majority of counties they cannot boast of one thorough-bred Short-horn bull. If the sires of our cattle, here in Indiana, the fifth State in the Union, could only be gathered together, I think it would cause the blush of shame to mantle the cheek of every thinking farmer in the State, and many a consumer would say, "I will eat Bologna sausage no more, for these large-headed, peaked-shanked, thick-necked and high-flanked animals are annually losing us millions of dollars. Such like investments in any other business in the world, would prove utterly disastrous. Certainly, my brother farmers, *we can do better*.

And now while low prices are pressing us so hard, and we are all earnestly trying to realize the most from our hard-earned products, can we not clearly see the necessity of improving the stock of our cattle? "Will it pay?" I admit this is the standard. And now for the figures:—To commence, in buying calves, I sometimes pay $15 for one, while others are offered to me at $6 to $7 that I would not accept as a gift; and the best I can buy are only grades. Now, here is a difference of over one hundred per cent. at the start. Again, take your common steer at the age of three years; he will weigh 1,100 pounds, worth four cents, equal to $44. A steer sired by a thorough-bred Short-Horn, of a common cow, with the same amount of feed and attention, will weigh 1,400 pounds, and bring 5½ cents, equal to $77; balance in favor of grade steers, $33; on one hundred steers, $3,300—enough to buy a small farm, and all on the difference in stock. Now this is no exaggeration; and I am satisfied hundreds of feeders will verify the figures I make. But I will make the case still stronger:—A thorough-bred steer at the same age, keep and all, will weigh 1,600 pounds, and be worth six and a-quarter cents, equal to $100—a difference of $56 in one steer in favor of thorough-bred. Now, to prove by actual experience that the figures are correct, I refer to a statement made at a meeting of the Indiana State Board of Agriculture in January last, by Dr. A. C. STEVENSON of Greencastle, that a short time previous he had sold a lot of good common steers at 4½ cents per pound gross, while some Durhams, fed in the same way, and same age, brought 6¾ cents per pound. I do not recollect the difference in weight, but it was full as much as I have made it in the comparison above.

I wish these statements could be kept continually before the eyes of every farmer in the West, until he would see that "it will pay" so clearly that he would act upon it. I know it will reach many if you publish this; but, unfortunately, there are too many who do not take the RURAL NEW-YORKER, and, like the calf that butted the locomotive, "it was the worse for the calf." So it is for those plodding farmers who are butting against the intelligence and improvements of the age—"it is the worse for them."

But to as many as read this communication I would say—never breed another cow to anything below a thorough-bred. If you are not individually able, club together in each neighborhood and buy a thorough-bred animal, and you will soon find "it will pay." If one of your enterprising farmers has such an animal, pay him $5 or $10 for service, and make money—"it will pay"—rather than accept the gratuitous service of an animal whose lightest part is in the rear.—WILLOW BROOK FARM, *Red House, Morgan Co., Ind.*

SINCE the receipt of the foregoing letter the Indianians have organized a State Association of Short-Horn Breeders, and adopted resolutions urging the calling of a National Convention of this class of breeders of live stock. Evidently our intelligent correspondent is not the only one in Indiana who recognizes the loss to that grand State from breeding imperfect animals when perfect ones are as easily produced. And there can be no doubt that this new organization will stimulate more attention to breeding good stock and render the annual animal product of far greater value.

NOTES FOR HERDSMEN.

The Injured Cow Going Blind.—C. D. R. relates the circumstances of a cow being injured in one eye, and as a common consequence she was blinded; but, as an uncommon consequence she was also blinded in the other. I think the cause of that is an inflammation of the optic nerve at the decussation; and, as the eye is a double organ, when one eye is injured it would follow that the chances for an inflammation of the nerve from that eye would be great. Probably the horn, in striking, injured the "retina" of the eye, thus communicating to the nerve back of it the shock of the injury, and thus exposing it to an irrecoverable injury. I think the chances for recovery are uncertain, and C. D. R. will find something to confirm what I have said by reference to a work on "Physiology" or "Optics."—F. B. W., *Oberlin, O.*

Scours in Calves.—I notice an inquiry from M. A. HULL for a remedy to cure scours in calves. I once had a young calf that I thought much of, afflicted just as he describes his, and cured it like a charm in this way:—Feed it an egg, shell and all, every time it is fed milk until it is well. One egg will generally cure a young calf. Put the egg in its mouth and hold it shut until it swallows it, no matter if it don't eat all the shell. Eggs are good to cure older cattle as well as calves; but it takes more of them. An egg put in the milk every morning when a calf drinks skim milk will keep it thrifty.—H. GARLOCK.

Cow with Garget.—E. R., Watertown, N. Y. Your cow evidently has garget. Feed her a small piece of poke root (*Phytolacca dicandra*) two or three times a week. Stick a piece of it in a carrot and give it to her. Beans are said to cure garget also. Soak a pint of beans for a feed and give the cow every day till better. Bean meal is said to be still better—a pint of it with other meal every four days has cured bad cases.

Entomological.

ENTOMOLOGICAL NOTES.

Grape Vine Borers.—The enclosed bugs I found in the pith of my grape vines, where they have burrowed in great numbers. Several of my large, healthy, six-year-old vines have been killed since Spring, and I am in great fear that my vineyard will be destroyed. Please state the name and habits of this (to me) new pest, and the remedy. Do they bore into the vine in the Winter or Spring? I have examined my bearing vines, but have found none except in those which have been killed, and they were healthy and green in early Spring.—P. H. S., *Macon, Mo.*

THE small, blackish-brown beetles, varying from a quarter to one-half an inch long, and about a sixteenth of an inch in diameter, are the *Bostrichus bicaudatus*, SAY, several times referred to of late. They must be quite abundant in the Western States, as we are in receipt of them from various localities at the West, and learn from correspondents that they are doing a great amount of damage to vineyards this Spring. We do not know of any preventive, and, probably, the only sure method of destroying this pest is to cut and burn the infested branches.

First Book of Entomology.—Will you tell me what book would suit a beginner in the study of insect life? Are there any works which fill the same place in entomology that GRAY'S do in botany? If so, where and for what price can they be procured?—X. L.

WE have no work on Entomology that will give the beginner as clear and ready an insight into the science as GRAY'S works do into the science of botany. Such a work will no doubt appear before many years have passed, because there is a growing taste among our people to know more of insect life. There are, however, many good works that will aid the student; among them we would recommend "Harris' Insects Injurious to Vegetation;" also "Packard's Guide to the Study of Insects. The two volumes of the American Entomologist, edited by CHARLES V. RILEY, will aid you in learning the names, structure and habits of a vast number of our native species. These works can be had at this office. See our book list for price, except the last two, which we believe are two dollars per volume.

Worms on Corn.—If M. C. of Mobile will send us a few of the worms which are eating his corn and melons, we will try to give the information he desires. Pack carefully in a small tin box, with a little damp cotton or moss.

The Poultry-Yard.

"A HEN THAT OVER-LAYS."

On page 343 of the RURAL NEW-YORKER is a communication by "Subscriber," under the above head, asking "for a remedy for hens over-laying, or laying soft-shelled eggs." Careful observation and experience has taught me that there is but one cause for these irregularities and imperfections, and that is *weakness*. I know that the cause is almost invariably attributed to the want of shell-making material. A well hen, shut up on a clean board floor, and fed on whole grain, or unbolted meal, with gravel and water, will continue to lay perfect eggs till she has laid her litter out, or, till she has become so reduced in flesh as to stop laying entirely. The only advantage in giving hens lime, bone, etc., is, it furnishes for their immediate use a shell-making material, and relieves the bodily energies of an exhausting demand.

There are three principal causes for these weaknesses, all of which have their immediate effect on the ovarium. The first and greatest cause among large fowls is compelling them to fly in getting to their perch or nest. Asiatic fowls among hens are what heavy weights are among men. Who would think of requiring a heavy weight, of two hundred and fifty or three hundred pounds, to jump or clamber up the partition from the first to the second floor to retire, and then, if he appeared a little lame or strained the next day, wonder at the cause; and yet there is just as much propriety in the one case as in the other.

Large fowls should not be allowed to fly at all; their nests should be on the ground or floor, and their perches should be so arranged as not to require any wing effort in getting on to them. It is better to have them very low, than to have a boom to get on to them with (or from), as they are liable to fall off in the night.

The second cause is the over attention of the cock, especially if he be large and clumsy.

A third cause is a strain in laying. Hens that are well fed, and provided with all the necessary egg-producing materials, are liable to get too fat to lay with ease; and if, as is frequently the case, a surplus of material accumulates, a way must be provided for its disposition, and double-yolked eggs are produced. This is unnatural, and should be checked, or deleterious effects will almost certainly be the result.

I have given the causes, and now for a cure: Take the hen away from the rest of the flock, and shut her in a warm, dry place, and keep her on short allowance till she lays perfect eggs, and regularly, or stops laying entirely, when she may be returned to the flock. If she has become so weakened that her droppings are discolored and lax, give her a strong dose of Cayenne pepper; the seeds of two peppers should be given for one dose, and should be pushed well down the throat. Two or three doses will almost invariably effect a cure.

Permit me to say a word in regard to laying fowls. If they are shut up, keep them as quiet as possible; let them have a surplus by them, at all times, of the egg-producing material—especially feed and water; but be sure and exclude all members of male persuasion—that is to say, never allow a cock of any kind with them. Try this, and rest assured that soft-shelled eggs and sick hens will be at a discount, for I have advanced no new theories on unpracticed notions, but "speak that I do know, and testify of the things" learned in the school of experience.

Mystic Bridge, Conn. FARMER.

CANKEROUS DIPHTHERIA IN FOWLS.

I SEE in the RURAL NEW-YORKER of April 13th, ult., an answer to the inquiry of a Texas subscriber in relation to a new disease in chickens, signed by Mr. ROWE, Tremont, N. Y. I notice in his description of the disease he thinks the affection in the head and throat the same. My experience this last winter, in a number of cases, leads me to think differently. The head swells in the canker cases; the matter assumes a globular form in the head, with a different color, and the whole constitution of the bird differently affected. The treatment in the canker case given is good, and, in most cases, sufficient. In the other case not so, as there is a great deal more to contend with. When first noticed a watery, foamy appearance comes in one corner of the eye; in a few days the side of the mouth, wattles and side of the face appear as if some one had thrown the yellow of a hard boiled egg at the fowl and small, cubical fragments attached themselves to the parts named. On opening the mouth, I find the same attached on the inner side of the throat; and if pressed upwards from the outside it will be found, as the windpipe comes near the mouth from said pressure, that the same is found around and down in it also. The whole constitution is affected, and the disease is quite contagious, and requires more than common care to keep it from going through a large poultry yard.

I have had a fair test of remedies this Winter, as the cases presented themselves one after another, giving me a good chance for experiment. I used, both externally and internally, nitrate silver, chlorate potash, bichromate potash, and others, such as the virus in such cases indicates, without effect, in proper doses. I finally found the following to cure perfectly:—I take a teaspoonful of lard and twenty drops of carbolic acid, well mixed. I applied to the inner part of the air passage, or windpipe, with a swab made by rolling a few thicknesses of woolen thread round a small stick the size of a pipe stem, removing as much as possible of this cheesy stuff, without creating much irritation. This I did once a day. I gave a teaspoonful of the following mixture twice a day, internally:—One-half dram iodide of iron mixed in an ounce of sirup, to which add ten drops laudanum, ten drops carbolic acid, and the balance of water to fill a four-ounce bottle. I fed one and a-half ounces of fat salt pork to each fowl, in the day. I disinfected the house and droppings with a half pound of chloride of lime in half a pailful of strong ashes, applied a part every day, keeping the house clean. Charcoal is also good to throw around, as it absorbs the foul gases and keeps the disease from spreading. I think this disease a cankerous diphtheria. T. W. WOOD.

McGregor, Iowa, May, 1871.

POULTRY NOTES AND QUERIES.

Carbolic Acid and Poultry.—Dr. EMERSON says:—"Put three ounces of carbolic acid into twelve quarts of lime water or whitewash; whitewash the walls of the poultry-house well with this wash, and no living parasites will be seen—their death is inevitable. A weak solution may be made to wash fowls in; one part of the acid to sixty parts of warm water; let it cool, then dip the fowls in until the feathers become thoroughly wet and the solution reaches every part of the body. Afterwards place the fowls on clean dry straw, where the sun will reach them, until they are dry. Another form in which it is recommended to use it is a soap. These soaps are for sale by various manufacturers, and have a high reputation for cleansing animals and the cure of skin diseases. A mode of making this soap is as follows:—Dissolve three pounds of common bar soap in hot water, add two to four ounces of carbolic acid, according to the desired strength. Allow to cool as usual in making hard soap. As these preparations may be bought ready-prepared, and as carbolic is by no means a safe article to keep about the house, we would advise persons to buy rather than attempt to make them, except in the case of whitewash, when they must get the pure article and dilute it."

Helping Chickens Out of the Shell.—The Illustrated Book of Poultry says: "We formerly made many attempts at such assistance in vain, and, like many others rushed to the conclusion that chicks could not be thus saved; but an accidental discovery put another face on the matter. *Keep the egg in warm water* (about 100°) while the assistance is being rendered, and success may be hoped for. The shell must be cracked very gently, and the inner membrane very tenderly peeled off till the chick be at liberty, keeping all but the beak under water until nearly clear. The operation must be performed in a warm place, and tenderly as if touching raw flesh; and it will be found that the water greatly facilitates matters, liberating the membrane if glued to the chick, and enabling it to be separated without loss of blood. The latter occurrance nine times out of ten is fatal, but if the operation be completed without blood-flowing, success may be anticipated, and the nearly dead chick may be put by the fire in flannel, or under the hen, if a quiet, good mother—under her at night, in any case—and next day may probably be as well as the others."

Silver Hamburgs vs. Leghorns.—Mr. A. Y. VAN EPPS, in an article upon Silver Hamburgs in a late number of the RURAL NEW-YORKER, says that they have every quality to commend them except size; and immediately below says that they are non-sitters, thus giving them at least one defect. I claim that no one breed has perfection in all points. Again he says that they will lay more eggs than any other breed known. I am not prepared to say that they do not lay as much, but I *am* prepared to say that they do not lay a greater number of eggs, the year round, than the Leghorns; and as Leghorn eggs are a third larger than Hamburgs it is the same as the Leghorns laying a third more eggs. Again he says "their flesh is full as good as the much lauded Brahma." This I deny; for where is the blue-legged, blue-fleshed fowl that can compare with the yellow-legged, yellow-skinned fowl? In my opinion the only good quality of Hamburgs is their production of eggs. In regard to beauty they are far eclipsed by the Sebright Bantams.—H. R. E.

Incubators.—A correspondent asks where he can purchase an incubator, and if we know of any which can be operated successfully by anybody however unskilled. To both questions we must answer no. We have no doubt that some incubators are used successfully to hatch chickens by those who have invented them; but we do not know of any that are used profitably by poultry breeders. When we do we shall be glad to name it.

Packing Eggs in Salt.—I put down 100 dozen last Friday, in brine made thus:—One pint of lime, slaked; one pint G. A. salt; two gallons of water. I set the eggs on one (which?) end previous to pouring the brine over them. They require to be weighed down to prevent them turning sidewise. This is an old recipe. I presume there is some easier way. I would like to know if it is really necessary to pack on the end. It is a great deal of labor. [See RURAL June 1.—EDS.]—W. H. B., *Jackson, N. C.*

Lice on Chickens.—I am a farmer's wife, and am very fond of raising poultry. I have always found the following to be a sure cure for the above malady. When the chickens are two or three days old, take a little salt butter and rub the top of their heads with it; once will be sufficient. This will prove a preventive also. If "Constant Reader" will try the above, I think he or she will feel indebted to a reader of the RURAL.—S. A., *Newmarket, Ontario.*

Industrial Topics.

EIGHT-HOUR SYSTEM FOR FARMERS.

IN the RURAL NEW-YORKER of June 1st FARMER GARRULOUS talks of the eight-hour system as adapted to farm work. I know, from my experience, and from what I have learned from others, that it is the only right way to hire hands on the farm. But there are but few farmers who know what it means. They think that if they hire a man to work eight or ten hours, when that time is up he will quit; but they are wrong. The way is to hire a man, pay him a certain amount—whatever it may be—for a certain number of hours' work, and then, if you are in a hurry, whatever time he makes over that, pay him extra for.

In this way, most men are willing to work almost any number of hours if they know they will get pay for it. The present way is to hire a man by the month, and have him begin work by four o'clock in the morning and work until seven or eight at night. It is all wrong; and as long as we continue to do that, we will be obliged to take such hands as we can get, and let the best work in the shops or factories, where they know when a day's work begins and when it will end. Sooner or later we shall have to adopt this way of hiring our farm hands, and, in my opinion, the sooner we do so the better it will be for both farmers and their hired men. REFORMER.

Johnstown, Fulton Co., N. Y.

Mending Roadways.—I hope a suggestion made in the RURAL NEW-YORKER, some time last year, I think, will be repeatedly acted upon this spring, to wit:—That it is cheaper and better to haul gravel to repair a road, after the road-bed is properly constructed, than to plow and scrape and pile up dirt in the center thereof. A few loads of gravel, a few furrows to let the water off, leaving the grassy roadsides undisturbed, is the best way of mending highways that I have ever known. If it is a stony country, stone broken *fine* may be substituted for gravel. There is a great deal of labor wasted on roads and not half enough applied as it should be. Provide for keeping the water out of the roadway, and a bed of good wearing material for it, and we may soon have good roads at all seasons of the year.

Farm Economy.

UTILIZING STRAW FOR FODDER.

JAMES A. WHITNEY read the following paper at the last meeting of the Farmers' Club of the American Institute, on the above subject:

In American farming oat straw, especially when cut somewhat green and kept in bright condition, is fed to stock with but little loss, but wheat, rye, and barley straw are mainly used for bedding, and thus practically wasted, for sawdust, forest leaves, &c., costing nothing, could be readily substituted for such uses. The English are further advanced than we in the utilization of cheap forage, and the present season, when the prospect of a scant hay crop lends unusual interest to the subject, some of their methods of preparing straw for feeding merit more than ordinary attention. But in considering these we must remember that an essential contrast exists between the moist summers of England and the dry harvest periods of this country, which doubtless makes much difference in the condition of the straw; and also that processes feasible on the large farm of an English tenant will be difficult to carry out on the smaller acreage of many American homesteads. Modifications must therefore be made in the foreign practice, and in these the farmer will need to exercise his own judgment with skill and care.

It is found by far the most profitable to cut the straw into "chaff," as it is termed abroad, the cutting being very fine—from three-sixteenths to three-eighths of an inch in length. This "chaff," instead of being fed out at once, is kept for some months in bulk in dry barns provided for the purpose, and from the moisture contained in it at the time of storing, undergoes a slight change which renders it more palatable to cattle. To extend this limited fermenting process during many years (since in common use) is the object of the more recent improvements to which the present paper more especially refers. This consists in mingling with the straw about 5 per cent. of green and succulent material, together with a certain proportion of salt, and then by storing in mass, causing the flavor of the green forage to be communicated to the dry, and the nutritive elements of the latter to be rendered more soluble and digestible by the solvent action of the fermentation. The method has been tried on a large scale and is recommended by Prof. VOELCKER, chemist to the Royal Agricultural Society of England. The *modus operandi* is as follows:

A power straw cutter is so connected with a steam-driven thresher that the straw, after the separation of the grain, passes direct to the cutter and is converted into chaff. Before entering the cutter, however, the green stuff (for example, rye cut before the kernels have formed) is added to it at the rate of 100 pounds to the ton of straw, and a bushel of salt to the same quantity of straw is sprinkled in. The chaff falls into sacks in which it is carried to the place of storage, where it is left for a number of weeks before feeding. The expense of cutting and storing is about one shilling, or twenty-five cents for the product of an acre. But here the cost would be more, not only because of the higher rates of labor, but for the reason that the English trials were made on a farm of 4,200 acres, which permitted the use of a twelve horse-power steam engine, and all the economy resulting from the use of the best machinery.

Boiled feed of any kind, poured hot upon this prepared chaff is found to give excellent results, and by the use in connection therewith of oil-cake, corn meal, or other concentrated food, the real nutritive value may be made to equal or exceed that of the best meadow hay at an expense little or no greater. For this purpose ground cotton seed-cake has been found especially efficacious, used in the proportion of two hundred weight to the ton of fermented straw-chaff. The avidity with which cattle consume this prepared fodder, arising from the delicate flavor given it by the green material greatly increases its value as compared with ordinary cut straw, to say nothing of the greater ease with which its elements of nutrition are assimilated in the processes of digestion.

Green-corn fodder, unknown in England, would doubtless be preferable to rye for mixing with the cut straw, owing to the greater quantity of saccharine matter it contains, but green oats or the aftermath of clover or meadow grasses would be well adapted to the purpose. The chief obstacle to the immediate adoption of the method in many parts of the country will be found in the practice of deferring the thrashing until winter, when green forage is not at hand, but in such cases crushed or rasped carrots, turnips, sugar beets, and the like might perhaps be substituted for the green forage, although success would be less assured at the outset than with the succulent material previously mentioned. In those districts where thrashing is done in the field nothing but the need of suitable machinery need stand in the way of the most extensive tests of a method of utilizing comparatively waste fodder, which abroad has proved valuable in practice, and which certainly seems faultless in theory.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Steel Rake in the Garden.—*May 27.*—There are few more valuable implements for the garden than the common steel rake, provided, of course, that one knows how and when to use it. The clumsy malleable iron affair, so largely manufactured and sold as good garden rakes, are but a poor apology for such an implement, and I am only surprised that any one having a garden will purchase them. A good sharp-tined steel rake is one of the very best implements known for killing weeds; but it must be used in time and before the weeds have become very large and firmly rooted. Begin as soon as the weeds appear and then rake over the surface frequently, for this one can afford to do, because a man can go over five times as much surface in a day with a rake while the weeds are small as he can with a hoe when they have grown to any considerable size. Among flowers a rake is just the thing to keep the surface of the ground level, neat and clean; and even among larger growing plants, such as corn and potatoes, I am not quite sure that it cannot be used quite economically, bearing in mind, always, that it is an early implement—not one of your "come-easy, go-easy, slow-coach, behind-hand" affairs. Little weeds require but very little labor to destroy; but large ones quite the contrary; and those farmers and gardeners who are never a little ahead of their work are pretty sure to be a long way behind.

Mowing Lawns.—*May 28.*—The late abundant rains have compelled me to set the lawn mowers in motion. In looking among the fine lawns about the city I notice that most of the gardeners cut the grass very close, in fact so close that the sod is injured wherever there happens to be a slight elevation. The best lawn will soon be ruined if the knives of the mower are set so low that the lowest joints of the grass above the surface are cut or broken; besides, the beautiful and velvety appearance of the grass is destroyed. The grass should be left at least one inch long, and then there will be room for the fine cuttings to drop down and be hidden as soon as they are wilted. Workmen usually prefer to cut the grass very close, because it will grow less rapidly when shaved down to the sod, and the operation need not be performed so often, consequently less labor is required.

Early and Late Planting.—*May 29.*—There are some things that it will do to plant early, but others that cold, or a cool atmosphere injures more or less. There is little use in planting corn, beans or tomatoes until the weather is warm enough to insure growth. We have had exceedingly cool weather during this entire month, and many tender plants have made but little growth. Corn looks yellow, except in very warm soils and protected situations, while tomato plants have that sickly, brown color which says, plainly, "I am suffering from a bad cold." The bedding plants, such as coleuses, heliotropes, geraniums and fuchsias have lost the bright colors which they possessed when planted out. These cold nights just suit the cut worms, and they are making havoc with all those succulent plants agreeable to their taste. I have never found a more effectual method of destroying than catching and crushing. Lime, ashes, and various other substances have been applied about the plants without any satisfactory results; but, if a man will get up in the morning and use the fine tooth rake about infested plants, the cut worms may readily be found, for they do not go very deep into the ground, but remain near the surface. It is only the early bird that catches the worm, but not without labor.

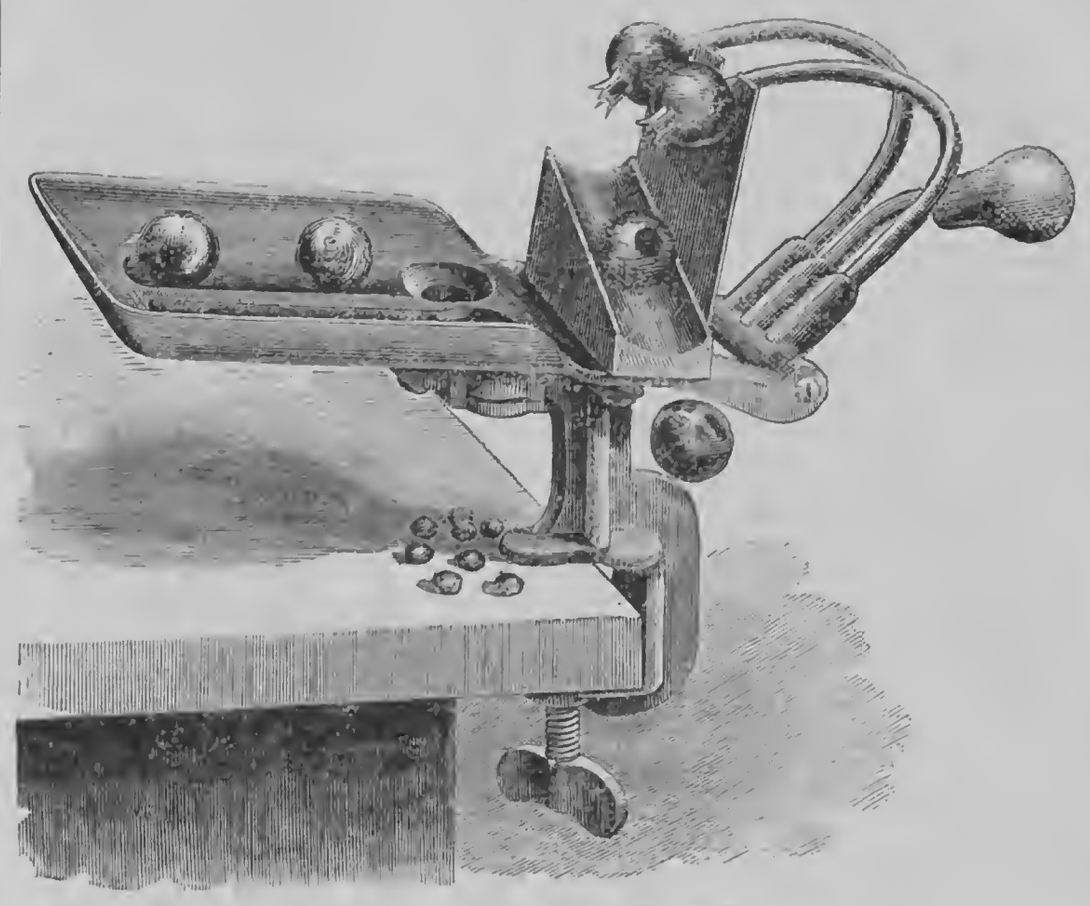
Magnolia Umbrella.—*May 30.*—Among the late blooming magnolias the *M. Umbrella*, formerly called *tripetela*, is certainly one of the most showy. The flowers are six to eight inches broad when fully expanded, and of a pure white color. The leaves are also very large—one to two feet long and six inches broad. The fruit is also very showy in Autumn, being four or five inches long and of a bright rosy red color. The trees commence blooming quite young, usually when not more than four or five feet high, seldom failing to show their flowers in this latitude the last of May. The habit of this species is not equal to the *M. acuminata* in graceful outline, the branches being larger and coarser, and the trees do not, as a rule, assume a pyramidal form; usually they are rather open and not well furnished with small twigs or branches, which would fill up and make the tree look more dense when covered with foliage. It is, however, a valuable species, growing rapidly and quite hardy in most of the Northern States.

Transplanting Tulip Trees.—*June 1.*—I dug from the woods and fields last fall quite a number of tulip trees, (*Liriodendron tulipifera*,) and heeled-in during winter, which I have planted out in nursery rows this spring. Like most other species of forest trees, these seedlings had few side or lateral roots, the main or tap-root penetrating deeply into the earth. In planting these seedlings I cut away the greater portion of the tap-root, and cut the stems down to within one or two feet of the ground. The largest of these seedlings were six to eight feet high, but all were severely pruned as stated, no attention being paid to buds or branches on the stems; but at this date nearly all have put forth new shoots, and I have little fear of the result, having done the same thing many times with these and other forest-grown seedling trees. Handsome and valuable native trees can be procured in abundance from our forests, and there is little danger of loss if they are severely pruned at the time of taking up or planting.

Farm Implements.

THE LOUDEN HAY CARRIER.

Probably no farm work involves severer labor than gathering and storing the hay crop. Its enormous bulk, and the fact that it must frequently be handled almost at lightning speed to save it from injury by rain, make any implement that lightens the load or moves more rapidly than unassisted muscle, doubly welcome to the farmer.



GOODELL'S CHERRY-STONER.

Chief among appliances for rapidly and economically handling hay is the Louden Hay Carrier, of which we give a representation. Its construction is such that it makes little difference how the barn is situated, the implement is effective in every position. The hay being grasped in large bunches by the usual horse-fork, is, by the action of the Carrier, raised perpendicularly, requiring no guides, moved to the place designed for it (recent improvements render it easy to deposit the hay one hundred feet from the wagon) and held there until the pulling of a cord releases the load, and it falls all together, as closely packed as it was while held by the horse-fork. It is claimed that by the use of this implement from one to three tons of hay may be packed in the same barn more than could be got in without it.

The hay having been dropped, the fork automatically returns for another load. One of the excellences of this implement is, that the fork is always under control, never flying loose, striking against beams, or threatening to "put a head on" those using it. This fact, and the perpendicular raising of the load, make the implement do *clean* work, not scattering the hay.

As to the expense, no unimportant consideration in these times, we learn that the two sizes made cost respectively eight and twelve dollars. The weight is about twenty-five pounds, and they can be sent by express cheaply and safely. The Louden Manufacturing Works, Fairfield, Iowa, will promptly send to all applicants circulars and price lists of these carriers, and also of the large variety of Horse Forks, Revolving Rakes, etc., they manufacture.

GOODELL'S CHERRY-STONER.

For this fruit *per se* we have a genuine affection, too deep to let us compare varieties, and be dissatisfied if the particular sample before us be not the most approved sort. Cherries of any kind always meet our approbation as soon as they become ours. If they belong to other people we grieve, and makes us lament that so sweet a fruit has so hard a heart.

But when the cherry is cooked, when cherry pie is made, or compounded of delicate paste, a pudding is glorified by cherries, when the gustatory nerves are quivering in every fiber with expected enjoyment, to come upon a vagrant stone then, perhaps break a pet tooth—*hic dolor!* True, cherries *can* be stoned by hand, but it is a dirty, wasteful, hand-staining business. It is no wonder the good wife guesses the folks are old enough to avoid swallowing the stones, and leaves them in.

But in these later days, Goodell, so famous already in agricultural mechanics, calmly considering these things, resolved to perfect the cherry, by removing the obnoxious stones by machinery; and, having succeeded in doing so, like the public-spirited man he is, now calls all the world, and everybody else, to share in the delight of which his Family Cherry-Stoner will prove so prolific a source—at least, during cherry time.

The instrument is not large, nor complicated, nor dear, nor likely to get out of order. The cherries being divested of stems, are washed and placed on a grooved platform, down which they gravitate to the inevitable cutters, which, swiftly descending, force the stones through the fruit on to the table, while the cherries are rolled off into a bowl. Two cherries are stoned at once, and about as rapidly as one can count, or an average boy eat them—which we call good speed. The stones are taken out about as cleanly as if carefully done by hand, but the shape of the cherry is perfectly preserved, and the large waste of juice in hand-stoning is avoided. Need we say more? Perhaps it will be as well to mention that Mr. D. H. Goodell, who manufactures these unpretending comforters at Antrim, N. H., has also an office at 55 Chambers street, New York City, as will be seen by advertisement in this paper.

The Naturalist.

BIRDS AND CATS.

I had hoped that some one more competent to do the subject justice than myself would put in a plea for the feathered songsters who, by their presence near our homes and in our forest belts, do so much to enliven and cheer us. No one can deny their usefulness in ridding the fruit trees and plants of insects, and in destroying worms which infest our fields and gardens. Many write in their praise, and for their protection, by law, from boys and men, but forget to advocate the most effectual means at our command for the increase of their numbers.

Where one bird is killed by man or boy, ten are destroyed by cats. Yes, the cat is the great enemy, the destroyer by wholesale, of our songsters; and as long as people keep a host of howling, hideous feline pests, so long will the birds be kept from increasing in numbers, and be frightened from our orchards and gardens.

I have been observing the motions and habits of both birds and cats pretty closely for a few years, and I find it is next to impossible to protect birds, even where you put up boxes on poles and in trees for their use in hatching. The cat perseveres, from day to day, watching and waiting, and in every case, will either kill one or both of the parents, and leave the brood to starve; or, failing in this, watch the young birds' first feeble efforts to fly, and destroy them ere they are able to escape her.

I say, kill the treacherous cats, and, if necessary, poison the mice and rats, or take some other means to get rid of them than the common one of keeping, as some do, a half score of cruel cats. S. H. J.

Perrysville, O.

NOTES FOR NATURALISTS.

Regulating the Hatching of Silk-Worm Eggs.—Duclaux, after a careful observation of the external conditions which favor and influence the hatching of the eggs of silk-worms, has prepared the following rules, by attention to which it is said that the development of the eggs can be regulated at will. First, to prevent an egg from being hatched at the usual time, it must be kept, from the period of being laid, at a temperature between 59° and 68° F., and then exposed fourteen days to cold, three months before the time at which the hatching is desired, being subsequently treated in the usual manner. To cause an egg to hatch before the usual time, it must be exposed to cold twenty days after being laid, and kept in that condition for two months, and then removed. Six weeks later it will be in the same condition as ordinary eggs, and can be treated in the same manner. In this way it is possible to have silk-worms ready for hatching at any season of the year.

LOUDEN HAY CARRIER.

Floricultural.

SELECT ALOCASIAS.

A CORRESPONDENT of the Journal of Horticulture says:—The genus *Alocasia* has deservedly become very popular, and, although less brilliant in color than their near allies, the *Caladiums*, they possess many advantages, and are charming subjects for the stove of an amateur, as well as that of the professional cultivator, or for exhibition purposes. The majority of the *Alocasias* are not deciduous, and hence their ornamental leaves and distinct characters are enjoyable during the dull winter months. This is a decided advantage, as they contrast beautifully with such flowers as *Poinsettias*, *Euphorbias*, *Gardenias*, *Eucharis*, and other denizens of the hot-house which display their charms at that ungenial season. Another recommendation that *Alocasias* possess is the easy manner in which they may be grown, which, combined with the leathery texture of the leaves of most of the species, renders them well adapted for the decoration of the drawing-room or the dinner-table, always providing there is no gas in the rooms. While upon the subject of gas, I must impress upon the minds of my amateur readers that it is utterly impossible to maintain the health of plants for any considerable length of time in apartments which are illuminated with gas.

The majority of these plants may be grown in very small pots, and thus the amateur may remove them from the plant-house to the drawing-room, plunge them in an ornamental pot or vase, and enjoy their beauties in such positions for a long time. A week, or perhaps two, will be sufficient for each plant to stand in such positions; but if five or six plants are kept (and if they are in small pots they will not take up much space), their admirers can always have one or two in their apartments during the winter months. The following species are all very beautiful, thoroughly distinct in appearance, and adapted for the purpose to which I have before alluded.

A. intermedia.—For the illustration of this really superb plant, the readers of the Journal are indebted to Messrs. VEITCH & SONS of Chelsea, in whose establishment it originated. It is a hybrid between *A. longiloba* and *A. Veitchii*, and is, perhaps, more ornamental than any other kind in cultivation. The stems attain a hight of from one to three feet (the latter only when well grown); their leafstalks are beautifully mottled, and banded with green and metallic white. The blade of the leaf varies from one to three feet in length, and its long ears render it very conspicuous. The upper surface is of a deep green, suffused and veined with silvery white, while the back of the leaf is tinged with dull purple.

A. metallica.—This is a plant of dwarfer habit than that previously named, usually growing from 12 to 18 inches high. The leaves are of great substance, obtusely ovate in shape, and of a uniform deep bronzy hue, which gives it a most distinct appearance. It is a native of Borneo.

A. Lowii.—A species from the same island as *A. metallica*, producing *cordate-sagittate* leaves, which are bright green on the upper side, ribbed with ivory white, the reverse of the leaf being deep purple. It is a most ornamental species.

A. gigantea.—In some respects this plant resembles *A. intermedia*; it may, however, be readily distinguished by the long, spreading, ear-like lobes of its large sagittate leaves, which are deep green above, veined with white and deep slate color below.

A. Sedeni.—This is another beautiful hybrid, produced in the establishment of Messrs. VEITCH, by crossing *A. metallica* with *A. Lowii*; and when I say it combines the colors and characters of both its parents, my readers will readily understand that it is at once a handsome plant, and a valuable addition to our stove ornaments.

A. zebrina.—This is a grand species; a larger grower than any of those previously named, and, therefore, not so easily accommodated by those amateurs having but limited space; nevertheless, those who can find room for it will be amply repaid by its majestic character. The blade of the leaf is large, broadly sagittate, and full; deep, shining green in color. The leaves are supported upon stout footstalks, which are pale green, and beautifully striped with numerous zig-zag bands or belts of deep green. It is a native of the Philippines.

There are several other species which form splendid objects in the stove, but are not included here, as my object has been to name only those which will bear removal to the dwelling-house. The soil I prefer for these plants is a mixture of peat, thoroughly good decomposed manure, some sphagnum moss, a little loam, and some sharp silver sand. Let the pots be well drained during the growing season; give an abundance of water, and there will be no difficulty in the amateur providing himself or herself with elegant specimens of *Alocasias* for the winter decoration of apartments.

FIGURE 1.

FIGURE 2.

CLIMBING FERNS.

THE cultivation of ferns is sadly neglected in this country, but as we progress in floriculture, and learn that beauty in plants is not altogether confined to those possessing brilliant colored foliage or flowers, the ferns will come in for a larger share of attention. the climbing ferns, of which there are many species, natives of different parts of the world, are really superb little plants, suitable for culture in the Wardian case, or for training on lattice-work in a window. Our native climbing fern (*Lygodium palmatum*), although quite a rare plant, can be occasionally found from Connecticut to Florida. The plants produce two forms of leaves, the lower ones being separated into five divisions or palmate, while the upper are finely cut into many, as shown in the accompanying illustration, Fig. 1. The plants grow several feet high and form a splendid natural wreath of green leaves when trained around a window or trellis.

The *Trichomanes Luschranthionum* is another beautiful climbing fern, with beautiful feather-like leaves, as shown in Fig. 2. It requires a warm, moist atmosphere, and is only suitable for house culture. A few such plants, well cared for, in a room or conservatory, are worth scores of common kinds; and one always feels a satisfaction in having something unique and rare. As a guide to culture of such plants we have only to know from whence they come and the nature of the climate, which is a kind of knowledge readily obtained without any great amount of research into the mysteries of geography or nature.

FLORICULTURAL NOTES.

Spiderwort.—Inclosed find a plant and its flowers; please give the common and botanical name. It is a hardy perennial plant, blooming in May and June. It has a pretty blue flower with three petals which open in early morning and close about noon. The only name it has here is "Noon Sleeper."—C. BLEAKNEY, *Saltsburg, Pa.*

THE common name of the plant is Spiderwort, and the botanical *Tradescantia Virginica*. There are several native, and many exotic species of this plant, which are cultivated for ornament. This genus was named in honor of the celebrated gardener and botanist, JOHN TRADESCANT, who lived and wrote quite a celebrated botanical work early in the 18th century.

ALOCASIA INTERMEDIA.

Squirrel-Corn.—I live in Laporte Co., Ind., about six miles from the city of La Porte, in the country, a very beautiful place. I often go into the woods and gather wild flowers, and have often noticed this plant. I do not know to what family it belongs, nor its name, and cannot find out. Will you please inform me. It grows in the forest among beech, maple, oak and hickory trees. I dug this up and pressed it; it has retained its color about the best of anything I know of. I have sent you the whole plant.—S. F. CLOUGH.

THE plant is commonly known as "Squirrel-corn," and by botanists as *Dicentra canadensis*. It is a near relative of the common "Bleeding heart,"—*Dicentra spectabilis* of our gardens. It is, however, a very pretty plant, and we are not surprised that it attracted your attention.

Aphides on Plants.—Can you give me a remedy for green lice on plants?—F. P. M.

SYRINGE the plants with tobacco water, if they are large; but if small put into a tight box and fumigate with tobacco. Take an old pan, or other dish, and put in a few live coals, and on to these throw a little fine-cut tobacco; cover up the box and allow the plants to remain in the smoke for an hour or two; then take out and syringe with pure water.

Arboricultural.

PEAR BLIGHT.

I ASK information in regard to the best treatment to give my pear orchard. Last season branches died in July and August, which I immediately cut off below the diseased part. Now the leaves on almost every tree are blighting to an extent that seems to indicate a total loss of the trees, if no preventive can be found. The ground is rather flat and not drained. Hoping you will be able to suggest a remedy, I am—F. P. MARTIN, *Yellow Springs, O.*

YOUNG trees are affected with what is known as "Pear Blight," a terrible scourge in many portions of the country. It is more abundant in localities where the soil is clayey and rather wet than elsewhere, in fact we have never knew trees to be injured by blight in a light, well drained soil, although there may be instances of the kind. A great amount of theorizing has been done during the past twenty years in regard to the cause and best methods of checking this disease; but the results are entirely unsatisfactory, and we can offer no better advice than to replant on a well drained soil, and one not so rich as to produce a late growth in autumn. In localities further south the danger from late growth is very slight, because the trees naturally ripen their wood during the dry months of August and September, and pear blight is almost unknown except in very tenacious, wet soils. In our experience of eighteen years, with pears, in the vicinity of New York City, we have never had a tree attacked or injured with blight; therefore we attribute the disease to causes named.

ARBORICULTURAL NOTES.

Forest Tree Planting in the West.—The Kansas Farmer says:—"We learn that the Atchison, Topeka & Santa Fe Railroad Company have engaged S. T. KELSEY of Pomona, to experiment in planting and growing forest, fruit, and ornamental trees, and hedges, grains, grasses, and vegetables. For this purpose the Company are to give Mr. K. a section of land every ten miles along the line of the road, from Hutchinson to the western line of the State, three hundred miles, upon which he is to make experiments, and plant 160 acres of forest to each section. This is a great work, and we hardly know which to commend most—their wisdom and liberality, or their good judgment in selecting so able a man to execute it as S. T. KELSEY." This is a wise policy which other of the great Western roads might imitate with profit.

White Pine and Birch.—Please tell me about White Pine seed; also Gray Birch. When is the proper time to gather them for sowing, and the best method of gathering?—READER.

THE cones of White Pine should be gathered in Autumn, as soon as the seed is ripe, and before it begins to fall. Place the cones in a dry room, on a tight floor, and they will soon open and the seed drop out. The seed may then be gathered up and put into paper or cloth bags. The small cones of Gray Birch may be treated in the same manner, although the seed is exceedingly small, and requires considerable care in cleansing. The seed also ripen in late Summer or Autumn, but by observation you can determine the proper time for gathering.

Dairy Husbandry.

AGITATING MILK AFFECTING CREAM—MORE ABOUT ABORTIVE COWS.

MR. MUNSON (proprietor of the "Franklin Creamery") has stated in public that moderate agitation of milk does not lessen the amount of cream; that if we disturb it, say skim it every four or six hours, all the cream in the milk will find its way to the surface. Our experience is to the contrary. He asks me to tell the reason why. Can Mr. WILLARD help me?

We are troubled with abortive cows increasing. One of my neighbors has brought in a quantity of "pure bone dust" to sell, and feed to cows to prevent (as he claims) abortion. Will "bone dust" prove a cure? I had supposed it contained a large per cent. of lime, and gave to the soil milk and butter properties, and did not feed the bone of cows or calves. Have the Farmers' Club of Little Falls determined the cause of abortion?—P. G. NORTHUP, *Franklin, Del. Co., N. Y.*

MILK designed for butter making, as a rule, should be agitated as little as possible until the cream has risen. We cannot say that such a moderate agitation of the milk as would arise simply from skimming, as above described, would lessen the quantity of cream; but any excessive agitation has a tendency to diminish the quantity of cream. This has been abundantly proved by experiments made on milk, a portion of which has been retained at the farm, and the rest sent by wagon and rail to the city. In numerous instances, where a careful test of such milk has been made, the milk which has been less disturbed threw up most cream.

VOELCKER made the following experiment:—He took 100 measures of new milk and set it aside for 24 hours at a temperature of 62° Fahr., when it gave 12 per cent. of cream by measure, while at the same time a like quantity of the same milk, after having been gently shaken in a bottle, threw up only 8 per cent. of cream. This shows that the shaking to which milk is subject, when carried long distances in wagons, or by railway, has the effect of breaking some of the cream globules, in consequence of which either the fatty matters remain suspended in the milk, or more probably the cream thrown up gets richer in fat. We are inclined to think that milk that has been thoroughly agitated during its transit to the factory and there experimented upon to see whether such moderate disturbance as skimming would affect the quantity of cream, is not a fair test of the principle stated. We have made no direct test of milk under such circumstances, and therefore cannot speak positively in regard to it.

We are not prepared to say that the feeding of bone meal to cows is a cure for abortion, or, indeed, that it has much or any influence in arresting that disease. We have had some experience in feeding bone meal to cows and in boning our pasture lands. And while we are ready to admit that during those seasons in which we supplied our herd with bone meal no abortions occurred in the herd, still we did not become fully satisfied that the freedom from the disease was to be attributed to the bone meal. Some years ago LEVI BARTLET of New Hampshire, widely known as an able writer on agricultural topics, informed us that in some sections of his State the cattle were terribly afflicted with bone disease consequent upon feeding upon lands which had been long devoted to milk-farming. The cows in that district were often so badly affected with the "bone disease" as to fall, yet abortions did not occur and this bad habit there was unknown. The feeding of bone meal was a benefit to the diseased animals and was resorted to as a specific for "bone disease."

In our experience we commenced feeding bone meal in Summer, and we found that animals which had aborted during the Winter previous appeared excessively fond of the meal, while a few animals of the herd did not care for it. Some of the young calves which were being raised on the farm would eagerly eat of the meal before they had been weaned. These experiments were sufficiently satisfactory to us that bone meal was of advantage to those animals that took it of their own accord. In feeding bone meal it was always kept apart from the salt, which was supplied in separate boxes, where the cows could have daily access to either, as desired.

The cause of abortion as a disease now so prevalent in the central counties of New York, still remains a mystery. In a recent article in the RURAL NEW-YORKER of March 23, page 195, we give what are claimed to be some new features concerning the disease, referring to the microscopical investigations M. BROULEY and other distinguished scientists of Europe, in which the disease is attributed to animalculæ, or living vegetable organisms. We have no settled theory regarding the disease. We have had theories, but during the long and patient investigation of the Farmers' Club of Little Falls to solve the mystery, in which we took an active part, we found the facts abundant to overthrow all theories suggested, except the one above alluded to. At the instance of the Club and the dairymen of Central New York, we brought the question before the New York State Agricultural Society in an address at the annual meeting of the Society at Albany (see Transactions 1865, page 214), and asked the Society to appoint a commission to investigate the subject, etc. As is well known, the Society took the matter in hand, and the Legislature appropriated several thousand dollars to defray the expenses of the investigation. The reports of the Commissioners appointed to conduct this investigation are printed in the Transactions of the State Ag. Society, and are in many respects valuable; but the Commissioners, in our opinion, came no nearer solving the mystery than did the Farmers' Club. The facts, however, gathered by the Commissioners very conclusively dispose of various theories in the minds of farmers as to the cause of the disease, and as we have several communications from correspondents attributing the disease to these exploded theories, we must refer them to the Reports of the Commission.

But while we do not wish to detract from the labors of the Commissioners or their reports, we think a mistake was made in not making a thorough microscopical investigation of the aborted calves and the appendages expelled, together with a more thorough examination of the diseased cows at the identical time abortions were taking place.

The New England Farmer, in commenting upon the article in the RURAL of March 23d, quotes from reports of the Commissioners showing that two cows were dissected and portions of the blood and other parts subjected to examination under the microscope, but without discovering any appearance of *cryptogamous spores* or other form of microscopic vegetation, etc. The statement, appearing as it does without explanation, seems to imply that there was no lack of microscopical examination, while it is well known that this line of investigation was scarcely entered upon by the commissioner. So far as Herkimer and the adjoining districts are concerned, the investigation was conducted at a season of the year when there was little or no chance of seeing abortions take place. Whereas, if the month of February had been selected the assistants sent out would have had ampler opportunity to have seen cases occurring almost daily. Of the cow dissected by Dr. HALSTED he says:—"Of the calf I know very little. It had been thrown with the manure into the barnyard, and was not in fit condition to form any judgment upon." Transactions 1868, p. 89. Again, the Commissioner says in same report, page 90, as follows:—"There have been few opportunities offered to the inspectors, in which to make actual examinations of the fœtus as expelled, but their limited investigations, and the general observations of farmers unite in describing nothing inflammatory, or otherwise abnormal in the external appearance of the fœtus; but it is usually dead." We are unable to state what is to be established by a thorough and exhaustive microscopic investigation; but much is hoped from such investigation, and we have referred to the matter in the hope that investigators will turn their attention in this direction.

In conclusion, we may remark that Professor LAW of Cornell University has recently examined the after-birth from a cow soon after aborting, and the microscope revealed living organisms which, there is reason to suppose, might cause disease. We give these facts as a new feature concerning a most terrible scourge that has long afflicted, and still continues to afflict, the dairy districts of New York, and the cause of which is shrouded in mystery.

REPORT OF NORTHWESTERN DAIRYMEN'S ASSOCIATION.

WE are in receipt of the Sixth Annual Report of the Northwestern Dairymen's Association, from the Secretary, Mr. G. E. MORROW of Madison, Wis. It is an octavo pamphlet of 100 pages, containing the addresses and proceedings of the late Convention, in January last, at the city of Elgin, Ill. The various dairy associations, through their annual reports, are presenting to the public a large amount of valuable information; and the Northwestern Association now contributes its quota of interesting and useful matter in this report. We have no space to give an extended notice of the volume, but may mention among the papers of special interest and value, the following: "Grasses for the Dairy"—an address by Prof. W. J. BEAL of Michigan Agricultural College; an address on the "Principles of Breeding," by Prof. W. W. DANIELLS of Wisconsin University; address on the "Condition and Prospects of the Dairy Interests of the Northwest," by G. E. MORROW of the Western Farmer; a paper on the "Size and Shape of Cheese, and Best Method of Manufacture," by S. FAVILLE of Wisconsin. The report contains statistics of the quantity of milk shipped to Chicago during the year 1871 from ten stations, and the amount of freight paid the Northwestern road therefor. A statement from the Illinois milk-condensing company shows that 1,881,721 quarts, or 470,430½ gallons of milk, have been received by that establishment during the year 1871. The Secretary regrets that only a meager collection of statistics as to the dairy produce of the Northwest in 1871 can be given, but the same may be said of the reports of other associations. They are all faulty in this respect. Some well organized effort should be made by the Associations to obtain ample and trustworthy statistics. These would give increased value to the reports, and the defect of the present system is felt to be a serious loss by every one engaged in the dairy interest. The Secretary, Mr. MORROW, seems to have discharged his duties creditably in putting the matter of the convention very clearly before the public.

Domestic Economy.

HOUSE FURNISHING vs. HOME MAKING.

POOR people think if they were rich they could then make their rooms beautifully home-like and comfortable; while people who are rich fall into the notion of supposing that so much expended on furniture of such and such qualities and quantities, answers the demands of fine furnishing.

If there is anything I have a horror of, it is a "regulation" room, one of these put up affairs with a Brussels carpet, so many chairs of the same pattern, a sofa, pictures on the wall in geometrical precision, an image on each end of a mantel with a clock between, and everything deathly prim.

There are some things the poorest, who have any desire to emulate cosiness and comfort, can have and enjoy. For instance, they can saw off their chair legs, and have seats of various hights, and when they buy their chairs they will exercise much better judgment in choosing odd ones, even if at second hand, than half a dozen all alike. Then, for comfort, there is nothing like the old-fashioned chairs, upholstered at home, covered, perhaps, with ANN'S old dress, re-dyed, or FANNY'S *paisee* shawl, or grandmother's cloak. Footstools and ottomans may be brought into existence in the same economical fashion, and they fit in notches when nothing else can.

In ranging pictures of any sort, let them be within the line of the eye where one is standing. Five feet from the floor is usually quite high enough for pictures of ordinary size in ordinary rooms. Book shelves should not be so high that one cannot easily read their labels. Spaces in the walls may be filled in with books or curiosities, while the top forms mantels, on which statuettes, vases, easels, etc., may be placed. Brackets, little upholstered shelves, and various sorts of feminineish fixtures give a room a most loving look. Then instead of one large table, I would have three or four smaller ones, low and with sure footed legs. On these would be books, small pictures, newspapers, writing materials, games, etc. Absolute cleanliness is essential, but a certain amount of a certain kind of disorder, is very wholesome. Flowers in windows are good for the flowers, but usually not pleasantest for the room or its inmates, unless the window can be well spared. Running vines in pots or brackets, or fragrant plants on mantels or shelves are agreeable. Pressed vines festooned about frames against a light wall, look beautifully. Three or four bright autumn leaves which have been pressed and oiled, pinned in clumps on the wall under pictures, brackets, etc., lend brightness and piquancy to an apartment. A room that has an air of being inhabited, is always more agreeable than one that is not.

There are two things in some fine houses I am afraid of—in the sense of being afraid of stuffed monsters. I refer to the fashionable, inlaid, carved, overgrown cabinets, and the fashionable bedstead, with towering headboard, and all sort of heathenish heads carved in relief. There is no such thing as having too large a bed, but I think the room occupied by beds could be economized to general advantage. What are called "parlor bedsteads," can be put up in a parlor, and be entirely unobjectionable in appearance. When closed, one sees what is apparently a book-case, or cabinet, with mirrors and mouldings. The sofa bedsteads, which open and serve for beds at night, and with folded wings do duty as sofas in the daytime, are all admirable. Then the saving in work, too! All the bedding "fixins" put on just for show no longer are needed, and bedding is less soiled. We may well learn from nature, which has stood men and trees on end, that it is an economizing of space, if having no other advantage. The parlor bedstead does the same thing with a bed, and converts our bedroom into a parlor. MINTWOOD.

GRAHAM BREAD.

YOUR correspondent, J. G. D. (see RURAL, May 11, page 311), should stir her Graham mixture until quite stiff, so that she can take a spoonful heaped up and drop it into the basin that she has prepared for the steamer. Let it remain in the steamer three-quarters of an hour after the water commences boiling. The object of putting bread over cold water is to heat it gradually, thereby giving it more time to rise than it would have by at once being set to steaming. A rounded up teaspoonful of soda (not heaped, nor even) is always the proper rule for a pint, or a common teacup twice full of buttermilk. My measuring teacups hold just a half pint each. If such a cup is not at hand, a pint measure probably is, as every housekeeper should have one. I will stand between J. G. D. and all the harm she receives from eating bread made light by using soda, if she follows my rule exactly. Now, in order to prevent any unwholesome effects from the use of soda, be sure to find just the quantity required, which proportion I have named, probably, is as near as can be come at by ordinary measurement.

A little experience and some observation will enable one to use just soda enough to neutralize the acid of the buttermilk, which is a sufficient test that no more is needed. But a new beginner had best measure her ingredients, lest she get in an overdose of soda, and make her bread unpalatable, like some gold-colored biscuits that I have sometimes seen (not on my table), and her husband be provoked to say:—"These do not look or taste like mother's"

Let me say here, if buttermilk is too sour, heavy or soggy bread is the result. I find many old housekeepers do not know that their dumplings, bread, or biscuit is often made heavy by using buttermilk too sour. Summer buttermilk is seldom fit for use more than 30 or 40 hours after taken from the churn. I do not use it for anything except Graham bread, corn bread, and Johnny cake. I find sweet milk and baking powder better for fine white flour. Cake, biscuits and pot-pie dumplings are much more delicate, and always light and puffy, when made with sweet milk. Graham bread made with yeast should become sufficiently light, as for baking, before being placed in the steamer. The consistency the same as buttermilk bread; also steam the same; bake, etc. The buttermilk rule is equally good for corn meal. S. J. D.

Painesville, O.

ODDS AND ENDS.

Cauliflower Salad.—Boil a cauliflower in salted water till tender, but not overdone; when cold, cut it up neatly in small sprigs. Beat up together three tablespoonfuls of oil and one tablespoonful of tarragon vinegar, with pepper and salt to taste:—rub the dish very slightly with garlic, arrange the pieces of cauliflower on it, strew over them some capers, a little tarragon, chervil, and parsley, all finely minced, and the least bit of dried thyme and marjoram powdered. Pour the oil and vinegar over, and serve.

Minute Pudding.—One quart sweet milk, three eggs; beat the flour and eggs together, and stir it in the milk while the milk is hot; keep stirring till it is thick enough for pudding; serve with sugar and cream. This equals the best corn-starch pudding.—L. E. K.

Skippers in Dried Apples and Cheese.—Will some one please inform me how to keep skippers from dried apples and cheese?—A SUBSCRIBER.

Scientific and Useful.

THE TRAPPING OF VERMIN.—II.

If the mouse be easily trapped, the rat, on the contrary, is one of the most difficult of all animals to capture. The cunning of an old rat that has run the gauntlet of a thousand traps is something wonderful; he will spring the trap and eat the bait, and if matters be so arranged that he cannot do this, he will avoid the trap most carefully. Yet, with all his cunning, he is no match for the lord of creation, and may be captured without fail if we only go the right way to work.

There are two systems of trapping the rat; by one the animal is killed instantly; by the other he is taken alive. Both these we shall endeavor to describe. First, let us say, however, that the different plans which are constantly being puffed in the papers, such as fixing barrels with tipping covers and all that, are mere nonsense. We have seen them tried a hundred times without success. It is true that we may occasionally succeed in capturing a whole brood of young ones — say six — and as the rat-catcher always adds nothing to his figures, this makes sixty, which gives a very respectable show on paper. But we could have caught these youngsters anyway, so that the plan has really but little to boast of in this respect; and as for catching the wise old fellows—they are not to be caught with chaff. Of course it occasionally happens that individuals that have escaped the most cunningly devised traps will sometimes fall victims to the very simplest devices. Indeed, a mere change of trap will sometimes enable us to effect our object in the case of a given individual; but particular cases ought not to lead us into the fallacy of deducing from them a general rule.

Of all the traps used for catching rats none is equal to the old steel trap, having jaws forced together by a stout spring. Properly managed, this trap will capture any rat—even the oldest—though it sometimes requires time, patience, and shrewdness. But before telling our readers how to manage the trap, let us tell them one thing they must *not* do—they must not bait it. This is a point that every shrewd trapper will soon find out for himself; but W. NEWHOUSE, in his excellent work on trapping, states the matter in such a clear way that we cannot forbear quoting his directions, which are as follows:—"There is one general principle in regard to baiting animals that may as well be recorded and explained, as it is applicable to all cases. It is this:—*Never put bait on the pan of a trap.* The old-fashioned traps were always made with holes in the pan of the trap, for strings to tie on the bait; and many, if not most, novices in trapping imagine that the true way is to attract the animal's *nose* straight to the center of action, by piling bait on the pan, as though it were expected to catch him by the head. The truth, however, is, that animals are very rarely taken by the head or body, but almost always by a leg. When an animal pulls at a bait on the pan of a trap, he is not likely ever to spring the trap, for he lifts in the wrong direction; and if he does spring it, the position of his head is such, especially if the bait is high on the pan, that he is pretty sure to give the jaws the slip. Besides, bait on the pan calls the attention of the wary animal to the trap; whereas, he ought to be wholly diverted from it, and all signs of it obliterated. Bait should always be so placed that the animal, in attempting to take it, shall put a foot on the pan. This can be done in several ways, but this general direction may be given for all cases that are not otherwise provided for:—Place the bait either on a stick above the trap, or in an inclosure so arranged that the animal will have to step over the trap to reach it."

Nothing can exceed, in clearness and accuracy, these directions. They are amply sufficient for all those that have any natural talent for trapping; but for the information of those who have had absolutely no experience in the matter, we propose to give in our next article the minute details of the operation.

Raising Water with a Siphon.—Say to "An Old Subscriber" that there may be two reasons why he is not successful in taking water to his barn—having twenty-five feet fall and only fifteen feet to rise. First, his pipe may not be air-tight; second, the outlet may be too small for the balance of pipe. Make the outlet the same size of the upright pipe at the well, and his efforts will be crowned with success. Having passed through the same difficulty that your correspondent speaks of, I speak from experience.—W. H. SILVERTHORN.

Miscellaneous.

DEPOSIT INSURANCE

Is a new form of LIFE INSURANCE, originated and just introduced by the old and popular

Charter Oak Life Insurance Co.,

OF HARTFORD, CONN.

ORGANIZED 1850.

$10,000,000 ASSETS.

It is confidently recommended as far superior in all respects to any Tontine or other plan upon which payment of profits is deferred. Insurance on all the usual plans is offered by this Company at far Lower Rates than are charged by other mutual companies. Agents in all the principal cities and towns.

The Season for Painting

HAS COME AGAIN.

If you propose to paint, first send stamp for a book called "Plain Talk with Practical Painters, with Samples of Colors." The book is worth a dollar, and costs nothing. JOHN W. MASURY, 111 Fulton St., New York. Specialty in Pure Paints and Colors. Masury's Ready-Made Colors are the only ones which stand the test of time. Do not be deceived.

NEW DIPLOMAS FOR AGRICULTURAL SOCIETIES

Specimens supplied by
The Major & Knapp Engraving, Mfg. and Lithographing Co.
56 & 58 Park Place, N. Y.

Pomeroy's Trusses.

Unrivaled for the relief and cure of Hernia or Rupture. POMEROY & CO., 744 Broadway, New York.

TEXAN LIEBIG'S EXTRACT OF MEAT
THE GENUINE AMERICAN ARTICLE

The Best and Cheapest Nourishment for Invalids and Families. For sale everywhere. A. GLANZ, Sole Agent, 194 William St., New York.

WEBSTER'S PATENT BUTTON-HOLE WORKER.

The most perfect Button-Hole Worker ever invented! So simple that a child can work a more perfect button-hole with it than the most experienced hand can without it. It does away with pricking the fingers, straining the eyes, and with imperfect and irregularly worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold.

Local and traveling agt's wanted for this and other new and useful articles. Address GEO. DAVIS, 91 Asylum St., Hartford, Conn.

Sample worker, with full directions for use, sent postpaid by mail on receipt of 50 cents.

Please state that you saw this in RURAL NEW-YORKER.

IVY PATTERN

NICKEL SILVER TABLE WARE,

HEAVILY PLATED WITH PURE SILVER.

A full assortment of Table, Dessert, Tea, Egg and Salt Spoons; Table, Medium, Dessert, Pie, Oyster, Pickle and Beef Forks; Soup, Oyster, Gravy, Cream and Mustard Ladles; Butter, Tea, Dessert, Cake, Ice Cream, Pie, Crumb and Fish Knives; Sugar Tongs, Shells and Sets; Berry Shells, Nut Picks, Napkin Rings, &c., &c. All goods warranted as represented.

Also, a full line of PLATED WHITE METAL TABLE WARE.

HALL, ELTON & CO., MANUFACTURERS OF

Factories, Wallingford, Conn. Salesroom, 36 Park Row, New York.

SAFE AND PROFITABLE!

THE

CANADA SOUTHERN

First Mortgage Sinking Fund

Thirty Years

7 Per Ct. Gold Bonds

AT

90 and Accrued Interest.

The Road runs from Buffalo to the Detroit River, and is the Eastern link in the new AIR LINE from BUFFALO to CHICAGO, and has been under construction for about two years past by railroad men who have seen the necessity for a STEEL RAIL, LOW GRADE SHORT ROUTE between the great railroad systems which diverge from Chicago, Toledo and Buffalo.

Among the holders of the road, by whose cash subscriptions 200 miles (out of 230) have already been graded, bridged and made ready for the superstructure, a large part of the steel rails bought, all of the materials for the stations and a part of the equipment purchased, are:

MILTON COURTRIGHT, JOHN F. TRACY, WM. L. SCOTT, DAVID DOWS, HENRY FARNHAM, R. A. FORSYTH, HENRY H. PORTER, JOHN M. BURKE, M. L. SYKES, Jr., B. F. ALLEN, all Directors either in the Chicago and Northwestern or in the Chicago, Rock Island and Pacific; GEO. OPDYKE, of the Midland Road; JOHN B. ALLEN, SIDNEY DILLON, DANIEL DREW, J. S. CASEMENT, J. & J. CASEY, O. S. CHAPMAN, JOHN ROSS, DAVID STEWART and F. H. WINSTON.

THE ROAD will be

33 MILES SHORTER THAN ANY OTHER ROAD,

either BUILT or in contemplation, between Buffalo and Chicago, and will also shorten the distance between Toledo and Buffalo 23 miles.

THE MAXIMUM GRADE on the entire line does not exceed FIFTEEN FEET to the mile—and Ninety-six per cent. of the Road IS STRAIGHT.

The ROAD WILL BE COMPLETED and in running order on or before December 31 of this year.

The principal and interest of the bonds are payable either in New York, London or Frankfort.

We confidently recommend the bonds to all classes of investors.

LEONARD, SHELDON & FOSTER,

No. 10 WALL ST., NEW YORK.

NOTICE.

Having become associated with Messrs. Leonard, Sheldon & Foster in the Agency of the Canada Southern Railway Company, we offer the above named Bonds for sale.

After a thorough investigation, we recommend them to our friends and customers as a sure and reliable investment. Pamphlets and all information furnished on application.

WINSLOW, LANIER & CO.,

27 PINE STREET, NEW YORK.

CAYUGA LAKE RAILROAD.

SATAE OF NEW YORK

Seven Per Cent.

FIRST MORTGAGE

GOLD BONDS

AT 90 AND ACCRUED INTEREST IN CURRENCY.

THIRTY YEARS TO RUN, AND ISSUED FOR $20,000 PER MILE.

This road forms the shortest and most direct route from the great Anthracite and Semi-Bituminous COAL fields of Pennsylvania into the central part of this State, and will run in connection with the New York Central road, which it crosses at Cayuga Bridge. Traversing as it does the finest and most populous agricultural district, generally known as the "Garden of the State," its local traffic will be large, but its greatest source of revenue will be from its COAL business. The road is being rapidly built. Iron is now being laid on a section covering more than one-quarter of the distance, and work on the whole line being pushed with great vigor, so that it is expected to have Coal trains running by the 1st of November next. From our knowledge of this enterprise, and after the most thorough investigation, we most confidently recommend the Bonds as a safe investment. We offer for the present the Bonds at 90 and accrued interest in currency.

THE TIME TO RENEW AND SUBSCRIBE!

ALL OUR READERS are advised that Vol. XXVI. of the RURAL NEW-YORKER will commence July 6, and close with December—comprising Twenty-Six Numbers. And will they do us and their neighbors and friends who don't (but ought to) take the RURAL, the favor to announce this fact? Note, also, that Single and Club Subscriptions are now in order and respectfully solicited from all parts of the Union, Canada, &c. Our inducements for clubbing are the same as last Winter. Those forming clubs for the New Volume will receive specific premiums, or free copies, etc., in the same proportion as for yearly subscribers—two six months (or volume) subscribers counting for one yearly. Clubs may be composed of part yearly and part half-yearly subscribers, at convenience of Agents. To aid those forming new clubs, or making additions to present ones, specimens, premium lists, etc., will be sent free.

LABOR UNIONS AND STRIKES.

THERE is in progress, in New York City, one of the most extended and, in some respects (up to the time of this writing), successful labor strikes that has occurred in this country. The object of the strike among most, if not all, of the different professions involved in it, is to secure for eight hours labor the wages now paid for ten hours. The avowed object of this demand is not that men do not earn enough per day, but they have to work too many hours to earn it. They want more hours for relaxation. Some of them claim that they want the extra hours for mental improvement and aesthetic culture. They want to be with their families more of their time. It seems to us a fit time to express our opinion concerning some of the results which grow out of the Labor Unions and their strikes, affecting both the prosperity of the laborers and the industrial progress of the country.

1. All labor Unions which seek to inform and protect those who belong to them in all their rights, we commend—especially such as have for their object the benevolent and beneficent purpose of helping the unfortunate, providing work for those out of employment, and making combinations against real wrong or injustice, and yet which do not deprive any one of individual rights. But a Labor Union whose object is to compel the skilled artisan to work for the same wages per day as the unskilled, and permits him to work a no greater number of hours, albeit the necessities of his family may demand of him longer continued daily exertion for their support, is unjust, oppressive and depressive in its influence upon industrial enterprise. Such labor combinations do the most grievous wrong to those engaged in them. For if the rate of wages per day, fixed by such Union is no higher than the minimum earnings of the poorest workmen, the most industrious and skillful workmen have to share their earnings with such as are not capable of earning as much. But if the rate of wages is as high as the maximum that can be earned by the best workman, then the employer and all who buy his goods, are defrauded to the extent that poor or unskilled and incompetent workmen are permitted to receive such maximum wages. Hence, view it in any light we may, such regulations are wrong.

2. We believe it a grievous wrong to the laboring man to deny him the right to work as many hours per day as he chooses (if he can get the labor to do), and for such price as he pleases to take. And it is equally wrong to compel an employer to pay the same price for unskilled labor that he does for skilled; or to insist that he shall run his machinery only a given number of hours, provided it is in his power to find men willing to keep it constantly running. Nor is it right or just to dictate to men who work by the piece how many pieces shall constitute a day's work and insist that their day's work shall be confined to that number. Is skill and deftness and experience to count for nothing as capital to the laboring man? Must JOHN BROWN, who by long experience has learned to accomplish double the work in a given time that JOHN SMITH can do, work half his time and loaf the balance, or be double the length of time doing his work that he need to be, in order to protect slow JOHN SMITH and enable him to earn as much as the swifter JOHN BROWN? When Labor Unions attempt such dictation they do great wrong to the laboring classes; they block all progress and suppress all incentives to excel.

3. The effect of diminishing the hours of labor for a given price will be to destroy enterprises employing labor altogether, or to force an advance in the price of the article produced, which in turn will open a field for competition to foreign producers or compel a rise in the purchase value of whatever is given in exchange for the articles the cost of producing which is thus enhanced. In other words, diminish the hours of daily labor without decreasing its cost per day, and the ability to produce is diminished and the cost of production correspondingly enhanced. And it should be remembered that the price of labor, if there is no over production, governs the price of whatever is consumed—that a short day's labor in a workshop means one equally short on the farm; or, that the farmer must receive in exchange for his twelve hours labor in one day, the value of a day and a half's labor by the artisan who works eight hours. This is the practical result in the end. The immediate effect may not be apparent, but the action and reaction of labor movements are sure to result in settling down to a common level finally.

4. It cannot safely be asserted that too much labor, in the aggregate, is performed in this country; but it may be asserted that too few labor; and if all did labor who ought to, it might be desirable that each should labor fewer hours; then a better division of the hours of labor might result. For if all who ought to did labor, there would be an increase of production, a decrease in the cost of living, and hence less need that those who do work should labor as many hours as they do. But so long as there is no over production we cannot see that there is to be any gain whatever to any class by diminishing the hours of labor per day without a corresponding decrease in the price paid per day for it; and even if this were done the cost of whatever is produced would be enhanced unless relays of men were employed at the end of the eight hours to take the places of those who had performed their day's labor—and duplicate it; for there would be diminished production.

RURAL NOTES AND QUERIES.

Sanctum Personals.—A party of gentlemen, pretty well known to the American agricultural and horticultural world, sail for Europe from this port the 22d of June. The party is to be composed of our genial and distinguished Irish friend, PATRICK QUINN, chief horticultural contributor to the New York Tribune, author of "Money in the Garden," and a successful New Jersey pear culturist; B. K. BLISS, seedsman of this city, a gentleman of equable temper and excellent social and business qualities; JOSIAH HOOPES of Pennsylvania, the author of "Hoopes' Evergreens," a gentleman well known as a nurseryman and enthusiastic student of horticulture; ROBERT DOUGLAS of Illinois, the great grower of seedling evergreens, one of the oldest and most experienced nurserymen in that State, and one of the most companionable of men. The object of these gentlemen is rest and recreation and an opportunity to visit some of the best gardens, nurseries, seed-farms, arboretums, etc., in Great Britain and Europe. They expect to return September 1. We have no doubt that their observations will enable them to enhance the value of their respective future contributions to our industrial progress and prosperity.

—W. W. CORBETT, one of the editors and proprietors of the Prairie Farmer, has favored us with a call. Chicago, he says, is rising out of its ashes with marked rapidity, and the paper with which he is connected is more prosperous than ever. He had just returned from the Agricultural Congress at St. Louis. We asked what was done there. He replied:—"O, they resolved and *resolved!*" Well, it is a good thing to resolve, because the process involves a study of what needs to be done; and it is a necessary preliminary step towards doing it.

Farmers Poisoned by Wild Parsnip, or Cowbane.—Five young men near Flint, Michigan, were plowing in a field and ate of the root of what they supposed to be Sweet Cicely (*Osmorhiza longistylis*), which is a fleshy root with a spicy, agreeable flavor. In a few moments the one who first ate of the root fell in a spasm and died. Immediately two of the others were taken with spasms, whereupon one of the others mounted a horse and started to the house, a mile away, to get help. He had to ride about a mile, and on reaching the house fell from the horse, but succeeded in giving the alarm. The farmer mounted the horse and started for the field, and arrived there to find three of his sons lying dead within the space of ten rods. The fourth was still alive, and the father gave him some tobacco, which resulted in violent vomiting and the saving of his life. The one who rode to the house will probably recover, according to a correspondent of the Detroit Tribune, from which paper we gather these facts. It is supposed they ate of the root of the Wild Parsnip, or Cowbane, (*Archemora rigida,*) a very poisonous plant. We give these details this prominence as a caution against eating roots, plants or fruits which are not known beyond peradventure to be non-poisonous.

Japan and its American Agricultural Commission.—The Prairie Farmer announces that it has learned from a private source that the Japanese Government has abruptly terminated its engagements with ex-Commissioner HORACE CAPRON and his associates, the Mikado having "paid off the whole delegation and sent them home." Has the Japanese Government learned all that these gentlemen knew about farming so soon, or did it find that Japanese agriculturists knew better how to adapt their culture to soil and climate, and the needs of the people, than did the Americans? We shall look with interest for some explanation of this result of an attempt to teach the Japanese agriculture.

Statue to Seth Boyden.—It will be remembered that a little more than two years ago we gave, in these columns, a portrait and biographical notice of this distinguished inventor and horticulturist, with a detailed account of his inventions and experiments, and their results, in the hybridization of strawberries. We notice with much gratification that the citizens of Newark, N. J., are doing themselves honor by projecting the erection of a statue to his memory. Such are the men who deserve to be thus perpetually honored and remembered by successive generations—industrial benefactors, who unselfishly labor to promote Progress and benefit their fellow men.

Judson, of Branching Corn notoriety, was recently tried in Illinois in a suit to recover damages resulting from the purchase of seed upon his representations, and muleted to the amount of $750 and costs of suit. This is one case. He is likely to be followed up in this way. The ultimate profits of swindling are not generally large, and we hope they will continue to grow smaller.

The Farmers' Club of the American Institute meets for the last time prior to the usual Summer vacation, Tuesday, June 11th, when it adjourns until the first Tuesday in September. We are glad to announce that the genial Commander of the Club, Hon. NATHAN C. ELY, has so far recovered from his recent illness as to be able to resume his place as presiding officer.

The Rural Club of New York is to partake of its June dinner, talk of evergreens, and enjoy a social reunion at Delmonico's, June 18, at seven o'clock. S. B. PARSONS and ANDREW S. FULLER are announced as the speakers. Probably, the causes which have proved so fatal to thousands of evergreens throughout the country will be discussed.

THE SEASON, CROPS, PRICES, ETC.

Hancock Co., West Va., June 4.—We have had a very dry spring; only a few light showers. Wells and springs are lower than ever before known. Wheat will not make more than one-fourth of a crop. Oats very short. Corn very backward, many fields almost ruined by cut-worms. Hay will not be more than one-half crop. Apples are looking well—expect a full crop; peaches nearly all killed; grapes promising. Corn, 65@70c.; wheat, $2; oats, 50c., rye, $1; hay, $20@25 per ton; straw, $16.—C. B.

Upperville, Fauquier Co., Va., June 3.—We have had distressingly dry weather for more than a year. Never, within the memory of the oldest citizens, have we experienced such a cold and dry spring. Wheat will be almost a failure; it will not get high enough to cut and save. The grass fields look very bare and dry—at a distance, most like plowed land—entirely died out in spots. Cut-worms destroying all the corn that was planted on clover or sod land. Farmers are now very busy furrowing out to plant the second time. Medium supply of fruit; cherries very small and wilted from the drouth. The old crop of corn nearly exhausted; worth from 90c. to $1; flour, $12 per bbl., and very scarce. In fact, we are in rather a bad fix. We are a little like the boy at school when he was asked at noon to join in a game. He declined, saying, "I can neither bet nor play, for I have neither money nor marbles."—G. S. A.

Sedalia, Mo., May 29.—Rain! Rain! Rain! Such a Spring, I presume, never before was witnessed in Missouri, for water, at any rate. Very little fall wheat in—looking badly; oats, half crop sown, doing well; corn, very little planted, and most all that is in the ground will have to be replanted. Grass bids fair to make a heavy yield. Peaches, apples, cherries strawberries, etc., make a promising show now. Wheat, $1.75; corn, 50c.; oats, 40c.; hay, $10; strawberries ripe, and selling readily at 50c. per quart. Raining this 9 A.M.—JOE.

Trenton, Oneida Co., N. Y., June 1.—Mean temperature for the month of May, 54° 29'. Highest point attained, 78°; lowest, 35°. Number of days on which rain fell, 10; amount of rain fallen, 4 18-100 inches; white frosts 5th, 13th, 14th, 15th and 16th. First violet the 12th. Snow disappeared in the "Gulch," on the lands of POST CURRY, in South Trenton, the 22d. Swallows came the 19th. Frost entirely out of the ground the 20th. One day of thunder and lightning. Prevailing winds, west; 12 days of east winds.—STORRS BARNOWS.

Artesia, Lowndes Co., Miss., May 28.—We have just had a fine rain, after a dry spell of about six weeks. The dry weather killed out the oat crop, and a good deal of corn died from being sucked to death by the chinch bug; but the corn looks fine now after the rain. We commence planting corn here about the first of March, and cotton about the last of March and the first of April; the latter crop is in good fix, and looks fine. The people through this part of the country have planted a good deal of clover since the war, and it does finely down here. Can any one of the RURAL readers tell me whether or not the old clover, where there is not a stand, if turned under next winter, will come out again, (the object being to sow more clover where there is not a good stand)? There is a great scarcity of tenants and farm laborers here. There is plenty of land through the country to rent and to sell cheap, and on good terms. We want good, honest, and industrious farmers to come, and will hail their coming with delight. I have in my employ a good many colored people; like them as laborers, and intend to keep them, if I can.

RURAL BREVITIES.

H. A. STICKLE is recommended to purchase HERBERT'S "Hints to Horsekeepers" price $1,75.

THE people of Southern Utah have already commenced fighting grasshoppers. Where are their turkeys?

A WESTERN Agricultural paper publishes an illustration of The "Jucunda or Agriculturist Strawberry." Which?

THE next meeting of the National Agricultural Congress (which recently met at St. Louis,) is to be held May 22, 1873, at Indianapolis, Ind.

M. L. SULLIVANT, Ford Co., Ill., plants twenty thousand acres of corn this year, and will employ 175 men on his farm, all of whom must be unmarried, sober and industrious.

WE call the attention of those of our readers interested in dairy stock to an article in our Herdsman Department from Mr. WILLARD. It will answer several questions received.

The Cincinnati Exposition this year devotes a building 140 by 150 feet exclusively to horticulture and fruit, and offers premiums of between $3,000 and $4,000 in this department alone.

X. A. WILLARD of the RURAL NEW-YORKER has been engaged to deliver the annual literary address at the anniversary exercises of Fairfield Seminary, June 18th, 19th, 20th. The school is one of the oldest in the State.

BROTHER BEDELL of the Crown Point (Ind.,) Register, has a veritable help-meet, as will be observed by the plan and description of his residence on our 1st page. Regret that lack of space compels us to condense, if not mutilate, Mrs. B's description.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

"Burnett's Toilet Preparations will speak for themselves."—*Charleston Mercury.*

Various Topics.

JAMES GORDON BENNETT.

JAMES GORDON BENNETT, the founder of the New York Herald, and the most successful journalist in America, died at his residence on Fifth avenue, New York, on Saturday, the 1st of June, in his 72d year. He was born about 1800, of French parents, at New Mill, Keith, Scotland, in the faith of the Catholic Church; and was educated for the priesthood, at Aberdeen. In April, 1819, he left his home for America, landing in Halifax with $25 in his pocket, and not a friend on all the Continent. Mr. BENNETT sought for employment in Boston, New York, Philadelphia, and Charleston, S. C., with indifferent success, as a school teacher, editor, and printer. He was always an industrious, hard-working ,indomitable man, never afraid to do what his hands found to do. Not until he started in business for himself, as editor of the Herald, which he founded May 6, 1835, did success begin to crown his efforts. In the early days of that sheet he overcame more obstacles, and endured more abuse and opposition than most men would have withstood. Mr. BENNETT commenced his successful career with the Herald in an exceedingly humble manner, doing all of his office and editorial work, acting even as a reporter and office boy. From such small beginnings sprang the mighty Herald of to-day, and the colossal fortune which it brought. The story of his life is one of obscure beginning, ambitious purposes, industry, hard work, perseverance, strict temperance, sturdy independence, boldness, shrewdness, enterprise, and journalistic tact. He made the greatest *news*-paper the world has ever seen, and infused a new blood of enterprise into all the journals of America. The ruling passion of his paper was for news, and its reputation has been maintained until this day. When in the vigor of manhood Mr. BENNETT wrote most of the brilliant editorials for the Herald—for he held the pen of a ready writer. Five years ago he withdrew entirely from the active management of the Herald, which now falls to his only son, who has been trained to follow in the footsteps of his father as a successful journalist.

Mr. BENNETT was a recluse, seldom seen in public, and he kept himself independent of all party ties, and refused to appear in public as a lecturer or for any other purpose. Few public men of to-day have ever seen him, and to the citizens of New York his face was almost unknown. The portrait of him which we this week present to our readers is a very good representation of the man as he was when somewhat younger than at the time of his death. He was not prepossessing in appearance; was tall; had reddish hair, and an unfortunate cast in his eyes which gave him a peculiar expression. He was one of the most untiring workmen of the age—a man of deeds, who had a completely successful life, viewing it from his standpoint. His aim was to make a great newspaper, and he succeeded far beyond his expectations. He leaves as a monument the New York Herald. At the time of his death his wife, son and daughter were in Europe, where he expected to join them during the present month.

THE MARQUIS OF BUTE.

THE Marquis of Bute, who was recently married in London to a daughter of Lord Howard, is one of the wealthiest of England. He inherited a princely property, and, during his minority, the accumulations were very great. He owns four magnificent residences. Mount Stuart, romantically situated on the Island of Bute; Cardiff Castle, built in the eleventh century, wherein Robert, Duke of Normandy died, after being a prisoner in it for 28 years; Dumfries House, Ayr, and London Castle, Kilmarnock. The Bute docks at Cardiff, entirely his property, are 65 acres in area, and cost upward of $5,000,000. He also owns most of the Island of Bute, and other landed property of great extent and value. The title of the Marquis of Bute gives him a precedence of all but princes and dukes. The family motto is *Avito vivet honore*.—"He flourished in an honorable ancestry." Lord Howard, whose daughter the Marquis has espoused, is a member of the Catholic house of Norfolk, and has been in the British House of Commons. He is in his 55th year, and married twice, his second marriage taking place one year after the death of his first wife. The bride is in her 19th year.

No man can get rich who lounges in stores and saloons.

JAMES GORDON BENNETT.

WALKING COSTUMES.

HEREWITH we give illustrations of fashionable Walking Costumes. Fig. 1 shows a walking costume of linen, pique, or plain cambric, with scalloped flounces and tunic and vest front basque further ornamented with braiding. Fig. 2 is a costume especially suitable for the seaside or the country. It is of two shades of fawn colored Cashmere, with hat of batiste or linen, tied down with a black velvet ribbon.

THE Dolly Varden blouse is made of a light quality of linen and has a strip of delicately sprigged chintz laid on over the plaits, collar and cuffs of the chintz.

POOR Carlotta is getting worse. Her mental and physical condition are alike hopeless, and it is likely that her sad and troubled life will speedily end.

IN RUSSIA the *trousseau* of the bride is exhibited to the gaze of admiring envy the day before the wedding.

LATE WALKING COSTUMES.

LAND POOR.

BY ROBERT ROLLINS.

I'VE had another offer, wife—a twenty acres more,
Of high and dry prairie land, as level as a floor.
I thought I'de wait and see you first, as Lawyer BRADY said,
To tell how things will turn out best a *woman* is ahead.

And when this lot is paid for, and we have got the deed,
I'll say that I am satisfied—it's all the land we need,
And next we'll see about the yard, and fix the house up some,
And manage in the course of time to have a better home.

WIFE.

There is no use of talking, CHARLES—you buy that twenty more,
And we'll go scrimping all our lives, and always be *Land Poor*.
For thirty years we've tugged and saved, denying half our needs,
While all we have to show for it is *tax receipts and deeds!*

I'd *sell* the land if it were mine, and have a better home,
With broad, light rooms to front the street, and take life as it come.
If we could live as others live, and have what others do,
We'd live enough sight pleasanter, and have a plenty, too.

While others have amusements and luxury and books,
Just think how stingy we have lived, and how this old place looks.
That other farm you bought of WELLS, that took so many years
Of clearing up and fencing in, has cost me many tears.

Yes, CHARLES, I've thought of it, a hundred times or more,
And wondered if it really *paid* to always be *Land Poor;*
That had we built a cozy house, took pleasure as it come,
Our children, once so dear to us, had never left our home.

I grieve to think of wasted weeks, and years and months and days,
While for it all we never yet have had one word of praise.
Men call us rich, but we are poor—would we not freely give
The land, with all its fixtures, *for a better way to live?*

Don't think I'm blaming you, CHARLES—you'r not a whit to blame,
I've pitied you these many years, to see you tired and lame.
It's just the way we started out, our plans too far ahead;
We've worn the cream of life away, *to leave too much when dead.*

'Tis putting off enjoyment long after we enjoy,
And after all too much of wealth seems useless as a toy,
Although we've learned, alas too late! what all must learn at last,
Our brightest earthly happiness is buried in the past.

That life is short and full of care the end is always nigh,
We seldom half begin to live before we're doomed to die.
Were I to start my life again, I'd mark each separate day,
And never let a single one pass unenjoyed away.

If there were things to envy, I'd have them now and then,
And have a home that was a home, and not a cage or pen.
I'd *sell* some land if it were mine, and fit up well the rest,
I've always thought, and think so yet—*small farms well worked are best.*

Our Story-Teller.

"I CANNOT AFFORD IT."

MR. ST. JOHN entered the fashionable dry goods store of "Lovering & Brothers," to see one of the proprietors. He had stepped out for a moment, one of the clerks informed him.

And withdrawing to an obscure corner, he stood watching with a half-amused, half-comical look upon his handsome face, the streams of gaily attired women that floated past him, gazing with envious and admiring eyes upon the rich fabrics of every hue and texture, that were suspended from the ceilings and spread out upon the broad counters.

Many of them were known to him, but he was in no mood to meet the sparkling glances and gay sallies that he knew would be showered upon him if he made them aware of his presence; for Mr. St. John was rich, and a bachelor, and had been so flattered and besieged by ambitious mammas with marriageable daughters as to make him almost resolve to always remain one.

So he stood back in the shadow, marking with curious eye unconscious betrayals of the natural dispositions, like glimpses of feminine human nature, and which the dear creatures would not have had him observe for the world.

As he stood there, the two Misses Parker came in, charming and brilliant girls, in whose society he had passed many a pleasant hour.

They were lavish in their purchases, and as Mr. St. John contrasted their smiling countenances with the careworn face of their father, whom he met in the street scarcely an hour before, hurrying from one friend to another to borrow money to pay a note on the point of being protested, their lively chatter jarred harshly on his ears.

"Isn't it lovely?" exclaimed one of the sisters, holding up some costly trimmings. "I suppose pa will scold when he sees the bill; but so he would if it were only half as large."

"To be sure he would," responded the other.

"And I'm not going to let the Dayton girls outshine me, you may be certain. It is my belief they gave that party simply on account of St. John's return from Europe. I suppose they are trying to catch him for Georgiana. Did you ever hear anything so ridiculous?"

"Never! Such horrid taste as the girl has in dress, too! She showed me the new silk she is going to wear. Would you believe it, it is blue! And she as dark as an Indian."

"That is for the benefit of Mr. St. John; it is his favorite color. I met him on the street yesterday. How tall and handsome he has grown!"

"Yes, and he is so rich! Pa says he is worth half a million, if not more."

Here the two girls passed along out of sight and hearing, quite unconscious of the proximity of the subject of their remarks.

"Good heavens!" was Mr. St. John's inward reflection; "are all women so heartless, so wrapped up in vanity and display?"

He was about to leave the store in disgust, when his attention was arrested by a low, gentle voice, which raised a host of vague but pleasant recollections. He turned eagerly in the direction whence it proceeded, and his eyes rested upon a slender, neatly attired lady; they lighted up with pleasure.

A woman would have noticed that the bonnet, though neat and fresh, was not of the latest style, and the mantle of last season's fashions; but men rarely observe such things. All that St. John saw was the graceful form and fair and gentle face of the wearer.

"Sweet Rose Lennox!" he thought, "she looks as lovely and fragrant as her name! Can her fresh and guileless nature be so perverted as to care for nothing but outward show?"

In the meantime Rose made a few simple purchases, quite unconscious of the eyes that were following her every motion.

"Is that all, Miss Lennox?" said the clerk.

"All, to-day."

"If you are thinking of getting a dress, I will show you something that will suit you."

"As I cannot purchase, I will not trouble you," was the low and quiet reply.

"No trouble at all, Miss," said the clerk, unrolling the goods, and spreading it out on the counter.

It was a heavy, lustrous silk—brown with a glint of gold in it, not unlike the color of the soft hair that shaded her forehead.

It caught the eye of the Parker girls, who were passing, and they gathered eagerly around it.

"It's just the sweetest thing I ever saw," said the oldest, enthusiastically.

"Why don't you get it, Rose? You have nothing for the party next Thursday, and it's just what you want."

"Only four dollars a yard," suggested the clerk, gathering up the heavy folds, so as to display its lustre and beauty.

There was not the slightest touch of envy or regret in the soft blue eyes that rested admiringly upon it.

"It is very pretty and quite reasonable, but I CANNOT AFFORD IT."

These words, spoken so quietly, and with such an unconsciousness that she was admitting anything painful or humiliating, and with the wonder it aroused in the hearts of her companions was mingled an involuntary respect, though it was conduct they could not have imitated, and but vaguely comprehended.

St. John made inquiries in regard to Mr. Lennox the next day, and learned that he had sustained some heavy losses, but was still supposed to be doing a great business.

Presuming on former acquaintance, he resolved to call at his house.

Despite the adulation he had received and his really personal advantages, St. John was no coxcomb, and well knew that with a girl like Rose Lennox he must stand on his own individual merits. So, not venturing to call for her who was uppermost in his thoughts, he was shown into the family sitting-room, where Mr. and Mrs. Lennox sat with their oldest children.

Rose was among them, and the blush that mounted to her cheek, the bright smile that she gave him, as their eyes met, spoke a warmer welcome than even a father's extended hand and cordial greeting.

But having testified by her looks rather than words her pleasure at seeing him, Rose left the entertainment to her parents, and, disappointed as St. John was, he could not but admire her utter unconsciousness that his visit was intended for her, and absence of all desire to attract his notice. As he talked with her father, his eyes wandered to the place where she sat sewing; noting every expression of the pure, young face, even to the quiver of the golden-brown lashes that shaded the rose-tinted cheeks, especially the sweet, womanly charm of her low, quiet tones, and gentle movements.

The richest party robe never looked half so lovely as that simple home-dress of brown merino, worn with no ornament, save a dainty ruffle at the wrist and throat.

"You will be at Mrs. Dayton's to-morrow evening?" he contrived to say, as he took his leave.

"No, I am not going!"

A shade of disappointment crossed St. John's face, almost immediately followed by a gleam of satisfaction as a happy thought struck him.

The next evening Rose was sitting in the parlor, quite by herself.

Her mother was up stairs with the younger children, and her father preparing to go out. Mr. Lennox looked in upon her a moment as he passed through the hall.

"Do you regret your decision in regard to the party, my daughter?"

"No, indeed," returned Rose, smiling brighly into the careworn face.

Mr. Lennox laid his hand lovingly upon her head. "My blessing! if I pass successfully through this crisis it will be owing to the strength you have given me."

"Are things looking any brighter, papa?"

"A great deal brighter, my child. You know I told you that I could retrieve my losses if I had time. Mr. Hart, my principal creditor, has offered to give me six months. It was owing to something Mr. St. John said to him. He is a noble hearted young man. God bless him."

The heart of Rose echoed this wish, as her father hurried away. For the first time regrets mingled with her thoughts, as she reverted to the gay gathering, from which she was debarred.

"I suppose he will be there," she murmured.

"A gentleman to see Miss Rose," said Katy, opening the door.

Rose lifted her eyes and the object of her thoughts stood before her.

"Not sorry to see me, I hope?" said St. John, taking her unresisting hand in his.

"Sorry?" Rose turned her eyes around that he might not see how softly radiant they were. "Oh, no," she faltered; I—I was only surprised. I thought you would be sure to be at Mrs. Dayton's this evening.

"Shall I tell you why I did not go?" inquired Mr. St. John, as he took a seat by her side.

The cheek of Rose grew as red beneath that earnest gaze as the flower for which she was named.

"I was just thinking about you, and wishing that I could thank you for the kindly office you performed for my dear father."

"I am going to ask him to perform for me a far more kindly one; to give to my keeping the brightest and sweetest rose that ever bloomed. When he asks me what your wish is, oh, Rose—if I could only say my Rose—what shall I tell him?"

What Rose told could be easily inferred by one who looked in upon the two a few minutes later, and saw how quietly the head of Rose reposed upon St. John's shoulder, as though it were the most natural resting-place it could find.

Rose was as modest as lovely.

"I don't see how you came to choose me, Paul, when surrounded by so many brilliant women."

"Who would so gladly do their best to dissipate my fine fortune," returned St. John, laughing.

He then told Rose of the little scene he had witnessed in the store of "Lovering & Brothers," and he had resolved then and there to do his best to win her, who, when tempted to expenditures beyond her means, had the strength of mind to say:—"I CANNOT AFFORD IT."

LAVATER says that you never know a man until you have divided an inheritance with him. I would also say that you never know a man until you have got into a scrape with him, and can see whether he is willing to take a fair share of the blame.

A LEAP YEAR ROMANCE.

A ROMANTIC marriage was solemnized in St. Paul's Church, in East 117th street, recently, the couple being Mr. Thomas Fagan and Mrs. J. Read. It was the climax of a case of love at first sight, and the raising of a poor young man to affluence.

Mr. Thomas Fagan is the son of the late James P. Fagan, who was Superintendent of Ward's Island. Young Fagan led a lively and fast life previous to his father's death, and thus naturally incurred the old gentleman's displeasure. He was cut off with a shilling. Thomas then sensibly went to work to earn an honest living. Being young, of prepossessing address, he soon obtained employment with Mr. Patrick Martin, a house-painter in Harlem.

About this time he was sent by his employer to brighten up the interior of the lonely dwelling of the buxom widow of the late Joseph Read, a gentleman who had acquired a large fortune in Washington Market. The widow was decidedly taken with young Fagan on his first appearance in the house, and watched his work with an apparently deep interest. In fact she followed him from room to room, scarcely leaving him alone for a minute. This made Thomas a little nervous, and, being rather sensitive, he imagined the widow suspected him of dishonesty. The longer Thomas remained in the widow's domicile the closer she watched him. Finally it made him so uncomfortable that he resolved to stand it no longer.

He informed his employer of this state of affairs, and another man was sent in his place. This did not suit the widow, and when the new painter made his appearance, she bade him return to the shop and send Fagan to do the work, saying that she wanted him and none other to work for her. Fagan was accordingly sent to finish the job. While Fagan was busily at work, Mrs. Read stepped up to him and asked him whether he was married. On being answered in the negative, she said:—"Then I am going to take advantage of the leap-year, and make you a proposition of marriage."

"But, my dear madam," said the young man, blushing to the roots of his hair, "you must surely be joking; we are strangers, and I am sure that you do not mean what you say."

"If you think I am joking and do not mean what I say, just put on your coat and go with me to my lawyer, and I will make over to you $50,000 worth of property," said the bouncing widow.

Young Fagan, convinced by her manner that she was in earnest, straightway accompanied her to the lawyer, and a deed was drawn up giving to Fagan $50,000 worth of property, which he was to become possessed of on the day of the marriage. Fagan, after the agreement had been made, gave up his work. He can be seen daily riding through the city behind a fast horse, which draws a stylish turnout, and he is one of the best dressed men to be seen on the street. Whenever he meets one of his old chums, he hails him and says, "Well, boys, this is better than painting, eh?"—*New York Sun.*

ODD CHANGES OF MEANING.

A CORRESPONDENT of Notes and Queries writes as follows of the changes of meaning that often take place in the lapse of time in words and phrases:

"The first verse of Dean Whittingham's version of the 114th Psalm may be quoted as a curious instance of a phrase originally grave in its meaning, becoming strangely incongruous:

"'When Israel by God's address
From Pharoah's land was bent,
And Jacob's house the strangers left,
And in the same train went.'
—*Manchester paper.*

"I had just read the above, when, glancing at an American paper on my table, I found the following 'from a correspondent:'

"'Some introductory lines in Southey's "Thalaba" require correction. They read as follows:

"'"Who at this untimely hour
Wander o'er the desert sands?
No station is in view."'

"Now this is no longer true. The Great Desert is crossed by a railway, and there are several stations. The editor advises that in any future edition of Southey the present altered state of things should be shown by a note."

Many other instances may be adduced in which a comic effect is produced in a passage of grave and even lofty diction by the use of some phrase which has become slang. Thus in the opening of one Dean Milman's theological works it is written, "The great drama of the Hebrew dispensation had been *played out.*"

Read not books alone, but men, and chiefly be careful to read thyself.

Sabbath Reading.

"WORDS FITLY SPOKEN."

BY ETHEL DANE.

"A WORD fitly spoken is like apples of gold in pictures of silver."—*Proverbs.*

GOD is watching, GOD is waiting,
He will judge you by and by,
For the words you *might have spoken*,—
Speak them yet, before you die.
Wait not; if a brother falleth
Go and take him by the hand,
Help him gain a foothold somewhere—
Point him to a better land.

Speak the word! but do it kindly,
Let him know that *God is love*,—
That for him so vile and sinful,
There is joy and peace above.
Peace and joy, if he repenteth
From the error of his way—
Hope, and home, and *Heaven for all*,
If we'll only watch and pray.

If your words were "fitly spoken,"
Many a sinner you might bring,
From a world of sin and sorrow
Close to Calvary's cross to cling.
Many a soul that's wandering blindly
In a labyrinth of sin,
Going further from our Father,
By a kind word, you might win.

Speak it then, to all the fallen,
Howe'er base or low they lie—
For the wrong by them committed,
JESUS' blood can rectify.
Let your path be e'er so humble,
There is work for you to do—
Do it bravely, never faltering,
Keep GOD'S kingdom still in view.

STINGY CHURCHES.

GRATUITOUS preaching makes selfish, ignorant, and indolent churches. A congregation votes its own destruction when it decides to "get along" with a preacher who costs them little or nothing, and earns just as little as he gets. A cheap minister is bad economy. Churches which adopt this policy are invariably in the background in all their operations. The congregations are small, and struggle along late to the place of worship, the singing is miserable, the prayer-meeting thin and dull, the Sunday schools, if they have any, of little account, unless conducted by outsiders, the houses of worship are badly warmed and not half-lighted, the communion vessels are bottles and common tumblers, they do nothing for missions, take but few religious papers, are without books or musical instruments in their families, their children run wild in sin and folly, and general disregard of religion prevails. In one thing such churches excel—that is, in quarrel. They are usually split into factions, and abound in committees, councils, discipline, and exclusions. They fight each other when they ought to be working to save souls, exclude members when they ought to be gathering them in, destroy churches when they might build them up. Hundreds of such churches can be found all over the country, while hundreds have already become extinct, died of ignorance in the pulpit and stinginess in the pews.—*Baptist Union.*

SILENT INFLUENCE.

WE are touching our fellow-beings on all sides. They are affected for good or for evil by what we are, by what we say and do, even by what we think and feel. May flowers in the parlor breathe their fragrance through the atmosphere. We are each of us silently saturating the atmosphere about us with the subtle aroma of our character. In the family circle, besides and beyond all the teaching, the daily life of each parent and child mysteriously modifies the life of every person of the household. The same process, on a wider scale, is going on through the community. No man liveth to himself, and no man dieth to himself. Others are built up and straightened by our unconscious deeds; and others may be wrenched out of their places, and thrown by our unconscious influence.

NOTHING that is truly great can ever be altogether borrowed; and he is commonly the wisest, and he is always the happiest, who receives simply and without envious question whatever good is offered him, with thanks to its immediate giver.—*Ruskin.*

WE celebrate nobler obsequies to those we love by drying the tears of others, than by shedding our own; and the fairest funeral wreath we can hang on their tomb, is not so fair as a fruit-offering of good deeds.—*Jean Paul.*

KIND words, spoken in the right time and place, do more to heal the wounded spirit than all the gold this world can give.

Ladies' Port-Folio.

WHY THE ROSE IS RED.

THE rose, of old, they say, was white,
Till Love, one day, in wanton flight,
Flirting away from flower to flower,
A rose tree brushed, in evil hour.
The spreading leaves concealed a thorn
By which the boy-god's foot was torn.

The precious drops in plenteous flow
Fell on a rose's breast below,
And all her snow-white virgin pride
In blushing pure carnation died,
To tell to future times unborn
How Love was wounded by a thorn.

Sobbing with pain and weeping dew,
The wounded boy to Venus flew;
But few the ills which boys endure
A mother's kisses cannot cure:
And for such pleasure after pain
Love would be often pricked again!

THE WELL OF BEAUTY.

A STORY FOR YOUNG FOLKS.

BY C. H. C.

BETWEEN two forest-covered mountains, on the Emerald Isle, was a narrow valley, into which the sun shone but six hours of a Summer's day. Beautiful flowers and luxuriant trees flourished here, and multitudes of musical birds built their tiny nests and reared their young unmolested. Near the center of this lonely valley, beneath a drooping willow, whose long, weeping branches mingled with the rich grass, was a deep well, whose clear, cold waters occasionally overflowed its brink, bubbling and boiling as if a great fire was beneath. Wondrous power and strange virtues were ascribed to this well of the valley—and among other things it was said to have the gift of rendering perfectly beautiful the maiden who would bathe her face in its waters at twelve o'clock on a midsummer's night.

On the side of one of the mountains stood a rustic cottage, the abiding place of KATHLEEN BURNS, a young and gay lassie of nineteen summers. Although well-formed, lithe and active, KATHLEEN was very far from being handsome; her cheeks were thin and pale, and her eyes, though blue as the bluest, had very little expression. Greatly she mourned over her want of beauty, and many were the sleepless nights she passed after coming home from a Fair or dance, where lovelier maidens dazzled the eyes of the young men, and received all their attentions, leaving herself, and others who had little claim to beauty, alone and unnoticed. But a stronger reason than this caused KATHLEEN to long for the fatal gift —*she loved*. For two years her affections had been given secretly to a youth who dwelt near her, but who had never bestowed upon her a thought of more than friendship.

Poor KATHLEEN! had beauty been given her EDWIN MCLANE would perhaps have loved her when he became acquainted with the excellence of her character and disposition; but, *man like*, not being attracted by her personal appearance, his thoughts seldom rested on her. And so KATHLEEN loved on, in silence and in secret, like many another woman—no ray of hope brightening her path. Her greatest consolation was that happiness *might* yet come to her, if not on earth, perhaps in heaven!

KATHLEEN had, from earliest childhood, been aware of the reputed virtues of the well of the valley, but up to the present time had felt a sort of supernatural dread of touching its magic waters on the eve of midsummer, the only time it was thought to have the power of conferring lasting beauty upon her who bathed therein. But, loving and suffering as she now did, her love and her pain increasing every day, KATHLEEN determined that the approaching epoch should not pass without finding her kneeling beside the Well of Beauty.

The twenty-first of June had at length arrived. The day was unusually calm and lovely, and the night that followed was still more so. The moon shone clearly and brightly from her unclouded path in the sky, and the softest of evening breezes gently stirred the glimmering leaves of the tall trees, where silent birds were sleeping with heads beneath their tiny wings. There was no sound to break the holy stillness, save the chirrup of the cricket or the mournful katy-did, and the distant, plaintive cry of the whip-poor-will. The midnight hour was near at hand, when KATHLEEN left silently and tremblingly her cottage home and wended her solitary way down the side of the mountain towards the quiet, moonlit valley. She was dressed in pure white, her auburn hair fell in long curls around her shoulders, and her blue eyes were filled with a light of hope that almost rendered them beautiful. She moved onward like some wandering spirit, filled with unrest, and paler grew her wan cheek as she neared the magic well. There it lay beneath the drooping willow tree, the thick, soft grass growing to its very edge, its cold, bright waters bubbling tumultuously. KATHLEEN paused and hesitated. Her lips trembled as she stood gazing — fascinated by the sight! Just then upon her ear fell the deep sound of a distant abbey bell, chiming the hour of midnight. Should a foolish dread prevent her from seizing the propitious moment? She knelt down, and was about to dip her hands and face in the bubbling waters, when a voice, as if from another world, caused her to start and look upward.

"Pause!" said the spirit-voice—for such she imagined it to be—"Thou needs't not bathe in the blessed waters! Beauty may be thine without their aid."

"How?" escaped almost unconsciously from the maiden's trembling lips.

"True beauty is an emanation from the soul. Look inwardly! Be humble in mind, be pure in thought, be innocent in deed, and thou wilt grow beautiful. A pure soul shineth from the eyes and irradiates the whole countenance. Go home. Let thy life be blameless, cultivate every amiable feeling, every virtue, every sentiment that is noble and exalting, and although days and weeks may pass ere the end be accomplished, the hour will come when the desire of thy heart will be granted thee."

KATHLEEN listened, entranced. The voice was silent, the waters of the well grew suddenly calm—and the moon sailed pensively behind a cloud. The maiden rose from her knees a new being. Already there was a change in her countenance. Her blue eyes shown with a happy light, and her cheeks were mantled with a beautiful crimson. She was no longer pale, listless, plain. From that hour she was happy. She strictly followed the dictates of that spirit-voice, and, to the wonder of all that knew her, became daily more and more lovely. The light of purity and goodness irradiated her countenance—the light of hope beamed from her brow—and ere long her friend, EDWIN MCLANE, became, in spite of himself, irresistibly drawn towards her: in short, soon was her devoted lover, and the once sorrowful maiden, drooping with "love's melancholy," was at last a radiant bride, blessed with her beloved.

Sycamore Villa, New Utrecht, L. I.

OLD MAIDS GOOD AND AMIABLE.

A QUAINT and gallant writer of some fifty years ago, says:—"I love an old maid—I do not speak of an individual, but of the species —I use the singular number, as speaking of a singularity in humanity. An old maid is not merely an antiquarian, she is an antiquity; not merely a record of the past, but of the very past itself, she has escaped a great change, and sympathises not in the ordinary mutations of mortality. She inhabits a little eternity of her own. She is Miss from the beginning of the chapter to the end. I do not like to hear them called Mistress, as is sometimes the practice, for that looks and sounds like the resignation of despair, a voluntary extinction of hope. I do not know whether marriages are made in heaven; some people say they are, but I am almost sure old maids are. There is something about them which is not of the earth, earthly. They are spectators of the world, not adventurers nor ramblers; perhaps guardians; we say nothing of tattlers. They are predestinated to be what they are. They owe not the singularity of their condition to any lack of beauty, wisdom, wit, or good temper; there is no accounting for it but on the principle of fatality. I have known many old maids, and of them all not one that has not possessed as many good and amiable qualities as ninety and nine out of a hundred of my married acquaintances. Why, then are they single? It is their fate!

HENRY WARD BEECHER said to his congregation in a sermon on home-life and hospitality, Sunday, "I honor the woman who comes to me when I call, in a dress suited to her work. I don't like to sit buried in plush in the parlor waiting three-quarters of an hour for a toilet. What is good enough for you is good enough for your friends."

A LADY writer says, if women were as particular in choosing a virtuous husband as men are in selecting a virtuous wife, a moral reformation would soon begin, which would be something more than froth and foam.

HELP others when you can, but never give what you cannot afford to, simply because it is fashionable.

Reading for the Young.

OUR LETTERS FROM BOYS AND GIRLS.

Nellie's Home and Flowers.

DEAR MR. RURAL:—I want to tell you a little about the place I live in. The house is of stone, one part of it over a hundred years old; that part is our sitting-room, and a pleasant one, too. On one side of the room stands the piano; on the west side a table with books, a sewing machine and mamma's sewing chair. She has no stand to put her work on, because the window seats are so broad she can use them. On the next side to this is a lounge, which is so large it nearly fills the whole side. On the last side stands the book case, by the side of the door, which opens on a piazza sixty feet long towards the south. As you step on the piazza you hear Ned, my bird, singing away from his cage and looking down on the flowers. Just in front of the house is a large, square bed of myrtle, and around it a variety of perennials. A paved walk leads to the kitchen, and below the walk is a triangular bed of flowers. A large climbing bush on a frame forms the center, while around it are Balsams, Asters, Salvias, Lupins, Coxcombs, French Clovers, Larkspur, Columbines, Zinnias, Stocks, and quite a number of perennials. We have two more large beds, a round and a square one, but they have nearly the same flowers as the others. I have a great many roses, among them the Damask. I have lots more to tell the RURAL little folks, but I will save it for another time.—NELLIE R., *Catskill, N. Y.*

From a Canadian Girl.

THIS is the first year Pa has been a subscriber for the RURAL NEW-YORKER for a long time. I have read the children's letters, and have been much pleased with them, but have not noticed any from Canada, so I thought I would make a commencement. We live near the village of Grimsby, on Mount Dorchester, but it is not much of a mountain, it is only a ridge which extends along near Lake Ontario. We have a very beautiful view of the lake and the surrounding country. We can see the city of Toronto, at a distance of forty miles, and several villages on the opposite shore. Pa has got the North Carolina fever, and wants to go South where the weather is more mild, but Ma won't go with him, and we think he is convalescing a little since the Spring opened. But I must tell you of our Band of Hope, of which we have about forty members. We meet Friday evenings, and we have readings, recitations, dialogues and various other amusements. I would like to know if any of the other correspondents of the RURAL belong to the Band of Hope. I have read Cousin JOHNNIE'S letters, and like them so much that I hope she will write often. As this is my first letter, I will make it short, or I will not have anything to tell next time.—WILD FLOWER, *Grimsby, Canada.*

A Young Louisiana Housekeeper.

DEAR RURAL:—My father takes the RURAL NEW-YORKER, and I like to read it very much, especially the letters from the boys and girls. I have long been wanting to write one, but could never stir up courage enough to do so until now. I like to read Cousin JOHNNIE'S letters. I wish she would write one every week. My dear mother died last October, and so I keep house—wash, iron, and sew—for my dear father and three little sisters. Father sent to Mr. VICK and got me a great many flower seeds. I have a good many Black Spanish and Light Brahma chickens. I like them better than any other kind. Will some one tell me how to press flowers so they will retain their natural color? Also how to make a pretty frame for my Morning Glories, Cypress, and other climbing vines to run on?—IDA A. S., *Tangipohoa, La., May 27, '72.*

A Boy's Idea of Iowa.

C. B. E. of Mt. Pleasant, Iowa, writes to the RURAL NEW-YORKER in admiration of his State and the West as follows: "I expect the young folks in the East, and a good many old folks, think Iowa is a desolate country; but they are very much mistaken. Iowa is the finest country in the world. Farming is now carried on in this section with but little work, with all the modern improvements. Corn, wheat, rye, and potatoes yield good crops, and there is plenty of wood, coal and stone, which makes everything handy. Iowa is cut up with railroads, which gives a good advantage for shipping. Education is now fully equal to the East; colleges, academies and public schools are plenty, and of high standing. There are young men and young ladies from Massachusetts and Pennsylvania attending school here; they think the schools are as good as they are in the East, and they all like to live in the West. I would advise all young men that want to make money to leave the East and come West, for there is a splendid chance. Land is low, and in a few years it will be valuable. It is raising in value every day."

A Request of "Wild Rose."

"HARRY HECTOR," from among the green hills of Vermont, sends a kindly greeting to "Wild Rose," and wishes for her a long and happy life of usefulness. Will she not tell us her real Indian name? If she will, I will give her a string of beads.—HARRY.

THE best thing to give your enemy is forgiveness; to your opponent, tolerance; to a friend, your heart; to your child, a good example; to a father, deference; to your mother, conduct that will make her proud of her son; to yourself, respect; to all men, charity; to GOD, obedience.

The Puzzler.

ILLUSTRATED REBUS.—No. 24.

☞ Answer in two weeks, with the names of those who send correct answers.

PUZZLE.—No. 6.

I'VE eight letters:—My first is worth a hundred; my two next are a preposition; these three make an animal. My three next make a famed Eastern chief; my three last and my four last give female names. Without my last, I'm a notorious Roman. My whole is a woman's name. What is it?

☞ Answer in two weeks, with the names of those sending correct answers.

PUZZLER ANSWERS.—June 1.

SEMI-BUSINESS PARAGRAPHS.

Bottles Full of Beauty.—Ladies, if you would have beauty by the bottle-full, all you have to do is to purchase Hagan's Magnolia Balm. That peerless beautifier of the complexion not only hightens natural charms, but renders even the plainest countenance exceedingly attractive. It recalls to the pallid check the rosy tinge of health, removes pimples, blotches, roughness, sallowness, etc.

Facts for the Ladies.—Mrs. H. B. Taylor, Putnam, Ohio, has used her Wheeler & Wilson Lock-Stitch Machine fourteen years without repairs. In two weeks she earned with it $40, besides doing her own housework; has stitched eighty yards in less than two hours. See the new Improvements and Woods' Lock-Stitch Ripper.

Watch No. 60324—manufactured by United States Watch Co., (Giles, Wales & Co.,) Marion, N. J., has been carried by me two months; its total variation from mean time being seven seconds in the entire time.—G. B. GAVETT, JR., of L. G. Tillotson & Co., 8 Dey St., New York.

Bores, in the guise of Traveling Agents, not employed by us. Thus we sell our scales at such low prices. Sold on trial anywhere in the United States. Free Price List. THE JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, June 8, 1872.

SINCE our last report the Treaty question has been virtually settled between the English Government and our own, and thus a long disturbing element to financial confidence is removed. The settlement, however, has lost part of its moral force on the sentiment of both countries by the bungling diplomacy connected with incidental questions. The fault is not alone on the English side, although most of the vexatious delay is due to the London Government.

The Presidential nomination at Philadelphia is also over and, in connection with the Treaty settlement, has a favorable influence on the Stock Market, while tending to keep within bounds the price of Gold, which had been stiffening on the hitch in the Treaty and on continued heavy Exports of Gold Coin.

The following are the comparative movements of the City Banks for the past fortnight:

	May 25.	June 1.
Capital	$87,151,000	$87,151,000
Loans	283,601,100	281,674,500
Gold and Greenbacks	72,315,700	75,018,700
Deposits	222,454,800	226,070,900
Circulation	27,515,300	27,522,000

PRICE OF STOCKS AND BONDS.

* Ex. Dividend.

The Bank return is stronger than the previous week by $3,000,000 in Gold and Greenbacks, and Money is easier at 6@7 per cent.

The New York Central Scrip is 4 per cent. higher, on the determination of Mr. VANDERBILT to convert the Scrip into Stock after July 10. This will make the Stock $20,000,000 in place of $16,000,000. The other Bonds and also Pacific Mail and Western Telegraph close 1@1¼ per cent. better than our previous table, St. Paul Common being an exception.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, June 7, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 9,151 bales of cotton; Dried fruits, 948 pkgs.; eggs, 12,938 bbls.; flour, 79,200 bbl.; wheat, 17,680 bush.; corn, 1,101,500 do.; oats, 227,400 do.; barley, — do.; grass seed, 150 bags; hops, 123 bales; beans, 467 bbls.; pork, 1,824 pkgs.; cut meats, 2,548 do.; lard, 3,916; kegs do., 359; butter, 18,453 pkgs.; cheese, 42,682 do.; peanuts, 1,336 bags; 1,670 hhds. tobacco; 7,196 pkgs do.; 4,116 bbls. whisky; 1,815 bales wood; corn meal, bbls, 3,430; do. bags, 1,090; rye, bu., 52,324; malt do., 13,750; beef, pkgs., 200.

Beans and Peas.—The amounts of German beans hurt the sale of medium and depress the market for this description. Marrowfats are in few hands and held firmly. Prime mediums $3.25@3.35., fair lots do. as low as $2.80. Prime marrowfats $3.65@3.70; fair lots do. $3. Peas are hard to sell; prime green $1.30@1.35; Canada free in bbls. $1.18@1.20.

Beeswax—Is in fair supply and selling at 40@41c. for Southern.

Butter.—We are now troubled with that perplexing period when buyers will not use State at the prices dairymen wish to realize, as Western completely serves their wants in excellence of quality, color, and abundance, at prices decidedly in favor of keeping trade moving in the retail markets. Receipts are very heavy, and with so much left over from day to day, as there is, dealers call the market dull, and endorse their impression by generally dropping prices for all grades. Western is materially lower, and has fallen daily in prices.

State pails, fine, 30c.; do. common to fair, 25@27c.; State half tubs, fine, 27@28c.; selections, 30c.; Welsh, packages, fine, 26@27c.; common State, 22@25c. Western ranges at 24@24c. for nice Western reserve; common Western, 18@20c. Grease and inferior, 7@15c.

Receipts of butter for May, 65,180 packages. Same month last year, 69,100 do.

Cheese.—There has been a very satisfactory business in this market the past week. Exports last week, 24,200 boxes; same time last year, 21,400 boxes; exports for May, 62,758 boxes; same time last year, 70,900 boxes. We quote fancy factory, 14¾@15c.; good do., 14@14½c.; skimmed as low as 5c.; Ohio factory, 13@13½c., with common at 10c.; Dary at 13@14c. for prime, and common at 6c.

Cotton.—Prices have gone up fully one cent, with large purchases from the speculators. The consumptive trade has been unusually light. At the close the market has reacted, with a depressed feeling.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20¾	20¾	20¾	20¾
Good Ordinary	24½	24½	24½	24½
Low Middling	26	26	26	26
Middling	27	27	27	27
Good Middling	28	28	28	28

For forward delivery latest sales on the basis of low middling, are as follows: For June, 26c.; July, 26⅛c.; Aug., 26⅜c.; Sept., 24⅜c.; Oct., 21⅝c.; Nov., 20¾c.; Dec., 20c.

Dried Fruits.—There is a very fair stock of unpeeled peaches, and prices are weak, with a slow sale. Fine apples meet with some attention, in good part from Western parties, who are buying on speculation; other grades are neglected. Peeled peaches, if prime, will sell at full prices. Blackberries are weak. Apples Old State, qrs., 6@7c.; Western, new, 10@10¼c.; Southern, new, qrs., 9@9¼c.; do. fine, sliced, 12@13c; new State qrs., 11@11½c.; do. sliced, fine, 13@14c.; Peaches, peeled, new N. C., 17@18½c.; do. Ga., 15@16½c.; peeled E. Sh. Va., 15@17c.; new unpeeled halves, 7c.; do. quarters, 4¼@5c. Plums, 27@28c. Cherries, new, ₱ lb., 33@34c. Blackberries, 13c. Raspberries 33@35c.

Eggs.—The market has been in the buyer's favor. For fresh lots, prices are a little better. Sales at 15@16c. for best marks of Western; common do., 13½@14½c.; State, 16@17c.; Jersey, 17@18c.; Southern, 11c.

Flour.—Prices have further declined 50c.; closing with a more settled feeling. The depression has been owing to the reports from Liverpool which speak of the crop prospects as being very favorable we quote at $5.75@6.25 for superfine state; $6.85@7.25 for common extra do.; $7.30@7.35 for good to choice do.; $7.10@7.85 for fancy do.; $5.75@6.25 for superior Michigan, Indiana, Ohio, Iowa, &c.; $6.75@7.35 for extra do.; $7.10@8.30 for choice extra do., including shipping brands of round hoop Ohio at $7.00@7.80, and trade brands of do. at $7.85@9.50; good to choice white wheat extras at $8.30@9.75; Minnesota, fair to very choice extra, at $7.00@$10; St. Louis at $8.00@$10.30 for common to fair extra, and $10.35@$12.00 for good to choice. Southern at $7.50@$10.20 for extra, and $10.25@$14.15 for good to fine. Rye at $4.50@5.50.

Fresh Fruits.—Strawberries have arrived faster than they could be used, and crates that missed sale have sold at a loss. The week has been very rainy, and the ordinary demand has been consequently seriously reduced. About the only good outlet berries have at such times is the restaurant trade and the festivals of societies and churches. To-day, 10@15c. is a full range for a lighter supply than we have had during the week. Large quantities have sold, at 8@12c. Some fancy Triomphe de Gand and Jucunda have sold at 30@35c. Southern N. J. begins to add to the more Southern supply. Cherries are good this year, and selling at 10@15c. Gooseberries slow at $3@3.50 per bushel for small. Apples are unchanged. Peanuts are again lower; Wilmington, $1.25@2.00; Norfolk, $1.40@2.10.

Grain.—Wheat is somewhat lower, but at the close with scarcely any stock coming in holders are firm. No. 1, in store at $1.66@1.70; No. 1 in store at $1.73@1.75; winter red western, $1.90@2.00; amber western, $2.03@2.05; and white western at $2.00@2.10 at Rye is steadily held at 92 for western, afloat and 94 for Canada in bond. Oats sell slowly and prices are weak. Western c 25c. Ohio 5. 55c. Corn has been been in large receipts, and prices have declined, closing firm with a large business from exporters. Sales at 65@66c. for Western mixed. Steamed lots, 69c.@70c. for sailing vessel lots, and 76c.@78 for white Western.

Hay and Straw.—The arrivals have been fair, and prices are lower. Shipping hay, $1.50; retail, $1.55@1.75; salt, $1; clover, $1.10. Long rye straw, $1.25; short, $1; oat, 55c.; wheat, 60@70c.

Hops.—Trade is small. The best lots being in small stock, bring full prices, but common lots rule in the buyer's favor. Prime, 55@65c.; common as low as 25c. Bavarians, 65@75c.; English, 60@65c.

Milk.—Receipts are too heavy for the cool weather June opens with. The supply has exceeded 9,200 cans; the sales have ranged at 90c@$1.00 per can.

Provisions.—Pork is again lower, mainly owing to large receipts of hogs at the West. Western, $13.30 for spot, $13.40 for July; $13.65 for Aug. Western prime mess, $12.50@12.75. Dressed hogs weak, at 5½@5¾c. for city; middles are lower; long clear, 7½c.; short clear, 8¼c. Cut meats dull; hams in pickle at 9@10½c.; in salt, at 9@10c.; shoulders in salt, at 5¼@5½c., and in pickle at 5½@5¾c. Smoked meats are in moderate demand, at steady rates; hams at 10½@13c.; shoulders at 6@6½c., and clear rib at 8@8½c. Lard is firm, with a moderate amount of stock offering; prime Western steam, 9 5-16c. for spot, June, 9 7-16c. for July, 9¾c. for Aug. City at 8¾@8¾c. for steam and kettle. Stearine is quiet, at 9½@10c. for prime Beef is quoted at $7.50@9.50 for Western mess, $10@12 for extra mess. Tierces at $14@17, for prime mess, $17@20 for India mess. Beef hams at $25@26 for Western.

Poultry and Game—Sell rather higher, with moderate arrivals. Pigeons bring $2.25 per doz. for feathered, $3.12½ for stall-fed; squab, $1.25. The quotations are:—Live, State and New Jersey fowls and chickens, 18@19c.; do. Western 17@18c.; roosters, 9@10c.; turkeys, 16@18c.; ducks, Western, per pair, 85c.@$1.00; Geese, Western, $1.62@1.75; spring chicks, 75@$1.12.

Seeds.—There is no business of consequence in grass; 9½c. for Ohio clover; 9¾@10c. for Michigan and Indiana; 10@10¼c. for State; Timothy $3@3.25.

Tobacco.—There is a good export trade for all descriptions at firm prices. Kentucky leaf selling at 8¼@9½c. for lugs, up to 13@16c. for selections; new crop Connecticut at 15@16c. for fillers, and 27@32½c. for seconds; New York at 10@11½c. for running lot; Ohio, 9¾@10¾c. for running lots; Wisconsin, 8¾c.; Havana, 90@$1.15.

Vegetables.—Old potatoes are dull, and drooping Bermudas are higher, as our own Southern are not running good. Green peas are arriving from New Jersey and Long Island. Tomatoes have arrived from Charleston, good at $7@8 per crate. We quote choice Peach Blows, $1.50@1.75; common sorts, $1@1.25; L. I. peas, $4.75 per bbl.; N. J. do. $4.25 per bbl.; Norfolk String Beans, $6.50 bbl.; Bermuda potatoes, $3 per bbls.; New Beets, $12@14 per 100 bunches; do. Turnips, $6 per 100 bunches; new Cabbage, per bbl., $3@5; Southern Potatoes, $5@7.

Wool.—There is a quiet market and rather a weak feeling. Sales of XX Ohio 77@80c.; unwashed at 48c.; Georgia, 55c.; super pulled, 70c.; California, full, $1.15; Cape at 43c.

Whisky—is held firmly at 91c. for Western.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., June, 8, 1872.

THE market at Little Falls for the week ending June 8 was not quite so brisk as for the previous week, but prices remain about the same. The delivery of farm and factory on Monday was 1,400 boxes. Farm dairies sold from 12½c., to 13½c., only a few lots bringing the latter figure.

The factories were largely represented, and the offerings amounted to about 8,000 boxes, a large part of which was sold. We give quotations of leading factories as follows:—Norway Association, 14½c.; Newville, 14½c.; Little Falls Central, 14½c.; Brockett's Bridge, 14½c.; Columbia Center, 14½c.; Cold Brook, 14½c.; Keys, 14½c.; Cook & Ives, 14½c.; Newport, 14½c.; Warren Center, 14½c.; Pain's Hollow, 14½c.; Henderson Home, 14½c.; Vanhornsville, 14½c.; Crum Creek, 14½c.; Countryman, 14½c.; Cold Creek, 14½c.; Mother Creek, 14½c.; A. Smith & Co., 14½c.; Old Fairfield, 14½c.; Fullonville, 14½c.

The delivery of Butter this week has been very light, and sales have been mostly at 27c.

We have advices from abroad for the third week in May. Our London correspondent says:—"American cheese (new) sells, and no good old in market." The quotations for best American, new, are 61@68s., and for other descriptions as follows:—English Cheddar, 60@74s.; Wiltshire double, 65@74s.; Cheshire, medium, 56@70s.; fine, 64@70s.; Scotch, 64@70s. Dutch Cheese—Edams, 44@60s.; Gondas, 44@60s.; Derby shape, 50@60s.

In Butter Normandy extra sells at 112s. to 116s.; Cork's new, 94s.; Jersey and Friesland, 100 to 108s; Canadian, 70s.

The corresponding prices last year were, for American cheese, 70s.; Cork's butter, 122s., and Friesland, 112s. The weather in Herkimer, N. Y., is warm and pleasant, but grass is backward.

GOUVERNEUR, N. Y., June 3.—The following sales of cheese were made to-day:—Cream of the Valley, 130 boxes, 14c.; Gouverneur factory, 178 boxes, 14c.; Hailesborough factory, 84 boxes, 13½c.; Little Bow factory, 115 boxes, 14c.; total, 507 boxes.

HERKIMER, N. Y., June 4.—The delivery of cheese to-day was about 1,000 boxes. Farm dairy sold at 8@14¼c., as to quality. The ruling figures for factory were 13½@14¾c.

LIVE STOCK MARKETS.

NEW YORK, June 6, 1872.

With the exception of hogs, the live stock trade shows a good deal of activity. The weather has been very favorable, and the demand for beef was never before so great at this season of the year. A new and extensive wholesale live stock market has been started at Wichita, Kansas, at the terminus of the Atchison, Topeka & Santa Fe Railroad, which promises to be an important center for the Texan trade.

The following are the receipts of live stock shown in comparison with other years:

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,196	95	3,904	16,077	42,182
" last week	7,918	93	4,358	18,439	42,049
Corresponding week last year	7,172	59	5,008	14,080	18,891
Average last year	7,387	88	2,301	25,132	24,177

Beeves.—We reported a strong market one week ago, with rather improving rates. Notwithstanding a larger supply since, the demand is still very good, and there is an advance close up to ½c per ₱. It has been a long time since we have had as high prices as now reported. The offerings last Monday were 148 car loads at Communipaw, 123 at 100th St., and 22 at Weehawken, making 4,371 head on sale that day. The market was firm, but there was not much advance from the previous rates. It was not until to-day, with 2,433 beeves in the yards, that there was a real advance, amounting to ½c. ₱ ₱., and butchers could not get all the cattle they wanted. Texans were plenty, and sold at 11¾@12¼c., while no decent native steers went under 12½c., and some only medium lots sold at 13c., with prime at 13½c., and even 14c. for the first choice.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ ₱	13¼ @ 13¾	12¾ @ 13
Good to prime	12¾ @ 13¼	12 @ 12½
Ordinary to medium	12 @ 12½	11¼ @ 12
Lowest grade	11¼ @ 11¾	10¾ @ 11
Average sales	12½ @ 12¾	12 @ 12¼

Milch Cows.—There is a little improvement in the fresh cow trade, the advance in beef helping the market. Common cows are very hard to dispose of at any price. Fair milkers sell at $50@55, with prime at $70@80. Some common cows will only sell at $35@40, but that kind is getting scarce.

Veal Calves.—These are doing very well, having advanced about ½c. during the week, there being a scarcity of stock. Fat Jersey calves are worth 8½@9c.; good State veals, 8@8¼c.; common to medium, 7@7½c., with buttermilk and grass calves at 5@6c.

Sheep and Lambs.—With a temporary scarcity, both sheep and lambs are advanced about ½c. ₱ lb., sheep selling at 5@6½c. for very poor, 7½@7¾c. for fair to good, and 7¾@7¾c. for prime. Lambs are now coming from the West, and sell at 10@11½c. for O., 12@13c., for State, and 13@14c. for prime to extra Jersey. A few late sales are given us follows, to convey a better idea of the market, viz.:—117 O. thin lambs, 40 lbs. average, at 10c.; 147 do., better quality, 47 lbs., at 11½c.; 229 Jerseys, 56½ lbs., at 13c.; 45 do., 51½ lbs., 14½c., and 94 do., 57 lbs., 14c. Sheep sales, 189 O., 93 lbs., 7½c.; 414 do., 91 lbs., 7¾c.; 238 at 88 lbs., 7¾c. While lambs are sustained in price, sheep rather droop at the close, and some are left over.

Hogs.—These continue to come forward about twice as fast as they did last year. There were 188,776 hogs received here in May, while for the same time last year we had only 90,022. There is one car of live hogs to report, sold before killing. They were from Missouri, 112 lbs., and brought $4.50. City-slaughtered sell at 4½@4¾c., as extremes, which is ¼c. lower than last week. From all accounts, there are plenty of hogs still to come.

LATEST, June 6th, P.M.—Beeves.—With light receipts to-day, the market is even stronger than it was yesterday, 9 cars 7¾ cwt. Ill. steers selling at 13½@14c., and 4 cars Texans, 6¼ cwt., at $81 each. There is every prospect of high prices next week.

Sheep and Lambs.—The weakness of last night amounts to ½c. decline in sheep to-day, receipts being larger and demand lighter. Lambs are no lower, and sell well, the supply being light.

Hogs.—Dealers have attempted to advance the rates nearly every day this week, but have not succeeded.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages,** is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.
By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely illustrated, and printed and bound in extra style. Contains 221 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

MONEY IN THE GARDEN: A Vegetable Manual, Prepared with a view to Economy and Profit.

THIS Work upon Kitchen and Market Gardening, and the Field Culture of Root Crops, is by P. T. QUINN, Practical Horticulturist, (Author of "Pear Culture for Profit,") and should be owned and studied by every one interested in Gardening. It is an able, practical, profusely illustrated work of 288 12mo. pages. Sent, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Prest. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2. Address

D. D. T. MOORE, 5 Beekman St., N. Y.

MOORE'S RURAL NEW-YORKER is not only a necessity to the farmer, but to the farmer's wife and children. Charmingly illustrated, excellently edited, combining in itself the best elements of both secular and religious papers, it fills a place in every household, and is indeed one of the "must-haves."—*The Guiding Star, Cincinnati, Ohio.*

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and completness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

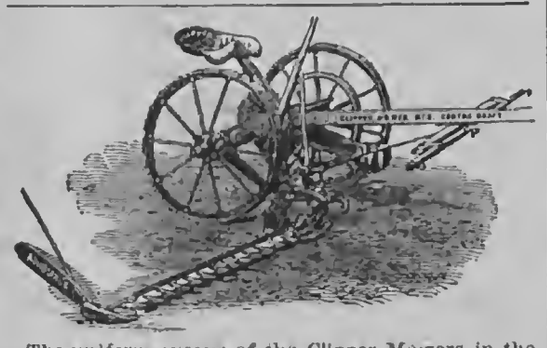
Received several hundred Premiums in 1871.



The *uniform success* of the Clipper Mowers in the field, the testimony of every farmer who has used them, that they are the *lightest in draft*, the *most durable* and the *most economical* machine for the farmer to buy, fully substantiates what the proprietors have always claimed—that the Clipper is the **Best Mower in the World.**

To the No. 4 size is attached the Dropper (cutting 5½ feet, with *separate Finger-Bar* for reaping), constructed with great improvements—in fact perfected; and in point of efficiency, strength, lightness of draft and symmetry of proportions, it is, as a Reaper, also unequaled. Farmers! see it before you buy. Pass your own judgment upon it. Look at its many improvements possessed by no other machine. Remember, it is fully warranted. Send for Pamphlet.

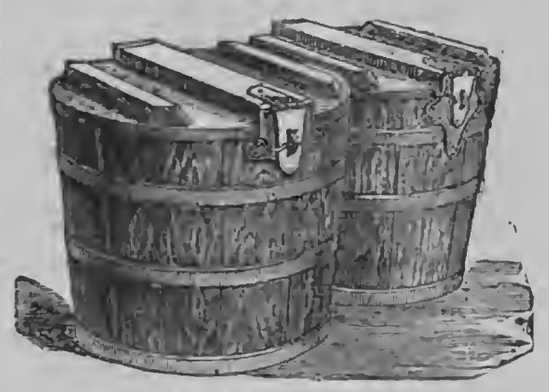
FARMERS, DAIRYMEN AND BUTTER BUYERS!

PACK YOUR BUTTER
IN
WESTCOTT'S

RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use.

Butter packed in this Pail brings **5 to 10 cents more** a pound in the New York City market than the same quality in any other package.



READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommend its general use by the dealers, dairymen and butter buyers who ship to this city.

Respectfully,

(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.

X. A. WILLARD,
Dairy Editor Moore's Rural New-Yorker.

They will save half your shoe bills. For sale by all Dealers.

FASHIONS FOR SUMMER.

943.

DOLLY VARDEN Polonaise is the charming novelty of the season, and becomes the decided favorite of all who see it, when Dolly Varden goods—much in vogue—or any kind of wash material is used. By unbuttoning the lapels at the side and back, and by loosening the belt, it becomes a plain pelisse without plait or gather; by readjusting again it is transformed into an elegant, tight-fitting polonaise. As this change can be made in less than THREE MINUTES, and as it requires only six yards of yard-wide goods, it is easy to see why it is so highly honored. All sizes. Price of pattern, including a CLOTH MODEL, which shows exactly how to make and put it together, and how it will look when finished, $1.

SPECIAL OFFER.—To any person who will cut this advertisement out, and inclose it with $1 to us before the first day of June next, we will mail to them this pattern, with the cloth model, and will send them SMITH'S ILLUSTRATED PATTERN BAZAAR FOR ONE YEAR FREE! NOW is the time to subscribe for the BEST FASHION MAGAZINE IN THE WORLD, AND THE ONLY FASHION PUBLICATION that imports styles and furnishes patterns of them. We give a CLOTH MODEL with every pattern. Our regular subscription price is ONE DOLLAR A YEAR. We give every subscriber patterns of their own selection FREE to the value of HALF A DOLLAR.
Single Copy mailed for 25 cents. If you wish for something RARE in Summer style, send stamp for "SMITH'S ILLUSTRATED SPECIAL." Address
A. BURDETTE SMITH,
914 Broadway, New York.

The only one ever manufactured that will stand the hard usage to which they are subjected. For sale by all can makers. Stock and Trimmings for sale only by the IRON CLAD CAN CO.,
Send for Circulars. 51 Dey St., New York.
☞ All genuine are stamped I. C. C. Co.

"ECONOMY IS WEALTH."—Franklin. Why will people pay $50 or more for a SEWING MACHINE when $22 will buy one that has a *standard* reputation, is double thread, complete with Table, constructed upon entirely new and practical principles, runs by friction, and excels all others? These celebrated Machines are intended for poor people who want to save time, labor and money. ☞ AGENTS WANTED. Machines sent to Agents and *given away* to needy families. For Circulars and reduced prices, address FRANKLIN & DIAMOND S. M. CO., Box 397, Boston, Mass.

Agents Wanted. $75 to $250 per month, everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, cord, bind, braid and embroider in a most superior manner. Price only $15. Fully licensed and warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay Agents from $75 to $250 per month and expenses, or a commission from which twice that amount can be made. SECOMB & CO., *Boston, Mass.; Pittsburgh, Pa.; Chicago, Ill.; or St. Louis, Mo.*

Floricultural.

A BEAUTIFUL CLIMBING PLANT.
Nyctocalos Thompsoni.

HAVING no national or private botanical garden in this country worthy of the name, we are obliged to look to European gardens for rarities in the floral world. Even the treasures of our own continent and country are first made known and generally disseminated from the gardens of Europe. We herewith present an illustration of a most magnificent climbing plant, from Assam, sent to the Kew Gardens from the Calcutta Botanic Garden six or seven years ago. The plant is nearly related to our *Bignonia*, or more properly *Tecoma*, the well-known Trumpet vine.

The plant is a tall, rapid climber, with slender branches, with leaflets four to six inches long. Flowers stand erect, four to five in a cluster, borne on terminal pendulous peduncles, and of the size shown. The flowers are succeeded by a pod six inches long by two broad, and quite flat. This beautiful climber would not be hardy in our climate, but must be well worthy of a place in a conservatory where it could be trained to the rafters or upon an ornamental trellis work. We do not know that any of our florists have as yet any plants for sale; but as all the BIGNONIACEÆ are readily propagated by seeds or cuttings, we presume it will soon be abundant—at least there is no good reason why it should not be.

FLORICULTURAL NOTES.

Salt for Rose Bushes.—A Chenango Co., N. Y., correspondent writes: "It is said that salt put in the ground around the roots of rose bushes in spring, will prevent the slugs from eating the leaves in summer. Will not the salt injure, if not kill, the bushes?"

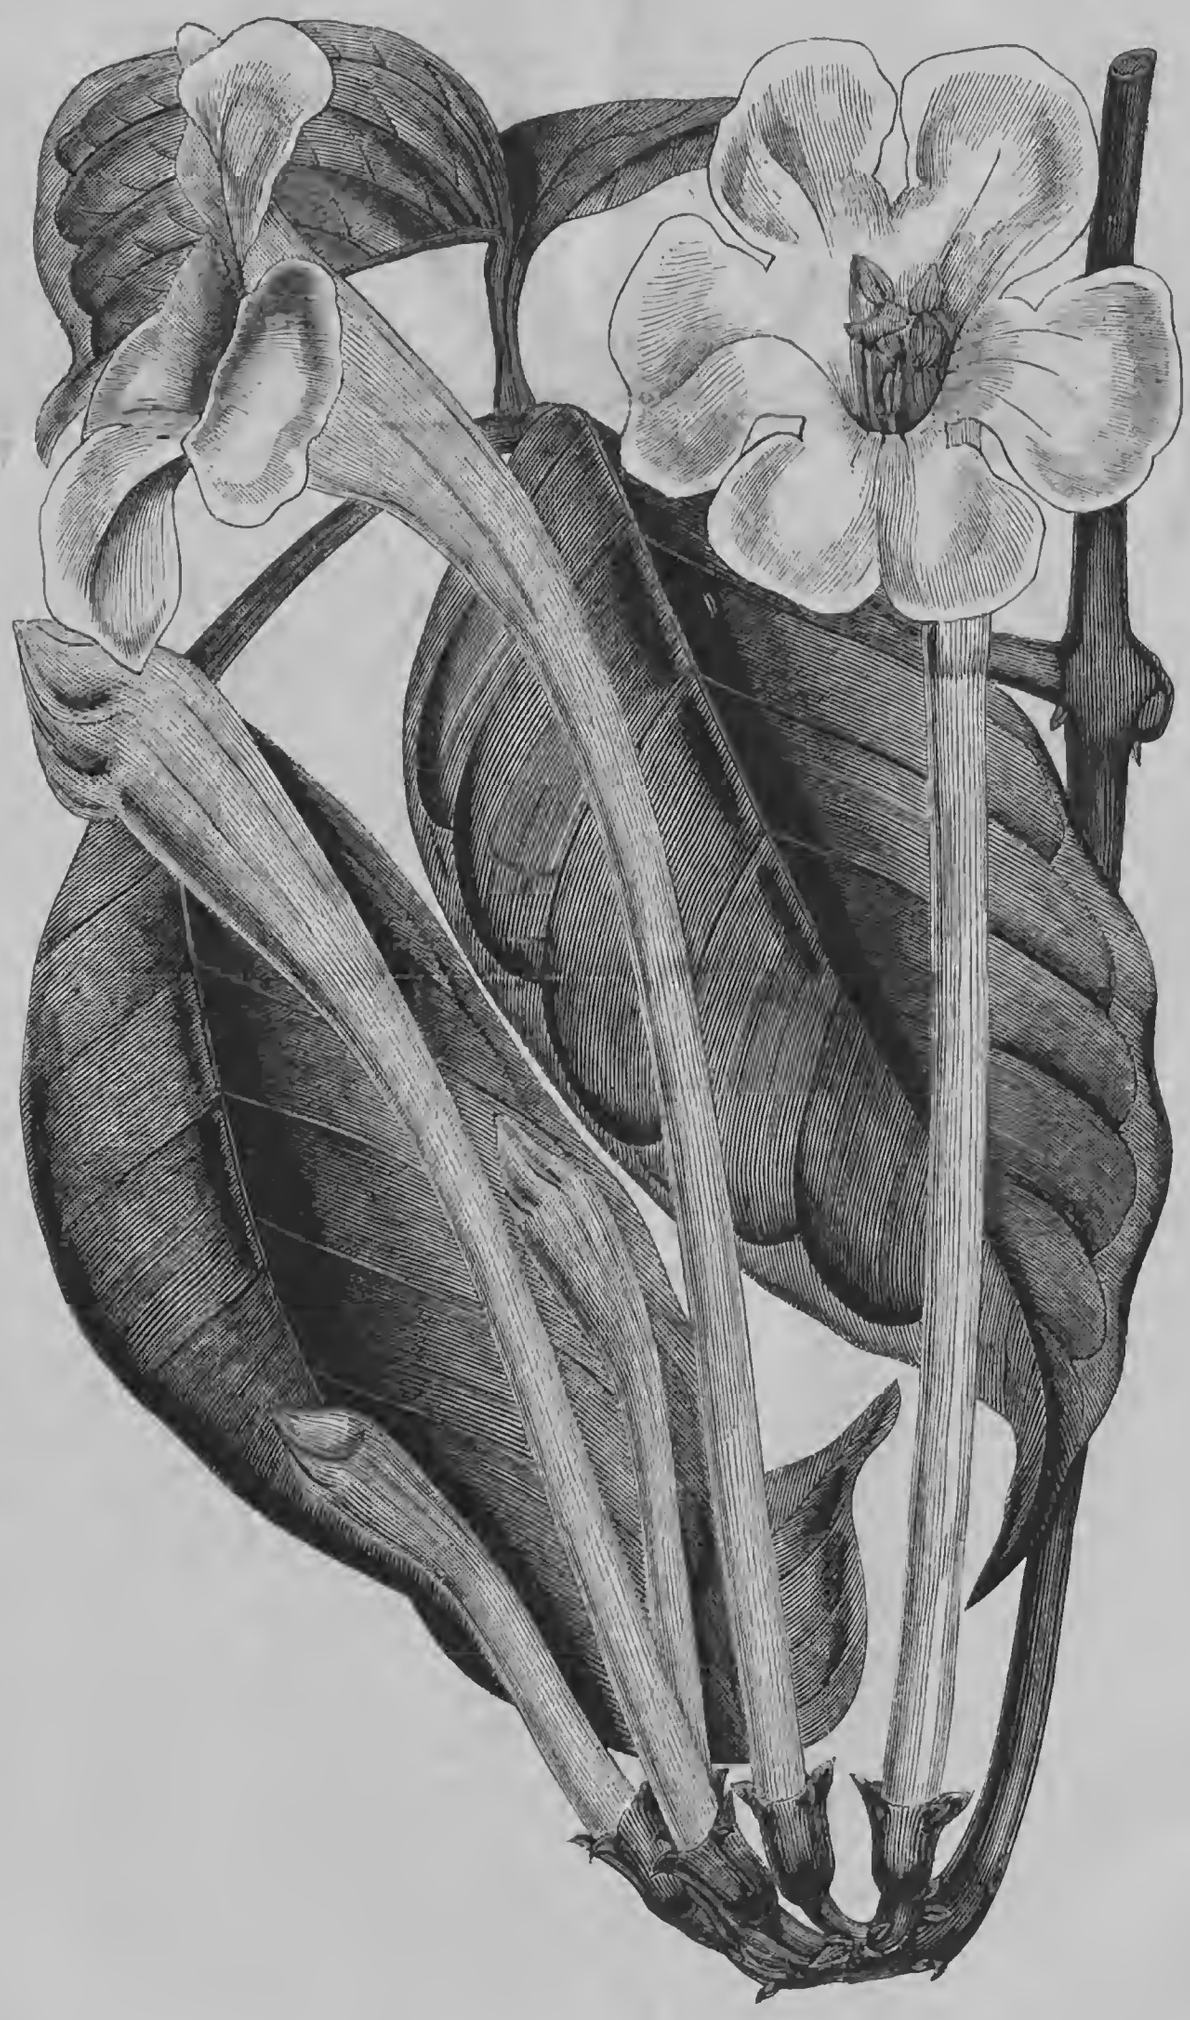
SALT applied to the roots of rose bushes would certainly not affect any insect that feeds upon the leaves. We do not know to what insect you refer by the name of slug. If it is the black, slimy slug which sometimes are very abundant upon roses as well as fruit trees, you may readily get rid of them by dusting with lime, ashes, or road dust. But there are two or three kinds of worms, also called rose slugs, in some parts of the country; even the leaf-rollers are called slugs by some persons; therefore we are at a loss what to recommend without a more minute description of the enemy. Cresylic soap and water is a pretty general insect annihilator and a safe solution to use on infested rose bushes.

Amaryllis for Texas.—Please tell me which of the Amaryllis, if any, you think would be hardy here.—TEXAS.

WE should suppose that all the species and varieties of Amaryllis would be perfectly hardy in Texas—at least in those parts of the State where the ground does not freeze more than two or three inches deep; and even then a slight covering with grass or leaves would be amply sufficient protection against frost. Of course, we only guess at all this, from what we know of the Amaryllis tribe. If we lived in Texas we should certainly endeavor to cultivate this lovely family of plants.

Cultivating the Opium Poppy.—Several correspondents ask for information in regard to the cultivation of the poppy for its opium. That opium can be produced in almost any good location in this country, we have no doubt; but at the present price of labor we do not think it can be done with profit. Hundreds of experiments have been made for the purpose of determining the practicability of opium culture in this country, but, so far as we have been able to ascertain the facts in regard to them, all have ended in a failure to make it profitable.

Worms in Nasturtiums.—E. C. B. asks how to destroy a green worm that cuts off the nasturtium leaves as soon as they appear. She says she does not want the scientific name nor any scientific knowledge of the pest. In the outset we may say that our correspondent is asking for just what she says she does not want—scientific information. We should, however, be pleased to help her, but cannot, for the simple reason that we do not know what kind of a worm it is that cuts the Nasturtiums. Then, if we did, perhaps it has never been honored with a common name, although its Latin title is probably well known. We would advise catching and killing the rascals before they destroy the plants; this is our method of getting rid of enemies in our garden.



A RARE CLIMBING PLANT.—Nyctocalos Thompsoni.

Wild Flowers for a Name.—Please tell me the names of the inclosed flowers. They are wild flowers, and grow from four to six inches high.—MRS. AUGUSTA ARMSTRONG, *Litchfield, Pa.*

THE plant with rose-colored flowers, with a few leaves crowded at the top of a slender stem, about four inches high, is the Fringed Polygala (*Polygala paucifolia*). It is a pretty little plant with subterranean stems upon which are concealed the fertile flowers, those appearing on the tops of the stems producing no seed. By close examination, you will readily discover the two distinct sexes of flowers.

The other plant which you send is known in some localities as the wild Rue Anemone (*Thalictrum anemonoides.*) It is a small, delicate plant, blooming in early Spring. Flowers white, produced on stems about four inches high, in small umbels surrounded by leaves. This species of *Thalictrum* is often mistaken for an *Anemone*, and with good reasons; for it resembles one in every particular, with the exception that it has no stem leaves like the true Anemone, all being borne on the flower stalk, as we have stated above.

Soil for Daphne Cneorum.—What soil suits *Daphne cneorum*? Or are we too far South for it to succeed? Mine have been very carefully treated and still do badly.—A. R., *Bowling Green, Kentucky.*

THIS species of Daphne is a native of the mountains of Europe, where it grows as a low, trailing undershrub; consequently it is usually more or less shaded. If you would succeed with it, plant in a half shady border and in soil composed of clay or loam, intermixed with leaf mold from the woods.

To Fumigate Plants.—My mode of fumigating a single plant is shown in the drawing, (page 408). The tobacco smoke is to be blown in from a pipe. The large plant is covered with a sheet of newspaper tied at the top and pasted together at the joining. The small plant is covered with a garden pot placed on a wet cloth, and the hole at the top covered with a wet rag. The tobacco is placed in a common tobacco pipe.—H. G.

Plants for Name.—We cannot recognise the plants sent by ANNA ROCHESTER of Kentucky, except No. 1, which is *Euonymus Japonica*—a handsome evergreen shrub, sometimes called Japan or Chinese Box. If you can send flowers as well as leaves of the other plants, we can probably name them. But it is rarely the case that we can name a plant by the leaf alone. Send us the whole plant when you can.

The Herdsman.

HOLSTEINS AS DAIRY STOCK.

We have frequent inquiries concerning the Holstein, or Dutch cattle, for dairy purposes. There can be no doubt that the Holstein cattle have proved superior for the dairy in Holland; indeed, the record of milk yielded from cows in the herd belonging to Prof. Rhode of the Royal Ag. College at Eldena, as detailed by our German correspondent, and heretofore given in these columns, is most remarkable, and we have no accounts of any cows that have surpassed the yield therein stated. Now, while the testimony is abundant and undoubted that the Holland cows in their own native country are remarkable as large milkers, it may be well to caution dairymen that single cows, or a particular lot of cows, from any breed cannot be taken as the average of that breed in regard to milking qualities. Every dairyman knows that among the common cows of the country animals are not unfrequently found that yield enormous quantities of milk. Due allowance, therefore, must be made in considering all remarkable yields of milk from special cows, or lots of cows, even though it be a matter of fact beyond question that the breed in general is distinguished as great milkers.

We say this because dairymen are sometimes induced to purchase from certain breeds of cattle for the dairy on account of having seen a record of some enormous yield of milk from single animals of the breed. But failing to obtain anything like such returns, they have been very much disappointed, and have abandoned the breed altogether. In selecting stock for the dairy the soil and general surface of the farm, as well as the special purpose for which the stock is intended, must be taken into account. And this brings us to the question as to whether the Holstein cattle are adapted to the dairies of New York.

It has been charged that the Holstein cattle, originating in a moist climate, and in a country distinguished for its low, level surface, can not be well adapted to our hot, dry Summers, our severe Winters, and upon our high, undulating, or more uneven lands. Mere speculative theories of this kind amount to but little. Experience and experiment must determine the matter. We cannot say what the future may be in regard to this breed in New York; but so far as the Holsteins have been tried they seem to thrive in our climate, and do well upon our rich and gently undulating soils.

We have a letter from Gerrit S. Miller, Peterboro, N. Y., bearing upon the point in question. Some two or three years ago Mr. Miller made an importation of Holstein cattle for the purpose of testing their adaptation to the soil and climate of Central New York as dairy stock, and he writes us, under date of March 11th, that he has just completed the annual record of milk given by the three imported cows, "Dowager," "Crown Princess" and "Fraulein." The following table gives the age and weight of the cows, the number of days in milk, and the whole quantity yielded in pounds:

Name.	Age y'rs.	Weight Sept. 22, '71	Days in milk	Milk in lbs.
Dowager.....	7	1,215 lbs.	214	8,305
Crown Princess	6	1,270 "	258	10,691
Fraulein.....	5	1,235 "	215	7,893½

Total pounds of milk for the year....26,889½

Estimating the product of these three cows in cheese at the rate of ten pounds of milk to the pound of cheese, and we have a yield of 2,688 pounds of cheese, or 896 pounds to the cow. The yield of "Crown Princess" on the same basis would be 1,069 pounds. We call this record an exceedingly good one.

Mr. Miller says that "Dowager" averaged 38 4-5 pounds of milk per day for seven months; "Crown Princess," 43 2-5 pounds for eight months, and "Fraulein" 32 1-5 pounds per day for the same period. The greatest weight of milk given in one day was 74½ pounds, by "Crown Princess;" "Fraulein" 70 pounds, and "Dowager" 58 pounds.

As the general treatment and manner of feeding stock has much to do in the yield of milk, we append remarks of Mr. Miller touching this point. He says:

"'Crown Princess' began her record April 27, 1871. The first week she had five quarts of grain and dry hay each day; second week six quarts of grain and hay; third week, six quarts of grain and pasture during the day. May 18, pasture night and day and four quarts of grain. From June 5th to September 5th she had nothing but pasture. September 5th began feeding four quarts of grain per day; Oct. 25th, six quarts; Dec. 21st, four quarts, and milked once per day. Record stopped January 9th, 1872.

"'Fraulein's' record began May 10, 1871. She had the same treatment as 'Crown Princess.'

"'Dowager's' record began June 19, 1871. We had a hard time with her bag, and kept her on short rations three or four weeks after calving. The pasture that these cows had was very poor; twenty-six acres of it is hardly enough to pasture eight cows.

"'Crown Princess' dropped a heifer calf March 4, 1872, and 'Fraulein' will calve about the 20th of March. They drop their calves about fifty days earlier in 1872 than in 1871, and this accounts for their short season in milk. 'Dowager' was giving at the close of this record thirty pounds of milk per day, and she will not calve till September, 1872."

Accurate records of this kind from reliable sources are of interest and value to dairymen. They show that dairying with cows that yield on an average nearly 900 pounds of cheese to the cow is a paying business, even though cheese be sold at a less price than last year. X. A. Willard.

NOTES FOR HERDSMEN.

Molasses as Cattle Food.—Of all possible occasional additions to the ordinary feed of milch cows, M. Focking of Dirschauerfelde finds that none has so marked an effect in increasing the yield of milk as common molasses. The quantity given by him to each cow was a half litre daily, and the consequent increase in the yield of milk varied from a half litre to one litre per cow, at times when a decrease to about the same amount is ordinarily looked for, viz., in the four to eight weeks before calving. At other periods the increase was greater, *cæteris paribus*. The cost of each portion was less than a penny—the article being procured in bulk from a neighboring sugar manufactory. The mode of giving it to the cows was by mixing it with their rape-cake in water.

Thirst and Cold Water Injuring Cattle.—A dairyman of Holland Patent, N. Y., writes to the Utica Herald that one day last March was so rough with rain, sleet and wind, that his cows would not go to water—the watering-place being about thirty rods from the barn, and not a very good place at that. The next day, those that did not get water the day before, were very thirsty, and drank heartily of *very cold water*, and during the day two of them aborted. He thinks the cold water caused them to abort, and in corroboration of this theory he refers to a case of a townsman who had eighteen cows abort after having been deprived of water two or three days, and then allowing them to drink all they would.

Water for Fattening Animals.—A German physiologist asserts that animals which are being fattened, particularly oxen, should not be encouraged to drink much water, for the reason that, as has been found by experiment, "the absorption of water generates carbonic acid to excess, and trammels the formation of fat.

Pomological.

POMOLOGICAL GOSSIP.

Selling the Box with the Fruit.—The fruit growers of Pleasant Valley, Solano Co., Cal., have made a sensible resolve, we think. They have decided to ship their fruit in a uniform-sized box, the box to go with the fruit and not to be returned. Why will not Eastern fruit growers be as sensible. This returning fruit packages is a nuisance to all concerned. We never could discover that there was any economy about it.

Cherry Currants in California.—L. O. Wilcox, Santa Clara, Cal., has 50,000 plants growing, most of them bearing. Last year he sent to market 1200 to 1500 quarts daily. His plants were put close together in rows; thus the fruit was not sunburnt as in an adjoining county. Nor have they suffered from frost. He plants all small fruits on ridges, so that by the aid of water from an artesian well he can produce heavier crops than without the water. He evidently believes in close planting for that climate.

Fox's Seedling Pear is a new California seedling of excellent quality, brown, obtuse pyriform, of medium size, rather coarse flesh, but with a very rich, sugary flavor. Bro. Meehan takes it to be a strong rival of Duchess of Bordeaux.

Arboricultural.

CUTTING TIMBER—'THE MOON THEORY.'

A writer in the Rural New-Yorker of the 30th of March, says:—"I have been trying to find out, for the last twenty years, in which one of the twelve months it is best to cut timber in order to have it remain sound and free from the attacks of insects." And then, to prove that he belongs to the scientific order, he goes on to state, "of course, I have read all the moon theories, and similar nonsensical stuff, handed down from superstitious granddaddies; but facts to prove any of the moony assertions are extremely scarce." And then proceeds in a lamenting tone on the difficulty or impossibility of ascertaining the proper or best time of cutting timber.

For many years past I have frequently seen similar productions, especially in agricultural papers; and, as I have had long experience among timber, and on the farm, I have as frequently thought of giving the public the benefit of some of the knowledge I have acquired in a long, practical and somewhat laborious life, but have as often been deterred by the circumstance of my not being in the practice of writing for the public press, and so allowed the duties of my calling to urge me on in the business in which I was more immediately engaged: but the communication above referred to, I confess, has somewhat excited me, and, though in mature life, I have resolved to bring out and give to the world the benefits of my long experience on this very important matter.

When but a lad, perhaps now nearly sixty years ago, I applied myself to the study of German books, which my parents were familiar with, and learned from a recipe I found in a German almanac, "on the best time for cutting timber," that it was "in the dark of the moon," and the very best time, the dark of the moon in the month of August." Having had ample opportunity of making experiments, I have proved, to my satisfaction, and that of many others, that timber felled on the aforesaid time never becomes affected by insects or worms, nor does it become brittle in seasoning, but, on the contrary, remains tough, and appears somewhat oily.

Now, Mr. Editor, do not be startled when I tell you, and the thousands who read the Rural New-Yorker, that the sap of trees ascends with every increase of the moon, and descends with every decrease of the moon, and at its full and at its dark it will neither ascend nor descend, but will spread in a circular form. I have no doubt but that the moon has the same effect on all vegetation, but I have never tested or experimented on any but standing trees. The proper time, or season, for testing or experimenting on this matter will now soon come, when any person disposed to investigate my theory will have the opportunity of doing so; and perhaps I may as clearly, and in as few words, state how it can be done, by stating how I gained my knowledge on this question.

When a youth, living on the old homestead, about fifty years ago, we (my brother and myself) cleared an addition to our then improvement, and as timber for firewood had become an object, we left quite a number of small oaks standing; but to make the best of them, we peeled or stripped the bark off them, upward, as far as convenient, for tanning purposes, in the month of June, when it peeled readily. There was then, as there always is at that season of the year, a new wood, or soft substance, forming between the bark and the hard wood, through which the sap flowed or passed rapidly (but with greater force in its ascent than in its descent), and marring this soft substance, it received a bluish color from the ax. Sometimes I threw dust or spit tobacco juice on it; in either case it absorbed sufficient coloring to see very distinctly which way, up or down, according to the time of the moon, the sap was passing.

Since then, I removed to the farm I now reside on, then covered with timber, and for many years chopped a new field each Spring; and at the time the bark peeled I would frequently strip off a piece of bark from a standing tree of any kind (some, however, peeled more readily than others), without cutting into the tree or too much marring the new soft wood forming; and, as I had opportunity, would show my working hands and neighbors that the sap ascended or descended, invariably, with the increase or decrease of the moon.

As the month of August has frequently been a busy season with me, if I required timber for rails, stakes, posts, or building purposes, I would send a man, or two, to fell such trees as might be required, at the proper time of the moon, and then would sometimes, to suit my convenience, let them lay for several years before working them up; even then I would find the green bark inside of the dead or dry bark—still green, though somewhat dried; but in no case have I found insects or worms inside of the bark.

To such of your readers as are interested in providing good timber, and are unacquainted with these facts, this communication may be of importance. I may, perhaps, on some future occasion, send you some of my experience on "the flax question." Our Canadian Government, for some years back, has spent thousands, yea, tens of thousands, of dollars, in employing lecturers to teach the farmers the culture of flax! and on wheat turning to drips or cheat by improper culture; (I will not say that it will turn to drips, for I never saw it do so; I will simply give my experience.) Also on its turning to smut.—Peter Fisher, *Port Nelson, Horton Co., Ont.*

We shall be glad to hear from Mr. Fisher at any time.—Ed. Rural.

ARBORICULTURAL NOTES.

Sub-Irrigation of Trees.—A correspondent of the Pacific Rural Press suggests the following mode of sub-irrigating trees: When the tree or vine is ready to be placed in the pit which has been excavated for it, have ready at hand two or more buckets of coarse gravel, or enough so that when poured into the side of the pit the column of gravel will reach from the surface to the bottom of the roots; then fill the remaining space to within four inches of the top with the soil intended for the support of the plant; being careful in so doing not to disturb the gravel, but in such a way as to leave a trench around the outer rim of the excavation, which will hold two buckets at least of water. The water poured into the trench will find its way down the column of gravel, and the air be excluded; in fact, trial has proven it far better than a wooden spout, or an open hole of any kind for getting the water down and preventing evaporation.

Planting Currant Cuttings.—A correspondent of the American Farm Journal gives the following method of setting currant cuttings:—"Cut your cions as long as you can get them. Take a penknife and cut out every eye as high up as you want to start the top (don't leave an eye for roots, for they won't root); stick them the usual depth, say about four or five inches, in the ground; they will not send out any blows. If your cions are tall and slender, stake them and tie up to keep straight. Prune the top to suit your taste. The fruit will be of a larger and finer quality than if cultivated in the ordinary way."

The Horseman.

NOTES FOR HORSEMEN.

Mare Giving Milk.—I have a valuable mare which I purchased last April' She was then represented to me as having just weaned a colt—milk flowing easily from her bag. I put her to a good horse through the season of 1871, and she had no colt—milk continuing to flow from her teats, upon the least pressure, all through the summer, and does so now. I am trying her still to horse—commenced in April—and she continues to take him. I am afraid she will not breed. Let me know what are her prospects for getting with foal, and what had I better do to insure that end.—W. W. Waring.

We never knew of such a case before, and cannot advise.

Inquiries for Horsemen.—A subscriber wishes to know what will cure a horse which has small, hard bunches on the body, resembling those made by the bite of an insect; also, a humor on a mare, so bad in places that it causes the hair to come off.

Club-Footed Horse.—Can you or any of your readers inform me how I can cure a valuable horse that is getting full-footed, or, as it is sometimes called, club-footed?—A Constant Reader.

Farcy Remedy.—I once cured a mare affected as John McMullin describes, by simply bathing the affected part two or three times a day with sour buttermilk.—Jerome.

Sheep Husbandry.

THE WOOL TARIFF.

AFTER a laborious struggle in Congress, a new tariff law has been enacted, the provisions of which will somewhat affect the future price of wool and woolen goods. The new law takes off one-tenth of the duty imposed by the law of 1867, on wool, woolens and cottons. When the tariff law of 1867 was enacted, the premium on gold or foreign exchange was some three times as much as it has ruled for a year past, which went to increase by so much the cost of importation, and the amount of protection to the American wool grower was directly the amount of the tariff duty and indirectly the cost of exchange added. It took nearly four years in the course of trade for the effects of the tariff of 1867 to be felt in their full force.

In 1871 the paradox in political economy insisted upon by the free-trade financiers was finally solved and exploded by the hard logic of events in the commercial world, and the facts of the protective policy were fully vindicated. All this while the premium on gold was going down till, in 1871, it reached the low figure of ten cents, and has been ever since between ten and thirteen cents—mostly between eleven and twelve cents. And all this while the market for domestic wool has been getting into a healthy condition, until now it is all that could be reasonably desired.

With a duty on wool which gives a protection equal to ten or twelve cents a pound, for most of our domestic fleece, the price of such wool this season stands at sixty-five to seventy-five cents in the country markets. At these figures wool growing is as remunerative as any staple farming business in the country. Now, say that the new law takes off one-tenth of this protection—equal to one-and-one-quarter cents per pound—and still the wool grower could stand it. But the effect of the reduction will be more than this, inasmuch as it extends equally to woolens and cottons; since, whereas under the old law woolens were more easily imported than raw wool, now the facilities for the importation of woolens and cottons will be by so much increased, and more too by the accelerated force of trade, so that the loss of protection to domestic wool will be double the amount nominally expressed in the law. We may call this the "direct damages" of the new law, while the "consequential damages" are not so readily figured out.

When we consider the persistent warfare which the free-traders have waged against us for the last three years, and diligent efforts of the hired emissaries who have infested the country as free-trade lecturers, we may congratulate ourselves that the matter is no worse; indeed, the wool growing interest has been dealt with the most leniently of any of the great industries of the country, in the arrangement of this new tariff law.—S. D. H.

SHEEP ITEMS.

Heavy Cotswold Fleeces.—In the Cotswold flock of JACOB FLICK, near Cleveland, Ohio, are six yearlings, which produced this season an aggregate of seventy-seven and one-fourth pounds of wool, unwashed but not dirty; this is an average of twelve pounds and fourteen ounces per fleece. One three-year-old ram gave eighteen pounds three ounces of very handsome wool. These sheep were shorn on the 13th of May. In Northern Ohio long-wool sheep have been taking the lead for the last few years, and the quality is bred up to "concert pitch."

Another.—Since writing the above I have pastured my eyes upon the premium Cotswold flock of WM. SQUIRES of the county of Lorain, hereabouts. He it was who furnished to one of our Cleveland butchers, for his Christmas sales, a Cotswold mutton which dressed 275 pounds! Mr. SQUIRES' flock of about one hundred sheep gave an average of nine pounds of washed wool per head. His stock ram gave fourteen pounds of washed wool. One little lamb, at a little over eleven months old, gave ten pounds, the staple being seventeen inches in length. Before being shorn this little thing looked, in form, like a live hay-cock!

Nice Merino Flock.—Being recently at the farm of P. T. THOMPSON of Geauga Co., O., I found him in the midst of sheep shearing, and it was like those good old days to see his flock of Merinos, of the pure ATWOOD foundation, kept up with Hammond blood. Last year Mr. THOMPSON purchased a noble ram of this sort from Hon. HENRY S. RANDALL, and his lambs wear the seal of a royal pedigree. Mr. THOMPSON kept up the purity and integrity of his flock through all the discouragements of the past few years, and now his dish is right side up for a shower of porridge. In the handling of his wool Mr. THOMPSON tags his sheep early in March, before the wool becomes foul, sets the tags by, and at shearing puts them in with the fleece—all without washing, as he does not believe in washing live sheep with the wool on.

Sheep Shearing in Ohio, which is usually accomplished by the middle of May, was very late this season, and held off till near the middle of June, except for fat sheep which were intended for Eastern markets, large numbers of which were fed in the counties of Clark and Madison, in Central Ohio, where grazing and feeding are done on an extensive scale.

Sound in the Feet.—We see nor hear of but very little foot-rot among the sheep flocks this season. This old chronic trouble has been pretty well weeded out during the past few years of low prices, and the flocks are sound in the feet.—S. D. H.

NOTES AND QUERIES.

Swelled Neck in Cotswolds.—The breeders of Cotswold sheep in Canada and in Ohio, complain of a fatal trouble among their sheep and lambs. There comes a swelling across the large arteries of the throat, and lambs are born with this trouble upon them, which is pretty sure to prove fatal. Besides the strangulation of the blood vessels, there is labored breathing and a hacking cough. I am told that no remedy has been discovered for this malady, and where it prevails in much force, the raising of lambs is a precarious business.—S.

Entomological.

ENTOMOLOGICAL NOTES.

Rose-Chafer (Macrodactylus Subspinosa, LATR.)—G. H. M. of Mifflin, Ohio, writes that the Rose-chafer, which is often incorrectly called the Rose-bug, is very abundant in his neighborhood, almost every year nearly destroying the grape crop. He also asks for the best mode of destroying this pest. Perhaps some of our correspondents can give a better one than ours, which is to catch and kill them. We take a common tin dipper, holding a quart or more, and into this put a little hot water, and the trap is ready. Take the dipper in one hand, holding it under the cluster of flowers upon which the beetles are feeding, and, with the other hand, jar them off into the hot bath. When the water is filled, pour out into a larger vessel and fill up again. This may seem to be a slow process, but it is not, considering the quantity that can be collected in a few hours; and if an entire neighborhood will join in the work of destruction, these pests would soon disappear.

To Keep Worms from Currant and Gooseberry Bushes.—Please tell Mrs. C. E. KEAT, and your other numerous readers, that common plaster will keep worms off of currant and gooseberry bushes. Sow it on while the bushes are wet; if it rains and washes off, you must put on again, and keep putting on as often as washed off, until worms disappear, which will be in a week, more or less. I have kept them off of my bushes three years with the above simple remedy. Hellebore isn't a circumstance to plaster.—D. ASHBY.

Cabbage Worm and Flea Beetles.—I have noticed lately that the Cabbage Butterfly (*Pieris rapae*) has an inveterate enemy in a bird that closely resembles the King bird. They perch on the garden fence, and the moment a butterfly is seen, a rush is made, and it is soon disposed of; consequently, there are less worms on the plants than last Spring. The little flea beetles are very numerous and destructive to young plants. I have tried sulphur as an experiment, but have not had time to note the effect yet.—X. L.

Destroying Potato Beetles.—I see that the potato beetles are promising to be more numerous than last year. They are already on my Early Rose in great numbers. I believe if they are destroyed early in the season the trouble is nearly surmounted. I see they are now copulating, and if destroyed before they lay their eggs, the next generation will not trouble us. I tried this last year with success. My boys go through the patch once a day, and with two pieces of flat stick, or lath, smush every one as (they now appear) couple.—P. H. S., *Macon, Mo.*

Hygienic Information.

TAKING DOWN STOVES.

I HAVE just returned from a visit to STEWER'S whom I mentioned in my last letter. It has been a cold, raw, wet day. STEWER was in the house churning. I wanted to talk with him about working out my road tax, he being Pathmaster. He invited me to a seat in the sitting-room. There was no fire; the room was damp. STEWER began to sneeze. Finally I suggested he was taking cold. He said he guessed he was, and put on his coat; said he would invite me into the kitchen where there was a fire, but did not think his wife would allow us in there. The fact is, the stove had been down a week and stored away in a loft to gather dampness and rust. It is a piece of "house cleaning" against which I emphatically protest. There is scarcely a week in the year when any living room is not more comfortable for having a fire built in it, to say nothing of the necessity for a fire as a means of promoting health. Besides, it is the best way of preserving stoves. Stoves are more injured by disuse in summer—by being stowed away where they will gather dampness and rust—than by use during the year.

I said as much to STEWER, but he said Mrs. STEWER ruled in the house, and she did not care so much for comfort and health as for looks, and "it's no use o' talking." Well, I happen to know that STEWER has been trying to sell his farm because himself and family have fever and ague annually; and people will not purchase it because they know the fact. Now, STEWER'S farm is just as healthful a place to live on as my own. We never have the fever and ague. But we do not take down our stoves, and we do build fires in them whenever it is damp or chilly, even though we keep all the doors and windows open. As a means of promoting and retaining health, fires are as necessary in the summer months as cold water. So I told STEWER. Why, sir, I would buy STEWER'S place to-morrow as soon as any I know of, notwithstanding its fever and ague reputation. I'd risk it; but I would keep up the stoves and fires. The absence of those when they are really needed causes more sickness in families than all the quack nostrums distributed through the country ever cure.

FARMER GARRULOUS.

HYGIENIC NOTES AND QUERIES.

Hygienic Inquiries.—Will some one who has been afflicted with and cured of dyspepsia give symptoms, length of time diseased, and treatment, to a sufferer for five years with this most harrassing complaint?—D. A. WHITE. . . . A subscriber asks for a remedy for an enlarged neck, which has lately commenced enlarging, and is quite painful at times. . . . Can any one give a remedy for salt rheum?—R. J. P. . . . I would like a remedy for nasal catarrh of six months' standing.

Bunion Remedy.—I can offer the following as simple and effectual:—Let fall a stream of very warm water from a tea-kettle, at the highest elevation from which the patient can bear the water to fall directly on the apex of the swelling; continue this once a day for a short time and a cure will be effected, providing you desist from wearing short shoes. The greater the elevation of the kettle the more effectual the remedy. W. R. S., *Morristown, N. J.*

Croup Remedies.—One teaspoonful of skunk's oil; also one of soothing syrup.

Another remedy is one tablespoonful of hog's lard, one tablespoonful syrup or molasses, one teacup of chamber lye.

Another:—Half a teaspoonful pulverized alum, one tablespoonful of molasses. We have used all of the above remedies in our family and find them good.—S. A. HOWELL, *Benton Co., Oregon.*

Wind in the Stomach.—A physician, in a very sensible article on bathing, recommends a more general use of warm baths instead of the sirups and worse nostrums for the wind in the stomach, which is thought to be so often the cause of the worrying restlessness of very young children.

Potatoes and Health.—The Food Journal says:—"The use of potatoes is a preventive against scurvy, if not an actual cure for it. Potatoes that have been exposed to the air, and have become green, are unwholesome; and new potatoes, *i. e.*, unripe ones, have much to do with the prevalence of cholera, and such like diseases, during the summer months."

Remedy for Rheumatism.—Take equal parts of the best quality of Spirits of Turpentine and Oil of Juniper; shake them well together and bathe the parts affected, and rub in thoroughly. Eat no fat meat, nor rich gravies, nor pastries.—EMILY W. HAWKES.

The Garden.

GARDENERS' NOTES.

Improved Cucumber Bed.—JAMES GROOM, commenting upon a previous communication in The Garden, says:—"I am surprised that "A.," speaking of dung frames for Cucumbers, should recommend solidly built up beds, when hollow bottomed ones are so far superior to them in every way, besides being capable of being put to other uses, so as to keep them at work the whole year round. The plan which we adopt is to build up corner piers of bricks to the required hight, say about eighteen inches in front, and twenty-four inches at back, and to lay strong bearers to form a floor, leaving sufficient apertures for the heat to pass through. We then set the frame on and put into it about three inches of leaf mold to keep down the steam; a load of strong, fresh dung is now put under the frame and enclosed with a lining of any sort of litter or garden refuse that may be at hand. In this way the heat will be up and the bed fit for planting in less than a week, thus effecting a great saving of time; and the heat may be regulated to a degree.

"Frames set up in this way are useful all the year round for forcing asparagus, early potatoes, propagating bedding plants, for cucumbers and melons, and for growing young stock of stove plants in during the summer, etc. Having a good quantity of houses and pits heated by hot water, we, of course, get our earliest supply of cucumbers from that source. But for amateurs or gardeners with a small amount of glass these simple structures are invaluable. Any one giving them a trial will never go to the trouble of preparing manure for beds, as it is labor worse than lost, and in even the largest gardens it is not one of the gardener's troubles to find sufficient employment for all hands."

Strawberry Crinolines.—Here's an idea? We notice in the London, Eng., papers "Strawberry Crinolines" advertised. We copy the engraving, (see page 408,) and the following quotation from one of these advertisements, which says:—"The Strawberry Crinoline is in the form of a table, made in halves, so as to be used without disturbing the plant. It is 16 inches in diameter, and stands 4 inches above the ground, galvanized. Its use is to preserve strawberries from slugs, contact with the soil, superfluous moisture, and other nuisances. They are considered to last ten years at least, with care. The Strawberry Crinolines are declared by all who use them to be of the greatest use in keeping the fruit clean and assisting its growth"

Snap Beans.—F. R. ELLIOTT, Cleveland, O., writes:—It is now time to plant varieties of snap beans, and we must say that a trial of years, with all the varieties catalogued and known, the best is the Wax or Butter, with black seed, and second to that is the White Wax or Butter, with a white oval rounded seed. This latter is entirely new, having been introduced into this country from Germany only two years since, and some seedsmen, because of not having it, will tell it is no improvement; and neither is it over the black seed variety, except that all the beans that mature are white, and just as good and clean white for cooking as the finest navy beans you can buy.

Rake vs. Hoe in the Garden.—F. R. ELLIOTT says:—In ninety-five cases out of a hundred a steel tooth rake will accomplish double and better results in half the time among rows of early peas, beets, onions, parsnips, &c., than the hoe. A neighbor of ours don't or didn't believe it until he looked on and saw, and while he muddled away with his hoe on one-third as many rows of peas as we had, a whole half day, we put ours through a dressing in just one hour. Let me tell you, friends, the small iron rake is the thing among your garden truck early in spring, and next to it is the Dutch scuffle hoe.

When to Apply Salt to Asparagus.—"When is the best time to apply salt to asparagus?" asks P. R. C. Now—any time when the plants are growing.

Diary of a Ruralist.

DAILY RURAL LIFE

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

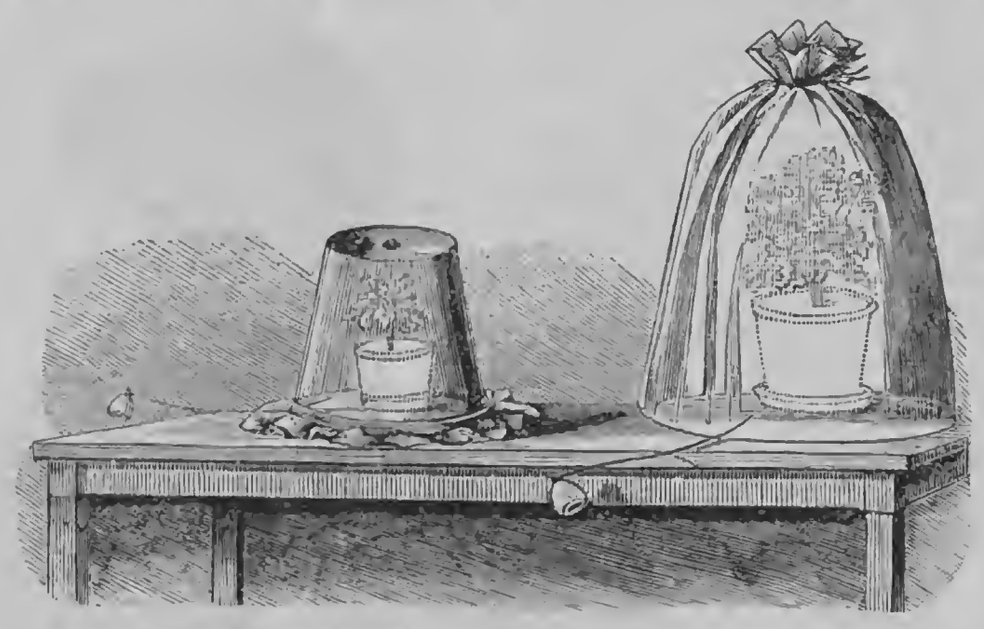
Strawberries Ripening.—*June* 2.—Although the Spring has been one of unusual severity, being both dry and cold, the strawberries are ripening on time, or very nearly as early as in the most favorable seasons. It is useless to spend one's time and strength in fretting about the weather, for if there is a loss in one direction we usually find some compensation in another. If there is but a half crop of any grain or fruit, prices advance in proportion, so that there is no great deficiency in the return. The earliest strawberry this season is the Red Bush Alpine; the next the small Jersey or Scotch Runner. This last-named variety is a great favorite with the New Jersey farmers, because it grows and yields abundant crops without cultivation. After the first season of planting no cultivation is given the plants; the weeds and grass growing up among the plants and killed in Autumn, falling down and forming a winter protection and mulching for the following season. Of course this is a slovenly system of strawberry culture, which would probably not answer very well on the rich soils of the Western States; but it has been practiced about New York, Philadelphia and Baltimore for the last fifty years with success, It is true that the farmers who grow this variety and follow the non-cultivating system neither expect and seldom obtain so large return per acre as those who follow the more modern systems; but when we come to count profits I am not quite sure but they are a little ahead. The cold weather in Winter seldom injures the plants, for they are always protected by the dead weeds; and even if a late Spring frost cut off a part of the blossoms, the plants and cultivation have cost nothing, even if there is a light crop, consequently the loss can be but very little at most.

I left quite a number of the new and old sorts unprotected during the past winter, in order to test their hardiness. Of course I did not expect that we should have so severe weather and bare ground through the entire season. The result has been a total destruction of a few varieties, and more or less injury to all. The following were but slightly injured, no plants being killed:—Charles Downing, Green Prolific, Matilda, Michigan, Kentucky, Seth Boyden, Wilson. Napoleon III. all killed, not a plant left; and it would not be much loss to the country if all other beds had met the same fate. Agriculturist about half killed, those left bearing but little. Lennig's White about like Agriculturist. Jucunda no better than the last, and President Wilder, although not Winter killed, does not bear enough fruit to pay for cultivation. This may be a valuable variety in some localities, but three years' experience has satisfied me that it is of no value on my grounds. The Charles Downing seems to grow better with age, and this season I would place it very nearly at the head of the list of approved and well-tested sorts. The fruit is large, handsome, of a bright scarlet color, with the flavor of the wild strawberry of our meadows—a flavor which every boy and girl who has picked berries from forbidden fields, just before haying time, knows all about, but may not be able to describe. The plants also appear to be perfectly hardy and prolific even in light soils, and without much cultivation.

Fighting Insects.—*June* 3.—The season for fighting insects is at hand. The Rose beetles (*Macrodactylus subspinosus*) have appeared in the past few days in large numbers, but not quite as abundant as they were last year, which I attribute to the quantities killed in the spring of 1871. Then I caught them by the thousands by jarring off into hot water. This year I am trying another plan, which is simply employing a net, such as used in sweeping bushes and weeds for other insects. A common muslin bag fastened to a wire hoop, attached to a handle, four feet long, will answer the purpose. [See RURAL NEW-YORKER, April 20, page 261—Fig. 1.] On all kinds of shrubbery these nets may be used with great results, as the beetles can be swept off very rapidly and emptied into a tub or other vessel partly filled with hot water. A little persistent work of this kind will keep this great pest of the garden in check. This net will also answer for taking the beetles from grape vines; and where it cannot be used to sweep over the plants, it may be held under them and the beetles jarred into it. All other insects that fall upon being disturbed may be taken with the same implement.

The *Chrysobothris femorata*, the larva of which is known as the flat-headed apple tree borer, is already about, and may be found sunning itself upon the sides of buildings or upon the fence. The beetle is about a half inch long and a quarter of an inch broad, nearly black, with a grayish luster on its wing covers. They should be picked up and killed whenever found. The cucumber beetles will soon make their appearance; also the little flea beetles, which attack cabbages and cauliflowers. The asparagus beetle (*Crioceras asparagi*) has been at work for some time, but by the free use of lime, plaster, or dry wood ashes, most of these pests can be kept in check. Freshly slaked lime will certainly destroy the asparagus beetles, but it must be applied to the plants when they are wet with dew, or soon after a shower. Lime is also a good thing for dusting trees and shrubs infested with the green fly, (*aphis*,) and there are few insects that can withstand its pungent fumes or caustic properties. We must fight continually in order to beat our insect foes, but it is well known when and how.

Massing Peonias.—*June* 4.—I have read much about massing roses, evergreens, and other plants, but do not remember having seen anything about massing, or planting in a mass, a great variety of Peonias. Many years ago (sixteen, I believe), I commenced raising seedling herbaceous peonias, and from time to time the best have been preserved, the single flowered sorts thrown away. I divided some of the very best; others remain intact; large old stools and all are planted in a mass together. To-day they are nearly all in bloom—about a thousand large plants, and the flowers are of all shades of color, from a dark crimson to a pure white, with an occasional one of a deep lemon yellow. Some are as fragrant as the old damask rose, while others are scentless; but all help to make up a magnificent display of rich and brilliant colors. I wish that bed of peonias could be placed on Broadway for a few hours! Would it not attract attention? And would it not be a pleasure for me to cut the flowers and give them away—not to the millionaires or their wives, but to the poor shop girls and boys, who seldom know the pleasure of possessing even a peony? But I am not going to puff my seedling peonias, for they are no better than any one else can produce, if they will do just as I have done, which is simply to sow a few seeds every year from the best sorts. Put the seeds into the ground as soon as ripe, and watch and wait for the blooms. Throw away the poorest and keep the best, and in a few years you will possess varieties all your own, and always have something to give to those who are less fortunate, but love flowers as well as yourself. I have no occasion to buy or sell peonias, as my collection is good enough for me, and it costs nothing but a few hours labor every year, in hoeing and transplanting.



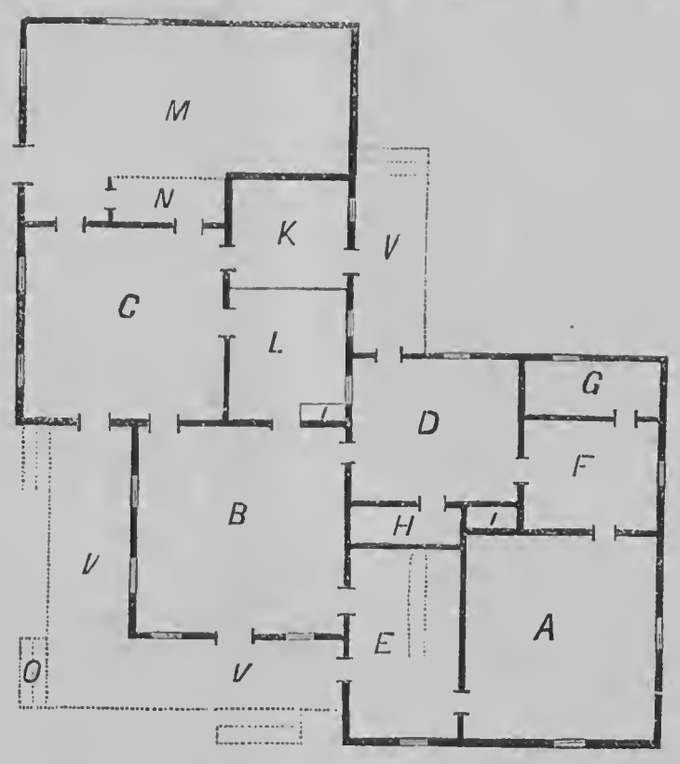
METHOD FUMIGATING SINGLE PLANTS.—[See First Page.]

The Apiarian.

"DOUBLE STORY HIVES."

IN RURAL of March 2d, referring to hive described by Mr. BURCH, I said I found an exact description of a "Langstroth double story hive" we bought of the agent (and paid for the right to use) some twelve or fifteen years ago. In reply Mr. B. says we did *not* describe the Langstroth hive, nor was the two story Langstroth hive in use at that time by a considerable.

From the above it will be seen that the points at issue between us are.—1st. Is his description that of the "Langstroth double story hive?" 2. Was it in use twelve or fifteen years ago? As proof that the description *is* the Langstroth hive, I referred him to "The Hive and Honey Bee," published in 1859. In his reply to same in RURAL of May 25th he asks does the simple fact that Mr. L. mentioned a two story hive prove it was in use then; he also says the only illustration of a two story hive in his work plainly shows Mr. L.'s idea of such a hive to be wholly unlike the one we described, "and demands the proof." In reply I would say that when a person receives a circular, pamphlet, or book published in the interest of any implement, machine, or other article, with illustrations of same, and purchases and *uses* it, it is at least his opinion that the same is made and used; and as I before stated we bought and used the hive in question in 1860 or 1861; but I don't ask him to take my word for it again, as I shall take the trouble to get the statement of the party of whom I bought and append it to this article. I also refer him again to page 378 of "Hive and Honey Bee;" in a note on ventilation Mr. L. says Mr. WHEATON uses no back ventilator, but depends upon a current of air from the front entrance of the lower and *upper* hive, the *upper* one being used for storing surplus honey on frames.



GROUND PLAN OF A FARM HOUSE.

As to there being only one, there are several illustrations and sectional views of the double story hive in the work referred to by Mr. BURCH. The illustration he refers to merely gives an outside view of hive. I care nothing about outside appearances of the hive; the *inside* is what we have to deal with. The hive we used consisted of four boards nailed together, the *end pieces being rabbeted at top on inside edge*, to receive the frames, and bottom board nailed to same, and pierced with holes to give bees access to upper hive.

The hive described by Mr. BURCH is simply four boards nailed together, the *end pieces being rabbeted at top on inside edge* to receive the frames, with loose or *stationary* bottom board, as the maker desires.

Having occasion to visit an apiary last week for the purpose of making a transfer, I found the bees in hives exactly like the hive described. I put the question "What kind of hives do you use?" Answer—"They are made on the *principle of the Langstroth hive.*"

In Mr. B.'s article of Feb. 10th, why does he wander off to the Langstroth hives? All the interest we have in said hive is the right to use, and all who do use it should have at least that much interest in it.

Rochester, Pa. J. E. MOORE.

IN the Spring of 1860, Mr. MOORE of Rochester purchased of Mr. WM. MCKEE and myself a *two story* Langstroth hive, and also the right to manufacture the same (the Langstroth) in any of its forms. Mr. McK. and myself at that time owned a portion of the territory of Beaver county.

I have not, until recently, met the articles of Mr. BURCH on two story hives. After reading them my impression was clear that his description covered the "Langstroth two story hive," at least as I have used such hive for some ten or eleven years past. WM. S. BARCLAY.

Beaver, Pa., June 5, 1872.

BEE NOTES AND QUERIES.

Will Bees Swarm Before the Second Crop of Drones Appear in Spring?—

STRAWBERRY CRINOLINE.—[PAGE 407.]

When bees kill off their drones in early Spring, before they are out of the cell, as well as after, will they then swarm before you see some of the second crop flying out, providing honey should become suddenly abundant? My opinion is that they will swarm, everything favorable, about two weeks after the second crop of drones are under way.—A CONSTANT READER, *Roanoke, Ind.*

WE cannot answer the question from our own knowledge.

Extracted Honey in Market.—My experience in handling much extracted honey in this market, during the past five years, has been:—It brings most, sells quickest, and gives best satisfaction in 15 to 25 pound packages of heavy tin or oak, with screw apparatus for emptying.—N. D. BATTERSON, *Buffalo, N. Y.*

Rural Architecture.

GROUND PLAN OF A FARM-HOUSE.

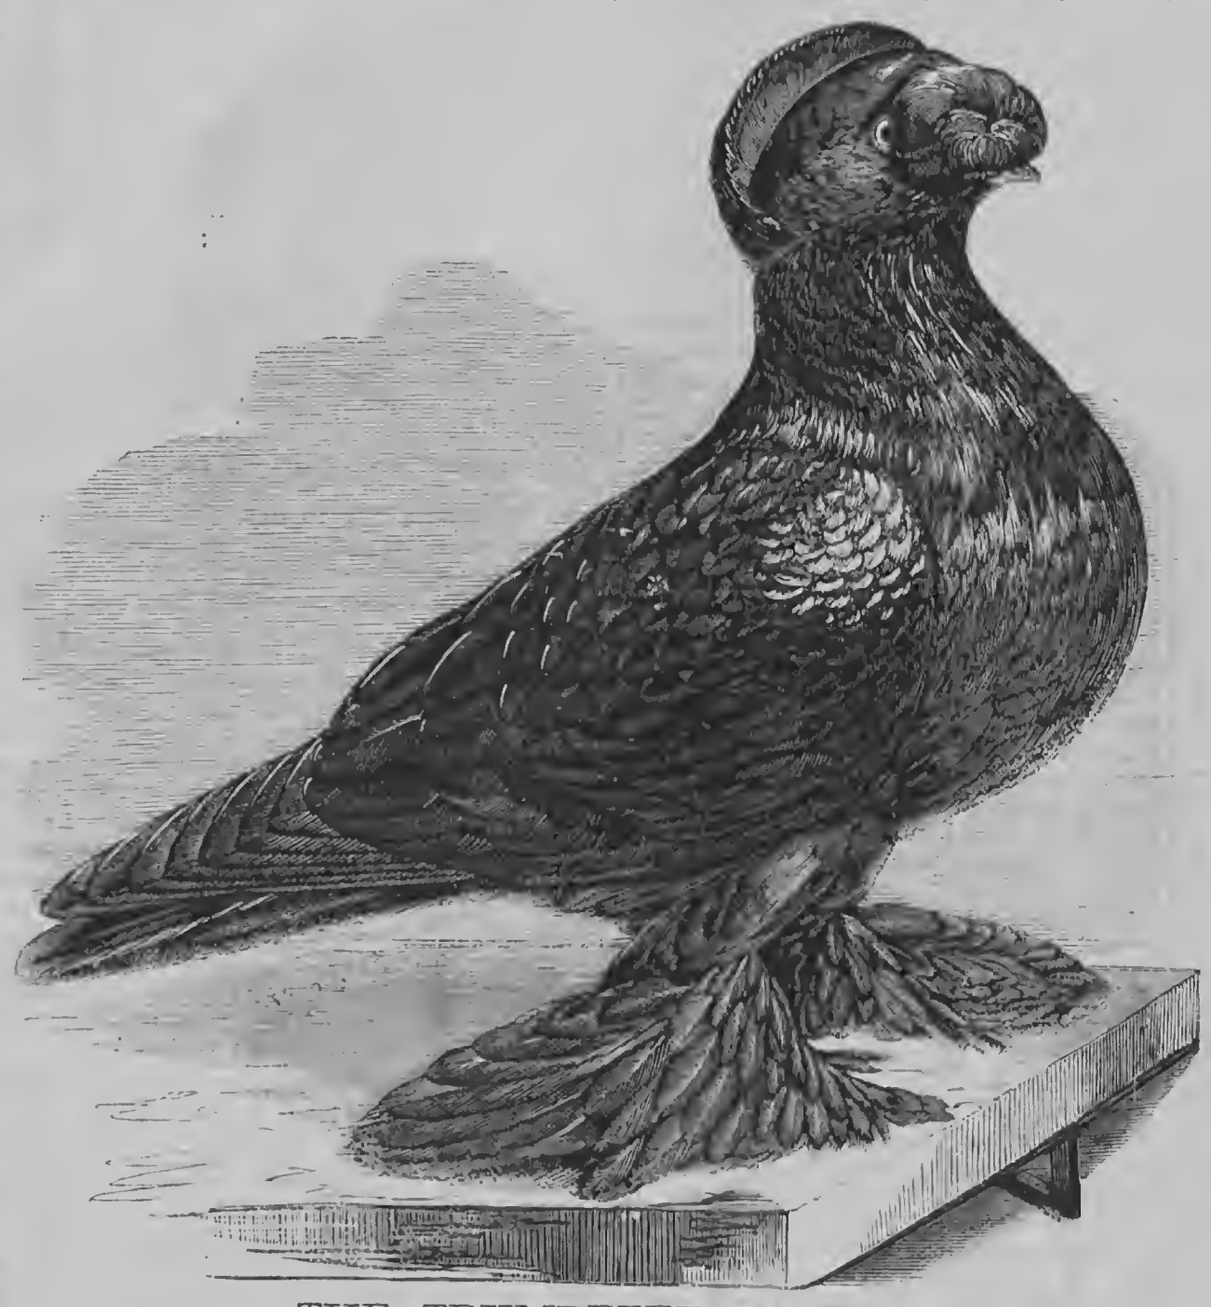
T. P. ALLEN sends us the accompanying plan of a farm-house which he thinks excellent. The upright part is two stories high, 22 by 28 feet. The front wing is 16 by 16 feet, one and a half stories high. The back wing is 23 by 26 feet. The second floor of the upright part corresponds to the first, except the hall extends back over the clothes-room, H. The following is description of rooms:—A, parlor, 14 by 16 feet; B, sitting-room, 16 by 16; C, cook-room, 14 by 15; D, bed-room, 10½ by 12; E, hall, 8 by 14½; F, bed-room, 9 by 10; G, clothes-room, 3 by 10; H, clothes-room, 3 by 8; I, wood-box, with chimneys above, 1½ by 2; K, bath and cistern-room, 8 by 8; L, pantry, 8 by 9; M, wood-house, 10 by 23; N, stairs, 3 by 8; V, V, V, veranda, 5 by 12, 5 by 16, 5 by 21; O, carriage steps, 2 by 5.

The Poultry-Yard.

TRUMPETER PIGEON.

THIS beautiful bird is believed by some to have originated among the ancient Egyptians or Arabians. Russia has furnished many excellent specimens. The distinctive characteristic which gives it its name is its prolonged, sonorous coo. The majority of the breed are Black, Black-mottled and White. Some are Red, Yellow and Dun. The best and most numerous of these colors are the Whites. Next to the Whites are the Black-mottled.

The points, as given by a recent English writer, are rose, crown, muffs, color and size. The rose is above or at the root of the beak; it should be large, flat and circular. The hood or crown should be even, large, and rise well from the back of the head, so as to give full effect to a front view. The muffs should be long, strong, and well-proportioned, as represented by the engraving. As to color, the purest white, jet black, and the best marked mottled, will have preference in their respective classes, other points being equal to those of their competitors. With regard to size the present taste is in favor of the largest. The muffs of these birds involve the most rigid cleanliness in their care, else they become anything but an ornament to the bird. Some fanciers, in the breeding season, cut the muffs short, thinking both the eggs and young are in danger from their great length; but the English writer above alluded to says:—"From our own knowledge in breeding long-muffed birds we can affirm that there is not any occasion to do so, for in an experience of fourteen years we have never cut a muff nor had any more casualties with our muffed birds than with the clear-legged ones, and for many years their feathers were from 3 inches to 4¾ inches long. Remember the feathers all run outwards, and the eggs and young are carefully kept within the feet and legs. Again, watch the old ones going to their nest, and it will be seen there is not very much to fear. There is a merit in Trumpeters that many high-class varieties do not possess. They are good nurses, requiring no more attention than ordinary Pigeons would; besides, they are of an even, good temper, very familiar, and of a sound, robust constitution. Thus they are adapted to young fanciers as much as any breed we know."



THE TRUMPETER PIGEON.

WILL POULTRY PAY?

THIS is a question which has been asked many times, and admits of the same answer as "Will farming pay?" It *will* pay when properly attended to. Again, it will be asked, "Do fancy breeds pay?" and we reply by asking, "Does blooded stock pay?"

During the year ending Oct. 1, 1871, I kept an accurate debit and credit account with my poultry stock, and found that they not only "paid" but yielded 100 per cent. dividends. I charged them with "stock in trade," with all their food except table refuse, expense of yard, (which was only $11.75, for I improvised a chicken house from a deserted pig pen,) for fancy eggs purchased, and for "medical attendance." On the other hand, I gave them credit for all eggs and flesh consumed or donated to our friends who did not have the luxury of chickens and fresh eggs, and at the end of the year I added to the account "stock on hand," and found that I had a large balance in favor of my poultry.

And this experiment was made with about thirty fowls, in a small yard taken off the corner of a village lot. But it settled the question, entirely, to my satisfaction, that it *will* pay to keep poultry, if they are as well kept on a large scale as mine were on a small scale.

The reasons why many persons have pronounced against the profit of raising poultry are obvious. They are put on to a place without any provision being made for their comfort. If they have the freedom of the barnyard it is thought sufficient. Consequently they make their nests wherever it pleases their henships, and the owner not being able to divine the *fowl* inclinations of a hen's mind, fails to find the eggs, and declares that *he* never derives any benefit from *his* hens. Finally she "sets" on her stolen nest of chilled eggs; (or, if she is an Atlantic Monthly hen she *sits*—the Atlantic has no *setting* hens); the result of her season of incubation will probably be one, or, perhaps, two chickens to consume her time in scratching and prevent her from laying for the next six weeks. No wonder that such poultry raising proves unprofitable.

But provide your fowls with suitable and comfortable quarters, not forgetting a supply of nest boxes, of at least a cubic foot of space to each, arranged along the sides of your hen-house, with lids to shut out the light, and back alleys to furnish ingress and egress to their "small houses all in a row." Give them good, wholesome food, in some variety, and clean water every day, and you will find them ready to settle their bills every evening, provided you are willing to "take produce on account," and allow you a good margin on your expense of keeping them.

There are some points which render the large Asiatic fowls more desirable than others. They are good layers and excellent mothers; the young chickens are ready for market, on account of their unusual size, earlier than others; and they *stay put*. Any common fence, which is close at the bottom, will confine them without any trouble. They are extremely gentle and domestic; so much so that if you live in a neighborhood of lawless juvenile depredators of the male persuasion, who are in the habit of stealing everything, you can protect your sitting hens from being robbed of their eggs, by carrying them around in a basket, on your arm, during their season of incubation; the Cochins, especially, would make no objections to the arrangement.

There is, beyond a doubt, money in the poultry yard, as well as "Money in the Garden;" but in either case, "eternal vigilance" has something to do with the process of getting it out. If suitable yards and poultry houses were provided, I am very certain that farmers' wives and children would demonstrate the problem, "Will poultry pay?" to the entire satisfaction of all parties interested. L. G. BEDELL.

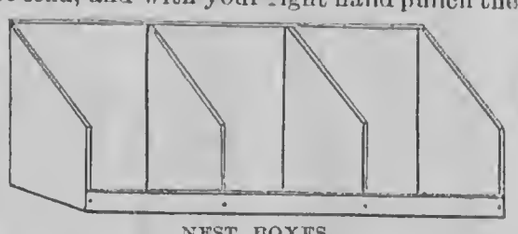
Crown Point, Ind.

NEST BOXES.

IN a late number of the RURAL NEW-YORKER a desirable Nest Box for Poultry is asked for. After some experience with various styles of nests, I have adopted the plan shown in the accompanying sketch. Its particular advantages are convenience and cleanliness. Being bottomless, it is intended to set on the ground, for various good reasons. There is not any cover to catch dirt; the ends and partitions being sloping, prevent the fowls sitting on them, either day or night. It is easily moved, and as easily cleaned and lime-washed. This is not *patented*, neither do I claim any originality, but happened to so arrange a single box, and finding it the right thing in the right place, I changed in favor of it all through my houses. Let the size be according to the breed. I like a liberal size—at least a foot square.

A hen-house should contain as little furniture as possible, and the whole interior *should* and *may be* kept perfectly clean. In whitewashing my houses I use 3 oz. carbolic acid to 12 qts. of whitewash or a piece of strong carbolic soap.—G. K. HAWLEY, *Glens Falls, N. Y.*

Marking Chickens.—JOHN S LIPPINCOTT tells, in the Poultry World, how he does it:—I take a very small saddler's punch and punch a hole in the web of the foot, being careful to cut it out clean, as if not cut clean out, it will grow up again. For my own convenience I have a round piece of wood on the handle of the punch to prevent it hurting my hand. The marking is done in this wise:—Hold the chick in your left hand and let its feet rest on a block of wood or lead, and with your right hand punch the



NEST BOXES.

hole in whichever web you wish. They can be marked in various ways, so that by keeping a book to correspond, you may tell your different strains when grown up.

The Naturalist.

EAGLES IN CONFINEMENT.

I HAVE in my possession a couple of eagles of different species. One is a Golden Eagle (*Aquila Canadensis*) and the other a Bald Eagle (*Haliætus Leucocephalus*). They are both very large and handsome birds. Perhaps a few notes concerning their prison life might be interesting to some of the readers of the Naturalist Department of the RURAL NEW-YORKER. The Golden Eagle is of a purplish brown on its body and wings; in some places nearly clear black; head and neck behind covered with long pointed feathers of a beautiful golden brown, from which the bird derives its name. The Golden Eagle belongs to the family of the true eagles, which differ from the fishing, or sea eagles, in having the tarsi thickly feathered to the toes.

The plumage of the Bald Eagle is of a brownish black on its body and wings, head and neck of a pure white, also the tail and upper tail coverts. They have been captured about four years, and at first were very wild. They would fly about their cage with great fury whenever any one approached; but, by degrees, they have become accustomed to their confinement, and are now quite docile. When they are fed with their usual food, they devour it in peace; but if a live fowl or quadruped is given them, then there is trouble immediately. If the Bald Eagle happens to light on the animal first, then will the Golden Eagle give you some idea of his character when free; for, with half open wings and sharp, discordant cry, resembling the bark of a dog, he will dart from his perch, and old whitehead has to yield his prey to his more powerful relative, and retreat to his perch, with a fierce hissing. There he watches, with lowering eye and threatening mien, his nobler companion, with wings outspread nearly eight feet in extent, devouring his prey.

As soon as the royal bird has satisfied his hunger, he retires to his perch and settles down in apparent contentment. Now the Baldhead takes his turn, uneasy, and with glances at his rival, returns to finish his meal. At all other times they live together in perfect peace, neither appearing to mind much about the other. When, however, there is anything given them which the Golden Eagle desires the first taste of, he always has it.

They are kept in a cage made of slats, thirty-five feet high and twenty in diameter, in the Summer. In the Winter they are kept in a smaller room in the barn.

For a long time before I put the two eagles together, the Bald Eagle had for companions a hawk and an owl; and they lived in perfect peace. Then the Golden Eagle was placed with them, not thinking he would make any disturbance, and for a short time all went well. But one day, on going to their cage, I discovered the owl sitting up in one corner, looking very wise, and winking, as much as to say, "I wish you'd take me out of this; it's not safe here." Only the legs and head of the poor hawk were to be found. I immediately removed the owl to safer quarters.

Eagles appear to endure captivity very well. We have an authentic account of one that lived in Vienna for one hundred and four years in confinement. Mine are in perfect plumage and apparent good health.

Claremont, N. H. SPORTSMAN.

Industrial Societies.

INDUSTRIAL SOCIETIES.

The Davis Co., Iowa, Ag. Soc. holds its next Annual Fair at Bloomfield, Sept. 24-28.

The Lockport, N. Y., Driving Park Association hold their Second Annual Meeting at Lockport, July 4 and 5.

The Kansas City Indus. Exposition holds its next Annual Exhibition at Kansas City, Mo., Sept. 23-28. $15,000 are offered in premiums. *Sec.*—Daniel L. Hull, Kansas City, Mo.

The Minnesota Hort. Soc. holds a Summer Meeting at Minneapolis, June 19-21, at which not only an exhibition of fruits will be made, but discussions had upon horticultural topics. *Pres.*—R. J. MENDENHALL, Minneapolis. *Sec.*—J. S. HARRIS, La Crescent.

Jefferson Co., N. Y., Farmers' Club.—Officers elect for 1872: *Pres.*—ANDREW C. MIDDLETON. *Vice-Pres.*—S. C. Bradley. *Sec. and Treas.*—N. R. Skeels, Watertown. This Club holds regular meetings the first Saturday of each month, at Commercial College Rooms, Watertown, N. Y., at 1:30 P. M.

The Crystal Palace Company of England propose to hold an exhibition of grouse and other game before Aug. 12, and to show, in connection with the birds, all appliances, both for their preservation and destruction. This, it is said, will be the first time that such game has been exhibited in pens like poultry.

Elgin, Ill., Dairy Board of Trade. There is such an institution at the beautiful Illinois town of Elgin. It furnishes regular quotations for papers. There ought to be more such organizations among farmers. It will profit them to organize and have regular market days for the sale of their grain and stock as well as dairy products.

Kenosha Co., Wis., Dairy Board of Trade.—May 22, an organization with the above title was effected, with the following officers: *Pres.*—R. S. HOUSTON, Kenosha. *Vice-Pres.* J. M. Wilber, Wilmot. *Sec.*—J. H. Slosson, Kenosha. *Treas.*—L. Bain, Kenosha. *Assistant Managers*—W. C. White, J. Rhodes, J. Tuttle, E. G. Summons, W. L. Marsh. The regular sale days are to be held the second and fourth Wednesdays of each months.

Wisconsin Woolen Manufacturers' Ass'n.—At a recent meeting, held in Milwaukee, the following officers were elected: *Pres.*—RICHARD STOUT, Waukesha. *Vice-Pres.*—J. W. Hutchinson, Appleton. *Sec. and Treas.*—W. G. Cutler, Milwaukee. The Association meets at Milwaukee during the State Fair, which commences Sept. 23. There are 34 woolen mills, with 166 sets of machinery, and a capacity for working 2,319,000 lbs. of wool annually, in Wisconsin. The wool clip of that State for 1871 is given as 4,620,000 lbs.

Domestic Economy.

MUSHROOM CATSUP.

DR. KITCHINER recommends the following mode:—Take care that they are the right sort and freshly gathered. Full grown flaps are preferred. Put a layer of these at the bottom of a deep earthen pan, and sprinkle them with salt; then another layer of mushrooms and some more salt on them, and so on alternately, salt and mushrooms. Let them remain two or three hours, by which time the salt will have penetrated the mushrooms and rendered them easy to break. Then pound them, in a mortar, or mash them well with your hands and let them remain for a couple of days, no longer, stirring them up and mashing them well each day. Then pour them into a stone jar and to each quart add an ounce and a-half of whole black pepper and half an ounce of allspice; stop the jar very close and set in a stew-pan of boiling water, and keep it boiling for two hours at least. Take out the jar, pour the juice clear from the settlings through a hair sieve, without squeezing the mushrooms, into a clean stew-pan; let it boil very gently for half an hour.

Those who are for superlative catsup will continue the boiling till the mushroom juice is reduced to one-half the quantity. It may then be called double catsup. There are several advantages attending this concentration; it will keep much better, and only one half the quantity be required, so you can flavor sauce without thinning it; neither is this an extravagant way of making it, merely the aqueous part is evaporated; skim it well and pour it into a clean, dry jar; cover it close and let it stand in a cool place until next day, pour it off as gently as possible (so as not to disturb the settlings at the bottom of the jar) through a tamis or a thick flannel bag, till it is perfectly clear; add a tablespoonful of good brandy to each pint of catsup and let it stand as before; a fresh sediment will be deposited, from which the catsup is to be quietly poured off and bottled in pints or half pints (which have been washed with brandy or spirits). It is best to keep it in such quantities as are soon used. Take especial care that it is close corked and sealed or dipped in bottle cement.

BILL OF FARE.

Monday's Tea.—For tea nice raised biscuit and butter, canned peaches; some of the cold roast beef left from dinner, sliced, and tomato catsup; brown bread, crackers, cheese, cookies and delicate cake. I picked, April 18, for the first, a bouquet of spring flowers; they have made their appearance rather late; however, they loook just as pretty and smell as sweet as they would a month ago. Now they are here, I will put them in a vase and have them on the table. I am very fond of flowers, and always have them on my table in their season.

Perhaps some of the readers of the RURAL may think this rather a plain bill of fare. Of course it is; it is not intended for company, but for plain people, and pleuty good enough, if nicely cooked and arranged (as it always ought to be) for company if company happens to drop in unexpectedly. It takes no more time, or but little more, to have a clean table-cloth and napkins and dishes arranged in good order, than to have it otherwise. M. N. R.

Union Springs, N. Y.

ODDS AND ENDS.

Fruit in Tin Cans.—The Boston Journal of Chemistry says:—"The impression prevails among those who use freely fruits which are put up in tin cans, that they are injured thereby, and this impression is in many cases correct. We have long contended that all preserved fruits and vegetables should be stored in glass, and that no metal of any kind should be brought in contact with them. All fruits contain more or less of vegetable acids, and others that are highly corrosive are often formed by fermentation, and the metallic vessels are considerably acted upon. Tin cans are held together by solder, an alloy into which lead enters largely. This metal is easily corroded by vegetable acids, and poisonous salts are formed. Undoubtedly many persons are greatly injured by eating tomatoes, peaches, etc., which have been placed in tin cans, and we advise all our friends who contemplate putting up fruits the present summer to use only glass jars for the purpose.

Monday's Dinner in that Bill of Fare.—My friends and myself have read an article in your issue of June 1st, written by a lady, in which she gives a "Bill of Fare" for Monday's dinner. We do not think she knows much about economy, for if she did, she would never have allowed her cooking to accumulate until washing day. She does not state that she washed, and as for her baking as much as she states, we hardly credit the statement. She must have had two or more ovens at her command, or she has a shorter method of making cake than we have any knowledge of. If we are right, would be pleased to get the recipe, as it takes us from three to five hours to make and bake a fruit-cake—as preparing the fruit, beating butter to a cream and eggs to a froth takes more time than she had at her disposal; and I think most of your lady readers will endorse our sentiments.—A CONSTANT READER, *Fulton, N. Y.*

Cement for Broken China.—A writer in Harper's Bazaar recommends the following:—"One of the very best methods of uniting pieces of broken china is by the use of boiling milk. The broken surfaces must be very clean, and brought into the closest contact by means of twine, which, after being loosely tied, should be twisted up so as to create considerable pressure. The article to be mended having been thus prepared, is placed in a pot and covered with milk that has been carefully skimmed. The pot is placed on the fire, and the milk allowed to boil gently for an hour or so. After being taken out and allowed to cool, the pieces will be found very firmly united; but it is advisable to leave them tied together for at least a week or ten days, after which they may be freely handled and exposed to moderate degrees of heat and moisture."

Cooked Cucumbers.—We find the following in the Rural Southland:—"It does not seem to be very generally known," says an exchange, "that the cucumber is one of the most useful vegetables we have, and can be dressed in a greater variety of palatable ways than any other, except the tomato. It is better than squash and more delicate than the egg plant, prepared in the same manner; can be stewed, fried or stuffed, and, above all, can be parboiled, mashed up in batter and fried as fritters, more pleasant and easily prepared than any vegetable or fruit. When a cucumber just becomes too old to be used raw or for pickling, it is then at its best for cooking—and may be used for that purpose even until the seeds become hard. A raw cucumber is, for most persons, an indigestible abomination, however much they may admire its flavor and odor."

Cooking Potatoes.—In the case of a kidney potato, I take as thin a slip as possible off the skin, say about half an inch wide, out of the middle of each side and round the ends. In a round potato I take out a similar slip all around the middle of the potato. In either case, when properly cooked, the floury matter will just be seen peeping out in this muskinned part. The rest of the skin will come off as thin as gossamer, leaving all the most nourishing part of the potato whole and untouched. To my mind this plan, simple though it be, is the greatest advance on thorough economic potato-cooking that I am acquainted with. Would that you could send the recipe to hundreds of cottages where potatoes are sadly spoiled in the cooking.—R. F.

Domestic Inquiries.—L. asks for a recipe for chocolate custard and cake; also for cocoanut cake and custard—cheap and good. . . "Reader" asks for a recipe for making mushroom catsup. . . "Constant Reader" asks how to bleach beeswax white. . . . C. W. WRIGHT asks for a recipe for making pop corn balls. . . . H. M. GRAY is "in a peck of trouble" because of ants in every part of her house. Wants to know how to get rid of them. [See page 344, RURAL, May 25.]

To Clean White Paint, a correspondent recommends using powdered French chalk and hot water, without soap. It adds to the whiteness of the paint without injuring it. When soap is used, add a little soda, wash with a flannel cloth, then rinse, and wipe with a linen cloth.

Currant Ice Cream.—Put one large spoonful and a half of currant jelly into a basin, with half a gill of sirup; squeeze in one lemon and a half, add a pint of cream and cochineal; then pass it through a sieve, and finish in the usual way. I like it.—SARAH P. C.

Rice Pudding.—1 cup rice; 1 of raisins; 10 of milk; wash your rice and put it in the milk cold, with the other ingredients; let it bake slowly at first; stir occasionally and in three hours it will be done. Try it. Season with nutmeg.—H. M. G.

Scientific and Useful.

TO MAKE WAX FLOWERS.

PLEASE say to Mrs. S. B. WARD, Marion Co., Oregon, that she will require the following articles to commence wax work:—2 lbs. white wax, ¼ lb. hair wire, 1 bottle carmine, 1 ultramarine blue, 1 bottle chrome yellow, 2 bottles chrome green, No. 1, 2 bottles chrome green, No. 2, 1 bottle rose pink, 1 bottle royal purple, 1 bottle scarlet powder, 1 bottle balsam fir, 2 dozen sheets white wax. This will do to begin with. Now have a clean tin dish and pour therein a quart or two of water; then put in about 1 lb. of the white wax and let it boil; when cool enough, so the bubbles will not form on top, it is ready to sheet, which is done as follows:—Take half of a window pane, 7x9, and, after having washed it clean, dip into a dish containing weak soap-suds; then dip into the wax and draw out steadily and plunge it into the suds, when the sheet will readily come off. Lay it on a cloth or clean paper to dry. Proceed in like manner until you have enough of the white; then add enough of the green powder to make a bright color, and heat and stir thoroughly until the color is evenly distributed; then proceed as for sheeting white wax. The other colors are rubbed into the leaves after they are cut out, rubbing light or heavy according to shade.

For patterns you can use any natural leaf, forming the creases in wax with the thumb nail or a needle; to put the flowers together or the leaves on to the stem, hold in the hand until warm enough to stick. If the sheeted wax is to be used in Summer, put in a little balsam of fir to make it hard. If for Winter, none will be required.

You can make many flowers without a teacher; but one to assist, in the commencement, would be a great help; though the most particular thing about it is to get the wax sheeted. The materials I have suggested can be procured at any drug store, and will cost from $3 to $4.50.

Long Eddy, N. Y. W. A. W,

SCIENTIFIC AND USEFUL NOTES.

Spent Tan, Leather Scraps, Etc.—Spent tan and leather scraps are waste products often prepared for manure with indifferent results. Spent tan is simply woody fiber impregnated with an acid—the former of no more value than sawdust; the latter positively injurious to many soils. The material therefore can only be used to advantage on soils deficient in vegetable matter, in which it may have a beneficial chemical action, or on stiff, heavy soils where it will act mechanically to lighten and loosen the texture. For either it should be previously composted with lime to neutralize the acid. Leather scraps are valuable because of the gelatin they contain, but this must be liberated from the tannin before it can produce ammonia by decomposition. This may be secured by composting with unleached ashes kept moist, the heap being covered with a foot of loam or muck to absorb the gases evolved.

A Cold Cement for Mending Earthenware, says a recent English work, reckoned a great secret among workmen, is made by grating a pound of old cheese, with a bread grater, into a quart of milk, in which it must be left for a period of fourteen hours. It should be stirred quite often. A pound of unslaked lime, finely pulverized in a mortar, is then added, and the whole is thoroughly mixed by beating. This done, the whites of 25 eggs are incorporated with the rest, and the whole is ready for use. There is another cement for the same purpose which is used hot. It is made of resin, beeswax, brick-dust, and chalk boiled together. The substances to be cemented must be heated, and when the surfaces are coated with cement, they must be rubbed hard upon each other, as in making a glue joint with wood.

Laying Brick in Chimneys.—Here is an item of use in building chimneys. Brick for walls, etc., should have the dust brushed off, and be soaked in lime-water just before using. The mortar will not only cling more firmly, but by setting more slowly, will permit the brick to be adjusted or dressed without destroying the homogeneous nature of the mortar by the slight movement incurred. Speaking of mortar, the best is made as follows:—Take any desired quantity of best lime, slake it with about four gallons of water to one cubic foot, or thirty pounds of lime. Mix dry with seven times the measure of the stone lime and run through a sieve having not less than one hundred meshes to the inch. The material is then put in a heap and wet up in the usual manner.

Moonshine.—IN RURAL NEW-YORKER, May 4th, L. W. L. wants to know what effect changes of the moon have upon animal and vegetable life. Investigations of these questions, and many others of like meaning, have recently been made by scientific men of Germany, France, and England, and the general opinions respecting them are found to be entirely without foundation; and that the moon, in reality, exercises *no perceptible* influence over things earthly, excepting the giving of light, "production of tides, the precession of the equinoxes, and the nutation of the earth's axis." The same will apply to stars and signs; they exert no sensible power over human beings, etc., only in the imagination of superstitious people, the oldest inhabitants, weather prophets, etc.—W. H. F.

To Build a Chimney that Will Not Smoke.—The Scientific American gives the following hints to those who would "build a chimney which will not smoke:"—The chief point is to make the throat not less than four inches broad and twelve long; then the chimney should be abruptly enlarged to double the size, and so continued for one foot or more; then it may be gradually tapered off as desired. But the inside of the chimney, throughout its whole length to the top, should be plastered very smooth with good mortar, which will harden with age. The area of a chimney should be at least half a square foot, and no flues less than sixty square inches. The best shape for a chimney is circular, or many-sided, as giving less friction, (brick is the best material, as it is a non-conductor,) and the higher above the roof the better.

In Laying Water Pipes, says the Industrial Monthly, the mouth, both for ingress and egress, should be trumpet-shaped; bends should be as far as possible avoided, and especially sharp, angular bends; at junctions, the smaller pipe should be brought round in a curve to agree in direction with the main; and, lastly, where a pipe rises and falls much, air is apt to collect in the upper parts of the bends, and thus reduce the section at that part, and it is therefore advisable to make provision, by a cock or otherwise, for draining it off at intervals.

Recipe for Red Ink.—EMMA P. R., Des Moines, Iowa, asks the RURAL NEW-YORKER for a recipe for good red ink. Here are two recipes which have been commended to us, but which we have not tested.

1. To twelve grains of carmine add three ounces of aqua ammonia, and heat gently, without boiling, for seven or eight minutes; then add eighteen grains of gum arabic, stirring constantly. It must be kept well corked.

2. Add two ounces of powdered Brazil wood to a pint of water, and boil it down to one-half the quantity; then add one-half ounce gum arabic, 1½ drams of tincture of cochineal, and 1½ ounces of alcohol.

Acoustic Telegraph.—Professor WEINHOLD, of Chemnitz, Germany, has invented a phonic telegraph, employing neither electricity, magnetism, light nor heat. The wire, which must be very carefully insulated, is attached at both ends to sounding boxes. Words uttered near one sounding box are repeated by the other very distinctly. This telegraph has been found to work well on the short line (2,200 feet long) where the experiment was made.

To Prevent Turners' Wood Splitting.—Small pieces of valuable wood, such kinds as are used for turning, etc., are very liable to split readily—that is, outward from the center. To prevent this, soak the pieces, when first cut, in *cold* water for 24 hours, then boil in hot water for two or three hours, and afterward dry slowly, and under cover. This will be found useful in making handsome mantel, toilet, and other articles from sumac, cherry, and other woods that never grow very large.

Dry Paint on Windows.—The most economical way to remove dry paint from the panes is to make a small swab having a handle some eight inches long, dip it in a little diluted oxalic acid, and rub off the paint with a swab.

Lime for Wall.—N. H. MORTON, if we were building as you are, we should use quick lime for our walls. This is our judgment, though we do not profess to be wiser than a good mason ought to be.

The Sportsman.

GAME LAWS OF NEW YORK.

In response to several requests from our correspondents we have procured from the Secretary of State of the State of New York a copy of the Game Laws enacted by the Legislature of 1872, which we herewith give entire:

CHAP. 433.—An Act to amend chapter seven hundred and twenty-one of the laws of eighteen hundred and seventy-one, entitled "An act to amend and consolidate the several acts relating to the preservation of moose, wild deer, birds and fish," passed April twenty-six, eighteen hundred and seventy-one, also to repeal section thirty of said act.

Passed April 29, 1872; three-fifths being present.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section one of the act entitled "An act to amend and consolidate the several acts relating to the preservation of moose, or wild deer, birds and fish," passed April twenty-six, eighteen hundred and seventy-one, is hereby amended so as to read as follows:

§ 2. No person or persons shall pursue or cause to be killed, any moose, elk, cariboo or wild deer, in any part or place within this State, except in the months of September and October, and in the first ten days of the month of November in any year; but it shall not be lawful at any season of the year to pursue deer with dogs in the county of Steuben. Any person violating the provisions of this section, by pursuing with dogs, or ensnaring or entrapping, any moose, elk, cariboo or wild deer, or by killing any of said animals contrary to the provisions herein, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be subject to a fine of fifty dollars, or be imprisoned in the county jail not exceeding three months, or both, at the discretion of the court, for each and every offense. The possession by any person of a carcass or green hide of any such animal, except during the time herein provided for killing the same, shall be deemed prima facie evidence that the person in whose possession such carcass or green hide is found killed the animal to which said carcass or green hide belonged; and it shall be unlawful to sell, transport or carry the carcass and hide, or carcass alone, after being killed, of any moose, elk, cariboo or wild deer, except during the months of time herein specified in which such animals may be killed, and the owner or owners, or corporations owning or running any line of stages, steamboats or railroads, and the owner or owners of any private conveyance upon which any carcass or green hide of such animals shall be found or conveyed, shall be subject to a penalty of fifty dollars for each and every offense.

§ 2. Section twenty-one of said act is hereby amended so as to read as follows:

§ 21. No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any salmon trout or lake trout, in the months of October, November, December, January and February, under a penalty of ten dollars for each fish, except that in Otsego lake fish may be caught or killed by hook and line only, but they may be had alive for artificial propagation or the stocking of other waters.

§ 3. Nothing in this act contained shall in any manner affect or apply to the waters of the river St. Lawrence, the lakes in Jefferson county, or the waters of Lake Ontario, except Irondequoit bay.

§ 4. Section fifth of said act is hereby repealed, except as it applies to that portion of the Great South bay, in the county of Suffolk, lying between Smith's Point and Quogue, and to the bays lying upon the southern portion of the county of Queens and Kings.

§ 5. Section six of said act is hereby amended so as to read as follows:

§ 6. No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any woodcock between February first and July third, under a penalty of fifty dollars for each bird.

§ 6. The twenty-seventh section of said act is hereby stricken out and the following substituted therefor:

§ 27. No person shall use any purse or pound net for the catching of fish in Port Washington or Manhassett Bays in the county of Queens, under a penalty of fifty dollars.

§ 7. Section twenty-eight of said act is hereby amended so as to read as follows:

§ 28. No person shall at any time take any fish with a net, spear or trap of any kind, or set any trap, net, weir or pot with intent to catch fish in any of the fresh waters or canals in this State, except as hereinbefore or hereinafter provided; nor shall it be lawful at any time to draw any seine or net for the taking of fish in any portion of Flushing bay or its branches, nor in lakes Canandaigua, Cayuga, Oneida, Champlain, Great Sodus bay, in the county of Wayne, or the inlets thereof; and any person violating the provisions of this section shall be deemed guilty of a misdemeanor, and shall likewise be liable to a penalty of twenty-five dollars for each offense; but suckers, catfish, bullheads, bony fish, or moss-bunkers, eels, white fish, shad, herring and minnows, are exempted from the operation of this section, also pike, in all waters save those lying in Columbia county and Oneida and Cayuga lakes and their inlets, provided, however, that nothing in this section shall be so construed as to legalize the use of gill-nets in any of the inland waters or canals in this State;—nor seines or nets of any kind in the waters of Otsego lake, except from the first day of March to the last day of August, and no gill-nets except during the months of July and August. But no such seine or net shall have meshes less than two inches in size, and in the Hudson river, the meshes of all gill-nets and set-nets shall not be less than four and one-half inches in size each, and those of fykes set in any of the waters surrounding Long Island, Fire Island, Staten Island and the bays and salt water, estuaries and rivers approaching thereto, to be not less than four and one-half inches in size; and any person who shall wilfully injure or destroy, by grappling or otherwise, any nets used in the Hudson or East rivers for the purposes of catching shad, shall be liable to a penalty of twenty-five dollars for each offense, and, in default of payment thereof, shall be imprisoned in the county jail of the county within whose jurisdiction the offense may be committed, for not more than thirty days. All drawing of seines in the Susquehanna river is prohibited.

§ 8. The thirtieth section of said act is hereby repealed.

§ 9. No person shall catch, with a hook and line or otherwise, any pickerel, perch or bass from the Goodhue or Cranberry lakes, situated in the towns of Addison and Thurston, county of Steuben, from the first day of December to the twentieth day of May of each year, under a penalty of ten dollars for each fish so taken or had in possession, the penalty to be recovered as already provided for in chapter seven hundred and twenty-one of laws of eighteen hundred and seventy-one.

§ 10. This act shall take effect immediately.

CHAP. 65.—An Act to repeal section forty-three of chapter seven hundred and twenty-one of the Laws of eighteen hundred and seventy-one, entitled "An act to amend and consolidate the several acts relating to the preservation of moose, wild deer, birds and fish," passed April twenty-sixth, eighteen-hundred and seventy-one.

Passed Feb. 29, 1872; three-fifths being present.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section forty-three of chapter seven hundred and twenty-one of the Laws of eighteen hundred and seventy-one, entitled "An act to amend and consolidate the several acts relating to the preservation of moose, wild deer, birds and fish," passed April twenty-sixth, eighteen hundred and seventy-one, which reads as follows:

§ 43. "The counties of Delaware and Chemungo are exempted from the operation of sections sixteen, seventeen and thirty-one," is hereby repealed.

§ 2. This act shall take effect immediately.

STATE OF NEW YORK, Office of the Secretary of State. } ss.

I have compared the preceding with the original law on file in this office, and do hereby certify that the same is a correct transcript therefrom and of the whole of said original law. G. HILTON SCRIBNER, Secretary of State.

New Publications.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **516 Large Octavo Pages**, is handsomely and fully illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

Miscellaneous.

Fashions for Summer.

975

La Perichole Polonaise is a rare selection from our last budget of Paris styles. It causes us to forget all others as we look upon it. It is one of those standard combinations of ART that NEVER fails of victory in holding its own ground when all its companions have passed away. We predict a glorious reign for it. No lady need hesitate to decide upon it for the costume which she wishes to wear the coming Fall and Winter, for we assure her that it will be largely imported in ready-made suits by our costume importers in about SEVEN WEEKS, when (the Summer trade over) they will not expose it to view until their FALL OPENING. We point to this PARTICULARLY to show those unacquainted with us that we are furnishing the pattern of it FULLY THREE MONTHS IN ADVANCE of the BEST and most expensive source of getting Paris styles. It requires eight yards of 24-inch goods. All sizes. Price of Pattern, including a CLOTH MODEL, which shows exactly how to make and put it together, and how it will look when finished, ONE DOLLAR.

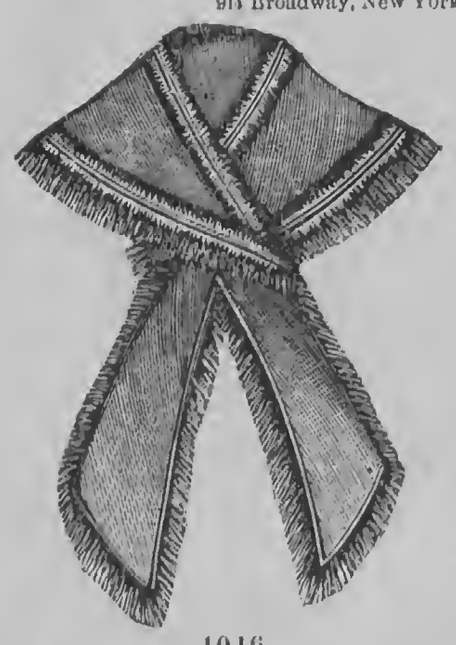
SPECIAL OFFER.—To any person who will cut this advertisement out and inclose it with ONE DOLLAR to us, we will mail to them this pattern, with the Cloth Model and the Hermosa Fichu No. 1016. And we will send them SMITH'S ILLUSTRATED PATTERN BAZAAR FOR ONE YEAR FREE! Now is the time to subscribe for the best FASHION MAGAZINE IN THE WORLD! AND THE ONLY FASHION publication that imports styles and furnishes patterns of them. We give a CLOTH MODEL with every pattern.

943

DOLLY VARDEN Polonaise is the charming novelty of the season, and becomes the decided favorite of all who see it, when Dolly Varden goods—much in vogue—or any kind of waste material is used. By unbuttoning the lapels at the side and back, and by loosening the belt, it becomes a plain Pollase, without pleat or gather; by readjusting again it is transformed into an elegant, light-fitting Polonaise. As this change can be made in less than THREE MINUTES, and as it requires only six yards of yard-wide goods, it is easy to see why it is so highly honored. All sizes. Price of pattern, including a CLOTH MODEL, which shows exactly how to make and put it together, and how it will look when finished, ONE DOLLAR.

SPECIAL OFFER.—To any person who will cut this advertisement out, and inclose it with ONE DOLLAR to us, we will mail to them this pattern, with the Cloth Model, and the HERMOSA FICHU No. 1016, and we will send them SMITH'S ILLUSTRATED PATTERN BAZAAR FOR ONE YEAR FREE! NOW is the time to subscribe for the best FASHION MAGAZINE IN THE WORLD, AND THE ONLY FASHION PUBLICATION that imports styles and furnishes patterns of them. We give a CLOTH MODEL with every pattern.

A. BURDETTE SMITH,
914 Broadway, New York.



1016

HERMOSA FICHU.—A convenience and a novelty for an outside garment—made in Grenadine, Swiss, Silk, Cambric, Poplin, &c. Very frequently in White or Black Lace, and worn with various costumes for house or street. It is in very great favor at present. Requires about one and a-half yards of 24-inch goods. Price of pattern, 25 cents.

SMITH'S
Illustrated Pattern Bazaar,
Published at 914 Broadway, New York,

Is just the kind of a Work upon Fashions and practical help in Dressmaking that every lady *NEEDS*.

It imports styles SIX WEEKS in ADVANCE of COSTUMERS.

☞ "I consider your Bazaar of infinitely more value to me than ALL THE OTHER fashion publications combined."

☞ "Your styles bear ample evidence of being *GENUINE* importations."

☞ "Your *INVENTION* of giving a cloth model with each pattern, to show how to make and put it together, is the *GRANDEST* improvement ever made to render patterns useful to ALL."

The above is the substance of the testimony of thousands that pour into us through the mails.

☞ We will BEGIN YOUR SUBSCRIPTION with the PRESENT NUMBER!

Single copy mailed for 25 cents.

NOTICE.—Cut the part of the Special Offer out and send it to us. Address

A. BURDETTE SMITH,
914 Broadway, New York.

BROWN'S "ALWAYS COOL" STOVE LID LIFTER.

Price 25 Cts.

With Patent Hollow Handle.

A KITCHEN LUXURY.

Brown's Double Cone Ventilating Damper.
THE BEST IN USE. PRICE 50 CENTS.
For sale by all Dealers. Manufactured by
G. B. WALBRIDGE, 55 Chambers St., N. Y.

Protect Vines, Plants, Fruit Trees!

Arsenic Water is sure death to *Canker Worms* and *Currant Worms*. For applying this, or Oil Soap, Quassia or Tobacco Water to trees or plants, **Page's No. 2 Force Pump** is unequaled. Send for Circular.
N. PAGE, JR., Danvers, Mass.

WEBSTER'S PATENT
BUTTON-HOLE WORKER.

The most perfect Button-Hole Worker ever invented! So simple that a child can work a more perfect button-hole with it than the most experienced hand can without it. It does away with pricking the fingers, straining the eyes, and with imperfect and irregularly worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold.

Local and traveling agt's wanted for this and other new and useful articles. Address **GEO. DAVIS,** 91 Asylum St., Hartford, Conn.

Sample worker, with full directions for use, sent post-paid by mail on receipt of 50 cents.

☞ Please state that you saw this in RURAL NEW-YORKER.

THE ANNUAL EXHIBITION
OF THE
Pennsylvania State Ag'l Society,
For 1872,
Will be Held at the City of Erie,
Commencing Tuesday, Sept. 17th, to continue Four Days.

The competition is coextensive with the United States and Provinces, and the citizens of the several States and the Dominion are cordially invited to compete for our prizes. There is no Entry Fee charged. For Premium Lists, and other information, apply to either of the undersigned, at Harrisburg, until August 20th, after which date headquarters will be at Erie.

JACOB R. EBY, President.
D. W. SEILER, Recording Secretary.
ELDRIDGE McCONKEY, Cor. Secretary.
Harrisburg, Pa., June 1, 1872.

Northern Ohio Fair

THE
THIRD ANNUAL EXHIBITION
OF THE
Northern Ohio Fair Association,
WILL BE HELD
On their Beautiful Fair Grounds, in the CITY OF CLEVELAND,
ON THE
9th to 13th days of September, 1872.

This is the largest Fair between Boston and St. Louis. For schedule of Premiums, &c., address

GEO. W. HOWE, Sec., Cleveland, O.

Educational, &c.

MAPLEWOOD INSTITUTE for YOUNG LADIES, PITTSFIELD, MASS. Known for thirty years for its superior facilities and rare beauty of location. Rev. C. V. SPEAR, Principal.

NEW HALF-YEARLY VOLUME.

THE TIME TO RENEW AND SUBSCRIBE!

All Our Readers are advised that Vol. XXVI. of the Rural New-Yorker will commence July 6, and close with December—comprising Twenty-Six Numbers. And will they do us and their neighbors and friends who don't (but ought to) take the Rural, the favor to announce this fact? Note, also, that Single and Club Subscriptions are now in order and respectfully solicited from all parts of the Union, Canada, &c. Our Inducements for clubbing are the same as last Winter. Those forming clubs for the New Volume will receive specific premiums, or free copies, etc., in the same proportion as for yearly subscribers—two six months (or volume) subscribers counting for one yearly. Clubs may be composed of part yearly and part half-yearly subscribers, at convenience of Agents. To aid those forming new clubs, or making additions to present ones, specimens, premium lists, etc., will be sent free.

NATIONAL AGRICULTURAL CONGRESS.

We have perused with considerable care the various reports of the proceedings of this "Congress" recently held at St. Louis, and have failed to find in them anything said or done which is likely to materially and immediately affect the interests of agriculturists. What our friend Corbett said about its having "resolved and *resolved*," we find to be true. These resolutions may be summarized as follows:

The formation of agricultural clubs was recommended. The monthly reports of the Department of Agriculture were declared unreliable, as a forecast, and County Boards of Agriculture were requested to co-operate to furnish the Commissioner with crop prospects, which he is urged to publish as soon as possible. Congress was urged "to reserve six sections of timber in each Congressional township (what is a 'congressional township?') of the present Government lands covered with forest," in order to prevent drouths—all of which is as clear as mud. But we are glad to see this important subject was referred to a Committee on Agriculture, who will, doubtless, relieve it of its opaqueness. Another ambitious delegate tried to make Frederick Watts a cabinet officer. Fortunately, he hasn't done it yet! Another resolution asks Congress to admit, free of duty, Nitrate of Potash, Nitrate of Soda, Salt, Gypsum, Sulphate of Ammonia, German Salts of Potash, Potash in any form, and Sulphuric Acid, in aid of Agriculture. Maury's plan for Crop and Meteorological reports was indorsed. The people were urged to plant trees, the State Legislatures to establish State nurseries, and Congress to require all persons receiving the benefit of the Homestead and other acts donating public lands, to plant with timber trees one-tenth of the land so donated.

Several elaborate and valuable papers were read, but in what shape they will reach the people we are not informed—probably through a volume of transactions which few will take the trouble to read, much to their own loss. The following are the officers elect for the ensuing year:

President—John P. Reynolds of Illinois.
Secretary—C. W. Greene, Jackson, Tenn.
Treasurer—Lee R. Shryock, St. Louis, Mo.
Vice-Presidents—C. C. Langdon, Mobile, Ala.; O. H. Jones, Atlanta, Ga.; Hon. A. M. Garland, Ill.; F. C. Johnson, New Albany, Ind.; Dr. J. M. Schaeffer, Fairfield, Ia.; G. T. Anthony, Leavenworth, Kan.; Jas. H. Moore, Harrisburg, Ky.; J. H. Stevens, Minneapolis, Minn.; Dr. J. Worden, Terry, Miss.; A. B. Barrett, St. Louis, Mo.; W. F. Kornegay, Goldsborough, N. C.; N. S. Townshend, Ohio; A. B. Hamilton, Harrisburg, Pa.; W. H. Jackson, Nashville, Tenn.; Com. M. F. Maury, Lexington, Va.; W. F. Lawton, Charleston, S. C.; Mr. Poor, Maryland.

STANDING COMMITTEES.

Meteorology—Com. M. F. Maury, Virginia; Prof. J. B. Turner, Illinois; Rev. A. Means, Georgia.
Forest Culture—R. S. Elliott, Kansas Pacific R. R. Co.; Dr. J. A. Warder, Ohio; W. C. Flagg, Illinois.
Experimental Agriculture—C. W. Spalding, Missouri; Gen. W. H. Jackson, Tennessee; C. A. Bailey.
Agricultural Education—Col. R. E. Withers, Virginia; H. N. McAllister, J. K. Hudson.
Grasses—L. D. Morse, Missouri; Mr. Williams; O. H. P. Lear, Missouri.
Transportation and Commerce—Gen. J. S. Marmaduke, Missouri; Gen. W. D. Wilson, Iowa; R. M. Patton, Alabama.
Fertilizers—Prof. Jameson, Missouri; F. Fontaine, Georgia; J. C. Burroughs, Illinois.
Labor and Immigration—W. M. Lawton, South Carolina; Judge G. Edmunds, Illinois; E. B. Whitman, Georgia.
Live Stock—Dr. R. J. Spurr, Gen. O. H. Jones, D. B. Gillman.
Horticulture—E. S. Hull, F. H. French, J. C. Ratcliff.

We have no word of discouragement to say with regard to such gatherings. They help to let each know what the other is thinking about and desiring. And the exhibit made helps to discover the paucity of real practical material there is embodied in such a Congress and its barrenness of practical ideas; and all this helps to revision and improvement. It may be that some future session of this Congress will develop the latent power which it contains. We hope so. Meantime let us "*labor* and wait!"

RURAL NOTES AND QUERIES.

Division of Labor.—In answer to a correspondent, A. R. F., we do believe in the proper division of labor. We have no objections to farmers (or any other class) buying where they can buy the best, cheapest. If they can do this by employing a paid agent at a salary, to deal directly with manufacturers, we say do so. We are opposed to extortion in any shape; but our observation and experience have taught us that, as a rule, extortion or extravagant prices beget competition, and competition destroys monopoly. Yet there are "rings," combinations, that seek to grasp all that can be got; and we recognize the fact that combinations of those upon whom they prey must be made in order to counteract the vicious action of greed. Commercial resolutions are as important and healthful as political resolutions. They are as much the result of natural law as the growth of trees. They are born of the instinct of self defense in man, and are not to be laughed at nor denounced. Let those who suffer from them learn *why* they suffer, and remove the cause.

The Rural New-Yorker is Profitable to hosts of its subscribers, as the many letters we receive to that effect abundantly testify. For example, here is a straw in that direction. Under date of June 10, 1872, Mr. W. H. Ferguson of Albany Co., N. Y., writes:—"Being well pleased with the Rural New-Yorker, I send you the names of some friends to whom you can forward specimen copies, if you will be so kind. The hints and suggestions contained in the Rural were worth $100.00 to me a year ago, against $2.50 subscription. The names are as follows."

—If all subscribers who find that the Rural *pays them*—whether in money, knowledge or entertainment—will *tell their friends about it*, or send us names for specimens, its circulation may be materially increased during the early weeks of the volume which begins in July.

New Hampshire Women Horticulturists.—We are inclined to chronicle all attempts on the part of women to practice horticulture with a view to profit. Franklin, Merrimack Co., N. H., boasts of a Mrs. Stephen Kenrick, of whom it is said that she "probably has the finest varieties of pears, plums and grapes to be found in that county. She does all the grafting and pruning herself, without any aid from outsiders, and always has a fine display of fruit. Then, in the same town it is reported there is Miss Annie E. Nesmith, who has bought an acre of land which she has been reclaiming by under-drainage for strawberry culture. A quarter of it is in strawberries in fine condition; nearly the whole of the balance is under cultivation and will soon be in strawberries. She manages it wholly alone, hires the heavy work done, but superintends every item of labor herself. She is said to have expended $1,000 in improvements on this single acre. We shall be glad to know that her expenditure yields a profitable return, and that her management results in proving that women can make money as horticulturists. Will she not tell us if she makes any money?

Must Have the Rural.—And How to Get It.—Almost daily we receive letters from people whose subscriptions expired some weeks or months before, but who find they must have the Rural again. Most of these send the money to renew, but some are "short" and propose to form clubs, and thus secure the paper. For example, a friend in Ellis Co., Texas, writes in this earnest wise:

"I write to you for some specimens of your 'dear old Rural,' for I cannot possibly do without it. Ever since it 'quit coming' we have been 'in the dark' about everything. I am going to try my best to get up a club for it here, and want you to send me your prospectus, premium list, posters, and some samples to distribute. I would have sent for it long ago if I could have got the money to spare, but now I am going to get a club if I can—enough to secure me a copy a year anyhow. If no more; for I like the Rural better than coffee or tobacco—indeed I have no use for any such 'weeds,' but I know what I have a use for, and can't do without, and that is Moore's Rural New-Yorker."

—To all in the position of our Texas friend—as well as to Agents and readers generally—we would suggest that, inasmuch as a new volume of the Rural commences next month (July 6) the present is the *right time* to subscribe and form clubs for the ensuing six months, or year, as preferred. Of course we will cheerfully and promptly furnish specimens, posters, premium lists, etc., to all disposed to aid in extending our circulation. Non-subscribers who wish the Rural regularly can secure a free copy (or a valuable book or other premium) by forming a club.

A Botanical Garden Proposed.—Several gentlemen of New York city have projected the establishment of a Botanical Garden on Madison Avenue—the erection of a substantial and ornate glass and iron structure for the reception and exhibition of plants from all parts of the world. It is proposed to make this not only a perpetual plant exposition, and hence a place of public resort, but to establish in connection therewith a School of Botany. The aim is to make it a means of instruction as well as a place where the senses may be gratified by the sight and smell of beautiful plants and flowers.

Inquiries for Advertisers.—J. S. B. asks where Sorghum or Sugar Cane Mills can be obtained.... Five or six inquirers ask where Alsike Clover seed can be obtained, and at what price; also, Lucerne or Alfalfa seed. "Subscriber," at Tarboro, N. C., writes:—"Where can I get a Langstroth Moveable Comb Hive, and what is the price?".... W. R. F. asks where he can buy ferrets.... P. M. Briggs asks if any of our readers have yearling Ayrshire Bulls, pure blood, for sale.

Personal.—As our Corresponding Editor, Col. S. D. Harris, has arranged to be in our New York Office during July and August, he requests all correspondence intended for him to be addressed here, instead of the Cleveland Office, during those months.

THE SEASON, CROPS, PRICES, ETC.

Lewiston, N. Y., June 2.—This is a great fruit region, and there is a prospect of plenty of it; all the orchards are full of blossoms. Wheat is very poor.—I. W.

Kenton, O., June 5.—Spring has been cold and backward; but little rain since snow went off until within two weeks, during which time have had several fine showers. Cut worms doing much damage among corn. In some localities wheat is almost a failure, on account of drouth and cold winter. Oats not looking well.—W. G. P.

Dwight, Livingston Co., Ill., June 9.—The Spring has been rather cold, so far, but crops look very well, especially oats and grass. Corn is backward, but has generally come up well. Potatoes will be a fine crop, if we can keep the Colorado bugs from them. Wheat, $1.25; corn, 38c.; oats, 40c.; potatoes, $1.10; butter, 18c.; eggs, 12½c.; good cows, $40@50; farm labor, $20 per month.—G. B. Calkins.

Sterling, Cayuga Co., N. Y., June 3.—We have had a cold, dry and backward spring, until a few days ago the weather changed and we are having gentle rains. We had quite a frost on low land the night of June 1st. Winter wheat looks very poor, generally speaking, and must be a light crop. Meadows and Spring grain are improving since the late rains, and bid fair for an average yield. Corn planting nearly completed. White wheat, $2; corn, 70c.; oats, 55@60c.; butter, 21c.; potatoes, 40@45c. Labor high and scarce.—L. S. M.

Rose, Wayne Co., N. Y., June 11.—A cool and rather backward Spring, thus far; but it has been very dry, and the finest time for putting in Spring crops (especially on low lands) that ever was known. All streams, canals, wells and cisterns were extremely low, but recently, with daily copious showers, they are filled up, and it is almost impossible to work any kind of land. Vegetation has come forward rapidly—clover and grass especially. Wheat, being late Spring killed, will not be more than half or two-thirds of the usual crop. Corn yellow, and two weeks later than usual. Fruit of all kinds blossomed full, and gives promise of an abundant crop. Currant worms and cut grubs plenty. Cows, $40@55; sheep and hogs, lower; wheat, $1.75@1.85; corn, 60@65c.; oats, 44@50c.; potatoes were 50@60c., but recently the bottom fell out, and they are now down to 20@25c.; butter, 20@22c.; eggs, 14@15c.; wages, $20 per month.—C. S. W.

Johnstown, Fulton Co., N. Y., June 9.—The weather for the last two weeks has been very wet; it has rained some almost every day—sometimes cool and cloudy with light rain, and again clears off for a few hours, clouds up and rains a perfect torrent. The ground is very wet and the roads are bad. Grass looks as well as I ever saw it at this time in the season. Hay, which a month ago was scarce at $30@35 per ton, is now dull at $15@20. The hay crop is safe now for this season. But very few oats sown, and they do not look well. Corn very small; it has been too wet and cold for corn and oats. All crops are growing very fast.—Reform.

Pittsfield, Merrimack Co., N. H., June 5.—During the early part of Spring the season was backward, but warm weather so materially advanced everything that planting was done about the usual time. Up to near the close of May it was very dry. Since then it has been correspondingly wet, and to-day more rain has fallen than during the entire first four and one-half months of '72. Apple trees have bloomed very freely and continued on the twigs for a long time. The outlook for hay has not been flattering, but late and copious rains have greatly improved it.—G. R. D.

Amity, Yamhill Co., Oregon.—Lafayette, the county seat of Yamhill Co., is situated on the left bank of the Yamhill River, 30 miles southeast of Portland. This county is claimed as one of the best grain-growing counties in the State. Land is worth from $15 to $20 per acre. Horses range in price from $35 to $400; $175 to $250 the span; milch cows, $15@20; two and three-year-old stock, $20@35; calves, $8@12 in the fall, after weaning; common sheep, $2.50@4.50 per head; imported sheep very high—some in our neighborhood being held at $180 each; chickens are worth $3@4 per dozen; turkeys, 50@75c. each; labor, single men, $1@1.50 per day; wool, 45c. per lb.; wheat, 75c. per bush.; oats, $1; potatoes, $1.—F. H.

BUSINESS INFORMATION.

We notice that Messrs. Winslow, Lanier & Co., 27 Pine St., New York, have joined Messrs. Leonard, Sheldon & Foster in the sale of the Canada Southern Bonds. First-class securities generally find first-class men to handle them. This fact seems very apparent in this connection. This bond stands high in the estimation of our best and most experienced railroad men, and is undoubtedly one of the safest securities offered in this market, and at the low price at which they are now offered must, and we understand do, find a rapid sale.

Electrotypes of Fine Portraits of the Cincinnati and Philadelphia nominees for President and Vice-President—Greeley and Brown, and Grant and Wilson—which we have had engraved from recent photographs, will be furnished to our friends of the Press at $5 each. The portraits of Grant and Wilson are given in this paper, (see next page,) and those of Greeley and Brown in our issue of May 18. Electros of any other engravings given in the Rural New-Yorker will be supplied, blocked ready for printing, at correspondingly low rates.

RURAL BREVITIES.

The commencement of the Vermont State Agricultural Colleges occurs the first week in July.

"A Boy Subscriber" should address "Agricultural College, Annapolis, Md.," for an answer to the question he asks.

We acknowledge the receipt of a basket of splendid Strawberries from S. G. Winant, Rossville, S. I., and P. Merseles & Co., 76 Dey street.

C. E. S. is informed that it will be easy to wash off white hellebore from currants and gooseberries if any should remain on them when gathered. It is poison.

See the advertisement of the Penn. Ag. Soc., which holds its next Fair at Erie, Pa., Sept. 17-20. Competition for its prizes are open to all the States and Canadas. No entry fee is charged.

PUBLISHER'S SPECIAL NOTICES.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

Show Bills, Specimen Numbers, Etc., of the Rural New-Yorker sent free.

BUSINESS NOTICES.

MUSICAL.

All who contemplate studying music, either as an accomplishment or a profession, should send immediately for a Circular of the Lyons Musical Academy—one of the best and most successful institutions of its kind. Address O. S. ADAMS,
Principal, Lyons, Wayne Co., N. Y.

HOW TO OBTAIN A "COLLINS"

Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.

Get Descriptive Pamphlet at 36 Dey St., New York.

Burnett's Cologne Water wins for itself a favorite place on the dressing table.

Biographical.

THE PHILADELPHIA NOMINEES.

FOR PRESIDENT,

ULYSSES S. GRANT,

OF ILLINOIS.

FOR VICE-PRESIDENT,

HENRY WILSON,

OF MASSACHUSETTS.

The National Convention, which met at Philadelphia on the 5th of June, nominated the above ticket for the suffrages of the regular Republicans at the coming election. The names of the gentlemen selected are not unfamiliar to the American people; nevertheless short biographical sketches of them at this time are appropriate. Such sketches we give herewith; and also portraits of the nominees, engraved from recent photographs.

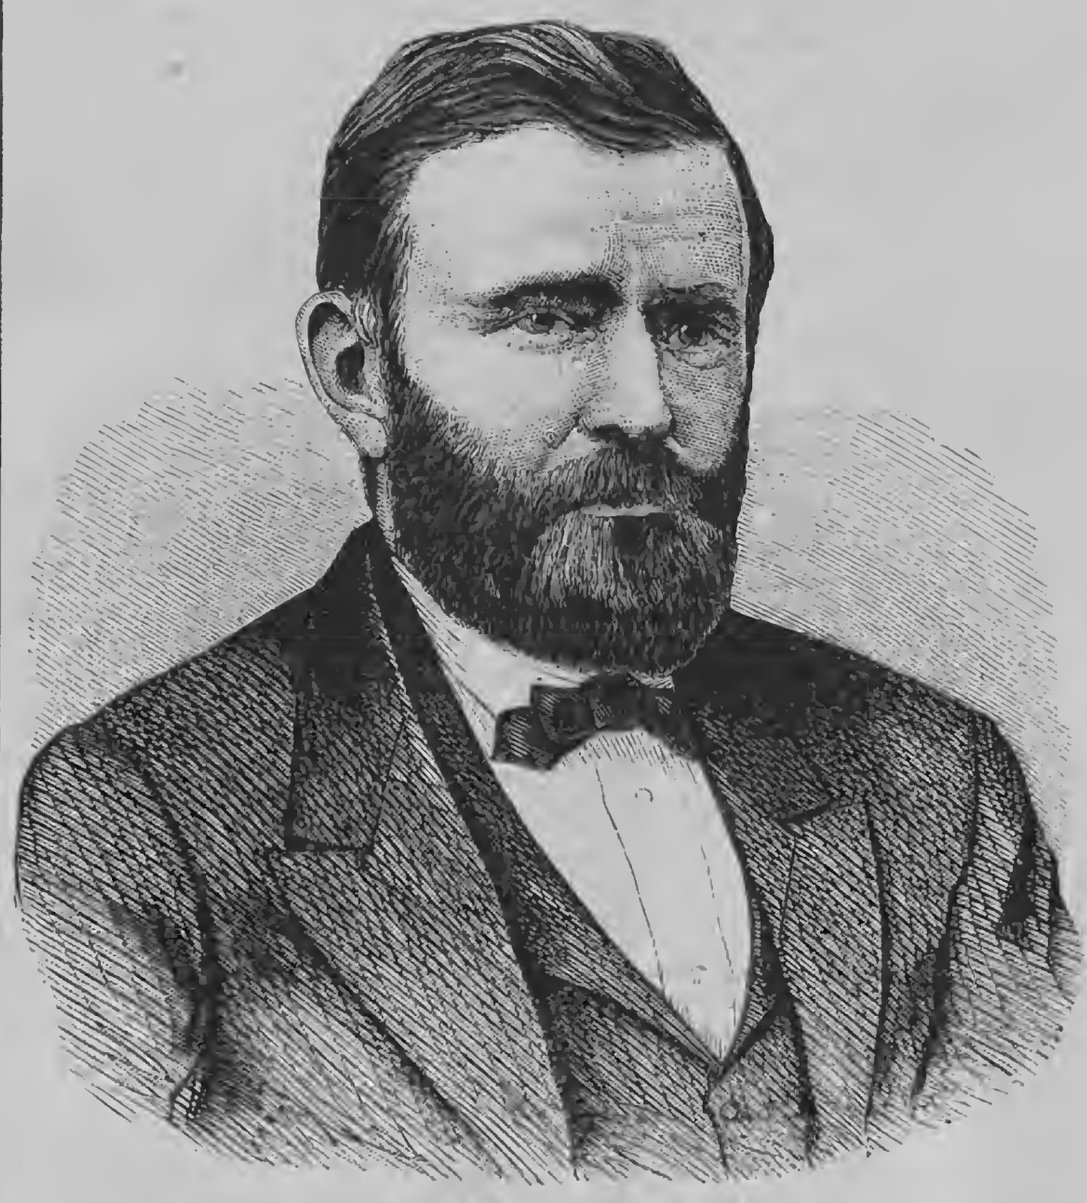
U. S. GRANT.

THE President of the United States, who has been nominated for re-election, is so well known to the whole people that the merest outline of his history will be sufficient. ULYSSES S. GRANT was born at Point Pleasant, Clermont Co., Ohio, April 27, 1822, and is the son of JESSE R. and HANNAH SIMPSON GRANT, formerly of Pennsylvania. He graduated at West Point in 1843, and joined Gen. TAYLOR on the Rio Grande, in 1846. Fighting through the Mexican War, GRANT attained the rank of Captain. He was living in Galena, Ill., when the civil war began. He offered his services to the country, and as Colonel of the 21st Illinois Volunteers served in Missouri. Gen. GRANT'S war record, from Fort Donelson to the surrender of LEE, is familiar to everybody, and needs no repetition here. He was made General-in-Chief of the Army March 17, 1864, and General of the U. S. Army on the 25th of July, 1866. He was inaugurated President March 4, 1869.

HENRY WILSON.

The man who was nominated on the first ballot for Vice-President of the United States at the Republican Convention, is a representative American. HENRY WILSON is 60 years of age, having been born in the year 1812, at Farmington, N. H. His youth was passed in extremest poverty, and when only ten years old he was apprenticed to a farmer at whose house he stayed until he became of age. During all that time it is said that he received but twelve months schooling, as the term is usually applied. Yet WILSON schooled himself, by reading and thinking, so that he was by no means under the average intelligence. When released from his severe apprenticeship, he started off to seek his fortune, with his entire property strapped upon his shoulders. Arriving at the town of Natick, he hired out to a shoemaker, to learn the trade, which he accomplished at the end of two years, besides saving up two hundred dollars. With this money he went to the academy at Concord, with the firm purpose of acquiring a thorough education, but before he had been there three months the man to whom he had lent his money, failed, and young WILSON returned to his bench. About this time he began to obtain some local notoriety for speaking at ward meetings in the interests of abolitionism. In 1840 he was elected to the State Legislature, and was subsequently elected three times to the same position, and twice to the State Senate. His two strong positions, which he took from the start and has ever since maintained, were the abolition of slavery, and the elevation of the working classes. Having been a working man himself, he has never forgotten the hardships of his early days, and for his efforts in behalf of the laboring classes WILSON will always be remembered. He was one of the organizers of the Free Soil Party, being in 1852 President of the Free Soil National Convention, and chairman of the National Committee. In 1855 he was elected to the United States Senate, to succeed EDWARD EVERETT, which position he has satisfactorily filled ever since. Though MR. WILSON has been in public life thirty years, it is said that he is yet as poor as when he was dependent on his wages as a shoemaker. No higher word of commendation than this can be awarded him.

OLIVE LOGAN lectured in Chattanooga recently. She was obliged to pay for delivering her lecture a city tax, a county tax, and a State tax, and fee the Sheriff and Clerk. The whole amounted to $56.



ULYSSES S. GRANT.

BRIEF SERMONS.

DIFFERENCES of opinion give me but little concern; but it is a real pleasure to be brought into communication with any one who is in earnest, and who really looks to God's will as his standard of right and wrong, and judges of actions according to their greater or less conformity.—*Dr. Arnold.*

DESPISE not little temptations; rightly met, they have often nerved the character for some fiery trial. And despise not little crosses; for when taken up and lovingly accepted at the Lord's hand, they have made men meet for a great crown, even the crown of righteousness and life, which the Lord hath promised to them that love him. —*E. M. Gouldburn, M. D.*

BENEFICENCE is a duty. He who frequently practices it, and sees his benevolent intentions realized, at length comes really to love him to whom he has done good. When, therefore, it is said, Thou shalt love thy neighbor as thyself, it is not meant, thou shalt love him first, and do good to him in consequence of that love, but, thou shalt do good to thy neighbor, and thus thy beneficence will engender in thee that love to mankind which is the fullness and the consummation of the inclination to do good.—*Kant.*

THE only way to meet affliction is to pass through it solemnly, slowly, with humility and faith, as the Israelites passed through the sea. Then its very waves of misery will divide, and become to us a wall on the right side and on the left, until the gulf narrows and narrows before our eyes, and we land safe on the opposite shore.—*Miss Muloch.*

As nothing truly valuable can be attained without industry, so there can be no persevering industry without a deep sense of the value of time.—*Stgourney.*

WE should give as we would receive—cheerfully, quickly, and without hesitation; for there is no grace in a benefit that sticks to the fingers.—*Seneca.*

THE word "impossible" is the mother-tongue of little souls, said Lord Brougham.

HENRY WILSON.

THE DINNER HORN.

BY COUSIN CYNTHIA.

O, THE sailor loves the sounding sea,
And the winds that wildly blow;—
And the bird-songs in the greenwood tree,
The poet loves, I know.
For *me*, I love the song to hear
Of the lark at early morn;
But the sweetest sound to the farmer's ear
Is the song of the *Dinner Horn!*

A battle march for the soldier free—
Or the call of the trumpet clear;
And the rapid tramp of cavalry
The soldier loves to hear.
But sweet to the farmer, wearied soul!
While he plows the rustling corn,
Is the sound that comes in the noontide lull—
'Tis the song of the *Dinner Horn!*

O, the cavalier loves at twilight's hour
To hear his beloved sing;
And the lady loves, as she sits in her bower,
The sound of the sweet harp's string.
But, hark! to those notes through the fields and groves,
And through the meadows borne—
'Tis the song of all songs the farmer loves—
'Tis the song of the *Dinner Horn!*

Our Story-Teller.

THE COURTNEYS;

OR, AUNT LAURA'S GIFT.

BY DE FORREST P. GUMMERSON.

Chapter I.

"Two years more, with our usual good luck, and the farm will be paid for," said LAURA COURTNEY to her husband, as he came in one morning carrying in each hand a pail full of foaming milk, and wearing just the slightest look of the blues in his face. His wife was quick to notice this.

SEARS COURTNEY had fallen quite too much into this way of feeling of late. When he bought the farm he had planned to have it all clear at the end of the second year; but now, when two years had come and gone, he found that two more would have to pass ere he could call it free from debt, and his own. He was naturally of a cheerful disposition, and something of a castle-builder; so that when he made up his mind to purchase the REYNOLDS farm, he did not look upon the shaded side of farm life; but saw only the bright pictures such as poets and dreamers delight to paint. He had never been used to farm work. Born in the city, and educated for a mercantile life, the idea of farming for a livelihood had never once occurred to him.

Had his health continued unimpaired, perhaps he would never have made the attempt. But after his doctors had repeatedly advised him to try this sort of life, and he had let this advice pass unheeded, the doctor grew more decided one day, and told him "that his life was not good for another year unless he followed the advice he had given him."

COURTNEY was not long in coming to a decision after this verdict. How could he die and leave all that was dear to him—his wife and children—to the mercies of a cruel and ofttimes unjust world? Great as were the attractions of city life to him, he would rather live on some deserted island, if they could share with him its solitude, than to die 'mid all the city's splendor, and they be left alone. So he entered into the business of purchasing a farm with a zeal that really surprised his wife, knowing how he had always disliked the country. At last one was found that just met his idea of what a farm should be, and the owner gave such a glowing description of it in regard to what it could be made to yield, that he quickly decided to purchase. If he had consulted with some one whose experience had been greater than his, he would not have made the mistake of purchasing so poor a farm.

SEARS COURTNEY had known country people only through the columns of some paper, which told of the honest lives they led, of their pastoral simplicity, and true home style of living. He had yet to learn that there were exceptions to this rule, and that there could be found in the country men whose meanness, and sharp bargains, would put a city sharper to his wit's end to equal.

First he hired a man to work for him by the day, and at the end of a week found that he was paying him one dollar more than any one else in the place was paying, though the man, with an effrontery surprising, had declared on his honor that all the hired men in the place were receiving that amount as their wages. Of course when he found out the man had told him a lie he discharged him at once; but so long a time elapsed ere he could procure another, that

his work went so far behind as to make it impossible to catch up; and when the year was ended, he found that he had expended over two hundred dollars more than his farm had yielded him.

"Of course, a few years more such as this has been will make us very rich some day!" he said to his wife, as he shut his account book with a suddenness that made her start with surprise. "Of course, I say, Mrs. COURTNEY, we shall yet be very rich from the profit of our farm; if, like a crab, we continue to go backward; eh, my dear?"

"I wouldn't get so down-hearted about it if I were you, SEARS. Remember this is only the first year; and then, you know, you had but little or no experience, and another year you may go far ahead of your best anticipations. Two hundred dollars isn't so very much after all, is it? when you take into consideration that you had so many new things to buy. I shall be able to help you much more the coming year. I don't intend to keep but one girl; I have learned so much in the past that I know I can do with less help."

Now, the idea of LAURA COURTNEY getting along with only one girl seemed so perfectly ridiculous to her husband that he just stretched himself out at full length and laughed at her until she actually cried, because she did not like the idea of his thinking that she could not do anything.

"It's just the way with these city men," she said. "They're never home, and they don't know anything about it. I'm sure that during the past year I did a great deal more work than ANN, who always made a fuss, as though she was doing a great deal, when all the time she required more waiting on than anybody else in the house."

"There! there! little puss, don't take it so to heart"—seeing what a bad effect his laughing was really having upon his wife. "Of course I believe you can work—I know you do, any way; but it did seem rather funny to think of those dainty, white hands of yours (which no one in the city ever saw ungloved, save in your own home) splashing about in greasy water and soap-suds. I confess the idea of it quite took my breath away, and it was the tickling sensation in my throat, caused in my trying to get it back again, that set me laughing."

LAURA COURTNEY could not cry any more after this speech. She had a keen sense of the ludicrous, and the idea of a tickling in her husband's throat, caused by losing his breath, and then trying to regain it, making him laugh, was quite too absurd; so she had to laugh too, which she did until SEARS brought her to task, by chiding her for doing the very thing she had accused him of but a few moments before.

Somehow the laugh had done them both good; for when SEARS arose he went over to where his wife sat and kissed her, and she noticed that the cloud had left his face, and where it had hung all day like a pall there were smiles like sunbeams now, that danced about in their own light. So while her husband was doing his chores she sang, for her heart was full of gladness and her faith in the future was strong enough to let her wait and see what it had in store for them without counting on possible failures.

Such as this woman are they who win crowns of life purer than gold, and by their faith a home eternal in the heavens, which the All-Giver bestows on those whose trust is in Him—believing that without He wills, not one of His beloved children shall faint by the wayside.

Chapter II.

LAURA COURTNEY kept her word; and when ANN'S month was up she was told that her services would no longer be required. ANN did not like this at all, and declared that "she'd make them pay her wages for the whole year." But as Mrs. COURTNEY had only engaged her by the month she told that lady "She could do as she pleased about trying that, but of one thing she was sure, she should not stand any of her impudence, and the quicker she left the better it would be for all concerned."

With one or two sharp speeches ANN went off to her room, where, having packed her things, and among them some half-dozen stolen articles, as Mrs. COURTNEY afterwards found out, she took her departure.

LAURA COURTNEY found that the task she had imposed on herself was indeed much greater than she had at first supposed. There was an immense deal of work to do; and it did seem to her as if she would break down under it. It was the Spring of the year, and the children were not very well, so that she had frequently to be up nights, and the little sleep she got, together with the work, began to tell fearfully upon her. SEARS noticed this and begged that she would let him get her another girl, but she was a decided woman when once she had made up her mind, and she was determined to see what this year could be made to bring forth by a thorough practice of economy.

Was it economy? I question if it is true economy to wear one's self out at hard labor, and such, too, as one has not been accustomed to, when there are those that can be had who are used to the hard paths of life. It seems to me that there are many mistakes made by women like LAURA COURTNEY, in believing that they are helping their husbands by giving all their strength to the needs of the present, and by so doing laying the foundation for an after-life of uselessness and misery, when from overwork they find themselves broken down in body and mind.

LAURA COURTNEY found before the year was half gone that she had not done the wisest thing. The woman who attended to the dairy was efficient, and did all in her power to lighten the labor and make it easy for Mrs. COURTNEY. But there was such a constant accumulation of little things that must be done that she fairly grew sick at heart when she dared think of them. Once or twice she had half resolved to tell SEARS that she had not acted altogether wisely; but she knew how everything plagued him and how much was going wrong about the place, and so she determined not to complain, even if she died by holding out to the end of the year.

To tell the truth, things had gone worse thus far on the farm than in the past year. Just when he most needed its work one of his valuable horses was taken sick and died. Here was a clear loss of over two hundred dollars, for although he could buy a cheaper one than this, he had twice been offered that amount for this one, and once only the week before it died. Then one of his cows fell in jumping over a fence and broke her leg and he had to kill her. His land, too, was poor; and no matter how much work was put on it, it would be some two or three years at best before it would begin to yield well.

"I've half a mind to give the whole thing up," he said to LAURA one evening, when he came in more tired than usual; "I don't see how it is ever going to benefit my health this trying to make bread out of stones! Why, this worriment of mind that I've had since we came here would have been the death of any common man."

LAURA COURTNEY was of much the same opinion; indeed her own troubles of late had caused her to wish many times that her husband would come to some such decision; but this had been one of her "good days," so she bit her lip and fully determined that no word of complaint should fall from her. When her husband had finished his supper he went out to go to the post-office, which was about half a mile from his home.

"I may be gone a little longer than usual," he said, "I want to stop and see Mr. MEREDITH about that wagon he talked of selling; so don't sit up for me, my dear, after the usual time of retiring; there's no knowing when he will get through talking; he is what the people about here call 'long winded,' you know." Then he kissed the children and his wife and went out.

After he had gone Mrs. COURTNEY prepared the children for bed. There were two of them—LOUISE, the oldest, nearly six, and JENNIE, not quite three. It was no easy task to get these little ones quieted down at bed-time. Indeed they usually took this time for one of their romps, and about all the mischief they could think of they contrived to narrow down into the half hour their mother took at this time. They had not half finished their play when SEARS COURTNEY returned. He had stopped at the post-office on his way down, where he had found a letter in a black-edged envelope, addressd to his wife. He was somewhat frightened at first, for to him there was something chilling in the touch of one of these somber-looking envelopes.

"I wonder why people will persist in parading their grief in all possible places? It seems to me that it is not necessary to fill the minds of others with constant sadness by these reminders of death. Is it not enough that the sorrows of each one come soon enough without having always to share in those of others?"

He opened the door that led to the nursery, and called to his wife to come down at once. He had a letter which he feared contained bad news. LAURA came down immediately after she had put the children for the twentieth time into their beds, and having called Mrs. DORRANCE, the cook, to stay with them.

Mrs. COURTNEY took the letter from her husband and opened it. It was from her father's youngest sister, who had married when LAURA was yet a child, and gone to the far West. Since her marriage they had heard but occasionally from her, and then nothing definite. In these letters she had alluded to the health of herself and husband, and stated in a general way that they were prospering. When Mr. RICHARDSON—LAURA'S father—had died, she had been telegraphed to, but, owing to the illness of her husband, could not come. Since that time she had not written but once, and LAURA had begun to forget that she ever had an aunt for whom she was named. The letter read thus:

"MY DEAR NIECE:—You will see by this letter that I have been deeply afflicted. My husband died suddenly about two weeks ago. He was as well, apparently, up to within an hour of his death, as at any time during his life. He died of heart disease. What I want most to write about, is where my future home is to be. I would like to make it with you. You have always seemed very dear to me since you were a little wee babe, and I gave you my name. I have sufficient means with which to support myself, and good health, so that I will not be any expense to you, and may be of assistance. All that I require is a home where I can feel that I am welcome. More when I see you. Please write at once. Your loving Aunt,

"LAURA WILSEY."

"What shall we write in answer?" said SEARS, when his wife had finished reading the letter.

"Why, that she may come, of course. You wouldn't have me deny the only relative I have, on my father's side, the comforts of a home, would you, my dear?"

"No! of course not; what do you take me for—a barbarian, I wonder?"

"Not at all; but then you wanted to know what to write; as if there could be but one answer."

So Aunt LAURA was informed that she would be welcome, and that henceforth she might consider their home as hers.

Chapter III.

ABOUT two weeks from the time Aunt LAURA'S letter was received, the stage stopped in front of the COURTNEY'S home, and a lady dressed in deep mourning was seen by Mrs. COURTNEY to hastily descend. She would have hurried out to meet her had her hands been free; but she had been helping the cook with the baking, and her hands and arms were covered with flour. Before she had hardly time to think, the door opened, and the sweetest of voices was heard calling, "LAURA."

"I hadn't time to knock, my dear! I was so anxious to see you that I could not wait for that formula to be gone through with. Ever since your dear, kind letter reached me I've just been wild to come. I knew by the kind words I found therein that I should indeed be welcome here."

The driver came in just then with the trunks, and for a time all conversation was dropped in order to attend to him. When he had gone, and Aunt LAURA had divested herself of her things, they both sat down in the two great easy chairs that had once belonged to her father's home, and poured out the story of their lives since they had been separated. When Aunt LAURA spoke of her dead husband, tears filled the eyes of both, and after that time he was not alluded to by either, because of the sorrowful feelings the mention of his name would call forth. But in Aunt LAURA'S heart there was laid away a tender memory of him she had loved so well, and he would never be forgotten.

When SEARS COURTNEY came in from the field that day, to his dinner, he found Aunt LAURA a very agreeable person, and his heart was glad within him that his home was to be hers as well.

"If things only would go right on the farm, now," he said, "I think we should be about the happiest family in this part of the land. But there is no use in denying it, my dear, things do go confoundedly wrong; and unless there is a decided turn in fortune's wheel in our favor, we shall not be able to meet our payments, and then the mortgage will be foreclosed and we shall be homeless."

"Always looking on the dark side, SEARS. Don't you believe you would be just a little more happy if you should try to look over or under these dark clouds, instead of right at them? It seems to me that you would find them edged with sunshine if you did."

"If I could. But then I haven't your faith, my dear; and things that seem but trifles to you seem the 'Old Man of the Mountain' to me; and I cannot throw trouble off as you can. We are differently constituted, you see."

"Well, let us hope for the best. It won't make us one jot better off to borrow trouble, any way. 'Sufficient to the day is the evil thereof' is a good proverb, notwithstanding you don't like proverbs, my dear."

SEARS COURTNEY went out to his work that afternoon with a lighter heart than he had had for many a day. Somehow these talks with his wife always did fill him with new courage and cause him to wonder if there had not been some mistake when woman was named the weaker vessel. But, use all the courage he could muster, and strength into the bargain, he could never make that farm pay. The land was poor and had been worked to death before it fell into his hands, so that when the time came again for harvesting he found that his crops would not meet his expenses by over one hundred dollars. From this time he was so disheartened that it did seem as if he would break down entirely. He began to wear the look of a man whose cares were weighing him down to the very earth.

LAURA COURTNEY tried every way in her power to cheer him, but to no purpose. "It seemed," he said, "as though I never could make another effort. Besides, I am not gaining in health here; so where is the use in trying to keep the farm any longer?"

Aunt LAURA noticed how changed he was from the cheerful man who greeted her with such an enthusiastic welcome, and wondered in secret what could be the cause. She resolved, too, upon asking her niece for an explanation of her husband's sad and worn-out look. Accordingly, one day while they were sitting alone, she asked Mrs. COURTNEY to tell her all about her husband's trouble—"for I know, my dear, that he has trouble. No man ever looked so dejected unless there was some deep cause—one, too, out of which he cannot see his way."

Then LAURA COURTNEY drew her chair closer to the side of her Aunt, and told just what the matter really was, and how that she feared SEARS would break down entirely if there was not something done to ease his mind in regard to the mortgage.

"Nothing will be more easy, my child," said Aunt LAURA. "I have a plan that will forever relieve your husband from the cares of farm life. I have feared for some time that it was too hard for him here. I have never told you that my husband died a rich man, but he did. When the estate was settled I found that there was left for me a little more than one hundred and fifty thousand dollars. There! don't look so surprised, child, it's true.

"Well, of course you know unless I marry again—which I never shall—all my money will some day go to you, or your children, should you outlive me. What I propose to have you do is this:—buy a cottage somewhere, large enough for your wants, and about four acres of land, and sell this miserable apology for a farm. Then hire a sufficiency of help to do all your housework. Then let your husband do farming on a small scale and in a genteel way on his four acres of land, and his health will come back to him. I don't believe that working from morn until night with the cares of a farm ever did bring one single man back to health, all the doctors in the land to the contrary. We will keep a horse, of course, or perhaps a pair of ponies, and a phæton, and wander at will 'over the hills and far away,' and banish care to the winds."

"But, Aunt LAURA, this would be too much for us to accept of you," said Mrs. COURTNEY.

"Why so? Haven't I enough and to spare? As I said, at my death all I possess will be yours. Now I propose to see just how you will use my money while I am living. I think there are more mistakes made in keeping money through a long life by those who are rich, and thereby letting those who have just claims upon them suffer for the want of it, knowing in the end that it must be theirs, than can ever be made by sharing it with them while one is alive, and can see the amount of good it is doing. So I intend to give you fifty thousand dollars now—that is for your name—and if it will make you and your husband happier and freer from care than you are now, then will I be sufficiently rewarded."

That evening, when SEARS COURTNEY came in to his evening meal, his wife told him of AUNT LAURA'S generous gift, and how rich she really was. The poor fellow was nearly unmanned, and almost cried. It seemed so hard to him to be compelled to lose all the money he had by this unlucky speculation. But here was an unexpected way out of all difficulties; and this woman, who at first he had feared to have enter his home, had saved him from ultimate want. He had indeed entertained an angel unawares.

It was not an easy matter to dispose of the farm. Those who lived in the place knew how utterly worthless it was in comparison to other farms. But at last it was sold, though much below what SEARS COURTNEY had paid for it; yet he considered that the best of the bargain was his in being able to get rid of it at all.

What need of prolonging our story? The end has come. The COURTNEYS are free from care; Aunt LAURA is happy in seeing them happy; and I might write chapter after chapter urging those who, like her, are rich, to go and do likewise—scatter their wealth so that its fruit might be seen by them ere the dark seal of death had closed their eyes forever. But what would it avail?

Ladies' Port-Folio.

A MOTHER'S RECOMPENSE.

BY C. G. S.

To-day I saw a young gentleman
Taking his mother to ride,
I saw her look into his handsome face
With a mother's fondness and pride;
And I said to myself: "Mrs. CAMDEN
Has always a son by her side."

I saw with what dutiful gallantry
He handed her into her seat,
I marked his careful solicitude
As he tucked the robes round her feet;
And I said to myself: "Mrs CAMDEN
Has not much more trouble to meet."

She has had her days of trouble—
Time's tide ne'er smoothly runs—
Hard work, sickness and poverty,
And the care of little ones;
And now she is old and feeble,
But the mother of seven sons.

For when ALLEN and WILLARD and ALBERT
Went into the world as men
To earn for themselves a fortune
And comforts for her, why PENN
And JULIUS and CHARLEY were left at home
To care for their mother then.

And now that JULIUS and CHARLEY
Have left the roof tree, too,
And PENN has bought for his mother
A beautiful cottage now,
I see that she keeps a carriage,
And rides out with her "baby LU."

LEARNING TO SEE.

WOULD it not be well if our children were taught to *see?* Some seeing they cannot escape from. A boy speedily makes a correct comparative estimate of the size of apples and other "goodies," and a girl gets a more or less quick perception of shades of color and degrees of fineness in dress material. In the trades, too, the power of sight is still more developed in special directions. But with all the training, none see all that is in their path, and most fail to see all the relations of the things they do see. They cannot help seeing a house, but how the house was built, the kind of brick, number of windows, hight, size, garden, and flowers in it—these they do not see in detail. Botanists and entomologists know how hard it is to get an exact description of all the distinguishing marks of a flower or insect—marks which might be seen had people only learned to see.

Now, the eye is not in fault; generally, there is no physical disability. The trouble is, we have not been trained to perceive all that is painted with unfailing accuracy on the retina. All particulars of everything within the range of our vision have impressed themselves on the eye; can we not learn to see them? It is said that a lady asked TURNER, the landscape painter, where he saw such colors as he had used—she had never seen such. His answer was, "Don't you wish you could?"

Is not this failure to observe likely to be a great hindrance in after life, cutting off sources of pleasure, causing false judgments and much ignorance? It will be answered, these details are trifles, not needing attention, except for special occasions. The objector has lived to manhood or womanhood, and found no need of that special training recommended. People have before now said the same about learning to read, but who believed them? They knew not what they had lost. You can, perhaps, tell what you have seen, but how do you know what pleasure the things you have not seen might have given you? You know of some dangers you have escaped, but cannot tell of those you might have escaped, had you seen (it may have been but the raising of an eyelid).

You may have a keen eye for all things in your business (or think you have), but the blunders of your apprentice and workman days might have been less numerous had you only learned *to see* while young.

Would that the fathers and mothers trained their children as HOUDIN'S father trained him! While walking the streets, at a given signal they would give an instantaneous glance at a shop window, and then compare notes, to ascertain how many particulars each had noted. Who does not perceive that this habit of instantaneous perception, thus trained, must have been of immense use in after life? In some schools the pupils are taught to measure distances accurately by the eye, but the power of perceiving, *at a glance*, all the peculiarities of any object, is not taught anywhere. Why should it not be? But if the teachers are derelict, we call upon the young to practice themselves in learning to observe, quickly and accurately. *Learn to see*—you do not know how much this implies. D. M. C.

WHAT SHALL I READ.

BY M. S. LADD.

THIS question has just been propounded by a young girl, and I will give it a public answer, hoping it may benefit other young friends who have a desire for self-culture. Taking it for granted that you are only beginning, I would advise that those old standard works, viz.: Plutarch, Rollin, etc., should be examined. The best of the old authors in poetry, history and philosophy; these give tone to the mind, and cultivate purity of taste. It is well to dwell among these people of the past, and fortify ourselves, as much as may be, by emulating their heroic virtues and self-denial; but we must still remember that we are living now; that progress commands a dividend, and that we must keep up with the spirit of the age; then we must read the best works of living authors,-be they philosophy, poetry or romance. The latter we shall find to contain both the former, and in a peculiarly instructive vein,—and while we may use wisdom about too frequent indulgence, and in the selection, these works should not be excluded entirely from the library.

A good paper should be examined at least as often as once per week; and by a good paper I mean one containing general news, and alive to the interests of the day. One in which you can get at the vital principles of the affairs of your own country, and somewhat of the changes and progress going on in other lands. It is surprising how much general information may be gleaned from a first-class newspaper. It is, in its way, an educator.

This young friend asks *what* she shall read, but does not ask *how* she shall read, though it is not, in the least, an unimportant matter.

In the first place I would have, if possible, regular reading hours. If not practicable, I would pick up my time as I best could; a great deal can be gathered in this desultory manner. A young lady who has often interested me by her intelligence in conversation, assured me that nearly all the information she had stored was gained by reading daily with book or paper propped up before her, while putting her hair up for dinner. "Ah?" said she, with a little shake of the head, "mother has never found out how it can take me so long to make my toilet."

For Sabbath reading I would use books appropriate to the day. I would carry no work, however much it interested me, into the Sabbath, if unsuited to its uses.

Do not read too hurriedly. Read to have matter for thought and to grow. Look out for doubtful argument. Do not receive all you read, though ingeniously constructed, as a final conclusion,—learn to examine and separate. Though your author may write well, his statements seem correct, and his reasons plausible, yet look into the subject with what powers of analysis you possess. While it is weak to be skeptical of well-grounded truths, we should not be convinced unwarily with speculative theories. Read slowly, thoughtfully, and let it enter into your brain and provide it nourishment.

SOMETHING WORTH LAUGHING FOR.

THE books have told us that George Washington never laughed aloud. It doesn't seem just right to dispute them, but here is a story told by an old soldier whose children told it to me, that shows how even books may be mistaken.

For long weeks the grand army of the Revolution had suffered from hardship and cold, as few armies had suffered before. The faces of the men were pale and thin, their forms were bowed and shivering with cold (for they were clothed in rags,) and their feet, all bare, or covered with nothing but fragments of leather, left bloody marks upon the snow wherever they walked. They might have disbanded and gone away to their homes for clothing and shelter; but there was a country to save, liberty to win, and their noble commander to follow into the heart of fiery battles. I do not think a man went home.

Far away, there was another commander—a fair and true hearted woman. She marshalled her forces from far and near—only women and girls! Into their hands she placed shining weapons, and, armed in like manner, she took the van and cheered them on to battle. That was a silent and bloodless war; but it was a victorious one. Ere the winter was half gone, an enemy was vanquished, for whom no sword had terrors, and who had never quailed before the loudest cannon.

One morning the old soldier, (but he was young then,) standing in front of George Washington's tent, saw the General come to the door and look abroad over the encampment. Here and there a soldier was carrying water to his tent, or hewing wood to feed the fire that must roast his scanty breakfast of potatoes; but there was none of that noisy mirth that soldiers are noted for. All were wan, and speechless, and despairing.

Suddenly there came in sight, just turning a corner of the camp road near by, three wagons, laden from dashboard to tailboard. Upon the foremost load, sat a fair and noble woman, the woman whom the great commander loved best of in all the world—his wife. She had come, the conquerer of the knitting needles, the queen of stockings!

The young soldier looked at his commander. O'er all that more than kingly face there was a sudden flush of joy and George Washington lifted up his voice and laughed aloud!—*Amanda T. Jones.*

Reading for the Young.

OUT IN THE WOODS.

"HIPPITY-RIP!" says the little tree-toad,
"What is going to happen to-day?
I guess I had better get out of the road,
If those children are coming this way."
He stretches his hind-legs, so long and slim,
For a flying leap to the hickory-limb:
And then he pops open his ruby-red eyes
At the funny proceedings, in solemn surprise.

Hop-skip-and-jump! It is Lorry and Len
With the rest of the romping crew;
They're scampering over the woods again,
And what are they going to do?
To build a bonfire, I do declare!
Is there any mischief they wouldn't dare?—
But roasting potatoes is jolly fun—
You eat 'em scorched, and about half done!

"Clickety-clack," says the saucy tree-toad,
"What a fuss you young ones make!
I wonder if baked potatoes are good?
How long do they take to bake?"
He turns to the mother-bird on her nest—
Four little fledglings under her breast—
"Do *you* know, madam, about such things?"
She shakes her head, and she flutters her wings.

"Chickadee-dee! Don't you wish they would go?
I am really afraid," says she,
"That some of those dreadful children know
I have got my nest in this tree.
It's all very well for you my dear;
With your long legs you have nothing to fear;
For me—of course I could easily fly,
But fancy leaving my darlings to die!"

Slippety-slide! "There's a copperhead—quick!
Keep Alice and Lorry away!"
Len picks up a stone, Syd "goes for" a stick—
The snake thinks he'd better not stay.
He rapidly wriggles himself to his den,
And pokes out his tongue at the whole race of men.
"Two-legged, hideous things! I affirm
That only to look at them makes me squirm."

Piffety-whiff! what a cloud of smoke,
As the dancing breeze comes near;
Says the little tree-toad, "I shall certainly choke,
If I stop in this atmosphere.
I guess I had best hop a little bit higher,
For I don't quite relish the smell of that fire.
I'll go and inquire if Miss Katy-Did's in,
And see what *she* thinks of this racket and din."

Fiddle-dee-dee! for the toad and the snake
The children care never a whit;
They eat their potatoes half-raw, and their cake,
They gobble it up every bit.
They jump on the logs where the sunshine is warm,
And brown ants and black ants in colonies swarm;
They hang on the saplings, and merrily swing
Backward and forward, like birds on the wing.

But dingery-ding! in the midst of the play
The sound of the dinner-bell comes;
Hop-skip-and-jump! they all scamper away,
And nothing is left but the crumbs.
Now the bird flutters down, and the snake wriggles out;
The pert little tree-toad goes hopping about;
They eat up the scraps, and declare they are good,
And bright shines the sun on the merry green wood.

A MONSTER KALEIDOSCOPE.

BY LORETTA.

WE had a monster kaleidoscope here the other night, and the children (yes, and the older folks, too) all said they never saw such masses of flowers, such wonderful cataracts, mountains of snow, beautiful bouquets, glittering jewelry, splendid rainbows, such a collection of bead work, distorted faces—and some pretty ones—dolls, etc., etc., too numerous to mention.

Of course, after looking through it at the ever changing scenes, the first questions were, "What is it?" "Where did you get it?" We waited till all had looked and pronounced it splendid, then told them the *modus operandi* of manufacturing such an instrument.

We placed the melodeon at the opening of the folding-doors between the parlor and sitting-room, leaving them open just the width of the instrument. We then suspended blankets from above the doors, to separate the two rooms, turned the lid of the melodeon back, and supported it by a pile of books, at an angle of about 45°. Then we threw blankets over this to keep out every bit of light. The lights in the parlor, where were the spectators, were turned down quite low. We placed a very strong light so its rays would fall directly on the articles exhibited. The spectators were requested to look through the opening at the end of the melodeon next them—not more than two can be accommodated at once—while we, the exhibitors, displayed hanging baskets, old artificial flowers, bead work, dolls, etc., at the other side.

These articles were not only magnified and repeated in the reflection, but one would think there must be magic and enchantment in the work, the reflection of some indifferent articles was so handsome. The cascades were formed by pouring water from one dish into another. The beds of snow were formed of white tissue paper crimped—the rainbow's different colors of tarletan. We just took what articles we could find with bright colors and held them before the opening, or shook them or turned them slowly. The lookers on often called for a repetition of some scenes. Sometimes one of the exhibitors would look through. This would cause a shout of merriment.

Our Kaleidoscope cannot be properly described without an illustration, but I advise each of you to get up one for yourselves. I think it will amuse you for at least one evening.

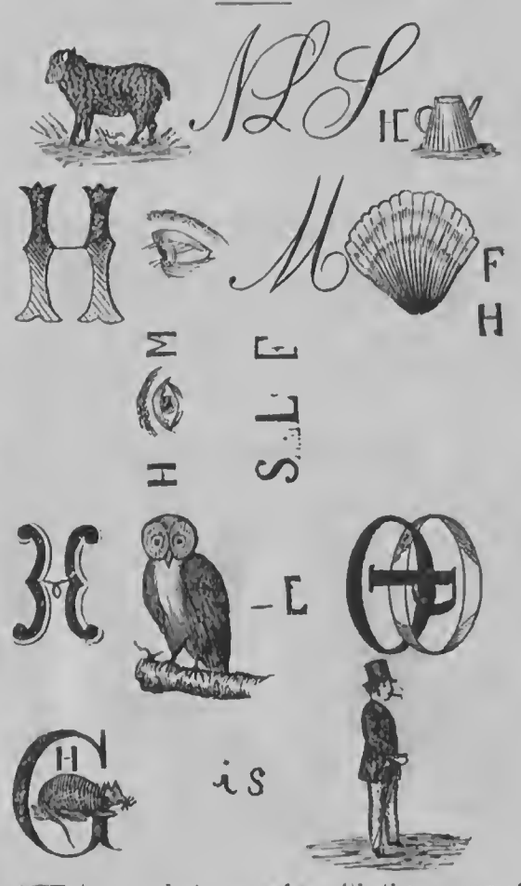
DIDN'T BELIEVE IT.

A LITTLE girl, six years old, was on a visit to her grandfather, who was a New England divine. "Only think, grandpa, what Uncle Robert says." "What does he say, my dear?" "Why, he says the moon is made of green cheese. It isn't, at all, is it?" "Well, child, suppose you find out yourself." "How can I, grandpa?" "Get your Bible, and see what it says." "Where shall I begin?" "Begin at the beginning." The child sat down to read the Bible. When she had read about half through the second chapter of Genesis, she came back to her grandfather, eyes all bright with the excitement of discovery. "I have found it, grandpa! It isn't true; for God made the moon before he made any cows."

LEARN to say "no." No necessity of snapping it dog-fashion, but say it respectfully, as you ought to.

The Puzzler.

ILLUSTRATED REBUS.—No. 25.



☞ Answer in two weeks, with the names of those giving correct answers up to the time of going to press.

PROBLEM.—No. 9.

THREE men, John, George and Henry, with their wives, Sarah, Mary and Ann, went to a store and bought goods, each person paying as many cents per yard as he or she bought yards; also, each man pays out $3.36 more than his wife. George got 51 yards more than John, and Mary 8 yards more than Sarah. Tell me the name of the wife of each. C. R. WILLIAMS.

☞ Answer in two weeks, with the names of those giving correct answers up to the time of going to press.

PUZZLER ANSWERS.—June 8.

ILLUSTRATED REBUS No. 23.—Washington is the Capital of the United States. Correct answers have been received from Mary M. Tolford, Bert Paddock, Will T. Carpenter, Aubery Bowie, Geo. L. Day, J. W. Hoyt, J. R. Scott, Martha L. Moore, Geo. M. Meyers, Mrs. Frank A. Moreace, John F. Peck, Curtis Zoller, Nellie G. Noris, Hosea A. Annis, Clarence M. Warner, Mella Dayton, Schuyler Goldsmith, Jennie Elizabeth P. W. Comstock, Lewis D. Coffrath, J. T. K., Seth Youngs, James W. Barber, David A. Chatfield, Mrs. W. H. Warner, Mrs. Jane Vaughn, Mrs. A. D. Lee, Henry A. Buell, A. B. Kinne, E. P. Morseman, Florence E. Brink, Fred. Snell, H. Whine Shepard, Alice A. Abbey, Mary L. Abbey, Henry B. Skillman, F. Ingraham, Carrie P. Russell, Milton Cornell, J. Sylvester Hicks, R. Willie Whittemore, T. Howard Gosom, Electa J. Blood, David H. Harrington, L. A. Smith, C. W. Taylor, Kathleen H. Aldrick, M. E. Cobble, A. A. Young, Addie Morse, Eugene Barrett, Whitfield Cartwright, A. H., M. C. and E. L. Cole, A. Pardee, J. W. S., Charles Knight, H. Bellows, Charles Sprout, R. Jeffers, G. W. Crandall, Eugene Grames, E. G. Seekell, Mrs. D., Ellen E. Edgerton, Lorin Jennings, Emma Phillips, Lillie D. Bond, May Merrin, C. J. Keith, John C. Bowen, Geo. W. Smith, G. R. Young.

PROBLEM No. 8.—737.67366 + acres. The only attempt at answer received is from Geo. Farley, who gives it thus:—1 sq. m. 97 a., 11 sq. rds, 8,014 sq. feet.

ORNITHOLOGICAL ENIGMA NO. 1.—European Kingfisher.

News of the Week.

GENERAL REVIEW.

The Washington Treaty still excites the attention of England and America. Much discussion in relation to it has occurred in Parliament. No conclusions have been reached. The arbitrators have gone to Geneva ... President Grant, in a short letter, has accepted his re-nomination. The international boat race on the 10th was easily won by the London crew ...Congress adjourned on the 10th....England asks for a postponement of the Tribunal; America is understood to refuse....The revolution in Mexico continues, and Monterey has been captured ...The Jesuits are to be expelled from Germany ....Spain will release Dr. Houard upon our peremptory demand.... Democratic State Conventions are generally endorsing Horace Greeley.

DOMESTIC NEWS.

New York City and Vicinity.

The 100,000 workmen on strike demand that all stores favor the 8-hour law or lose their patronage....Red Cloud, Red Dog, and other Indians, hold a public reception at the Cooper Union ....Rev. Dr. John Lanahan was arrested on the 7th and thrown into Ludlow St. jail. The charge is slander. Next day he was bailed out....The gas manufacturers have yielded to the strikers ....A force of 1,800 men under direction of the police, commenced to clean the streets on the 10th ...The Brooklyn ring frauds, as they are called, attract much attention....The mercury was 92° in the shade on the 9th. ..The great 8 hour demonstration on the 10th was a failure; only a few working men turned out ...The Japanese Embassy has arrived in town....Dr. Louis A. Sayre has been made a Knight by the King of Sweden....James Gordon Bennet was buried on the 13th. His son only came from Europe to the funeral....The 8-hour strikes are not so successful as the workingmen could wish. The piano and sewing machine men refuse to yield. Co-operative associations are to be formed....The various troops of the city have had their Spring reviews and field days....The dog laws are to be enforced.. The famous English bands and artists for the Boston Jubilee have arrived... The weather was extremely hot on the 12th....The piano makers have resolved to keep their shops open 10 hours. .Some of the furniture makers are yielding to the 8-hour strike....The new postal cards will soon be put upon the market.

Political.

From all accounts the Philadelphia Convention was wonderfully enthusiastic. The Tribune speaks of it as an office-holders' convention, and says the ticket is stronger than the platform.... The text of Minister Schenck's letter to Earl Granville on the indirect claims is made public. The claims, by order of Mr. Fish, were categorically withdrawn....Vice-President Colfax says his letter to Mr. Bowen, declining a re-election, was not intended for publication. ..Congress adjourned on the 10th. The so-called Enforcement act was not passed... It now appears that the Buell records, of which so much has been said, have never been on file in the War Department, hence they were not stolen ...President Grant has written a short letter of acceptance to the President of the Philadelphia Convention. Senator Wilson has made a handsome speech of acceptance....Fernando Wood indorses Greeley ....Harlem and Yonkers have held Greeley and Brown ratification meetings....Iowa Democrats indorse Cincinnati, also South Carolina Democrats....Grant clubs are forming in Boston... Hendricks has been nominated for Gov. of Ind. ..Indiana Democrats indorse Greeley. Members of Congress, the President's family, and the Cabinet have left Washington....Kansas Democrats indorse Greeley ...One of the last acts of Congress was the introduction of the penny postal cards....Delaware Democrats repudiate Greeley ....Senator Wilson will make a tour through the South....Vermont and Missouri Democrats indorse Greeley.

Fires.

Office of the Omaha Bee, on the 11th....Cotton mill in Frankford, Pa., on the 11th; loss $60,000... Snow sheds on the Central Pacific Railroad, for a quarter of a mile, on the 10th.

Crimes.

On the 8th, Augustus Brown of New York city was assaulted, and had his skull fractured. ....On the 7th, one Thomas Price of New York was stabbed by Thomas McGibney....Thomas Talbot was stabbed by John Gannon, Jr., on the 8th, in New York....A man named Koesbach was shot by a stranger at Belleville, near St. Louis, on the 7th.

Disasters.

On the 6th, a terrible tornado passed over Illinois, Iowa, and the Northwest, causing immense damage, as well as loss of life....A terrible whirlwind took place in Logan Co., Ohio, on the 8th; the villages of Quincy and Degraff were destroyed; two persons were killed, and many wounded ...Floods in New Hampshire are reported, washing away bridges, dams, etc.; at Whitefield, N. H., property to the value of $100,000 has been destroyed by water.

From France.

Gen. Trochu has made a brilliant speech in the Assembly in favor of reducing service in the army from 5 to 3 years....It is estimated that the war of the Commune damaged Paris to the amount of 500,000,000 francs.... President Thiers, in a speech in the Assembly, says France desires a long peace... Gen. Trochu's bill reducing the term of service in the army has been defeated....Cremorne, the winner of the Derby, has won the prize of Paris....There is great dissatisfaction in Paris with President Thiers.

FOREIGN NEWS.

From Great Britain.

A letter from Mr. Schenck read in Parliament on the 6th, declaring that the supplemental article excludes the indirect claims, seems to have turned the tide in favor of the Treaty. Earl Russell at once withdrew his motion to the Queen....The Burmese Empire has sent an embassy to England.....Yarmouth has given the Prince of Wales a great reception. ..The British Grenadier Band sailed for America on the 7th, notwithstanding the opposition in the House of Lords....A new cable has been laid from England to the Continent....Prince Bismarck is expected in the Isle of Wight for the benefit of his health....Sir Alexander Cockburn is about to go to Geneva to attend the tribunal....The great boat race on the 10th, between the Atalanta crew of New York and the London crew, was won by the latter, the Americans losing from the start. Thousands of spectators lined the river, and there was much rejoicing in London over the victory. Time was 21 minutes 16 seconds, over a course of four miles and two furlongs.....The Ballot bill has passed to a second reading in the House of Lords....Earl Granville and the Italian Government propose a conference of the European powers to put a stop to the persecution of the Jews in Roumania. Russia and Prussia object, and a joint note is likely to be the result....On the 11th Mr. Gladstone made a statement relative to the Treaty. He said England had asked an eight months postponement of the Tribunal. Much discussion followed in both Houses, and a proposition to withdraw was cheered in the House of Lords ... On the 12th there was great political excitement over the Washington Treaty....The winning boat of the London crew has been sent to the Crystal Palace....The Fiona yacht won in the Channel match of the Royal Thames Yacht Club, on the 12th.

Miscellaneous Foreign News.

Spanish successes are reported in Cuba.... Mexico is reported as steadily becoming tranquil. New railways, lines of steamships, etc., are projected... A steamer has arrived at Bombay from Zanzibar, with positive news of Livingstone. Mr. Santhey of the Herald was near the coast with letters from the Doctor....The inundation of the Po in Italy rendered 22,000 persons homeless in the Province of Ferrara.... The Senate of Spain approves of the wise and merciful conduct of Serrano at Navarre. Castelar has defended the Commune in the Cortes ....On the 7th Gen. Sickles made a formal demand of Spain for the release of Dr. Houard. If Spain does not comply at once President Grant will take decisive action....An American named Rufus Bratton has been abducted from London, Canada....The Indians about Ft. Garry are reported troublesome....The Hawaiian Parliament proposes to impeach the Ministry for building a hotel with Government money.... Gen. Caballas has been defeated in Mexico, and Monterey has been retaken by the revolutionists. Gen. Corella, and his staff of 20 officers, all who escaped from Monterey, have arrived at Brownsville, Texas ..The Emperor of Austria will visit Berlin in September....The Brazilian Chambers has been dissolved....The revolution in Venezuela is at an end ...War between Hayti and San Domingo is apprehended....The Emperor of Germany will soon give a decision on the San Juan boundary question....The German treaty with Luxemburg in relation to working the railways has been signed....Lord Lisgar of Canada has returned to England.

THE NORTHERN PACIFIC RAILROAD.

Favorable Report of the Investigating Committee.

The Committee on Pacific Railroads was instructed during the recent session of Congress to investigate the affairs of the Northern Pacific Railroad Company, upon motion of the Hon. N. P. Banks of Massachusetts. The report, just published, is a complete vindication of the officers and agents of the Company, and is in every way satisfactory. There were no charges of any kind made against the management. The Committee examined the officers of the Company under oath, and have obtained the fullest information as to the actual condition of the road. The work throughout is of the best quality; the iron is all manufactured from American ores by American labor. By the end of the present year, 517 miles of road will be in operation. Surveys for the best lines across the Continent have been made, and, in addition to that now completed, there is under construction and preparing for contracts 1,031 miles of road, including both sides of the Rocky Mountains. No director or engineer of the road is pecuniarily interested in its construction, and all contracts have been made after competitive biddings. No land has been sold, given, or promised to any director or executive officer. The managers are to be congratulated upon the clean record shown, which will do much to strengthen public confidence in the value of this great Company. The Committee find that the Northern Pacific Railroad Company offers to its bond-holders several elements of security, and they go on to recite these, concluding by the statement that recent thorough and careful surveyings have left no room for doubt that the Company's lands, agricultural, grazing, mineral, and timber are of excellent average quality, and, with the road built through them, they will possess a cash value which will surely provide for the payment of the bonds for which they are now mortgaged.

SEMI-BUSINESS PARAGRAPHS.

Tonic and Recuperant Plantation Bitters.—The constantly increasing patronage which it receives has, it is true, excited the petty envy of certain splenetic advertisers of pinchbeck panaceas, who hope to make a market for their own stagnant, watery wares, by deerying all spirituous medicinal preparations. But the public can stomach neither their arguments nor their potations, and consequently reject these very weak imitations of the enemy as entirely too thin!

United States Watch Co.—This Company, we observe, continues to hold the leading position among American manufacturers: at the Fairs held in different parts of the country, where there has been great competition in this line, the Marion (Giles, Wales & Co.,) United States Watches have been regarded as greatly superior in every particular to any on exhibition, and have been awarded the first premiums, over all competitors, in every Fair where they have been exhibited.

Facts for the Ladies.—Miss H. W. Terry, Wading River, N. Y., has used her Wheeler & Wilson Lock-Stitch Machine almost constantly for five years, on all kinds of family sewing, and broken but one needle. See the new Improvements and Woods' Lock-Stitch Ripper.

No Agents, no Discounts, no Commissions. One price to all. Purchasers save two profits. Sold on trial anywhere in the United States. Free Price List. The Jones Scale Works, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

New York, Saturday, June 15, 1872.

In general trade the week's business has been rather uninteresting. The Exports of Domestic Produce improved to $5,000,000 from $3,800,000 the week before, and the Export of Gold has fallen off to about $2,000,000 from $3,750,000, the previous week. The speculators in Gold have been unable to keep the price above 114 per cent., although the political situation between our Government and Great Britain has not been improved, and the Geneva arbitration is likely to fall altogether or to be postponed, at the instance of the British Cabinet, until next Winter.

It is satisfactory to state, however, that the Treaty affair has no important depression on the London or New York markets. The British Funds keep steady and our Government Stocks firm. The latter are so well held that the Sinking Fund, this week, was unable to purchase more than $50,000 U. S. 5-20s out of $2,000,000 advertised to be bought at or under the par of Gold. A number of new Railroad negotiations, not for very large sums, have been successful abroad, and others, more important in amount, are understood to be favorably progressing.

The Share speculation at the Stock Exchange broke down 2@3 per cent. on Thursday, and in the case of Pacific Mail 5@6 per cent., and while this turn may swamp a good many of the holders, the break in the market is regarded by the Brokers as likely to lead to a more active business for the remainder of the month. There is also a break of 2 cents per pound in the Cotton Speculation, and contracts for the months of July and August are offered at lower figures on the prospect of a large crop next fall. The acreage, or width of lands, planted in cotton is estimated to be 12½ or 15 per cent. larger than last season, and the young crop is looking well throughout the South.

The Secretary of the Treasury has issued his first of June Schedule of the Public Debt. During the month of May he reduced the Principal $4,225,000, and reduced the Yearly Interest charge on the Funded Debt $480,000 per annum. That is, he took in $8,000,000 6 per cent. debt, while his net Treasury Circulation, free of Interest, is increased nearly $4,000,000. The following is the present classification of the Funded Debt, as compared with the total outstanding on the 4th March, 1869, on the incoming of the present Administration:

FUNDED (GOLD) STOCKS, UNITED STATES, JUNE 1.

Date.	Coupon.	Registered.	Total.
5-20s, 1862	$242,500,300	$34,184,200	$276,684,500
5-20s, 1864	59,012,250	37,140,900	76,183,150
5-20s, 1865	120,105,850	39,620,000	159,732,850
5-20s, 1865, (new)	161,867,150	62,622,900	224,490,050
5-20s, 1867	228,500,500	92,461,300	320,771,800
5-20s, 1868	25,358,750	13,905,500	39,264,250
Total 5-20s	$847,761,300	$279,374,100	$1,097,135,400
Sixes, 1881	91,276,300	192,301,300	283,081,200
Fives, 10-40s	56,131,250	158,435,350	194,567,300
Fives, 1874	13,255,000	6,015,000	20,000,000
New Fives, 1881	76,395,950	125,104,050	200,000,000
Total	$1,055,721,100	$730,962,800	$1,795,383,900
Total March 4, 1869			2,107,846,150
Reduction of Funded Debt			$312,462,250
Yearly Gold Interest charge, 1869			124,255,350
Present yearly charge			103,577,361
Reduction Interest charge			$20,677,989
Reduction in Funded Debt as above			$312,462,250
Reduction of Treasury Circulation			19,483,631
Total payments on Debt			$331,945,881

The last Quarterly Statement of the National Banks of the United States shows the following summary, as compared with the previous report:

ALL NATIONAL BANKS—STATEMENT OF APRIL 13, 1872.

	Feb. 27, 1872.	April 19, 1872.
Capital paid in	$463,880,834	$467,324,318
Surplus fund	103,779,552	104,512,525
Profits unappropriated	43,193,000	46,128,590
National circulation	321,413,225	325,305,752
Old local circulation	1,830,565	1,763,880
Individual deposits	593,062,201	620,775,265
U. S. deposits	6,914,247	6,555,722
U. S. disbursing officers	4,859,722	3,416,371
Due to national banks	128,620,930	120,755,505
To other banks & b'krs, &c.	50,340,027	46,614,214
Total liabilities	$1,717,904,060	$1,743,652,213
Loans and discounts	$835,211,423	$841,031,414
U. S. stock for circulation	370,674,700	374,428,450
Other U. S. funds	37,062,550	34,461,100
Legal-tender money	119,007,308	123,240,704
Gold and silver	25,447,163	24,443,849
Due from National Banks	127,729,937	118,817,603
Due from other Banks	12,267,759	12,290,716
Bills of National Banks	15,475,199	18,443,682
Real estate	30,652,676	30,869,274
Stocks and mortgages	22,766,759	21,538,914
Cash items for Cl'ing house	105,267,234	126,657,137
Miscellaneous	16,361,352	17,352,344
Total resources	$1,717,904,060	$1,743,652,213

The comparative strength of movement in February and April may be thus stated:

Deposits in gross	$593,062,200	$620,775,265
Less clearing items	105,267,342	126,657,137
Net deposits	$487,794,903	$494,118,128
Net to banks	38,963,021	36,252,454
To Treasury	11,773,949	9,772,098
Circulation	321,413,225	325,305,752
Demand in liabilities	$859,946,061	$865,448,427
Gold and greenbacks	144,454,471	147,684,903
Pro rata	16.80 ₰ ct.	17 ₰ ct.

The Tariff and Tax revision by Congress has been completed. Including free Tea and Coffee, previously enacted, the Customs on Foreign Imports and the Taxes upon Domestic production have been reduced at the late session of Congress $53,000,000 per annum, not including the Income tax, which ceases with the tax of 1871 (now in the course of collection), by its own limitation. The taxes upon the Whisky interest are simplified and consolidated into a single tax of 70 cents per gallon. The tax on manufactured Tobacco is made uniform at 20 cents per pound. The Stamp taxes are abolished, except on friction matches and the two cent stamp on bank checks, drafts and orders. Hides are admitted duty free, and there is an abatement to the extent of one-tenth of the present duties on Iron, Steel, Wool, Woolens, Cottons, Leather, Glassware, and some other less important articles. The duty on Salt and Coal are reduced about one-half.

The following are the comparative movements of the City Banks for the past fortnight:

	June1.	June 8.
Capital	$87,154,000	$87,154,000
Loans	284,674,500	287,113,200
Gold and Greenbacks	75,048,700	75,454,100
Deposits	220,170,901	227,301,400
Circulation	27,522,000	27,502,500

PRODUCE AND PROVISIONS.

New York, Friday, June 14, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 13,136 bales of cotton; dried fruits, 10 pkgs.; eggs, 11,228 bbls.; flour, 83,575 bbls.; wheat, 184,631 bush.; corn, 2,322,700 do.; oats, 562,855 do.; barley, — do.; grass seed, — bags; hops, 351 bales; beans, 206 bbls.; pork, 1,287 pkgs.; cut meats, 2,623 do., lard, 4,328; kegs do., 11; butter, 16,950 pkgs.; cheese, 50,693 do.; peanuts, — bags; 2,632 hhds. tobacco; 5,709 pkgs do.; 5,992 bbls. whisky; 1,838 bales wool; corn meal, bbls, 5,885; do. bags, 1,158; rye, bu., 24,000; malt do., —; beef, pkgs., 81.

Beans and Peas.—Medium are in moderate stock comparatively, with scarcely any trade; prices are weak. Marrowfats are held firmly. Prime mediums, $3.25@3.35.; common lots do., $2.90. Prime marrowfats, $3.65@3.75; common lots do. $3. Prime Kidney, $3.65@3.75. Prime pea, $3.50@3.60. Peas are dull at $1.25 for Canada, and $1.75@2.00 prime green.

Beeswax—Is in fair supply and selling at 40@40½c. for Southern.

Butter.—The market has struggled through a heavy week, and even the reduced quotations are weak at the close:

State pails, fine, 28c.; do. common to fair, 24@27c.; State half tubs, fine, 26@27c.; selections, 28c.; Welsh, packages, fine, 25@26c.; common State, 20@24c. Western reserve, fine, 26c.; other, 14@18c.; Western, 18@20c.; common Western, 10@12c. Grease and inferior, 7@15c.

Cheese.—The market has been somewhat unsettled. The impression is that prices opened too high to favor a healthy tone for any length of time. Shippers, after filling the few urgent orders they had on hand last week, withdrew pretty generally from the market, the price on the other side showing no improvement. Slight concessions are offered at the close, but not liberal enough to effect much business. We quote fancy factory, 14¾ @ 15c.; good do., 14@14¼c.; skimmed as low as 5c.; Ohio factory, 13@13½c., with common at 10c.; dairy at 13½@13½c. for prime, and common at 6c.

Cotton.—The market has been very dull, and prices have declined both for spot lots and contracts.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	21	21	21	21
Good Ordinary	23⅜	23⅜	23⅜	23⅜
Low Middling	25⅛	25⅛	25⅛	25⅛
Middling	26¼	26¼	26¼	26¼
Good Middling	27¼	27¼	27¼	27¼

For forward delivery latest sales on the basis of low middling, are as follows: For July, 25.1-16c.; Aug., 25⅝c.; Sept., 23⅜c.; Oct., 20⅜c.; Nov., 19⅜c.; Dec., 19¼c.

Dried Fruits.—A few lots of prime apples are selling, but outside of this the market is extremely dull. Prices generally slow, very little change—if anything, there is a weaker feeling on unpeeled peaches.

Apples—Old State, qrs., 6@7c.; Western, new, 10@10½c.; Southern, new, qrs., 3@3½c; do. fine, sliced, 12@13c.; new State qrs., 11@11½c.; do. sliced, fine, 13@14c.; Peaches, peeled, new N. C., 17@18½c.; do. Ga., 15@16½c.; peeled E. Sh. Va., 16@17c.; new unpeeled halves, 6½@7c.; do. quarters, 4½@5c. Plums, 27@28c. Cherries, new, ₰ lb., 33@34c. Blackberries, 13c. Raspberries, 33@35c.

Eggs.—The arrivals are large for the season and the warm weather creates a general disposition to realize. Prime Western 15c., common and fair marks do. 13½@14c., State 16@17c., Jersey 17@18c., Southern 13½@14c.

Fresh Fruits.—Strawberries have arrived freely, still not more abundantly than could be used, and prices have ruled pretty steady at 10c. for common, and 15c. for prime quarts Del., Md. and N. J. These prices are for market stock. Fancy seedlings from up the river have sold at 18@25c., with a few as high as 50@75c. per quart. Among the new varieties that are plentiful enough to try for a market place this year is the "Chas. Downing." Dealers look upon it thus far as favorable for local use, but do not regard it as a proper berry to compete with the Wilson for shipment. Cherries are fine this year and in good supply from near points. A few fancy have brought 20c., the range is generally 10@15c. Florida watermelons are in market but not wanted. Apples nominal Gooseberries quoted at $3 per bush. Peanuts dull; Wilmington, $1.25@2; Norfolk, $1.40@2.

Flour.—The news from the other side has been more encouraging, and prices are stronger. Some business has been done for export, but the high rates of ocean freight checks a free movement. We quote at $5.75@6.25 for superfine State; $6.35@7.25 for common extra do.; $7.30@7.25 for good to choice do.; $7.40@7.80 for fancy do.; $5.75@6.25 for superior Michigan, Indiana, Ohio, Iowa, &c.; $6.75@7.35 for extra do.; $7.40@8.30 for choice extra do., including shipping brands of round hoop Ohio at $7.00@7.80, and trade brands of do. at $7.85@9.40; good to choice white wheat extras at $8.30@9.75; Minnesota, fair to very choice extra, at $7.00@9.35; St. Louis at $8.00@10.30 for common to fair extra, and $10.35@12.00 for good to choice. Southern at $7.80@10.20 for extra, and $10.25@13.00 for good to fine. Rye at $4.00@5.40. Corn meal is quiet; sales of Brandywine at $3.90@3.95.

Grain.—The arrivals of wheat are remarkably light, and prices are firm notwithstanding the outlet is small. No. 2, in store at $1.76@1.80; No. 1 in store at $1.75@1.77; winter red Western, $1.92@2.00; amber Western, $2.03@2.05; and white Western at $2.00@2.14 Rye is dull at 92 for Western. Oats are lower, with fair supplies. Western, 50½@51c.; Ohio, 51@54c.; State, 51@53½c. Malt selling at $1.05 for two-rowed State. Corn has declined on account of heavy arrivals. At the close there is a good export trade, and the market is steady; steamer lots of Western mixed, 63½@65c.; sailing do., 67@69c. Sales for Aug. at 70c., and Sept. at 71½c.

Hay and Straw.—Prices have been steadily declining under heavy arrivals. Shipping hay, $1.30; retail, $1.45@1.60; salt, 95c.@$1; clover, 95c.@$1. Long rye straw, $1.05@1.10; short, 90@95c; oat, 75@80c.; wheat, 60@65c.

Hops.—Stocks receive only light additions, and very steady prices generally are quoted. The trade is entirely from brewers. Prime, 55@65c.; common as low as 25c. Bavarians, 65@75c.; English, 60@65c.

Milk.—An increased demand has put prices up. Sales as high as $2 per can, although the more general figures obtained were $1.25@1.30. Receipts for the week have been about 67,000 cans, making an average daily supply of about 9,600 cans.

Poultry and Game.—Live is in good demand, at better figures. Dressed is arriving to special summer receivers, and quotations are not useful as a market item at this season. Spring chickens are in demand, as the lower price helps distribute them. Pigeons bring $2.25 per doz. for feathered, $3.12½ for stall-fed; squab, $1.25. The quotations are:—Live, State and New Jersey fowls and chickens, 19@20c.; do. Western 18@19c.; roosters, 18@19c.; turkeys, 16@18c.; ducks, Western, per pair, 88c.@$1.00; Geese, Western, $1.62@1.75; spring chicks, 75@$1.12. Game is not in market. We quote English snipe, $1.75@2. Stall-fed pigeons, $2.50@2.75; wild pigeons, $1.87@2.25 for unpicked and picked; squab, $1.25.

Provisions.—Pork is depressed with a dull trade. Mess on spot, $13.40, and for July $13.50. Extra prime $10.50@10.75. Prime mess $12.75. Cut meats are in good demand at firm figures; hams in pickle at 10½@11c.; in salt, at 9@10c.; shoulders in salt, at 5½@5¾c., and in pickle at 5½@5¾c. Smoked meats are steadily held at 10½c.; hams at 13c.; shoulders at 6@6½c., and clear rib at 8@8¼c. Dressed hogs quiet, 5¾@5¾c.; for middles there is a good trade at steady rates; city long clear 7¼c. Lard is very quiet at 9 1-16 for

Western steam, 9¼c. for July, 9 11-16c. for Aug. City at 8¾c. Stearine sold at 10¼c. for prime. Beef is hard to sell at $7.50@8.00 for plain Western mess, $10@12 for extra mess. Tierces at $10@12, for prime mess, $17@20 for India mess. Beef hams at $25@26. Tallow is weak at 9½c. for prime brands of city.

Seeds.—There is very little trade in grass. A few sales have been made. 9½c. for Ohio clover; 9½@10c. for Michigan and Indiana; 10@10¼c. for State; Timothy $3@3.25.

Tobacco.—There is a fair trade in seed leaf. Holders are disposed to place their supplies promptly at late prices. Kentucky leaf is quiet. We quote Kentucky 8¾@9¼c. for lugs, up to 13@16c. for selections; new crop Connecticut at 15@16c. for fillers, and 27@32½c. for seconds; New York at 10@11½c. for running lots; Ohio, 9½@10¼c. for running lots; Wisconsin, 8½c.; Havana, 95c.@$1.15.

Vegetables.—Bermuda potatoes have advanced, and with the Southern stock for the most part small and poor, the trade have turned their attention to old stock, paying better prices. Cucumbers sell low. Choice Peach Blows, $1.50@2.25; common sorts, $1.25@1.75; L. I. peas, $5 per bbl.; N. J. do. $4.75 per bbl.; Norfolk String Beans, $1.00 bbl.; Bermuda potatoes, $8@9.50 per bbl.; New Beets, $10@12 per 100 bunches; do. Turnips, $3@5 per 100 bunches; new cabbage, per bbl., Va., $2.50; N. J. cabbages, per 100, $8; Southern Potatoes, $3@5.

Whisky—is dull and lower at 88c. for Western.

Wool.—Trade, generally, is very slack. All parties are disposed to wait until prices are fixed on the new clip. Farmers, to a considerable extent, are basing their prices on the rates for old, but as last season was a very remarkable one, those quotations are considered here very unlikely to rule. In instances, prices have been brought down to an approachable figure. Sales of Western fleece at 70c.; unwashed do., 50@55c.; super pulled, 75@82c.; extra No. 1 at 65c.; burry Texas, 30c.; burry California, fall clip, 25c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., June 15, 1872.

THE market at Little Falls for the week ending June 15 was not so brisk as for the week previous and prices were about ½c. lower.

The sales of farm dairies ranged from 11½c. to 13½c., the delivery being about 600 boxes.

More than 6,000 boxes of factory were offered, nearly all of which were sold.

The top price for best lots was 13½c., though in a few instances it was said a higher price was reached. We give quotations of sales from leading factories as follows:

Herkimer Co. Central 11½c., Gloversville 13½c., Fulton 11c., Freman 13½c., Eatonville 11½c., Dairy Hill 11½c., Countryman 11c., Crains Corners 11½c., Columbia Center 11c., Cold Creek 11½c., Brockett & Fecter 11c., Brockett's Bridge 11½c., Bethel 11½c., Keys 11c., Ladue 11½c., Little Falls Central 11½c., Manheim Turnpike 11c., Mother Creek 13½c., Zimmerman Creek 11c., Top Notch 11c., Snell's Bush 11½c., A. Smith & Co. 11c., Nichols 11c., Newport 11½c.

We have advices from abroad for the first week in June. Our London correspondent says New American cheese comes to hand very good and sells at extreme quotations. Extra fine is quoted at 68s., fine 62@66s., good 58@60s. The other descriptions of cheese sell as follows:—English Cheddar 54@70s., Wiltshire double 60@74s., Cheshire medium 52@68s., fine 64@70s., Scotch new 58@64s. Dutch cheese—Edams 44@60s., Goudas 46@58s.; Derby shape, 46@50s.

In butter the new has an upward tendency. Glonmells is quoted at 110@112s., Corks 116s., Normandy extra 112@116s.

The corresponding prices last year were for American cheese, new, 70s., Corks butter 117s.

The weather in Central New York has been very wet and grass is getting a good start. Cows are doing very well, but we hear complaints that less cheese is being made than last year from some sized herds.

LIVE STOCK MARKETS.

NEW YORK, June 13, 1872.

IN point of numbers the markets have been well supplied with animals, while warm weather rather checks the demand, strawberry short cake taking the place of meats at the eating houses. Trade was at its best condition at the close one week ago, for it soon took a downward turn, and now we report a decline in all kinds, with the single exception of veals. This is probably only temporary, as it is very certain that cattle at least are not plenty in the country, while high prices and tall feed incline farmers to stock up heavily. It is not unfrequently the case that one-fourth of the cattle are taken from the wholesale market at Buffalo or Albany for further feeding.

The following are the receipts of live stock shown in comparison with other years:

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week.....	8,222	68	3,523	20,507	40,513
" last week.....	8,196	95	3,304	16,077	42,182
Corresponding week last year.....	6,215	85	3,373	24,030	26,002
Average last year....	7,187	88	2,301	25,132	25,177

Beeves.—The firmness noted one week ago to-day was of short duration, for by Monday morning we had 5,310 bullocks for the market of that day, or more than butchers could be induced to buy, even though put ½c. below the former prices. The cattle were variable in quality, from poor 5¾ cwt. Texans at 10⅝., to very fine Illinois grade Durhams of 10 cwt. at 13½c. Few animals sold above 13c., no matter how fine. The cattle were distributed—190 cars at Communipaw, 127 at 100th street, and 16 at Weehawken. Considerable of the stock was sold on Sunday, so that by Monday butchers had partially filled up, and, as the weather was very hot, they played off. Texans especially were hard to sell, and owners lost money on them. Some lots were sold at very little more than they cost in Chicago. Dealers even talked of sending them back again. The run has not been heavy since Monday, but the market is even weaker. In point of fact, it is nearly ½c. lower, fair steers selling at 12½c. on the scales, 57 lbs. per cwt. Some of Monday's Texans still remain unsold. The weather continues hot, and butchers do not want much on hand, either dead or alive. A decline in lamb and mutton operates against the beef trade. It does not look like selling all the 1,600 cattle which arrived to-day. The remedy for the present decline is to practise the holding back process for a few days. With a known scarcity in the country, compared to our present excessive wants, it does not seem necessary to sacrifice on prices.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₩ lb.....12¼ @ 13½		13½ @ 13¾
Good to prime.....12½ @ 13		12¾ @ 13¼
Ordinary to medium.....11½ @ 12		12 @ 12½
Lowest grade.....10 @ 11		11¼ @ 11¾
Average sales.....12¼ @ —		12½ @ 12¾

Milch Cows.—Hot weather causes a turn in the market, that article having more than doubled in price since last week. This is encouraging for dealers in fresh cows who now find a demand for all their good milkers. The rates are not much improved, but the average of $55@65 is rather higher. Poor cows sell at $40 and a few extras at $80.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

SAFE AND PROFITABLE!

THE

CANADA SOUTHERN

First Mortgage Sinking Fund

Thirty Years

7 Per Ct. Gold Bonds

AT

90 and Accrued Interest.

The Road runs from Buffalo to the Detroit River, and is the Eastern link in the new AIR LINE from BUFFALO to CHICAGO, and has been under construction for about two years past by railroad men who have seen the necessity for a STEEL RAIL, LOW GRADE SHORT ROUTE between the great railroad systems which diverge from Chicago, Toledo and Buffalo.

Among the builders of the road, by whose cash subscriptions 200 miles (out of 230) have already been graded, bridged and made ready for the superstructure, a large part of the steel rails bought, all of the materials for the stations and a part of the equipment purchased, are:

MILTON COURTRIGHT, JOHN F. TRACY, WM. L. SCOTT, DAVID DOWS, HENRY FARNHAM, R. A. FORSYTH, HENRY H. PORTER, JOHN M. BURKE, M. L. SYKES, JR., B. F. ALLEN, all Directors either in the Chicago and Northwest or in the Chicago, Rock Island and Pacific; GEO. OPDYKE, of the Midland Road; JOHN B. ALLEN, SIDNEY DILLON, DANIEL DREW, J. S. CASEMENT, J. & J. CASEY, O. S. CHAPMAN, JOHN ROSS, DAVID STEWART and F. H. WINSTON.

THE ROAD will be

33 MILES SHORTER THAN ANY OTHER ROAD,

either BUILT or in contemplation, between Buffalo and Chicago, and will also shorten the distance between Toledo and Buffalo 23 miles.

THE MAXIMUM GRADE on the entire line does not exceed FIFTEEN FEET to the mile—and Ninety-six per cent. of the Road IS STRAIGHT.

The ROAD WILL BE COMPLETED and in running order on or before December 31 of this year.

The principal and interest of the bonds are payable either in New York, London or Frankfort.

We confidently recommend the bonds to all classes of investors.

LEONARD, SHELDON & FOSTER,

No. 10 WALL ST., NEW YORK.

NOTICE.

Having become associated with Messrs. Leonard, Sheldon & Foster in the Agency of the Canada Southern Railway Company, we offer the above named Bonds for sale.

After a thorough investigation, we recommend them to our friends and customers as a sure and reliable investment. Pamphlets and all information furnished on application.

WINSLOW, LANIER & CO.,

27 PINE STREET, NEW YORK.

CAYUGA LAKE RAILROAD.

SATAE OF NEW YORK

Seven Per Cent.

FIRST MORTGAGE

GOLD BONDS

AT 90 AND ACCRUED INTEREST IN CURRENCY.

THIRTY YEARS TO RUN, AND ISSUED FOR $20,000 PER MILE.

This road forms the shortest and most direct route from the great Anthracite and Semi-Bituminous COAL fields of Pennsylvania into the central part of this State, and will run in connection with the New York Central road, which it crosses at Cayuga Bridge. Traversing as it does the finest and most populous agricultural district, generally known as the "Garden of the State," its local traffic will be large, but its greatest source of revenue will be from its COAL business. The road is being rapidly built. Iron is now being laid on a section covering more than one-quarter of the distance, and work on the whole line being pushed with great vigor, so that it is expected to have Coal trains running by the 1st of November next. From our knowledge of this enterprise, and after the most thorough investigation, we most confidently recommend the Bonds as a safe investment. We offer for the present the Bonds at 90 and accrued interest in currency.

Pomeroy's Trusses.

Unrivaled for the relief and cure of Hernia or Rupture. POMEROY & CO., 744 Broadway, New York.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats, Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler; No. 3, a medium size, having 3,853 square inches of fire surface, consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water.* We are also manufacturing:

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

For further particulars address

FARMERS, DAIRYMEN AND BUTTER BUYERS!
PACK YOUR BUTTER
IN
WESTCOTT'S
RETURN BUTTER PAIL

Approved and recommended by the leading authorities of our country on dairying, and acknowledged by all butter dealers to be the very best package in use. Butter packed in this Pail brings **5 to 10 cents more** a pound in the New York City market than the same quality in any other package.

READ THIS:

NEW YORK, Nov. 15, 1871.

We, the undersigned, Produce Commission Merchants of the City of New York, consider Westcott's Return Butter Pail, manufactured by Silsby Bros., Belmont, N. Y., *the best package in the market.* It is our experience that Butter packed in this Pail *sells more readily and commands a higher price* in this market than in any other package, and we heartily recommend its general use by the dealers, dairymen and butter buyers who ship to this city.

Respectfully,

(Signed by 45 leading Commission Merchants.)

The Westcott Return Butter Pail meets my approval as a good butter package. It is one which I always feel safe in recommending.
X. A. WILLARD,

AGENTS WANTED FOR

HISTORY OF THE GREAT FIRES

In CHICAGO and the WEST.

By Rev. E. J. GOODSPEED, D. D., of Chicago. The record of a proud city overtaken by sudden and awful calamity, of towns destroyed by the wasting element, of forests burned, of homes and farms desolated, of men of wealth made beggars, of families separated. Abounds with thrilling incidents of marvelous escapes, etc., and is the only complete History of these great events. 800 8vo. pages; 60 Engravings; price $2.50; outfit, $1. Secure the best territory at once. 70,000 already sold. The profits go to relieve the sufferers. Address H. S. GOODSPEED & CO., 37 Park Row, New York, or J. W. Goodspeed, Chicago, St. Louis, Cincinnati, or New Orleans.

"THE "LIGHT RUNNING" "DOMESTIC"

A DOMESTIC Luxury.

A DOMESTIC Blessing.

A DOMESTIC Necessity.

"WILL LAST A LIFETIME."

Address "DOMESTIC" S. M. Co., 96 Chambers St., N. Y.

NEW WAY OF GETTING THE GOUT.

Patient.—"Oh, dear! How my limbs ache, and how the pains in my toes gripe!"
Doctor.—"How did you get the gout?"
Patient.—(Forgettting his high living,)—"I was vaccinated the other day from a cow that had the 'hoof and mouth disease.'"

A STANDARD SECURITY.

We are selling the NORTHERN PACIFIC 7-30 GOLD BONDS at Par and Interest in currency. They are issued in denominations of from $100 to $1,000 Coupon, and $100 to $10,000 Registered, and are at all times interchangeable, at the pleasure of the holder, without charge.

They are secured by a First and Only Mortgage on the Road, its Equipments, Earnings and Franchises, and also on a Land Grant which, on the completion of the Road, will exceed 23,000 acres to each mile of track, or 500 Acres of Land to secure each $1,000 Bond.

These Bonds are at all times receivable at Ten Per Cent. Premium, in payment for any lands purchased from the Company.

A portion of the Company's lands are now on the Market, and the proceeds of sales constitute a SINKING FUND for the REDEMPTION OF THE BONDS.

Holders of United States 5-20 Bonds can now convert them into

NORTHERN PACIFIC 7-30s,

Realizing an immediate handsome profit, and an increase of about one-third on their annual income.

The semi-annual Interest on the Registered Bonds is paid with GOLD CHECKS, sent to the Post-Office address of the holder.

All marketable securities received in exchange, without expense to the investor, at their highest current value.

JAY COOKE & CO.,

New York, Philadelphia and Washington.

☞ For sale by Banks and Bankers generally throughout the United States and Canada.

"ECONOMY IS WEALTH."—Franklin. Why will people pay $50 or more for a SEWING MACHINE when $22 will buy one that has a *standard* reputation, is double thread, complete with Table, constructed upon entirely new and practical principles, runs by friction, and excels all others? These celebrated Machines are intended for poor people who want to save time, labor and money. ☞ AGENTS WANTED. Machines sent to Agents and *given away* to needy families. For Circulars and reduced prices, address FRANKLIN & DIAMOND S. M. CO., Box 397, Boston, Mass.

Agents Wanted. **$75 to $250 per month,** everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, cord, bind, braid and embroider in a most superior manner. Price only $15. Fully licensed and warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay Agents from $75 to $250 per month and expenses, or a commission from which twice that amount can be made. SECOMB & CO., *Boston, Mass.; Pittsburgh, Pa.; Chicago, Ill.; or St. Louis, Mo.*

AGENTS WANTED FOR

"JESUS."

By CHARLES F. DEEMS, D. D.

His divinity established and rationalism routed. The most popular and rapidly-selling religious work ever issued. For Circulars, address UNITED STATES PUBLISHING CO., 411 Broome St., New York.

Rural Adornment.

RUSTIC HANGING BASKET.

THE accompanying drawing represents a rustic hanging basket that any person can make with the common house tools, ax, saw, knife, hammer and a few brads. First, procure from the woods two or three sticks of iron-wood, or such as may suit your fancy. They should be selected, small trees, about three inches in diameter. After selecting the tree, cut it up into pieces fourteen or fifteen inches in length; then, taking one of these round sticks, split off the four sides; this, if it splits well, will give us eight pieces from two sticks, the number required to make the basket. The sticks, or pieces, should be narrower and thinner at one end than the other, as shown in Figure 2 (*A*), and rounded at each end. Then procure a block, or piece of inch board, and cut out a circular piece about three inches in diameter (*B*), slanting it a little so that the pieces will have the *taper* towards the bottom when tacked to the block. This, as you see, gives the basket a little flare. They should fit close together at the point where the block is, and may be a little open, nearer the top, in order to fill between with moss. Now, as we have the pieces nailed to the block with brads, we must begin to ornament it with grape vines and roots, as per engraving, Figure 1. Roots are tacked to the under side of the block, to fill it all up, and at the lower points of the pieces where they match, always keeping in view one thing—to preserve the tapering form and matching the roots in every way that will bring them all towards the center with uniformity. Next put vines on the sides, as per engraving, bringing two together over the places where the sticks match; also, weave in around the top two vines, in and out alternately, and, fastening with brads, tack roots on the pieces between the ornamental work.

Next put on a handle of grape vine, giving it a single knot; tie at the top to form a loop, interweaving it with a smaller vine; then give the basket a coat of varnish and put in suitable plants, and you will have an ornament that in a city would cost you at least five dollars. Keep the basket partially in the shade, and occasionally dip it in a barrel of rain water.

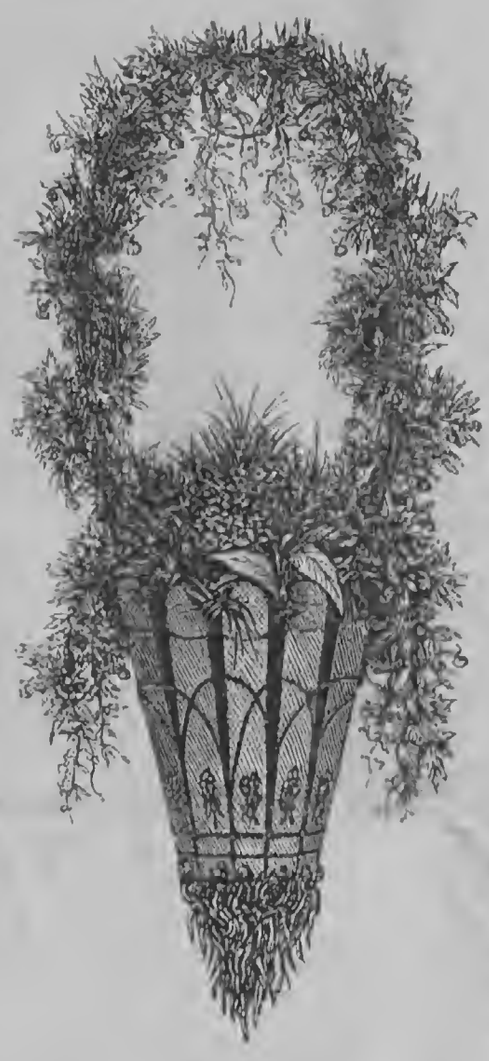

FIGURE 1.

Rustic Lawn Basket.

I INCLOSE you a sketch of a lawn basket similar to one I constructed last year, and which was the admiration of all who saw it. The material for it is at the hand of every one, and its beauty after the plants are in blossom and the vines entwined over the handle, will repay for all trouble and time spent in constructing it. The body of the basket is made as follows:—Procure at a tannery (or from the woods) coarse, strong hemlock bark, as wide as possible. Cut this up into pieces twenty inches long and making one end of each piece about an inch or so narrower than the other, in order to give it the right slant; then strike an oval where you wish the basket to stand, and dig out the sod, or a groove three inches deep. Now set the bark with the narrow end down at the desired slant, and pack earth against it on the inside of the oval until it will stand alone.

After erecting the sides and ends of the basket and getting them all to match nicely, procure a grape vine from the woods about half an inch in diameter and as long as possible. Here it will need two persons to work to advantage. Put the grape vine around about three inches below the top edge of the basket; the second and third time around being twined around the first. This gives it more strength and holds the work together so that it can be filled with earth. After filling, which should be of at least half leaf-mold, you may put another vine around the lower edge of the basket, to give it a finished look. Then comes the handle, which should be a large grape vine about an inch and a-half in diameter. Each end of this is pushed into the earth six or eight inches at each end of the basket, and it is then ready for the plants.

In filling with earth, it looks better if filled to within about three inches of the top. Plant at each end of the basket, near the handle, a Madeira vine and two or three Cypress plants; the waxy, broad leaves of the former intermingled with the finely cut leaves of the latter, together with its little red and white blossoms, are beautiful, and soon get so thick as to hide the rough handle completely. In the center of the basket may be put such plants as please the fancy, but I had verbenas in mine, and they gave a continuous bloom from Spring until the hard frosts came. A basket constructed like the above will stand eight or ten years, with proper care, and always look well. I think if a hardy English ivy were trained over the handle and some evergreen plants put in the basket, they might give a pleasing effect in Winter, too.

Who will give us a few essays on rustic and ornamental work, with such details as shall enable us to construct adornments without having to pay five or ten dollars for an armful of crooked limbs, just because we don't know how to put them together? I have seen baskets covered with knots and roots that were peeled of their bark; tell us at what season of the year they should be gathered in order to get the bark off easily. In the meantime I tell the RURAL readers "what I know about" a basket I made. ALAN.

RUSTIC LAWN BASKET.

The Naturalist.

A NORTH RIVER "DEVIL FISH."

THOSE of our readers who noticed (or can refer to) the illustration and description of the "Devil Fish" (*Octopus vulgaris*) in the RURAL of Feb. 3d, will be interested in the following item from the N. Y. Sun:

A NORTH RIVER MONSTER.—The attention of the people passing through the Barclay street ferry entrance yesterday was attracted to a large, strange marine monster hanging over the fish stand of Mr. J. E. Baker. It is labelled "Devil Fish," and is certainly a "queer fish." The fish was captured in the North River, opposite Weehawken, by Capt. Sam Ludlow. The fish had become entangled in the meshes of a shad net. The monster, including his tail, measured nearly five feet in length; its horny head is one-third as large as its body; its jaws are armed with rows of teeth running down into its gullet; its mouth is immense, and when the jaws are extended the fish could easily swallow a good-sized infant. The back and head is a dirty black, while the belly is a dull, yellow color. Two immense flaps, not unlike in color, size, and appearance, the ears of an elephant, hang from the sides of the head. The body is irregularly shaped, terminating in a tail similar to that of a lion, a web-like fin forming the tuft. Several fins, shaped like the human hand, the five fingers distinctly marked, project from the body. "See there," said Mr. Baker to a Sun man, drawing out a couple of feelers a foot long from near the eyes, "notice that tuft upon the ends: those are his baits. He will bury himself partially in the sediment at the bottom of the river, and lifting these over his mouth set them in motion. They attract fish, which he draws between his jaws. Here is a big shad we took from his maw." Mr. Baker here displayed a four-pounder pretty well mangled. "The shad is lively, while the devil fish is slow; he had to set his trap for him."

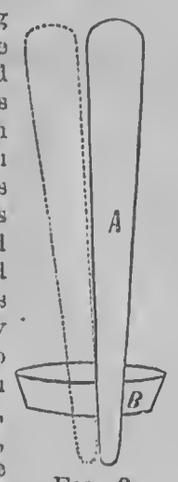

FIG. 2.

NOTES FOR NATURALISTS.

Harlequin Bug.—Coming into the house, yesterday, I found the beautiful little beetle herewith inclosed, crawling upon my shirt. Having never seen one like it before, I thought I would send it to you for name and habits, if it is of sufficient interest to do so. I had been among my fig trees trimming out some dead wood; around the fig trees is some mustard going to seed, and close by two asparagus beds; if the beetle did not come from either, then he must have flown against me when passing into the house.—GEO. C. EYRICH, *Jackson, Miss.*

THE beetle is a foe to cabbages, mustard, horseradish, and in fact all plants belonging to the Brassica family. It is a great pest to the cabbage in some of the Southern States, but has not as yet appeared at the North. Its scientific name is *Strachia histronica*, HAHN. We would advise you to destroy every one found.

Farm Economy.

ECONOMICAL NOTES.

Sawing Down Timber.—In the RURAL NEW-YORKER of June 1st I noticed an article from "S. H." on sawing down timber. As I have had a *little* experience in that business, I will furnish it for the benefit of those who have not. In doing so, I do not propose to say how it can be done successfully, but would warn novices that there *is* danger and expense attending this way of doing business, unless it is thoroughly understood. When I commenced, my directions were very similar to those of which I speak. Accordingly, the notch was cut, saw applied, and wedges vigorously driven. The result was that when the tree was cut about two-thirds off, it went over, splitting nearly sixteen feet, and leaving the uncut portion standing on the stump. In falling, the tree "gigged back," and came very near catching myself and man under it. Several others were sawed down with the same success. This splitting was of no particular advantage while cutting saw logs; but when I went to cutting cord wood, I found it quite a help, and used the saw altogether, for I never was able to get a tree to the ground without splitting it from ten to twenty-five feet. I was working exclusively on White Oak timber. If some one who knows would inform us how to saw down trees without injuring them, I would consider it a kind favor.—FRANK BATCHELOR, *Allegan Co., Mich.*

Manures for Clover.—Sulphates of soda and magnesia (glauber and epsom salts) have been found peculiarly efficacious as manures for clover, this being a crop that responds much more readily to mineral than to nitrogenized manures. The reason of this is believed to be that the plant draws its ammonia more from the air than from the soil. On land that, without such fertilizers, gave about three and one-half tons of clover hay, the crop was increased to four and one-half tons per acre by manuring with the salts named. Combined with superphosphates, these substances would be likely to show still better results, and a fertilizer thus constituted is well worthy of extended trial on our clover fields. The value of clover, especially when pastured with sheep, is fully recognized by our farmers; but its systematic growth preparatory to wheat, as is practiced in English tillage, is too much neglected, inasmuch as, from the small amount of ammonia taken by it from the soil, it allows nearly a whole year's accumulation to be stored up for the use of the succeeding cereal crop, to which nitrogenized plant food is absolutely essential.—J. A. W.

Effect of Plaster on Land.—JOHN GOTHAM is informed that plaster will not add to the permanent fertility of his sandy soil, except as it may aid the growth of clover, which may be plowed under, and thus furnish food for plants. Its chief use is supposed to be the absorption of ammonia from the atmosphere. The amount per acre need never be increased to produce the same results. Nor is it any more necessary to continue to use it after one application than it is to use barn-yard or other manures, because they have been once applied; but to all soils whereon plaster benefits the crop once, it pays to apply it as a top-dressing annually on corn, potatoes, clover, grain, etc. Such is our experience during a long series of years on sandy, light loam, and well-drained, stiff loam lands.

Barn-Yard Manure and Ashes.—A correspndent asks "whether barn-yard manure and ashes can be used together on land?" Both can be profitably used on the same land, but they should not be mixed before application. The barn-yard manure should be applied to and incorporated with the soil, and the ashes applied separately as a top-dressing. "Can the two be used alternately, at different seasons, on the same land? Yes. "How much ashes can be used, per acre, on moderately good land with safety?" Any amount from one bushel to five hundred bushels.

Resolving Not to Buy Implements.—We notice some of the Patrons of Husbandry in the West are resolving not to buy reapers and mowers the present year. That is right, if they do not need them. But we have seen no resolution to take proper care of such as they have got. In several of the Western (and Eastern) States such a resolution is more needed.

Dairy Husbandry.

CURIOUS NOTIONS ABOUT CHEESE.

THE Utica Herald in a long and labored article, purporting to comment upon an article of ours in the RURAL NEW-YORKER, April 20, page 262, accuses us of trying to increase the price of cheese above the rates of last year, and then endeavors to prove that the English consumer cannot pay, and should not be asked to pay, a higher price for American cheese than he did last year.

Waiving the point that the Herald does not allude in its remarks to the main topic which we had under discussion, viz.: whether American dairymen cannot realise more profit in exporting butter than cheese at last year's prices, it quotes from us in regard to the manner in which the foreign trade is managed—in which it seems to fully agree as to the facts therein stated—and then goes on to say:

"A moments reflection will show any one that the English laborer cannot afford to pay higher prices than he did last year. If we could reduce the price one-half we believe it would double consumption at home and abroad. The retailers here charge the consumer from 15 cents to 20 cents a pound for cheese, and in consequence few families use it except as a relish. Put cheese at 8 *cents to* 10 *cents* and it would always be found on the table, and be eaten as freely as meat, potatoes and bread—provided a palatable article could be had. The price of cheese is dearer to the English than to the American consumer, although the American can afford to pay higher prices because better rewarded for his labor."

This is not very encouraging to American industry. "Put cheese at 8c. to 10c.," and instead of consumption being doubled, production would decline so that the business of cheese dairying would be soon broken up. Take out the cost of manufacturing and furnishing from the price of cheese at 8c. to 10c., and the nett receipt to farmers would be from 6c. to 8c. per pound. Every practical dairyman knows that cheese cannot be produced at these figures except at a heavy loss. In our trade with England the question is not what the English laborer can afford to pay, but what the well-to-do English people are able to pay. We grant that the poor English laborer in the mines, in the cotton mills and upon the farm cannot afford to pay a high price for cheese. He is not able to indulge in any animal food, except at long intervals. He must live upon the cheapest food, and little at that. The idea of American dairymen reducing prices sufficiently low to put cheese within the easy means of the pauper class of England may be very philanthropic, but we do not think our dairymen are called upon to make themselves poor in their efforts to serve the paupers of England. A more satisfactory and just arrangement, it seems to us, would be for the English employer to increase the wages of his laborers so that these latter may be able to obtain a full supply of wholesome food at such rates as it can be decently afforded. A few years ago, when our cheese was not so well made as it is now, the cheese dairymen of England were accustomed to say, in rather a boastful spirit, that they were quite willing America should furnish cheese for their poor, but as for themselves it was their aim to supply cheese for the "better classes." The drift of the Herald's argument needs no further comment.

RESULT OF EXPERIMENTS IN WINTER BUTTER MAKING.

IN RURAL NEW-YORKER of March 2d, page 150, there appeared an article entitled "Good Winter Butter," signed "G." I wish to say that, with the exception of keeping the cream thirty-six hours, instead of forty-eight—which could not have made the difference in the result—we followed the directions of that article, and the result was butter as white as snow, and having a peculiar flavor, which prevented its being used at all. I wish to ask you, or some of your numerous readers, whether such results as the article in question asserts can be obtained in that way, and if so, in what respect did we fail, or whether said article is one of those written by ignorant or malicious persons which parade the papers now-a-days to such an extent that people are becoming afraid to try any thing; thereby destoying the value of newspaper directions—at least to a great extent?

Also, will you, or some one of your correspondents who *knows*, tell me what is meant by a tablespoonful or a teaspoonful of any thing. Does it mean level full or heaping full? Also, what is the size of a cup used in measuring a cupful of anything? Why will not persons who write receipts either give standard measures, or the weights of the ingredients used, no matter how unimportant any particular ingredient may seem to them? M. A. D.

A BUTTER-AND-CHEESE FACTORY.

AT Streetsboro', in the county of Portage, State of Ohio, I found a well-managed butter-and-cheese factory, in the hands of N. B. JENKINS & SON. In the first place there is a flowing spring of pure water, which is conducted around the milk vats wherever it is desired. Then they have a well filled ice-house, to make the milk, cream and butter, just as cold as they desire. They buy the milk of some four hundred and fifty cows, daily, night and morning. The night's milk is set in the vats and cooled; it is skimmed early in the morning, cooled to 55° and churned; so they have sweet cream and sweet buttermilk. The buttermilk is put in the vats with the morning's milk and set for cheese — sweet buttermilk is better for cheese than new milk.

The butter house is a neat building of two rooms, in a bank of the hill, attached to the ice-house. The inner room is a perfect refrigerator, kept at a temperature of 65°; here the butter is worked upon a table with a heavy conical lever roller (as described on page 511 of "Willard's Practical Dairy Husbandry"). It is salted with best factory filled, at the rate of two-and-three-fourths pounds to one hundred gallons of milk; then the butter is packed in pails for market. This butter is sold in New York alongside of Orange County, and in Philadelphia alongside of Chester, at same prices.—S. D. H.

Entomological.

ENTOMOLOGICAL NOTES.

Cabbage Pests.—If Mr. A. S. NASH, Westport, Conn., has the same kind of "small bugs" or "spiders" that infested my plants last year (and from his description of them and their ravages I should think they were alike; if not, they are similar), I would advise him to procure some of the Grafton mineral fertilizer—see advertisement in previous numbers of the RURAL—and apply it, with a dredge box or the hand, to the leaves when wet. A single application of the mineral completely rid my plants of the aphides. A keen eye and lively fingers will be the most certain means of destroying the worms. This mineral is valuable as an exterminator of cucumber beetles and squash bugs, when applied in the same manner as recommended for the aphides on cabbages. The trite saying that "an ounce of prevention is worth a pound of cure" is nowhere better applicable than to your conduct towards the squash and cucumber bugs. Hence it is better to keep the leaves dusted with gypsum or the Grafton mineral than to do it after they once get "moved in." Constantly search for the eggs of the squash bug on the under side of the leaves, and when the bugs become plenty, should you be so unfortunate, place two shingles about one-fourth of an inch apart, near your vines, and in the middle of the day, if it be a sunny one, go around and press and move the shingles one upon the other, and set them up as before. By this plan you can destroy large numbers of the pests.—G. B. D.

Killing Currant Worms and Colorado Potato Beetles.—I think a better way to apply Paris Green for the Colorado Beetle and white Hellebore for the Currant Worm, is as follows:—Take one part of the poison, and from three to twenty parts flour, and thoroughly mix. With this mixture partly fill a *thin* cotton bag (I use a small table-salt bag), and tie on the end of a stick about four feet long. By applying when the foliage is damp with dew, and keeping to windward, no bad effect need be experienced. The amount of material used is much less than with the dredging box. The larger the quantity of flour (or whatever other substance mixed with the poison) used, the more liberal should be the application to the plants. I think one pound of Hellebore is sufficient for 200 currant bushes for one season—applied three times.—E. MEEKER, *Cayuga Co., N. Y.*

Noxious Insects in Illinois.—Dr. LE BARON, State Entomologist of Illinois, according to the statement of Dr. HULL at the meeting of the Alton Horticultural Society, says there are but twelve noxious insects in that State, and Dr. HULL thinks none of these are eaten by birds; and that the insectivorous birds devour harmless insects exclusively.

The Horseman.

HOW TO KNOW THE AGE OF A HORSE.

WE find the following in the Southern Cultivator, credited to "Exchange":—The colt is born with twelve grinders, when four front teeth have made their appearance, the colt is twelve days old; and when the next four come forth it is four months old. When the corner teeth appear the colt is eight months old; when the latter have attained the hight of the front teeth it is one year old. The two-year old colt has the kernel, (a dark substance) in the middle front teeth, and when three years old they are substituted by the horse teeth. The next four teeth are shifted in the fourth year, and the corner teeth in the fifth.—At six years the kernel is worn out of the lower middle front teeth, and the bridle teeth have now attained to their full growth. At seven years a hook has been formed in the corner teeth of the upper jaw, the kernel of the teeth next to the middle fronts is worn out, and the bridle teeth begin to wear off. At eight years of age the kernel is worn out of all the lower front teeth, and begins to decrease in the middle upper front. In the ninth year the kernel has wholly disappeared from the upper front teeth, the hook on the corner teeth has increased in size, and the bridle teeth lose their points. In the tenth year, the kernel is worn out of next to the middle front of the upper jaw; and in the eleventh year the kernel has nearly vanished from the corner teeth of the same jaw. At twelve years old the crown of all the front teeth in the lower jaw has become triangular, and the bridle teeth are much worn down. As the horse advances in age the gums shrink away from the teeth, which consequently, acquire a long, narrow appearance, and their kernels have become metamorphosed into a darkish point, gray hairs increase in the forehead, over the eyes, and the chin assumes the form of an angle.

The Poultry-Yard.

POULTRY NOTES AND QUERIES.

Experience with White Brahma Fowls.—I wintered twenty-four fowls, as follows, viz.:—Fifteen White Brahmas; three White Brahma cocks; three White Dorking hens; two White Dorking cocks; one White Vulture-Hocked hen (have never named her); and since last September have lost only *one*. They commenced laying the 8th of January. I have collected since then 768 eggs. Have had hatched out since then 83 chicks; lost 12, and now have some large enough for the table. I think the White Brahmas the best and most gentle mothers of any that I have. At the end of six months I will give the cost of keeping, value of eggs for each month, and the value of chicks I have on hand at that time. I *know there is profit in keeping fowls, even in a private family.*—C. S. S. T., *Plymouth, Ind., May* 19.

Poultry Yard Ethics.—The Poultry World very properly says:—"To call a bird "premium" because its very great grandfather won a cup, is like advertising a stick-in-the mud horse as *fast trotting* because some one of his ancestors excelled in speed."

The Apiarian.

BEE NOTES AND QUERIES.

Inquiries for W. E. Ladd to Answer.—Judging by Mr. W. E. LADD'S comments upon the article in the RURAL NEW-YORKER, by "Daily Rural Life" (page 117), in regard to bees, he seems to be just the man we want to hear from, to tell us how to carry on the bee business successfully. I am troubled in the same way in getting my bees to build their combs straight in the frames, and true enough, so that they can be removed without injury to the comb and bees; and I have seen many others in the same fix—men who have handled bees for years. Now, if Mr. LADD, who, it seems, must know how to do it, will do so, he will confer a very great favor upon many of the bee-keeping readers of the RURAL NEW-YORKER.

I would also like to know what kind of a hive he uses, how to make it, and how to use it; whether it is patented, and if it is, what patent; and if constructed so that the bees will not attach the frames to the sides and ends of the hive by comb, etc.?

This has been a hard Winter for bees in this section, and many have been lost; but what are left are doing well now.—BROWNE, *Sandwich, N. H.*

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Planting Scarlet Sage.—*June* 10.—The *Salvia splendens*, or Scarlet Sage, is one of our most showy ornamental plants, especially during the latter part of Summer and early Autumn. The plants are usually sold by our florists in Spring, grown in small pots, the same as verbenas and other bedding-out plants, and but very few persons seem to know that they can be grown from seed twenty times cheaper than they can be purchased. "Save your own seed," is my rule with everything that I can, and especially with choice plants. Early in Spring I sowed a quantity of home-grown Scarlet Sage seed in my hot-beds, and from time to time the plants have been set out in the border about my lawn. I raised a thousand plants or more without any expense, except the little time required in saving and sowing the seed, which, of course, amounts to nothing with those who love flowers. Had I purchased these plants they would have probably cost me fifty dollars, but by raising them from seed my garden will be made brilliant at very little expense. The idea which I wish to impress upon all who love a garden, is to learn how to make one without unnecessary expense. If certain persons would try to employ their own brains more, there would be less necessity of purchasing the products of others.

Tying Up Raspberries.—*June* 11.—I never could understand how any could think of raising a good crop of raspberries without either trellises or stakes, as some small-fruit culturists recommend. If the young canes are not tied to some support, they are broken off by the wind and rain when not more than two or three feet high, and the old canes, when loaded with fruit, are beaten down by every shower and the berries become covered with dirt. I have tried the pinching off of the young canes when not more than two feet high; also checking latteral growth; but have found no system so cheap or satisfactory as thoroughly staking every hill. A heavy rain, with high winds, a few days since, broke down a good many plants, and we have been over the plantation to-day making all secure. Good strong twine, or bass, is required to hold a large number of canes secure to a stake, but the increase in quantity and quality of fruit will more than pay the cost. Then, how much more readily the plants can be cultivated when tied up, and how neat and trim a plantation of raspberries or blackberries looks when the plants are kept secured to stakes or trellis! I am well aware that some of our extensive cultivators of these fruits use neither stakes nor other means of support; but a glance at their plantations is enough to give any man who has any neatness in his composition the hysterics.

Cleaning Roads and Fence Corners.—*June* 12.—If there is any one thing which I hate more than another about a farm, it is to have the road walks and fence corners filled with brush and weeds. It is from these places that the Canada Thistles and other noxious weeds become scattered over the farm, and who does not know that weeds in roads and walks are a sure mark of slovenliness on the part of the owner? Just mow all the brush and weeds from the fence corners and roadsides; hoe and rake your garden walks, and see what a wonderful change it will make in the general appearance of your place. What a very bad hat is to an otherwise well-dressed gentleman, weedy walks and roads are to a good farm or garden.

When I was a boy, my father taught me to hoe out my row, which meant to the center of the road, or close up to the fence, not permitting the weeds and grass to annually encroach upon that portion of the land occupied by crops. I know it is a hard lesson to learn, and it takes a long time for some men to understand the importance of hoeing out their row, but by persistent effort my workmen have succeeded, and, as a result, the roads and walks are usually as free of weeds as any other portion of the grounds.

Double Crenate-Leaved Dutzia.—*June* 13.—If everybody who owns a garden has not already obtained this queen of ornamental shrubs, I would advise them to get it as soon as possible. Do not forget the scientific name, which is *Dutzia crenata pleno*. It is a large, upright-growing shrub, producing long spikes of beautiful double flowers, the outside row of petals being tinged with red, the others pure white. It is readily propagated by cuttings or layers, and we presume good sized plants can be purchased for twenty-five cents each. I do not know of a more beautiful shrub or one that will give more general satisfaction. My old plants (and I have a goodly number growing about my garden) are now in full bloom, and they are the admiration of all who chance to see them. Write down the name and get a plant next fall or spring, and if you are not pleased with it, set me down as a poor judge of shrubbery.

The Vineyard.

PRUNING GRAPES IN SUMMER.

AFTER reading several articles on "grape pruning," I will give you my experience in pruning grape vines in summer. I had heard different persons say that to prune the vines closely in summer would greatly increase the size of the bunches, besides producing a more delicious flavor in the fruit. There being two very vigorous vines in our yard, I thought I would try the experiment. Accordingly, one very warm day, toward the latter part of June, last year, armed with a good knife, and confident of having a splendid crop of grapes, I proceeded to the vines and commenced pruning with a *will*. Nearly every shoot was cut off, leaving only one or two leaves beyond the last bunch. This was done in the supposition that the whole strength of the vine would now be thrown into its fruit. Having completed the work to my satisfaction, I now waited patiently, expecting to see them bending with grapes whose bunches, in size, would rival those in the land of Canaan. But you may imagine my disappointment in the result. Instead of the clusters being large, they were small, having increased but little in size after the pruning. Instead of a delicious flavor, those on one of the vines were almost tasteless. Yet, this is not the worst of it. On examining the vines in the beginning of winter, I found nearly every shoot that I had trimmed was dead—all, except about two or three inches at the base. How they will do the coming Summer remains to be seen. I give these facts as the result of the experiment. If any of the readers of the RURAL have had successful experience in this method, will they not give us a little information on the subject, especially on the proper time for pruning, and where to cut the shoot.?

Landisburg, Pa. A READER.

WE do not wonder our correspondent's experiments in Summer pruning were unsatisfactory. We do not know that anybody ever had the hardihood to recommend such Summer pruning as he describes. We have always found that lungs were necessary to the health of the individual; and leaves are the lungs of a plant, in a sense; cut off the foliage of a plant and you kill it, as surely as you will kill a man to take the lungs out of his body. We advise our friend to get some good work on grape culture and study it; also one on vegetable physiology.

UNPRODUCTIVE SCUPPERNONG.

I HAVE been a subscriber to your paper for several years, and, seeing that you sometimes have plants sent you for name, etc., I last year sent you specimens from some Scuppernong vines, but saw no mention of them. I inclose in this specimens from the same two vines—both are upwards of ten years old, and in the Spring are both in full bloom. At present I see no difference in the blooms; but in a few days the blooms of one will open, the outer covering will fall to the ground and will be soon followed by the petals of the flowers, while the bloom, or fruit, of the other will steadily grow to maturity. The vines are both luxuriant, in the same soil, and only about fifty feet apart. I have never seen or heard of a vine with the peculiarity of the non-bearing vine. Can you tell why it is so, and if it is hopelessly unproductive? Root and limb pruning have both been tried without any result. The two bunches tied together are the unproductive.

I also have a rose bush, several years old, very luxuriant, but which has never borne flowers or any signs of buds. I have never known a case like this.—M. M. M., *Columbus Ga.*

SIMILAR instances of unproductive vines are quite common among seedlings of other species of our native grapes. Sometimes we find vines in which the stamens are deformed, as in the well-known Taylor's Bullit and Oporto; and the vines bear but little, unless in close proximity to other and more perfect flowering sorts. Occasionally a vine is produced in which the pistils of the flowers are either entirely wanting or deformed, and in such instances there can be no fruit, no matter how or where cultivated. The flowers sent are not in a proper condition for us to determine their character, although we have met very old vines in the Southern as well as Northern States, that never produced anything but staminate (male) flowers, and of course there was no fruit ever seen upon them. It was long ago discovered that all our American species of vine were occasionally dioecious—that is, the stamens and pistils are in separate flowers on different plants.

We cannot account for the rose bush not blooming; but wait, there is good reason to believe that it will bloom in time.

Domestic Economy.

THAT WEEK'S BILL OF FARE.

MRS. M. N. R. of Varian Springs has a bill of fare for one week. She commenced getting breakfast with baking potatoes, frying ham and eggs, making coffee (which, of course, was lately browned by her own hands), then scalds milk to drink in it, fries buckwheat cakes, sets table, which she asserts must be done as nice as if expecting company; and she has, beside other things mentioned, bread, butter, sirup, fried cakes and crackers. We think the breakfast will do if the appetites are not *too delicate*. She says after breakfast she is going to bake, so as to have more of a variety. We will venture to suppose that husband buttons those little waists and laces the little shoes, or perhaps she *may* live far enough East so that those little "responsibilities" never trouble her. However it is, we think she does not have many small children to see to, or much milk to skim before breakfast, or she could not spend so much time in getting the cloth just so even, warming plates, putting napkins, glass ware and other fixings, which she mentions, in just such a precise manner.

We will suppose they have eaten their "frugal" meal and got things cleared away. As it is Monday, washing would naturally come next in order, though she says nothing about that. Perhaps where there is such exact order the dirty clothes know enough to take care of themselves! She then commences the dinner. First, her sponge for bread is light. While that is rising she makes mince pies, cakes, cookies, gingersnaps and fruit-cake. Now the baking is done, she is going to have roast beef, potatoes, turnips and squash. Then she must have grape jelly, pickles, brown bread, white crackers and ginger-snaps. For dessert she has mince pie, cheese and apples. She thinks in a family of five or six persons one kind of meat will do. She intended to have had soup, but did not get round to it, but thinks if they are all well and hearty they will make out a good dinner.

We want to learn this lady's "knack" of doing work, as we never could get all this done, which she tells of doing, the same day we wash. With us, a family of eight persons, we practice going to church every Sabbath; then, as every housekeeper knows, things are more out of place on Monday than any other day of the week; and beside sweeping, making beds, washing, churning (which latter always *will* manage to come on Monday), we could not find time to do so much cooking, even if we had the strength and disposition. We think, perhaps, Mrs. M. N. R.'s rules may do for people who live in towns, but we think they will not be applicable to farmers' wives. Perhaps you may hear from us again, if we succeed in getting husband to buy some of those nice patent pans which I lately saw at neighbor Drake's; they will save so much time, and labor, too. And then, perhaps, BENNIE and WILLIE, our two youngest, will get the measles, which, if such a thing should happen, our spare time will be all occupied. MRS. W. F. T.

HOW SUMMER SUITS SHOULD BE WASHED.

SUMMER suits are nearly all made of white or buff linen, pique, cambric, or muslin, and the art of preserving the new appearance after washing is a matter of the greatest importance. Common washerwomen spoil everything with soda, and nothing is more frequent than to see the delicate tints of lawns and percales turned into dark blotches and muddy streaks by the ignorance and vandalism of a laundress. It is worth while for ladies to pay attention to this, and insist upon having their summer dresses washed according to the directions which they should be prepared to give their laundresses themselves. In the first place, the water should be tepid, the soap should not be allowed to touch the fabric; it should be washed and rinsed quick, turned upon the wrong side, and hung in the shade to dry, and when starched (in thin boiled but not boiling starch) should be folded in sheets or towels, and ironed upon the wrong side as soon as possible. But linen should be washed in water in which hay or a quart bag of bran has been boiled. This last will be found to answer for starch as well, and is excellent for print dresses of all kinds, but a handful of salt is very useful also to set the colors of light cambrics and dotted lawns: and a little ox gall will not only set but brighten yellow and purple tints, and has a good effect upon green. —*Scientific American.*

ODDS AND ENDS.

Strawberries and Raspberries.—Aline, in Germantown Telegraph, says:—"These can be preserved for ice-creams or cakes or for tarts, without boiling. They should be picked when the fruit is dry, and put at once into a deep bowl or pan, and bruised gently. Mix with an equal weight of best "sifted" sugar, and put immediately into wide-necked bottles; cork these firmly without delay, and tie bladders over the tops. Keep in a cool place or the fruit will ferment. This mixture should be stirred softly, and only just sufficient to blend the sugar and the fruit. The bottles must be perfectly dry, and the bladders, after having been cleaned in the usual way, and allowed to become nearly dry, should be moistened with a little whisky or alcohol on the side next the cork. I have thus successfully put up both strawberries and raspberries for future use."

Lemon Butter.—We find the following highly recommended:—One pound of white sugar, one quarter pound fresh butter, six eggs, juice and grated rind of three lemons, taking out all the seeds. Boil all together a few minutes, till thick as honey, stirring constantly; put in small jars, or tumblers, covered with paper dipped in white of egg. One teaspoonful is enough for a tart or cheese-cake. This will keep a long time in a cool, dry place.

To Color Kid Gloves a Beautiful Black.—Take four ounces of alcohol and a handful of logwood chips; dissolve the chips in the alcohol; put the gloves on your hands and put the liquid on with a sponge.—J. A. S.

The Literary World.

NEW PUBLICATIONS.

Music to be Performed at the World's Peace Jubilee.—Boston: Oliver Ditson & Co.

TWENTY thousand copies of this handsome book, of 175 pages, have been *given* by Mr. DITSON for use at the Jubilee, and it is now offered to the public, not only for use by the audience, or even as a souvenir to be preserved in memory of the Jubilee, but as a really good selection of the best choral music, for use in singing societies and in choirs, for practice, and special performances. The music is good, well printed, cheap—what more can be needed?

Fables and Legends of Many Countries. By JOHN G. SAXE. Boston: Jas. R. Osgood & Co.

A COLLECTION in rhyme of many of the later and shorter poems of this well-known author. SAXE is always readable, usually amusing, and frequently very funny. The book contains thirty-five poems, and is dedicated to Mr. SAXE'S "three daughters." The poems have all the delicious flavor for which his writings are celebrated.

The Nether Side of New York; or, The Vice, Crime and Poverty of the Great Metropolis. By EDWARD CRAPSEY. New York: Sheldon & Co.

A BOOK of much interest, albeit most of the articles it contains have appeared in the Galaxy. Mr. CRAPSEY is a careful writer, and has given his subject much attention. The book is decidedly readable and sensational, and will be apt to impress country readers with the extent of crime and wickedness in this city.

Pansies. By A. D. T. WHITNEY. Boston: J. R. Osgood & Co.

MRS. WHITNEY has long been known as a pleasing poetess, as well as a writer for young folks. In this handsome little volume, "for thoughts," there are many pleasing and rare gems of poetry, which will delight hundreds of readers. Her war poems are sad and beautiful, calling vividly to mind the awful days of the great Rebellion.

School of Mines, Columbia College, 1871-72.

A VALUABLE pamphlet of fifty pages, giving a full account of the College, its course of instruction, etc.

The Puzzler.

PUZZLER ANSWERS.—June 15.

ILLUSTRATED REBUS NO. 24.—He who waits for dead men's shoes may have to go a long time barefooted. Correct answers have been received up to the time of going to press from Mrs. D., Nettie E. Betts, Chas. A. Sprout, L. A. Smith, J. M. Simmons, Will M. Pryne, Samuel Parsons, H. E. Bradley, Aubrey Bowie, R. Jeffers, E. H. Harvey.

PUZZLE NO. 6.—1, C; 2, At; 3, Cat; 4, All; 5, I. Na and Lina; 6, Catalin; 7, Catalina. Correct answers have been received up to going to press from Thomas W. Fagan, Will M. Pryne, Mrs. A. A. Macomber.

"PROGRESS AND IMPROVEMENT."

MOORE'S RURAL NEW-YORKER.

A NATIONAL ILLUSTRATED

RURAL, LITERARY AND FAMILY NEWSPAPER.

D. D. T. MOORE,
Conducting Editor and Proprietor.

CHAS. D. BRAGDON, ANDREW S. FULLER,

SATURDAY, JUNE 29, 1872.

"FINIS" TO VOLUME XXV.

In closing, as we do this week, another Volume of the Rural New-Yorker—thus terminating our engagements with all whose subscriptions expire with the present number—there is no occasion for extended comments. We have endeavored to render the paper continuously interesting and valuable, and from the manifestations of approval received think it has proved very acceptable to the great mass of its supporters. A reference to the Indices of the several leading departments will show that the volume contains a variety and quantity of Reading Matter, Illustrations, etc., rarely if ever before furnished, for the meager subscription price. In some respects we have fallen short of our intentions, but hope to make amends in the future, and shall certainly strive to render Vol. XXVI., which commences next week, superior to the present in several particulars. For the large measure of favor and support which the Rural has received since its "New Departure" in January last, we take this occasion to tender sincere acknowledgments—especially to Agent-Friends who have so generously and successfully aided in augmenting our field of usefulness, and to Correspondents whose contributions have added to the value of our pages.

Though this is a busy period with Ruralists, and withal a season of President-making and political excitement, we trust none of its friends will forget that the commencement of a new volume, next week, presents a favorable opportunity to increase and widen the circulation and usefulness of the Rural New-Yorker. Farmers and horticulturists, as well as city, suburban and village people who have gardens and families, should remember that such journals as ours always aim to be entertaining and useful, and hence ought to prove acceptable to the various members of the family circle at all seasons, whatever political or other excitements may temporarily prevail.

THE EFFECT OF STRIKES.

The effect of striking will, we fear, be to enthrall the working men of this country far more than it will release them from present or supposed bondage. In order that the strike of any class of workmen shall be effectual as a benefit to that class, it must be general throughout the country. Even then it tends to deprive this same class of employment and throw the trade in their line into foreign channels.

This Government by its protective tariff has been protecting American working men from foreign and low-priced labor competition. It may be asserted that this protection has benefited the capitalist manufacturer more than his employes. It may be so; but it has at least given them remunerative employment. Now it seems to us that their action is altogether in the interest of free trade—of anti-protection; and that just in proportion as their action increases the cost of the articles they produce here, or diminishes the amount of production, in just such proportion will it open our markets to foreign producers and enhance their chances of driving our home-made goods out of the market and destroying our manufacturing industries—that while our working men are striking for the avowed purpose of protecting themselves, they are really striking for the benefit of their foreign competitors and throwing away their own chances for profitable employment.

We sympathize with men who want to work fewer hours and earn the same money; but *we* have never been able to do so, continuously. Our hours of labor are oftener sixteen than eight. We believe that is the experience and practice of most men who succeed. Success depends upon continuous, unremitting labor. We are, as we have always been, in favor of defining what number of hours shall constitute a day's work, just as we are in favor of defining what number of ounces shall make a pound; but the price paid for that day's work should depend upon the skill and efficiency of the employe—upon the amount he can earn for his employer—just as the price of a pound of butter must depend upon the demand and the profit the purchaser can derive from his purchase.

As we have heretofore said, the day has not yet arrived when less labor should be done; more is required than ever before. The fields for enterprise are constantly enlarging. The number of non-producers is largely increasing, and that will naturally increase the demand for and profits of well directed labor. But American working men should see to it that these profits are kept in their own hands, and carefully calculate whether such derangements of the labor market as these strikes produce do not diminish rather than increase the rates of wages they can command, by opening wide the door for foreign competition.

RURAL NOTES AND QUERIES.

The Index to This Volume, given herewith, is very complete, and will prove a great convenience to all who save the Rural filed, stitched or bound, for future reference. Moreover, it shows what a vast amount and variety of valuable information we give in a semi-annual volume. The preparation of such an index involves considerable labor, and ought to be appreciated. Those of our readers who preserve their papers will find the index invaluable in furnishing access to a large amount of practical and useful information.

The Index to Advertisements is also quite full, and must prove useful to purchasers. This feature ought to pay advertisers, as it will be likely to bring them customers in the future—for many who save the Rural will have occasion to refer to the Index to Advertisements whenever they want articles likely to be "made a note of" therein.

The New York Rural Club met at Delmonico's, Tuesday evening, June 18th, and sat down to an excellent dinner, Horace Greeley presiding. Between thirty and forty members and their ladies were present. S. B. Parsons read a paper upon the "Hardware and Jewelry of Plants," which was both entertaining and instructive, and which we hope to present to our readers at an early date. A discussion of the causes and statement of facts concerning the destruction of evergreens followed, the theories and facts varying in so large a degree that no definite conclusion was reached that may be regarded as of general application. Members had a charming social reunion. We hope to be able to announce that the next meeting of the Club will be out-of-doors—a pic-nic visit to some of the beautiful places adjoining the city, where both pleasure and instruction shall be derived from what we may see as well as what we may hear.

The Eight-Hour Strike in New York City is fast assuming a character which will result in the total defeat of the workmen engaged in it. Because a man refused to accede to strikers and employed other hands to prosecute his work last Fall, he is now notified that he must throw away the material (cut stone) prepared for use by non-society men (said to be worth $25,000), and have it done anew by "society" men; that he must reimburse the various trades-unions who contributed to support his striking workmen eight months ago, and dismiss all apprentices or non-society men, and recognize the power that thus dictates to him! To emphasize this demand, the person's property thus threatened has been defaced and wantonly injured by "society" men. This is likely to be the entering wedge toward the disastrous defeat of the poor dupes of shallow demagogues and turbulent spirits who, claiming rights, refuse to recognize the rights of others.

The New Postal Law authorizes the use of one-cent postal cards for correspondence. The style of the card is left to the discretion of the Post-Master General; and it is understood it is to be an open card, the face of which will bear a one-cent stamp and lines for the address, while the back will be ruled for the letter. The postage on circulars, newspapers and other transient printed matter, which under the old law was two cents for every four ounces or less, is now one cent for every two ounces or less. Small circulars, which formerly cost two cents, can now be sent for one cent.

Japan and the American Agricultural Commission.—A gentleman, who is in position to know what he *is* talking about, writes us with reference to the paragraph under this head, in Rural of June 15, as follows:

The paragraph about Japan and Gen. Capron is without foundation. M. Mael (Minister from Japan in Washington) knows nothing of it. It is true that Mr. Antisell, the Chemist and Mineralogist, is on his way home. It is amusing to see the flippant paragraphs in ridicule of the effort of the Japanese at Rural Improvement. James Brooks once furnished a nonsensical paragraph in praise of Japanese agriculture—an agriculture that almost literally has no cattle or other farm animals; no agricultural implements, except such as should disgrace semi-barbarians; no labor-saving processes or appliances, and scarcely a prominent agricultural product, except rice. What if they do save human excrement, cultivate garden patches with sticks and grow large quantities per acre, when they might produce four times as much with the same labor, dress themselves, instead of going naked as laborers do, and export enough to make themselves comfortable if not rich? Agricultural editors appear to misapprehend, utterly, the object of the Japanese in engaging the assistance of foreigners.

The Proceedings of the National Agricultural Convention, held at Washington, D. C., Feb. 15, 16 and 17 last, have been printed by Congress and are before us. Over twenty thousand copies have been printed for distribution; and those who desire to read, in detail, what was said and done at this Convention can probably procure a copy of these proceedings by addressing the Commissioner of Agriculture at Washington.

Steam Plow in California.—At a recent trial of the Hyde Steam Plow, built in 1871, at Sacramento, it is reported as having "broke up an acre and a quarter of tough soil in an hour." It is claimed that this plow "does its work with less consumption of fuel and water than any English steam plow, and the inventors are fully satisfied their end is attained."

THE SEASON, CROPS, PRICES, ETC.

Paw Paw, Mich., June, 15.—Potato bugs plenty; weather cool; corn grows slow. Wheat bids fair to be a large crop; also grass. All kinds of fruit likely to be plenty; apples about half the crop of last year.—D. W. A.

Perry, Wyoming Co., N. Y., June 12.—We have lately been blessed with several heavy and some light showers, which were received with thankful hearts. Rain had been much needed through this section of country for a long time. —M. A. D.

Black Creek, Allegany Co., N. Y., June 18.—Season continues dry, with but very little rain. Grass looks good; oats backward. Apples look well—there will be a big crop, if nothing happens. Winter wheat is very promising. Wheat is $2; corn, 90c.@$1; potatoes, 25@30c.—W.

Salina, Athens Co., O., June 17.—Cutworms are taking some fields of corn by storm. Weather dry and cool. The potato tops the cutworms have left are being taken by the potato beetle; wheat poor—some fields not worth cutting. Apples and cherries plenty; peaches, none. Hogs, 5@5½c. per lb., gross; cattle, 5@5½c.—J. E. B.

Sandusky, O., June 10.—Fine weather for crops; plenty of Colorado potato beetles. Wheat looks well and is heading out nicely; corn mostly up and looking finely; no peaches; plenty of apples and cherries; strawberries coming into market and are fine. Sheep shearing has commenced. Have just clipped ten full-blood Leicester, one year old, they yielding me 100 lbs., or an average of ten lbs. per head.—C. W. T.

Manlieau Co., Mo., June 11.—Wheat almost an entire failure, much of it being plowed up and sown to buckwheat. Oats look splendid; corn late, but a good stand. The Colorado potato bug has ruined many pieces of potatoes entirely. The heavy rains of late have destroyed the chinch bugs, but we fear the eggs laid already will, when hatched, furnish bugs sufficient to destroy our grain crops.—D. E. B.

Rensselaer Co., N. Y., June 10.—The Spring was very cool and dry, until about the 20th of May, since which time plenty of rain has fallen. Farmers have done planting, and are busy mending their ways (or working roads). The early drouth of May injured the rye and grass crops so that they will be light. Oats are backward. Potatoes have been largely planted. The season promises plenty of fruit of all kinds, except pears.—G. H.

Hereford, Berks Co., Pa., June 15.—The season is very backward, cold and dry, very few rainy days. Grass is far back yet. Grain looks poor, especially winter wheat. Fruit is promising, though it wants a thorough, wetting rain. Many of the evergreen, and also other trees were killed by the heavy frosts of last winter. Oats and corn look well. Wheat sells at $2.10; corn, 90c.; oats, 60c.; rye, $1; eggs, 18c.; butter from 25 to to 30c.—H. E. E. K.

Norwich, Oxford Co., Ontario, June 12.—Very wet since the 15th of May. Most farmers are two weeks behind with their work. The meadows are looking very promising, especially new seeding. Spring crops look well. Winter wheat is below the average, owing to the hard winter. It is just beginning to head out. The fruit crop promises to be above the average. Wheat is worth $1.40; oats, 50c.; potatoes, 50c.; wool, 52@60c.—E. B. M.

Ralston Station, Tenn., June 8.—Crops of all kinds look well. Corn is growing fast; it is from ankle to hip high. Wheat is ready to harvest, and will yield well. We have a full crop of peaches, and locusts, (insects), but not many apples. Old wheat, $1.50 per bushel, and scarce at that, with an offer of $1.25 for the new crop; corn, $2.25 per barrel; hay, none for sale; oats, 80c.; potatoes, $1@2; butter, 10c.; eggs, 10c., with not much demand at present; bacon, 10c. per lb.; lard, 10c.—B. D. H.

INDUSTRIAL SOCIETIES.

The Will Co., Ill., Ag. Soc. holds its Annual Fair at Joliet, Sept. 10-14.

Washington Co., N. Y., Ag. Soc.—The thirty-first Annual Exhibition of the Washington Co. Agricultural Society will be held in Fort Edward Sept. 18-20.

Indiana State Ass'n of Short-Horn Breeders.—Such an Association was organized at Indianapolis, May 22, by the adoption of a Constitution and the election of the following officers: *Pres.*—Dr. A. G. Stevenson, Greencastle. *Vice-Pres.*—Charles Lowder, Plainfield. *Sec.*—J. G. Kingsbury, Indianapolis. *Treas.*—Alexander Heron, Indianapolis. *Ex. Com.*—Gen. Sol. Meredith, Cambridge City; John Giles, Sullivan, and W. W. Thrasher, Fayette county.

Publisher's Desk.

NEW VOLUME NEXT WEEK!

THE TIME TO RENEW AND SUBSCRIBE!

All Our Readers are advised that Vol. XXVI. of the Rural New-Yorker will commence July 6, and close with December—comprising Twenty-Six Numbers. And will they do us and their neighbors and friends who don't (but ought to) take the Rural, the favor to announce this fact? Note, also, that Single and Club Subscriptions are now in order and respectfully solicited from all parts of the Union, Canada, &c. Our inducements for clubbing are the same as last Winter. Those forming clubs for the New Volume will receive specific premiums, or free copies, etc., in the same proportion as for yearly subscribers—two six months (or volume) subscribers counting for one yearly. Clubs may be composed of part yearly and part half-yearly subscribers, at convenience of Agents. To aid those forming new clubs, or making additions to present ones, specimens, premium lists, etc., will be sent free.

PUBLISHER'S SPECIAL NOTICES.

Now Is the Time to Form Clubs for Vol. XXVI., which commences next week. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

"Time Up"—Cash Terms.—All whose subscriptions expire this week will find the number of the paper (1170) printed after their names on address label. As our terms are in advance, all who wish the uninterrupted continuance of the Rural should renew at once—and in doing so, please don't forget to invite your friends to subscribe.

Bound Volumes of the Rural New-Yorker are constantly kept on hand at its publication offices. Vol. XX. for 1869, containing 828 pages and over 800 illustrations, $4. The four Semi-annual Volumes, issued during 1870 and 1871, are $2.50 each. The volumes being too heavy for the mail, are usually sent by Express or as Freight subject to charges. Bound copies of Vol. XXV., which closes this week, will be ready in a few days—price $2.25.

The Rural as a Present.—Our readers are reminded that in all cases where a *Subscriber* sends the Rural New-Yorker to a relative or friend, *as a present*, we only charge the lowest club-rate—$2 a year. The lowest price for copies thus sent to Canada is $2.20 and to Europe $3—as we prepay postage. For a volume (six months) half the above rates.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

No Traveling Agents are employed by us, but any person so disposed can act as Local Agent, on his or her own authority, and secure premiums, etc.

Send Us the Names of such of your friends, far and near, as you think will or ought to take the Rural, and we will mail them Specimens, etc.

Show Bills, Specimen Numbers, Etc., of the Rural New-Yorker sent free.

BUSINESS NOTICES.

DR. STRONG'S REMEDIAL INSTITUTE,
Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths. Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. Terms lowest in winter. Send for a Circular. Endorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Tayler Lewis, LL. D.

News of the Week.

GENERAL REVIEW.

AFTER two or three short sessions the Geneva Tribunal has adjourned for a week.....Many Democratic State Conventions have indorsed Greeley....The great labor strike in New York City is on the decline... A conference of leading men opposed to Grant has been held in New York....The President is at Long Branch.... The Pope has protested against the Italian Government....Japan has had an earthquake ..The Boston Jubilee is a great success....The trial of Stokes has commenced....The Jesuits are to be expelled from Germany.

DOMESTIC NEWS.

New York City and Vicinity.

THE attorneys of the Erie Railway Company have commenced a suit against Jay Gould for $6,000,000. It is said 40 other suits will be commenced....A Frenchman, named Emil Andre, most brutally shot his wife in East 15th st., near First Ave., on the 13th, killing her instantly. He claimed that she was unfaithful....Thirty boarders at No. 140 East 34th st., were poisoned on the 12th from eating custard. All recovered....A severe thunder storm passed over the city on the 11th. Three lives were lost, and much property damaged....Verdicts against Emil Andre, John Smith and James Tully have been found for murder....It has been decided that Gov. Hoffman cannot return Carl Vogel to Belgium ....There were two fatal cases of sun-stroke on the 11th....Additional trades have struck for 8 hours....The boy Dunn, who killed a keeper at the House of Refuge, has been sentenced to one year's imprisonment. Yacht racing has been fashionable in New York this week....The European bands received graceful receptions as they arrived .....The coachmakers' strike has failed....The strikers have attacked the sugar refiners, and were driven away by the police... The piano makers are at work, and the great strike is generally considered a failure ..Great wooden pavement frauds have been discovered ....The free baths were opened on the 17th.... The trial of Stokes for the murder of Fisk, commenced on the 18th....The heirs of Sir Francis Drake have held a meeting, as usual, to take steps to secure a fortune of $130,000,000....Four hundred employers have held a meeting in favor of the 10 hour system .The Atlantic Yacht club has held a regatta....Dr. Gyles has been acquitted .....A brewery on West 39th st., was burned on the 18th. Loss $75,000. .There has been a decline in Erie stock, with excitement on Wall st....The moveable property of the city has been seized for debt....It will cost $900,000 to clean the streets for the remainder of the year.

Political.

WISCONSIN and Missouri Democrats indorse Greeley....Gov. Perham of Maine has been renominated....Gov. SEMI-BUSINESS PARAGRAPHS.

A Sad Falling Out.—It is indeed a sad falling out when, after years of the closest intimacy, the hair parts company with the head. Fortunately the lamentable separation may be easily prevented and the twain more closely united than ever by a timely and systematic use of Lyon's Kathairon, the most potent invigorant of the hair and promoter of its growth and beauty known to modern pharmacy.

Watch No. 20019, Stem Winder—bearing Trade Mark "Wm. Alexander, Marion, N. J.,"—manufactured by the United States Watch Co., (Giles, Wales & Co.,) has been carried by me six months, and subject to very severe tests in my vocation; its total variation from mean time being less than one second.—GEO. W. MCDONALD, Sup't Brooklyn Water Works.

Facts for the Ladies.—Mrs. J. Brewer, Stamford, Ct., bought her Wheeler & Wilson Lock-Stitch Machine in 1863; earning the first two years her rent and household expenses for self and child, and $710 in the savings bank: has six of the original dozen needles. See the new Improvements and Woods' Lock-Stitch Ripper.

Locusts do not equal traveling agents in devouring *green* things. We do not employ them; thus such low prices. Scales sold on trial anywhere in the United States. THE JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, June 22, 1872.

THE general trade of the City, as usual near the close of June, is very quiet. The amount of business doing in Foreign Merchandise is made lighter by the facts that the new Tariff on Tea and Coffee (made free) goes into effect July 1, and that considerable deductions are made on many other articles after August 1. The consequent accumulation of Foreign Goods in Bond, awaiting these changes, is very large. At this port the accumulation was $9,200,000 in April, $12,800,000 in May, and will probably reach $15,000,000 in June.

The exports of Domestic Produce are fairly active, running chiefly upon Corn, Wheat, Flour, Cheese and other Provisions, and upon Tobacco. The export of Cheese this month is especially heavy and on the increase. The prospect of a Foreign demand for Breadstuffs through the Summer and Fall months is good, and the export of Indian Corn is already very large.

In Money and Railway affairs the appearances are favorable to ease and to large traffic. The business doing over the great trunk lines between the seaboard and the West is 15@20 per cent. ahead of last Summer, and it shows an average increase of 15 per cent. since the first of January. The introduction of Bessemer steel rails on the New York Central and other prominent lines has reduced the operating and renewal expenses of the roads, and when this improvement is made complete to the full length of the roads, the economy it is believed will tell to the extent of 10@12 per cent. on the operating expenses. We hear that Mr. VANDERBILT expects to run the Central for 16 per cent. of the gross traffic. The rate is now 55@58 per cent.

PRODUCE AND PROVISIONS.

NEW YORK, Friday, June 21, 1872.

Receipts.—The receipts of the principal kinds of produce since our last embrace 11,575 bales of cotton; dried fruits, 8 pkgs.; eggs, 10,813 bbls.; flour, 75,339 bbls.; wheat, 282,886 bush.; corn, 1,383,120 do.; oats, 380,723 do.; barley, — do.; grass seed, 136 bags; hops, 75 bales; beans, 293 bbls.; pork, 1,383 pkgs.; cut meats, 2,752 do.; lard, 5,611 pkgs.; kegs do., 100; butter, 15,870 pkgs.; cheese, 41,517 do.; peanuts, — bags; 2,686 hhds. tobacco; 7,442 pkgs do.; 1,164 bbls. whisky; 1,881 bales wool; corn meal, bbls. 3,705; do. bags, 710, rye, bar., 12,918; malt do., 40,202; beef, pkgs., 173.

Beans and Peas.—The offerings are moderate of beans, but the demand is slow and prices are unchanged.

Beeswax—Is very much lower. Sales at 38@39c. for Western and Southern.

Butter.—There are no favorable features for butter. The June make of State is of course now being packed away. If such were not the case there would be no room for it here with the fine grades of Western that is offering at the low prices. The yield through the West will be enormous. Reduced rails supply about all the State needed. Western has been exported to the extent of 900 pkgs., and shippers promise to take more if the quotations admit:

State pails, fine, 25c.; do. common to fair, 22½@23c.; State half tubs, fine, 23½@—c.; selections, 27c.; Welsh, packages, fine, 24@25c.; common State, 18@22c. Western reserve, fine, 17c.; other, 16@—c.; Western, 12@14c.; common Western, 10@12c. Grease and inferior, 7@8c.

Cheese.—The depression of last week has been enhanced by a decline on the other side. Concessions of fully 1½c. have been submitted to, but this has failed to induce much life, as there is still little or no margin left for shippers. The arrivals have fallen off but we are carrying over more stock than desired, especially as the reports are that next week's receipts be larger. The market closed weak at 13½c. for fancy State factory, 13¼c. for good, as low as 5c. for skimmed. Ohio factory 12@12½c. for good and 9c. for common; dairy at 12@13c. for fine, 6c. for common.

Eggs.—The arrivals are much lighter and prices of parcels from near points are improving, but for lots from the West there is still anxiety to realize. Sales at 15@15½c. for prime Western; common and fair marks do. 14@14½c., State 17c., Jersey 17@19c., Southern 13½@14c. duck 18@20c., geese 30c.

Flour.—The reports from the other side indicate a better condition of the crops, and the market here has been sensibly affected, prices showing a decline of about thirty cents per barrel. We quote at $5.70@6.20 for superfine State; $6.50@6.85 for common extra do.; $6.90@6.95 for good to choice do.; $7.00@7.60 for fancy do.; $5.90@6.20 for superfine Michigan, Indiana, Ohio, Iowa, &c.; $6.45@7.10 for extra do.; $7.10@8.00 for choice extra do., including shipping brands of round hoop Ohio at $6.75@7.00, and trade brands of do. at $7.50@9.25; good to choice white wheat extras at $8.10@9.30; Minnesota, fair to very choice extra, at $7.00@9.50; St. Louis at $8.30@10.20 for common to fair extra, and $10.25@12.00 for good to choice. Southern at $7.00@9.80 for extra, and $9.85@13.00 for good to fine. Rye at $4.20@5.15. Choice Western corn meal sold at $3.70.

Vegetables.—Only fine old choice potatoes can now be moved. We have had samples of L. I. new, the Early Rose selling at $7. Some from Del. sold at $5; New York and further South quoted at $5.50@6.50 per bbl., quality not extra. Green peas have been largely shipped Eastward. Charleston tomatoes have arrived, mostly picked too green, quoted $3@4 as a range. Southern cucumbers not wanted. New potatoes—L. I. per bbl. $5@7, Southern $5.50@6.50, Bermuda $9.50@10, choice old potatoes $1.75@2, common $1@1.50, Ber. tomatoes ₰ crate 90c., Southern string beans ₰ crate $1.50@2, do. bbl. $2.50, L. I. string beans $3@3.50, L. I. green peas bbl. $3@4, S. C. cucumbers crate $1@2, Va. rabbages ₰ bbl. $2.50, do. N. J. and L. I. ₰ 100 $6@8, S. C. summer squashes ₰ crate $1@1.50, N. J. turnips 100 bunches $2.50@3.

Fresh Fruits.—The shipping demand for berries has been greatly stimulated by the Boston Peace Jubilee, and dealers have in many instances obtained fancy prices for ordinary fruit. We now are depending upon New Jersey and up-river gardens, and good stock is bringing paying prices. Gooseberries are scarce; Black caps are in market, also a few Southern apples.

Provisions.—Pork is weak and quiet. Mess $13.50 for June. Extra prime $10.75. Western prime mess $12.62. Dressed hogs dull at 5¾@6c.; middles are steadily held, with a fair export inquiry. Long clear 7½c. Cut meats are firm at 11½@12c. for hams in pickle; 9½@10½c. for do. in salt; 5½@5½c. for shoulders in salt; 5¾@5¾c. for do. in pickle. Smoked meat sell slowly at 10½@13c for hams; 6¾@7c for shoulders; 8@8½c. for clear rib. Lard is a little unsettled, and if anything more in the buyer's favor. Western steam, 9¼c. for spot and June; 9½@9¾c. for July and August. City at 8¾c. for steam. Stearine is in light demand at 9¾@10c. for prime. Tallow firm at 9½c. for city. Beef is dull at $7.50@9.00 for plain Western mess; $10@12 for extra mess. Tierces at $14@17 for prime mess; $17@21 for Indian mess. Beef hams, $23@28.

Wool.—The market has been very dull. There is considerable inclination to clear out stocks of old before new comes to hand, and buyers can name better terms. Sales of extra pulled at 60, 62½c.; super pulled 72c. Beyond this, prices are entirely nominal, most buyers waiting until affairs assume definite shape.

LIVE STOCK MARKETS.

NEW YORK, June 20, 1872.

We have had a larger run of cattle and sheep, with fewer hogs, during the past week, and the law of supply and demand has had its legitimate effect—lower rates for the former and an advance in the latter. The hot weather checks the demand for fresh meat, and butchers are not inclined to purchase more than for present wants. Ice has to be largely used to keep meat from spoiling, and even with this precaution some of it is condemned by the sanitary inspectors. They find the largest hauls among the veals.

The following are the receipts of live stock shown in comparison with other years:

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week.....	9,413	72	3,437	22,474	37,237
" last week.....	8,222	68	3,523	20,507	40,518
Corresponding week last year.....	8,536	63	2,971	28,093	26,979
Average last year...	7,187	88	3,501	25,132	25,177

Beeves.—There was not much change after last report up to yesterday. The supply of cattle was quite large, 195 car loads at Communipaw on Monday last, 131 cars at One Hundredth street, and 6 at Weehawken, making 5,509 head on sale, or rather more than butchers cared for, unless they could buy at reduced rates. The quality of the stock was quite variable, some of the fine grade Durhams being too large and fat to suit most butchers, while the other extreme of green Texans—run right through without stopping to feed any length of time—were quite too poor to give satisfaction, no matter how low the price was made. The extremes of that day were 10½@14c., and cattle were sold for all the weight there was in them. Now, with 3,184 heaves on sale to-day, butchers dictate terms. The decline is ½@¾c. per ℔ from Monday, while weights are decidedly in favor of butchers. Prime cattle were recently sold on the scales 60 ℔s. ₰ cwt.; but now 58 ℔s. are all that can be obtained even on such cattle as all know will make 60 ℔s. This really makes the actual decline nearly 1c. per ℔., and quite a good many cattle go over until to-morrow. Texans had a hard time of it, as they generally do in a glutted market. Salesmen thought an offer of 9c. per ℔., entirely too low, but regretted afterwards that they had not accepted it. All accounts go to show that we are to have a good many of these "Long-horns." Already we find that 106,859 cattle have passed over the noted "Chisholm trail" into Kansas, mostly for shipment from Wichita. A few droves are very good, but the bulk are thin cattle, and should be held for further feeding in Kansas. The prospects for a good market the coming week are not flattering.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₰ ℔.....	13 @ —	12¾ @ 13½
Good to prime.....	12¾ @ 13¾	12¾ @ 13
Ordinary to medium.....	11 @ 12	11½ @ 12
Lowest grade.....	9 @ 10	10 @ 11
Average sales.....	— @ 12	12¾ @ —

Hogs.—With light receipts and a fair demand from cutters, hogs are doing better. There are not enough selling alive to establish prices, but dressed are worth 5¾@6¾c.; those of 160 ℔s. going at 6c. There is very little doing in fresh pork, but smoked meats have a fair inquiry in hot weather.

Milch Cows.—These are dull again, both milk and beef having declined. Poor cows are particularly hard to sell, and should not be sent here. Even if country buyers are obliged to take a lot right through as they run, they had better sell the poor ones and bring only good cows to this market. Prices vary from $35@50 for common, and $60@75 for fair to prime milkers.

Sheep and Lambs.—There is an increase in the receipts, and prices fall off in consequence, with a slow trade. Lambs are coming forward very freely from all directions. The best Jerseys rarely exceed 12c. One extra lot of 55 ℔s. did sell at 12½c., while some of 90 ℔s., not as fine, went at 11½c., and thin Jerseys at 10c. Western vary from 9c. for poor, 8 of 50 ℔s. to 10¾c. for prime Kentucky; one lot of 80 ℔s. choice selling at 11c. Sheep go all the way from 5@6½c., most of the stock arriving from the West and selling at 5¾@6¾c. The average of 3,300 sheep sold during the week was $6.16 per head, with 11,350 lambs at $7.72. They would not do as well now.

Veal Calves.—The supply holds out good, and so does the demand. The high price of mutton, some weeks ago, turned the trade largely upon veal, and it still runs in that direction. We are beginning to have large lots of poor grass calves worth 4@5c. per ℔., with buttermilk and half fed at 5@6½c.; thin milk veals at 7@7½c., and good to choice at 8@9½c. One whole car load Bucks Co. 130 ℔s. sold at 9½c. right through, with 130 grassers, 175 ℔s., at 1¼@4½c.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

First Mortgage Sinking Fund
Thirty Years

7 Per Ct. Gold Bonds

AT

90 and Accrued Interest.

The Road runs from Buffalo to the Detroit River, and is the Eastern link in the new AIR LINE from BUFFALO to CHICAGO, and has been under construction for about two years past by railroad men who have seen the necessity for a STEEL RAIL, LOW GRADE SHORT ROUTE between the great railroad systems which diverge from Chicago, Toledo and Buffalo.

Among the builders of the road, by whose cash subscriptions 200 miles (out of 230) have already been graded, bridged and made ready for the superstructure, a large part of the steel rails bought, all of the materials for the stations and a part of the equipment purchased, are:

MILTON COURTRIGHT, JOHN F. TRACY, WM. L. SCOTT, DAVID DOWS, HENRY FARNHAM, R. A. FORSYTH, HENRY H. PORTER, JOHN M. BURKE, M. L. SYKES, JR., B. F. ALLEN, all Directors either in the Chicago and Northwest or in the Chicago, Rock Island and Pacific; GEO. OPDYKE, of the Midland Road; JOHN B. ALLEN, SIDNEY DILLON, DANIEL DREW, J. S. CASEMENT, J. & J. CASEY, O. S. CHAPMAN, JOHN ROSS, DAVID STEWART and F. H. WINSTON.

THE ROAD will be

33 MILES SHORTER THAN ANY OTHER ROAD,

either BUILT or in contemplation, between Buffalo and Chicago, and will also shorten the distance between Toledo and Buffalo 23 miles.

THE MAXIMUM GRADE on the entire line does not exceed FIFTEEN FEET to the mile—and Ninety-six per cent. of the Road IS STRAIGHT.

The ROAD WILL BE COMPLETED and in running order on or before December 31 of this year.

The principal and interest of the bonds are payable either in New York, London or Frankfort.

We confidently recommend the bonds to all classes of investors.

LEONARD, SHELDON & FOSTER,
No. 10 WALL ST., NEW YORK.

NOTICE.

Having become associated with Messrs. Leonard, Sheldon & Foster in the Agency of the Canada Southern Railway Company, we offer the above named Bonds for sale.

After a thorough investigation, we recommend them to our friends and customers as a sure and reliable investment. Pamphlets and all information furnished on application.

WINSLOW, LANIER & CO.,

KIDDER'S PASTILLES.—A sure relief for ASTHMA. Price, 40c. by mail. Stowell & Co., Charlestown, Mass.

NEWS CONDENSER.

— San Francisco has a chain-gang.

— Peaches and figs are abundant in Texas.

— Horses are dying rapidly at Athens, Ga.

— Pirates are infesting the Mississippi River.

— The highest part of the Catskills is 3,824 feet.

— The lowest salary paid any minister in New York City is $800.

— College commencements are taking place all over the country.

— A statue of Victoria, costing 18,000 pounds, has been set up in India.

— When a prison in Switzerland becomes vacant, a white flag is hoisted over it.

—Paris asks for sparrows to kill the innumerable black flies which infest the city.

— Ex-President Johnson has recently received $4,000, as a refund of tax on his salary.

— The English Court went into mourning for a week for the Archduchess of Austria.

— A paper called the Paper Trade Journal has been started in New York, with Chas. F. Wingate as Editor.

— Contributions from poor needle-women are asked to build a statue to the inventor of the sewing machine.

— The editors of New York, with a large delegation from the South, are in convention at Watertown, N. Y.

— Hood's, Ferry's, Walker's and Pollgnac's commands have had a reunion at Houston, Texas. Out of 24,000 men who went to the front, only 400 are left.

Johnston Harvesters

Johnston's Single Self-Raking Reaper.

Johnston's One and Two Horse Single Mower.

Johnston's 2-Wheeled Combined Self-Raking Reaper and Mower.

Johnston's English Harvester.

The above variety of Machines are manufactured so that all the wants of the Farming community may be met,—the largest farmer who needs separate machines for Reaping and Mowing; the more moderate, who requires a Mower and Reaper combined; and the smallest farmer who desires a perfect Reaper, and one that will Mow, also, if occasion require.

Each of the above is First Class, and perfect of its kind, and built expressly for the purpose designed. Every farmer will find in this line of Machines the acknowledged STANDARD HARVESTERS of the World. For straight grain, they are unsurpassed, while for lodged or tangled grain they are far superior to any other implements for Harvesting ever invented. Address,

THE JOHNSTON HARVESTER CO.,

Samuel Johnston, Pres't. BROCKPORT, N.Y.

The Kirby Harvesting Machines:

TWO-WHEEL MOWERS!

SELF-RAKING REAPERS!

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

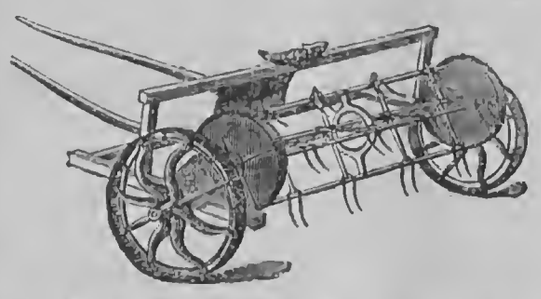
HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

AGENTS WANTED WHERE NOT ALREADY ESTABLISHED.

THE

AMERICAN HAY TEDDER



Enables the most important Agricultural product of America to be cut, cured and stored in the barn in one day. Improves the quality and increases the value of the harvest. Prevents all risk of damage from storm, and sudden showers. Is simple, durable and of light draft. Was awarded the New England Agricultural Society's only first prize, at the Great Field Trial, at Concord, Mass., as being superior to all others, and the only perfect machine for tedding or turning hay.

MADE ONLY BY

AMES PLOW COMPANY,

WEBSTER'S PATENT BUTTON-HOLE WORKER.

The most perfect Button-Hole Worker ever invented. So simple that a child can work a more perfect button-hole with it than the most experienced hand can without it. It does away with pricking the fingers, straining the eyes, and with imperfect and irregularly worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold.

Local and traveling agt's wanted for this and other new and useful articles. Address GEO. DAVIS, 91 Asylum St., Hartford, Conn.

Sample worker, with full directions for use, sent postpaid by mail on receipt of 50 cents.

☞ Please state that you saw this in RURAL NEW-YORKER.

The Wheat Field of America!

Healthful Climate, Free Homes, Good Markets.

THE NORTHERN PACIFIC RAILROAD offers for sale its **Lands in Central and Western Minnesota,** embracing: 1. The best of Wheat Land; 2. Excellent Timber for the Mill, the Farm and the Fire; 3. Rich Prairie Pasturage and Natural Meadow, watered by clear Lakes and running streams—in a Healthful Climate, *where Fever and Ague is unknown.*

Grain can be shipped hence by lake to market as cheaply as from Eastern Iowa or Central Illinois. Cars now run through these Lands from Lake Superior to Dakota. Price of land close to track $4 to $8 per acre; further away, $2.50 to $4. **Seven Years' Credit;** Warranted Deeds; Northern Pacific **7-30 Bonds,** now selling at par, received for land at $1.10. No other unoccupied Lands present such advantages to settlers.

SOLDIERS under the New Law (March, 1872) get 160 acres FREE, near the railroad, by one and two years' residence.

TRANSPORTATION AT REDUCED RATES furnished from all principal points East to purchasers of Railroad Lands, and to Settlers on Government Homesteads. Purchasers, their wives and children **carried free** over the Northern Pacific Road. Now is the time for Settlers and Colonies to get Railroad Lands and Government Homesteads close to the track.

Send for **Pamphlet** containing full information, map and copy of New Homestead Law. Address LAND DEPARTMENT, NORTHERN PACIFIC RAILROAD, ST. PAUL, MINN.,
OR 120 BROADWAY, NEW YORK.

LADIES' SILVER

Spiral Spring Garter

AND GENT'S ARMLET.

The easiest, most healthful and comfortable Garter and Armlet ever offered to the public.

Every one will use them after a single trial. Physicians recommend them.

They have not a continuous line of contact, but rest on many and small surfaces, thereby insuring free circulation of blood.

Sample pair sent free on receipt of 50 cents, with Terms to Agents for this and other new and useful articles.

Address HUBBARD & FOLLETT, 91 Asylum St., Hartford, Conn.

BUILDING PAPER

FOR SHEATHING, PLASTERING, ROOFING, DEAFENING AND CARPET LINING.

Samples and Circulars sent free, by ROCK RIVER PAPER CO., Chicago Ill.; or,

B. E. HALE & CO., 56 & 58 Park Place, N. Y.
Sole Agents for Eastern States.

AGENTS WANTED—BEST TERMS Given for our New and Popular Works, including Bibles, &c. For full particulars, address QUAKER CITY PUBLISHING CO., 217 and 219 Quince St., Philadelphia.

---

3 HOURS work will secure the BEST WASHING MACHINE in the WORLD.
S. W. PALMER & CO., Auburn, N. Y.

RUPTURE

Relieved and cured by Dr. Sherman's Patent Appliance and Compound. Office No. 637 Broadway, New York. Send 10 cents for book with Photographic likenesses of cases before and after cure, with Henry Ward Beecher's case, letters and portrait. Beware of traveling imposters, who pretend to have been assistants of Dr. Sherman.

BUY THE

Iron Clad Milk Can

The only one ever manufactured that will stand the hard usage to which they are subjected. For sale by all can makers. Stock and Trimmings for sale only by the IRON CLAD CAN CO.,
Send for Circulars. 51 Dey St., New York.
☞ All genuine are stamped I. C. C. Co.

"ECONOMY IS WEALTH."—Franklin. Why will people pay $50 or more for a SEWING MACHINE when $22 will buy one that has a *standard* reputation, is double thread, complete with Table, constructed upon entirely new and practical principles, runs by friction, and excels all others? These celebrated Machines are intended for poor people who want to save time, labor and money. ☞ AGENTS WANTED. Machines sent to Agents and given away to needy families. For Circulars and reduced prices, address FRANKLIN & DIAMOND S. M. CO., Box 397, Boston, Mass.

Agents Wanted, **$75 to $250 per month,** everywhere, male and female, to introduce the GENUINE IMPROVED COMMON SENSE FAMILY SEWING MACHINE. This machine will stitch, hem, fell, tuck, quilt, cord, bind, braid and embroider in a most superior manner. Price only $15. Fully licensed and warranted for five years. We will pay $1,000 for any machine that will sew a stronger, more beautiful, or more elastic seam than ours. It makes the "Elastic Lock Stitch." Every second stitch can be cut, and still the cloth cannot be pulled apart without tearing it. We pay Agents from $75 to $250 per month and expenses, or a commission from which twice that amount can be made. SECOMB & CO., *Boston, Mass.; Pittsburgh, Pa.; Chicago, Ill.; or St. Louis, Mo.*

AGENTS WANTED FOR

"JESUS."

By CHARLES F. DEEMS, D. D.

His divinity established and rationalism routed. The most popular and rapidly-selling religious work ever issued. For Circulars, address UNITED STATES PUBLISHING CO., 411 Broome St., New York.

A FEW PRESS OPINIONS OF THE RURAL NEW-YORKER.

"BEST PAPER AND BEST PREMIUM."—This is the very emphatic pledge of the veteran Conductor and Founder of MOORE'S RURAL NEW-YORKER in his Prospectus for 1873, and, judging from his practice in redeeming promises during a score of years past, the public may expect its fulfillment. The RURAL has long ranked as the leading weekly in its sphere. An exchange truly says:—"MOORE'S RURAL has now been before the public for over a score of years, and, as an Agricultural Journal, stands at the head of all published in America, and in many of its departments excels all competitors. To the farmer, especially, it is a most invaluable companion and counsellor, furnishing interesting, instructive and reliable information on all matters relating to the Farm and Garden, Stock Raising, the Dairy and the Household. As a family paper, too, it is worthy of high commendation. Its moral tone is excellent; its summary of foreign and domestic news sufficient to give an idea of what is transpiring in the world, its reports of the markets reliable, and departments of knowledge necessary to make a live paper are properly attended to. It is also beautifully illustrated with original designs gotten up specially for it."

The improvements promised for 1873, and the fact that every one paying only $2.50 for the paper a year, will receive, as a Premium, a postpaid copy of a Superb Steel-Plate Engraving worth $5, ought to double the circulation of the RURAL NEW-YORKER within three months.—*Long Island Times.*

MOORE'S RURAL NEW-YORKER, which has for a score of years been the favorite farm and fireside journal throughout the land, is characterized as "the most elegantly printed, ably edited, widely circulated and heartily welcomed paper, as a whole, which now finds its way among the people." But, popular as it has been heretofore, the *reduced price* of the RURAL for 1872 must greatly increase its circulation.—*Free Press, Northampton, Mass.*

RURAL NEW-YORKER.—We take pleasure in directing attention to the prospectus of the RURAL NEW-YORKER for 1873, in another column. It is, in our opinion, as the prospectus claims, the very best paper of its class with which we are acquainted. Indeed, we can't see how any farmer or housekeeper can do without it. We advise all our friends to try it one year anyhow.—*The Abingdon Virginian.*

MOORE'S RURAL NEW-YORKER is an able and well managed paper, and deserves the success it has achieved.—*N. Y. Daily Times.*

MOORE'S RURAL NEW-YORKER.—The prospectus and premium list for this excellent paper for 1873 are out and scattered broadcast over the country. In entering upon the twenty-seventh volume, the publisher proposes to do even better than ever before by his patrons, and he never falls short of what he promises. The RURAL has always been his pet, and he will stand by that to the last. It is to have a new dress with the opening of the volume, and a nice one of course. It will contain sixteen quarto pages each week, made up of rural, literary and news matter, engravings, &c., making a high-toned, lively and always interesting family journal—as good as the best in the world. This vast amount of matter, prepared by a large corps of writers, is furnished to single subscribers at only $2.50 per year, and each single subscriber gets a picture 24 by 30 inches—a five dollar engraving. Clubs get the paper at still less rates. The circulation of the RURAL has long been immense, and the indications are that it will now, under the improvements and low rates offered, have a still wider circulation. The RURAL has an office at 5 Beekman street, New York, and 82 Buffalo street, Rochester.—*Rochester Daily Union and Advertiser.*

THE RURAL NEW-YORKER is a paper the name of which is without a blot. Characteristically Agricultural, it is in the broadest sense a Family Paper, one which may be admitted without doubts as to its tendency. It has an immense circulation, and merits patronage wider still. Its readers are like Oliver, always asking for—MOORE.—*Examiner and Chronicle.*

RURAL NEW-YORKER.—Attention is directed to the prospectus of the RURAL NEW-YORKER for 1873. The Steel Plate Engraving, which goes as a premium, is a beautiful production of art, but the contents of the paper return to subscribers many times over the worth of their money. But the RURAL is an old favorite and needs no praise.—*Chenango Telegraph.*

UP TO THE TIMES.—While MOORE'S RURAL NEW-YORKER maintains its reputation as being in the first rank of the agricultural papers of the country, it has other features which alone would give it a high position among the popular weeklies,—notably its illustrations, of which it has a perfect right to boast.—*N. Y. Evening Mail.*

THE best Weekly Agricultural and Family Newspaper we ever saw is the RURAL NEW-YORKER. It has seven Editors, all men of reputation, besides numerous regular contributors, scattered all over the country. *Kentucky Statesman.*

MOORE'S RURAL NEW-YORKER needs no introduction to our Wayne county readers, among whom it has these many years been an established favorite. We note many improvements since its removal to New York; in fact, the RURAL wouldn't be MOORE'S paper if it *didn't* improve. In entering upon the Twenty-seventh Volume, the publisher proposes to do even better than ever before by his patrons; and he never fails short of what he promises. The RURAL has always been his pet, and he will stand by it to the last. It is to have a new dress with the opening of the volume, and a nice one, of course. Though maintaining its agricultural character, the RURAL has other features which make it one of the best literary and family papers in the country; and we are glad to know that it is gaining in circulation every year. The more widely such journals are circulated the better for the people.—*Lyons Republican.*

MOORE'S RURAL NEW-YORKER, the most widely circulated, popular and *best* of all the agricultural weeklies, offers an attractive premium to every subscriber for 1873, in the form of a beautiful $5 engraving. Thus, all who pay $2.50 will receive the RURAL NEW-YORKER for one year and obtain a copy of the superb Steel-Plate Engraving entitled "Birth-Day Morning, or The Gardener's Present." Such liberality, united with the excellence of the RURAL as an Agricultural and Family Journal, will undoubtedly largely augment its subscription list.—*Geneva Gazette.*

MOORE'S RURAL NEW-YORKER.—This old and first-class farmer's journal comes out for 1873 in a new style and new dress. The new vignette heading is by far the most beautiful yet designed. The illustrations are fresh, numerous, varied and beautiful, and the reading matter is pure and chaste, being furnished by the ablest agricultural and literary writers in the country. *Monitor, Salem, Mo.*

THE RURAL NEW-YORKER has now for nearly a score of years been an honor to journalism, Excellent and pure in its literary contents, abounding in timely information on all matters pertaining to agricultural and rural affairs, and tasteful to fastidiousness in its arrangement and letter press, its unrivaled success is assured.—*N. Y. Evangelist.*

THE RURAL NEW-YORKER has won a position where it need not ask commendation, and need not fear criticism. It has no equal in its own department in the country.—*Standard, Chicago.*

MOORE'S RURAL NEW-YORKER is not a sensation paper, and may not win patrons so fast as some that are; but those it wins it keeps, by giving them the full worth of their money in instructive, wholesome, agreeable information with regard to Farming and Household affairs, with a goodly array of literary matter, markets, &c., &c. We presume that no man who took THE RURAL was ever afraid or ashamed to be seen reading it, or hesitated to commend it to his neighbors.—*Horace Greeley, in N. Y. Tribune.*

RURAL NEW-YORKER.—In our opinion, and we give it for what it is worth, MOORE'S RURAL NEW-YORKER is the best Farm journal now published, and no home in the country is complete without it. Each number is perfect in itself, abounding in diversified reading matter, richly illustrated by first-class engravings, instructive as they are fresh and beautiful. We commend the RURAL NEW-YORKER to all our country friends.—*Wyandot (O.) Union.*

OUR old friend, D. D. T. MOORE of the RURAL NEW-YORKER, is indefatigable in making his RURAL one of the most popular papers in the country. He sends all his subscribers this year a beautiful engraving, entitled "Birth-Day Morning," which is worth the price of subscription. The RURAL NEW-YORKER maintains its pre-eminence as a prosperous rural journal and retains its foothold in all well regulated families where it once makes an acquaintance.—*Yates Co. (N. Y.) Chronicle.*

MOORE'S RURAL NEW-YORKER.—The world-wide reputation of the publisher of the RURAL NEW-YORKER is not to be dimmed. His journal is to be better in every respect than ever before, and will remain, as it has long been, the leading and largest Agricultural Family Journal in the world. Remember that Mr. MOORE is always as good and generally better than he promises.—*Rochester Daily Express.*

WITH the New Year the RURAL NEW-YORKER changed its form to the size of Harper's Weekly, which we consider a very great improvement. Before, it was too large and unwieldy for convenient preservation and binding. The RURAL NEW-YORKER is the best Agricultural and Family Journal published in America. It is always filled with valuable matter and is liberally illustrated.—*Sentinel, Centralia, Ill.*

MOORE'S RURAL NEW-YORKER, since its size was doubled, is the largest and handsomest Agricultural Weekly in America. We hear, without surprise, that its subscriptions are double those of any other year.—*N. Y. Tribune.*

HAYING—OLD AND NEW METHODS.

We present on this page the contrast of modern methods of making hay with those of the earlier time, when we were boys. The scythe and whetstone, propelled by human muscle, have given place to the click, click of the Mower, drawn by horses. Time is saved and the work as well done. The farmer, instead of swinging the scythe through the forenoon with a half dozen men at his heels trying to "cut him (and each other) out," rides his two-wheeled machine, driving his team and watching the grass fall with a complacency born of the fact that he can thus do the right thing at the right time and the women folk have no extra cooking to do.

Instead of the inevitable boy, who used to be kept out of school to stir hay, and who was apt to "break up bumble bees' nests" and suck sweetened water and ginger through a straw most of the time, we see the Tedder, keeping the air full of the fresh mown hay and fitting it with wonderful rapidity for the stack or the mow.

Then the limit of cutting down to-day is not governed by the amount of hand-raking force there is available. Nor do we see the wife and daughter impressed to aid in the warm and weary work of raking just as a shower is discovered portending. Even the old revolving rake, excellent as it is, is going into disuse, and instead the boy sits upon a two-wheeled vehicle, and, with no effort but the pressure of feet or hand upon a lever, to unload, guides the horse and sweeps up the hay into whrows, or bunches it for pitching, the moment it is in condition. Indeed, our picture does not show what we have seen doing—a team driving along gathering its own load from the field without any previous raking.

Instead of the wearisome process of lifting tons weight of hay over the big beam, or on top of a stack, by hand and backbone power, we have numerous devices in the shape of horse forks, with their riggings for carrying the hay to any desired point in mow or stack—a load being lifted into place in ten to fifteen minutes, with little effort, which it would have been difficult to put in place once, with great effort, in less than half or three-quarters of an hour.

These contrasting pictures are given as records of progress made, and as evidences

HAYING—OLD AND NEW METHODS.

of the forward revolution of improvements for the relief of human industry, the saving of time, and for enhancing the real value of the hay product by enabling the farmer to cut his grass when it is in the best condition to cut, cure it in the shortest space of time and in the best manner, and secure it under cover without such exposure as will rapidly and surely depreciate its nutritive qualities and hence its value, whether designed for his own stock or the market.

FARMER GARRULOUS TALKS.

Strawberry and Cherry Friends.

It is astonishing, Mr. Editor, how many friends I have during strawberry and cherry time. I'm overwhelmed with their attentions! There is no use o' talking! I am growing vain because of my growing popularity. I find myself saying, "After all, virtue is its own reward," and I seem to be reaping the reward of careful industry and mind-my-own-business habits—at least so far as apparent appreciation goes. For instance, who who would have thought that Mrs. Stickuppernose would ever have deigned to visit my humble home? Yet only yesterday her carriage stopped at my gate, and she—delightful woman!—got out of it and actually entered my house! She told my wife that we had a most "chawming place," and that she had been trying to induce her husband to buy two or three farms, and retire from business and indulge in pastoral pursuits *as a recreation! "Recreation!"* I repeated when I was informed of her desire. Then she very naively and frankly informed Mrs. Garrulous that she was dying for a taste of strawberries, but she didn't suppose they would be ripe for a month yet (she had seen me selling them in market only the day before) and she thought she would drive out and get a breath of God's fresh air (she's very devout), look in upon our "chawming home," (she had told Mrs. Tellalisiehears that she could not understand how Susan Jane Jones ever came to marry that Garrulous and shut herself out from the world on a farm), and find from Farmer Garrulous how long she would have to wait before she could put a strawberry between her lips!

Of course I was sent for. Mrs. Garrulous (innocent, kindhearted soul!) sent out for me with a message to bring in the best box of strawberries the boys and girls had picked. So I went in with the box under my arm. Behold Mrs. Stickuppernose in the parlor awaiting my coming.

"Good morning, madame!"

"Why, how *do* you do, Mr. Garrulous? O, I did want so much to see you and your dear wife that I could not stay away any longer; so I came down to see you, and see when strawberries would be ripe. I'm dying for a taste of 'em."

"Well, madame, strawberries *are* ripe;" and I exhibited the box of Charles Downings under my arm. Mrs. Garrulous rushed up to me to get them, and thrust them into the waiting hands of the delightful Stickuppernose, but I said, "I will show them to Madame." So I did. But I did not let her touch them.

"Oh! how delicious!"

"How do you know, Madame?"

"They look, I mean," said she.

"Yes, and they taste equally so," said I.

"Are you sending them to market, Mr. Garrulous?" she asked, very differentially.

"Yes, Madame; I was in market with a lot yesterday, which you saw me selling. This box I had picked especially for your next door neighbor, Mrs. Substantial, who bought five boxes of me yesterday, and ordered ten of my best to-day. Aren't they nice?"

"Very," said our visitor, rather demurely. "Can you spare me some to-day?"

"Certainly—how many do you want?"

"O, as many as you can spare conveniently."

"What, Madame? I can let you have five bushels if you want them!"

"O, you mean *sell* them to me?"

"Certainly!—why should I give them away?" My wife looked at me deprecatingly and appealingly.

"Well, that makes a difference; if I *must* buy them, after having come so far without getting a taste, I suppose I had better have three or four boxes. How much will they be?"

"Twenty-five cents per box, Madame. And allow me to say that my wife, when she visits you, does not expect you will send for your husband and his samples of needles, thread, laces, or silks, from his store, with any idea that he will *give* her any of those articles."

"O, well! Mr. Garrulous; you and I understand each other. You say these berries are twenty-five cents per box. Why, that is all they ask for them in town at the fruit stands; and *you* do not get that for them there?"

"No! But when I do a retail trade I expect pay for my time; and I do not propose to destroy my town market for my fruit by underselling my best customers there, at home. It has cost me more time to bargain with you for the sale of three or four boxes than to have sold three or four dozen boxes in town. I will send John in with the fruit, Madame. You can pay me now for it."

She very reluctantly handed me a dollar bill, flounced out of the house and into her carriage without bidding good-bye or inviting Mrs. Garrulous to *return the call*, received her berries (John said) "as if she knew they were sour," and went whence she came.

I don't hear that she has told anybody about her visit to our "chawming home;" but I have heard that she thinks "that Garrulous a boor, and a man who would steal coppers from dead men's eyes." Her husband is a good fellow, a thorough and liberal business man, without an ounce of meanness in him, and I don't think she has told him how far she rode to "find out when strawberries would be ripe." I have invited Mrs. Substantial and her family, with a few other choice friends, to a "Strawberry Short-cake Party," (so the invitation reads,) and if we don't have a jolly time it will not be because there are not plenty of strawberries to eat, and flowers to garnish the table with. But I tell you, Mr. Editor, I've lived long enough on a farm to have learned how to treat "strawberry and cherry friends." (You may leave the *r* out of that last word when you set it up, and you'll hit the nail square on the head).—Farmer Garrulous.

The Herdsman.

PRICES OF CATTLE IN OHIO.

The long established Madison County stock sales, in the town of London, which is in the midst of the great blue-grass, cattle-feeding region of the Darby Plains between the Scioto and the Miamis, are the best index of the ruling prices for live stock which the country afford; being to Ohio what the Bourbon County stock sales are to Kentucky. These sales are regularly held on the first Tuesday of every month, and are attended by the best informed and largest operators in live stock in all Southwestern Ohio and the region beyond as far as St. Louis.

The sales for June were largely attended and well supplied with cattle. From an analysis which I have made of the sales of between four and five hundred of one, two and three year old cattle—mostly two-year-olds—I find that the range of prices was from a small fraction over four cents to fully six cents per pound, live weight. These, of course, are stock cattle, which change hands from breeder to feeder, or from one stock man to another, to suit the convenience or exigencies of business. The cattle of this region are mostly grade Short-Horns. The range of weights for two-year-old steers at the June sales was from 700 pounds to 1,100 pounds—a majority being between 850 and 900 pounds. S. D. H.

NOTES FOR HERDSMEN.

Horn Ail, or Hollow Horn.—In reply to Thos. Miller's inquiry (page 279), as to what ailed his heifer, I had a cow that was taken sick, with the same symptoms as his. My cow was healthy, apparently, and in good order. Some time the last of April she calved; did well, and gave a full mess of milk until the calf was about a week old, when she began to sicken and the water to run out of her eyes. She would stagger around in the yard as if she was blind. I examined her horns to see if they were hollow, and thought them all right; so did some of my neighbors who examined them. Her droppings were hard and black as tar. I put spirits of turpentine on her horns and gave her about a pint of hogs' lard and about the same quantity of linseed oil; then I gave her a pound of epsom salts, all to no effect. I got two pounds more of salts, and put it down her, without much change, except for the worse. Next morning I took my gimlet and bored into one horn, and found that was hollow as a drum; the other had a little blood and matter. My cow is all right now; gives from twenty to twenty-four quarts of milk per day at present. It may be that if Mr. Miller had examined the horns of his heifer, he would have found the disease there.—Abraham Witmer, *Niagara Co., N. Y.*

Field Crops.

CALIFORNIA WHEAT AND WHEAT SOIL.

We saw a paragraph, some time since, going the rounds of the newspapers, stating that Benjamin Ely of Buckeye township, Yolo County, had raised *five successive crops of wheat from one sowing.* Chancing to meet Mr. Ely at our Yolo ranch, a few days since, we inquired of him as to the authenticity of this story, and he confirmed it in every particular, and in answer to our inquiries, gave us several additional facts of interest about those crops. Mr. Ely informed us that he put in the first crop in 1865 (if we remember the year aright), in the usual way, by plowing and harrowing, and that he harvested five successive annual crops of wheat without further plowing, sowing, or harrowing, and that his yield was an average of 35 bushels to the acre, per annum, for the 45 acres that comprised the field; and that on the sixth year it produced a good crop of hay.

This land is situated next to the Foot Hills, about six miles north of the Putah Creek, and thirty miles due west from the city of Sacramento, two or three miles north of "Grand View Park," our Yolo ranche.

As we have said, there was no plowing, harrowing, or sowing after the first crop was put in; but Mr. E. says he turned in his hogs upon the stubble ground, and that was all that was done. So we see that it was "*snout culture*" that did the work, and produced a series of crops that will compare favorably with the most scientific or thorough tillage in the yield of their products. And if this term has never had a place in the agricultural encyclopedias hitherto, it should have one henceforth.

Volunteering crops, as it is called in California, is very common; but it is generally done by harrowing or cultivating the stubble ground the season after the first crop was harvested; but we do not recollect of any instance before this where more than two or three crops in succession have been taken from this kind of tillage. The difficulty in this kind of wheat culture generally is, that there is too much seed scattered from the harvesting, but the hogs, by eating much of it, and rooting and trampling it into the ground, leave only enough for a proper seeding; and hence the success, doubtless, in the case before us.

The superiority of California wheat is beginning to be understood and appreciated, not only in New York and other Eastern markets, but in Liverpool and other markets of Europe. The commercial world seems to have awakened to the importance and value of this superiority by a somewhat sudden impulse within the past year or two. And yet for thirty years or more, the value and superior quality of the wheat of California, and soil of California as a wheat growing country, has been known to the observing and intelligent readers who have taken an interest in the subject.

In looking over a volume of Hunt's Merchant's Magazine for 1842 (Vol. VI.), we find under the heading "Value of California Wheat," an article quoted from the Augusta (Ga.) Constitutionalist of Aug. 26, 1841, which goes on to state that "the grain of this article was brought by a trader from Middle California, 30° or 35° north latitude, where it grows luxuriantly and yields abundantly a superior article of flour. It was obtained and introduced by Major P. Spiers, who was in the Northwest in the employ of the United States as Indian agent. This wheat has been sown in Abbeville District, South Carolina, latitude 34° 10' W. The crop of this year, 1841, is superior to that of 1840 in the size of the heads, superior product and fullness of the grain. Experienced farmers, who have seen the wheat grow, assert that on proper wheat land, well prepared, eighty bushels can be raised on an acre. Its yield is astonishing, from the fact of one grain producing thirty to forty stalks, each having a full head, which contains from one hundred to two hundred grains. The best head of our common wheat will only shell out from sixty to eighty grains. Another advantage is, that this wheat is not so subject to disease as other kinds of wheat, and will withstand high winds and storms. It also grows and matures well westwardly, in the 39th degree of north latitude. It is considered to be a superior kind of wheat and a great acquisition to the agricultural community, and we hope it may at least have a fair trial, when it will prove itself all that its most sanguine friends have said or thought it would be."

This prediction, made thirty years ago, has been fully verified, and more, even, than was claimed then for California wheat. To-day it stands at the top of the list in all the best wheat markets of Europe and the United States. H.

CULTIVATION OF POTATOES.

As potatoes are raised extensively in our vicinity, I will give our method of cultivation, as it may be of use to farmers in other localities; hoping, also, to hear from them in return. After the ground is plowed and thoroughly harrowed, we mark it out with a marker making three marks at a time, using one horse or two as may be preferable. The potatoes are dropped in the crosses and stepped on to prevent their rolling out of place, and then covered with a two-horse potato coverer. If the ground is very grassy, as soon as the potatoes begin to break through the surface, we put two horses before a large plow (the one used in plowing at first) and with a long evener (6½ feet) so that the horses may straddle two rows, we plow them under, and then put on the harrow and drag it down smooth. The potatoes make their appearance again in two or three days, and the grass is effectually checked. This takes the place of the old method of hoeing. They are then cultivated with a one-horse cultivator, once in a row each way, and afterwards hilled with a shovel plow, which is the finale until the time of digging. G. H. B.

Schodack, N. Y.

CLOVER FOR NAMES.

Enclosed find three species of clover (or what I take them to be); please examine them and tell me their names, and whether they are good for grazing stock and improving poor land or not?

1. The branch with small leaves and yellow clovers is what some call the Japan or Lespedeza, which attracted some attention South and West, two or three years ago. I never noticed it growing in this part of the country before yesterday; and to-day I have been riding around in the country, and see some about every plantation I passed. I saw it growing on land that had been turned out for years, which was covered with ledge grass, and it had taken such a hold that it seemed as if it was going to make the ledge give way to it; in places where the ground is good it grows luxuriant.

2. The branch with large leaves and red bloom (deeper hue than the common red), I have seen growing about here; very pretty on poor land, and even amongst ledge. The first time that I noticed it was about three years ago; but as I have been West most of my time since then, I have never experimented with it.

3. The branch with long leaves and soft velvet-feeling bloom, slightly tinged with red, is something new to me, never having noticed it before to-day. I noticed it growing fine on poor ledge fields. I think from its appearance it must be a kind of clover.—D. T. Dye, *Sandford, N. C.*

Neither of the clovers sent are *Lespedeza striata* or Japan Clover. No. 1 is Yellow Hop Clover, (*Trifolium procumbens,*) sometimes called Yellow Dutch Clover.

No. 2 is *T. Carolinianum* or Carolina Clover, common in the fields and pastures of the Southern States.

No. 3 is *I. arvense* or Rabbit's Foot Clover, or Stone Clover.

The second is the most valuable of all, but neither are equal to the common red clover (*I. pratense*), or the Lespedeza or Japan Clover. Of course they answer for pasture where no better species are grown, but are not worth special care or culture so long as we have many that are better, that will grow in a similar soil and climate.

FIELD NOTES AND QUERIES.

Alsike Clover.—Will you inform me as to the call for Alsike clover seed? I have a few acres of clean land, will it pay to raise it for seed better than as a forage plant?—Noah Agarn.

We should think it would pay to grow it for seed, for we find on inquiry here that the seed (all of it imported,) wholesales at 35 to 45 cents per pound, and retails at from 50 to 60 cents. The demand for it is increasing. Probably it would increase still more if farmers could buy it at less than $30, or even $25, per bushel. We know no reason why clean domestic seed should not bring a paying price for some years to come.

Other correspondents who inquire are informed that the seed can be obtained of nearly or quite all the seedsmen advertising in our columns.

Planting Corn in Drills.—John Johnson, Geneva, N. Y., claims that corn planted in drills will yield about twenty-five per cent. more than when in hills in the common way. An editor of the Country Gentleman, by repeated experiments, found that on his land he could increase the crop fifteen bushels per acre by planting in drills.

Dairy Husbandry.

HOW WATER AND COLD INFLUENCE THE FLOW OF MILK.

We have called attention, from time to time, to some of the causes which operate injuriously on milch cows in lessening the flow of milk—such as cold, fatigue, excitement, etc., etc. The Boston Journal of Chemistry gives an account of loss of milk on account of the cows being allowed to stand in water during hot weather. Dairymen who have streams, or any considerable body of water connected with their pastures, will have observed that cattle during hot weather are very fond of taking "their daily bath," so to speak. They will not unfrequently stand for a considerable time in the water, sometimes with the water up to their sides. We presume this is done many times by animals to avoid the annoyance of flies; but whatever cause leads them to stand in the stream or pool, it seems the influence of the water is to check the flow of milk. The facts stated are as follows:

"During the past summer, in the hot days in July and august, the animals resorted to the lake to drink, and, after slaking their thirst, they would wade into the water and remain sometimes an hour or two with the legs half immersed. This habit it was found invariably diminished the flow of milk at night, and, in order to learn the extent of the diminution, careful observations were made. It was ascertained that standing in the water an hour diminished the flow to the amount of eight or ten quarts in a herd of thirteen cows. The loss was so great that whenever they resorted to the water they were driven away to the pasture again at once."

We presume there are few dairymen who are aware of the facts above stated; indeed, the habit of noting the diminishing flow of milk and tracing it to the true cause is too generally neglected. There are many circumstances influencing the flow of milk which ought to be more generally known and made the basis of practical management. It is surprising how much more milk may be obtained from a herd by the observance of care in little things as respects treatment, such as the avoidance of all worry or excitement of the cows, proper shelter during cold storms, habits of kindness to animals, regular hours and manner of milking, not to mention feed, and good water to slake thirst; which, of course, are more generally recognized by everyone who is familiar with the handling of dairy stock.

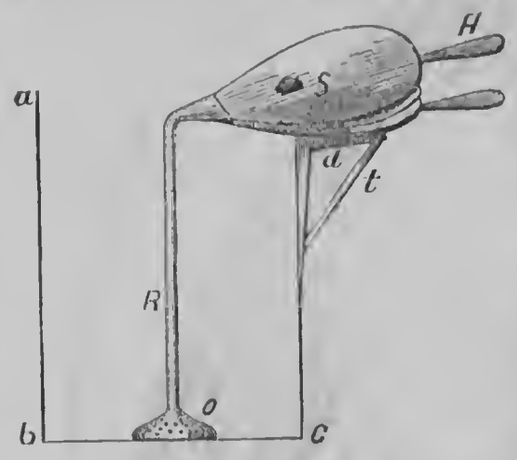
"We have learned," says the writer previously quoted, "that from simply turning the herd into the yard upon a cold day in Winter and allowing them to remain fifteen minutes, the flow of milk was diminished to a serious extent, and consequently the animals are not now allowed to leave the warm stable during the entire Winter, except for a brief period upon warm, sunshiny days. Water is brought directly from a well into the barn, and the drinking vessels are arranged so that the animals have to move but a step or two to supply their wants. The nature of the water supply and the convenience of access are most important points in the management of milch cows. A draught of ice cold water taken by a cow in Winter cuts short the milk yield for the day from one to two pints."

We think it was Mr. JAMIESON of New Hampshire who, a few years ago, made some direct experiments during Winter in slightly warming the water for his "cows in milk," and comparing the yield with the quantity of milk produced when the cows were allowed to drink cold water from the trough in the yard. The flow of milk was so decidedly in favor of the warm drink that he advocated the plan as more than paying for the labor, etc. Probably, there are not many who would care to take the trouble of warming all the water for the supply of a large herd in cold weather, but the facts are nevertheless important. If it has been found that cows will give more milk in cold weather by warming their water artificially, dairymen might take the hint that it would pay to lead water into their barns, or to erect some structure over the water-trough where the water would be protected from snow and ice, and thus rendered several degrees warmer than the ice-cold water with which they are usually supplied during February and March, when cows are "coming in milk."

AERATION IN CHEESE MAKING.

It is now pretty well settled that good sweet air—air free from foul odors—can be used mechanically with advantage in the cheese making art. A current of pure, cool air forced through warm milk as it comes from the cow, improves its condition for keeping sound and in good order. We have called attention to various devices for airing milk, but one of the most simple and efficient is the JONES & FAULKNER device by which a common hand bellows attached to the carrying can is made to do the work. This device is intended to be used by dairymen at the farm before the milk starts for the factory.

The accompanying figure will give some idea of this machine: *a*, *b*, *c*, *d*, represents a cross-section of the carrying can; *S*, the bellows from which proceeds the pipe *R*,



MILK AERATOR.

terminated with an enlargement, *o*, pierced with holes for the escape of the air. There is a valve at the lower end of the pipe which prevents the milk from entering and ascending the pipe. There is also a simple arrangement at *t*, whereby the bellows may be fastened to the can in a moment.

Now by grasping the bellows handle, *H*, and moving it up and down, the air is forced rapidly through the tube to the bottom of the milk, and of course rises through it, coming in contact with all its particles. The same inventors have an aerator attached to the cheese vat and to be worked with power from the steam engine. It consists simply of a rapidly revolving fan-wheel, enclosed in an iron case so that the air may be forced over the milk or through pipes as desired.

But an entirely new application of the aerator is to force air through the curds in the sink. We first got the hint of exposing curds to the atmosphere from the English Cheddar dairymen. In the Cheddar process, as is well known, the curds are allowed to lay for some considerable time spread out in the sink, and by the action of the atmosphere they are further developed and their flavor improved. At the factories this principle of airing the curds has been found almost indispensable in cases where faulty milk has been used. Floating curds that have a disagreeable odor when floating in the whey, are greatly improved by exposure to the atmosphere, as the bad odors have a chance to escape. But if the curds are immediately put to press without such exposure, it must be evident these bad odors are shut up in the cheese, and must, of necessity, work mischief. The idea, then, of forcing good, sweet air through such curds to carry off objectionable odors, must commend itself to any practical cheese maker.

In this device the space immediately below the sink is inclosed, and the air being forced into this box, finds its exit upward through the sink and the curds. We are not positive that any great advantage would be derived from the aerator when the curds are made from sound milk and are in good condition, as a simple exposure to the atmosphere, on the Cheddar principle, would doubtless suffice. Experiment and experience, however, must demonstrate how far currents of air forced through the curds can be made available. But there can be no doubt that the aerator, in case of faulty curds, will prove a valuable device. It is a new appliance in dairy apparatus, and, as such, we bring it to the notice of cheese makers.

Pure Water and Sweet Grass.—The Northwestern counties of Ohio have been properly called "Cheesedom," from the fact that dairying is the leading business of that grassy region. Mr. A. D. HALL, an extensive cheese-maker of one of the best locations in Cheesedom, writes to the Secretary of the Ohio Dairymen's Association: "I more clearly see that we have but a small area, even in this region, where we can make and depend upon A1 cheese; that is, a cheese that will keep for one year and not be worthless. I now regard our highlands, which abound in so many springs, as the only places where we can be sure to produce the best milk, take all seasons together; and a farm which has no running water for cows, and where the cows use slops and whey and resort to sunken places for drink, may injure a dairy of cheese."

Pisciculture.

FISH CULTURE AS A SOURCE OF FOOD SUPPLY.

It is frequently asserted, and perhaps with some degree of truth, that an acre of water is more valuable than an acre of land; in other words, that the food-producing power of an acre of water is greater than that of an acre of land. Whether equal to the land or not, it is now thoroughly understood that the products of the lakes, ponds and rivers of any country, ought not to be neglected by the inhabitants, and that the extent to which the productive capacity of any lake or river may be increased by judicious management is quite as great, or even greater, than the improvement that can be effected in the care of land. All this has been proved over and over again, but like all important truths if not constantly reiterated it is soon forgotten by the public. But that in this case the general public, even those who have no direct interest in fish-culture, should be thoroughly aroused to an appreciation of the importance of the subject, is absolutely necessary, since it will be utterly impossible to make any satisfactory progress until the laws which protect and regulate fish culture are fully carried out. It is easy enough to get them enacted; the difficulty is that the public has not yet been taught to regard those laws that regulate the capture of wild animals, whether of fur, fin or feather, as anything else than encroachments upon the liberty of the free born citizen, though we must say that in this respect the free *born* citizen is not half as unreasonable as the adopted citizen who has just escaped from the tyranny of the old world game laws.

The title applied to such laws is also unfortunate. We call them *game* laws, and it is under the game laws that our song birds are protected from the ruthless efforts of every school-boy that can command an old musket or rusty horse pistol. Game laws have been odious since the time of WILLIAM the Conqueror, and although it was perhaps impossible to avoid it, yet it certainly was unfortunate that the term should have been applied to laws which are productive of such universal good as are the laws regulating or prohibiting the capture of our birds, fish and animals. Still more unfortunate is it that the protection of trout that have been bred in boxes and fed in artificial inclosures, and which are private property quite as much as the sheep or pigs or oxen of the farmer, has been committed to laws which fall under the same general head. Those who have given attention to the subject will remember that one of the great difficulties in the way of progress in fruit culture, was the fear that the crop would fall a prey to thieves. To rob an apple orchard, melon patch or strawberry bed, was not regarded as a very venal offense—one not at all deserving of fine or imprisonment. Indeed, so lax were the laws, which, by the way, are generally a reflection of the popular mind, that it was found almost impossible to punish offenders. And even after proper laws had been enacted, it took some time to educate the public mind up to that point where they did not look upon the man that undertook to defend his rights as the really guilty party—their sympathies, strange to say, being entirely with the thief. Happily this state of things has passed away; the man or boy that would enter a vineyard for the purpose of helping himself to grapes without the consent of the owner, is regarded as a thief; fruit is as safe as any other property, and the consequence is that our markets are abundantly supplied with delicious fruit, and thousands of our citizens are engaged in a pleasant, healthful, and paying business. It is to be hoped that a similar change will soon take place in regard to fish and other animals, and that the man who stocks a fine pond with trout, and preserves and cares for them, will be protected, not only by the arm of the law, but by that far higher power—public opinion.

But it is not alone in regard to fish in private ponds that we are called upon to educate public opinion. Our rivers deserve our earnest attention, for by proper care they might again be made to teem with salmon, as did the Hudson in the days of its discoverer. To place in a striking light the desirability of such a result, FRANCIS writes thus; "What edible animal is there that exists on land, which possesses the capability of reproducing 9,000 of its own size in a period little exceeding eighteen months. This can, however, be performed by a grilse of eight or nine pounds' weight. A grilse of this size will deposit, say, 9,000 ova in about fifteen or sixteen months; the fry from this ova go down to the sea, and in two or three months more they have been known to come back to the river as grilse of from five to ten pounds' weight."

So much has been written and published in regard to fish culture, that the public are in general pretty thoroughly familiar with the details of the business. The securing of the spawn, the hatching of the eggs, and the feeding of the young fish have all been so minutely described and illustrated, that every step of the process is understood by those who take an interest in the subject. There are, however, certain general principles which must regulate this subject as a commercial question, and which have never been fully discussed so far as we have seen—not even in such special treatises as those of FRANCIS, NORRIS, SETH GREEN, FRY, GARLICK and others. These principles may not be necessary to the success of experimental ponds, but unless they are fully understood and appreciated, no great commercial success can attend the artificial production of fish.

The culture and preservation of fish deserves consideration from three very important points of view. 1. The production of food; 2, the promoting of field-sports, and 3, the influence created upon the character of the water that is supplied to our large cities. It is to the first question alone that we shall at present direct our attention.

The points that must determine the success or non-success of artificial fish culture, are the quantity and quality of the fish that may be produced on any given acreage without the incurring of such extra expense as shall take away the profit. Of course, at fancy prices which warrant the outlay of large sums for labor and food, the amount of fish that can be raised in a very small pond, is something astonishing. SETH GREEN tells us that he could keep so many fish in his pond that the bottom would be entirely hidden, and yet the fish would do well. He has one pond, only seventy-five feet long, twelve feet wide and five feet deep, that has nine thousand trout in it. They measure from nine to twenty inches in length, and weigh from a quarter of a pound to three pounds each, all as fat as seals and as healthful as trout can be. But such a thing is possible only where the circumstances are peculiarly favorable, and where the greatest care and labor are expended. Cases like these cannot be accepted as guides for general practice.

It is a curious fact that the only purely carnivorous animals, raised and used for food by man, are fish. Poultry and pigs are sometimes fed upon flesh, but they are not essentially carnivorous, and may be fed upon a purely vegetable diet with great success. The flesh that is fed to them is mere offal, and when the supply runs short, other things may be substituted; but if we were to undertake to raise lions and tigers, and use them for food, our meat supply would cost us from seven to ten times what it is now worth. A lion will, in a comparatively short time, consume his own weight of flesh, and the same is true of all the other carnivora—fish being no exception to the rule. A pickerel weighing one pound will readily swallow and digest his own weight of small fish in four to five days, and a trout, if fully supplied with all he can eat, will require his own weight of fish every seven to ten days. If the trout or the pickerel forage for their own supplies, it is of course impossible to keep an accurate account of the amount of food consumed, but when kept in small ponds or stews, and fed artificially, it will be found that every pound that is added to the weight of the fish, will involve the consumption of several pounds of food.

[CONCLUDED NEXT WEEK.]

Eels in a Knot.—We have in our little lake, among the eel tribe, a phenomenon which may be a natural one, but we have failed to learn the *rationale* of it. We submit it to your readers. In June, 1862, for the first time eels were noticed gathered together in knots, and even caught with a scoop net by hundreds—as many as 62 at a haul. In 1863, same month (June), they were seen again in knots. To-day, June 21, 1872, a bushel were caught at one haul. Is this a common practice with eels in all waters? Or is it only known in our little lake, three miles long and three-fourths of a mile wide? —E. ALLISON, *Wayne, Steuben Co., N. Y.*

We can give our correspondent no information. It is generally supposed that eels only copulate in salt water. Whether this is the case or not we cannot say.

Floricultural.

LATTICE-LEAF PLANT.
Ouvirandra Fenestralis.

This interesting Madagascar aquatic belongs to a genus containing some eight distinct species, six of which belong to India, and two, viz., *Ouvirandra fenestralis* and *O. Berneriana*, to Madagascar. In its native country the leaves of *O. Fenestralis* measure from ten inches to fifteen inches in length, and from two to three inches in breadth. In a young state they are of a pale yellowish green, which, as they advance in growth, changes to a deep olive green, and ultimately, before they decay, they assume a dark-brown hue. Of the structure of the leaves little need be said as a glance at our illustration will at once explain that. When fully grown they resemble a piece of lace or lattice work, but when very young the openings to which they owe their peculiarity are filled up with cellular tissue, which as the leaves increase in growth disappears.

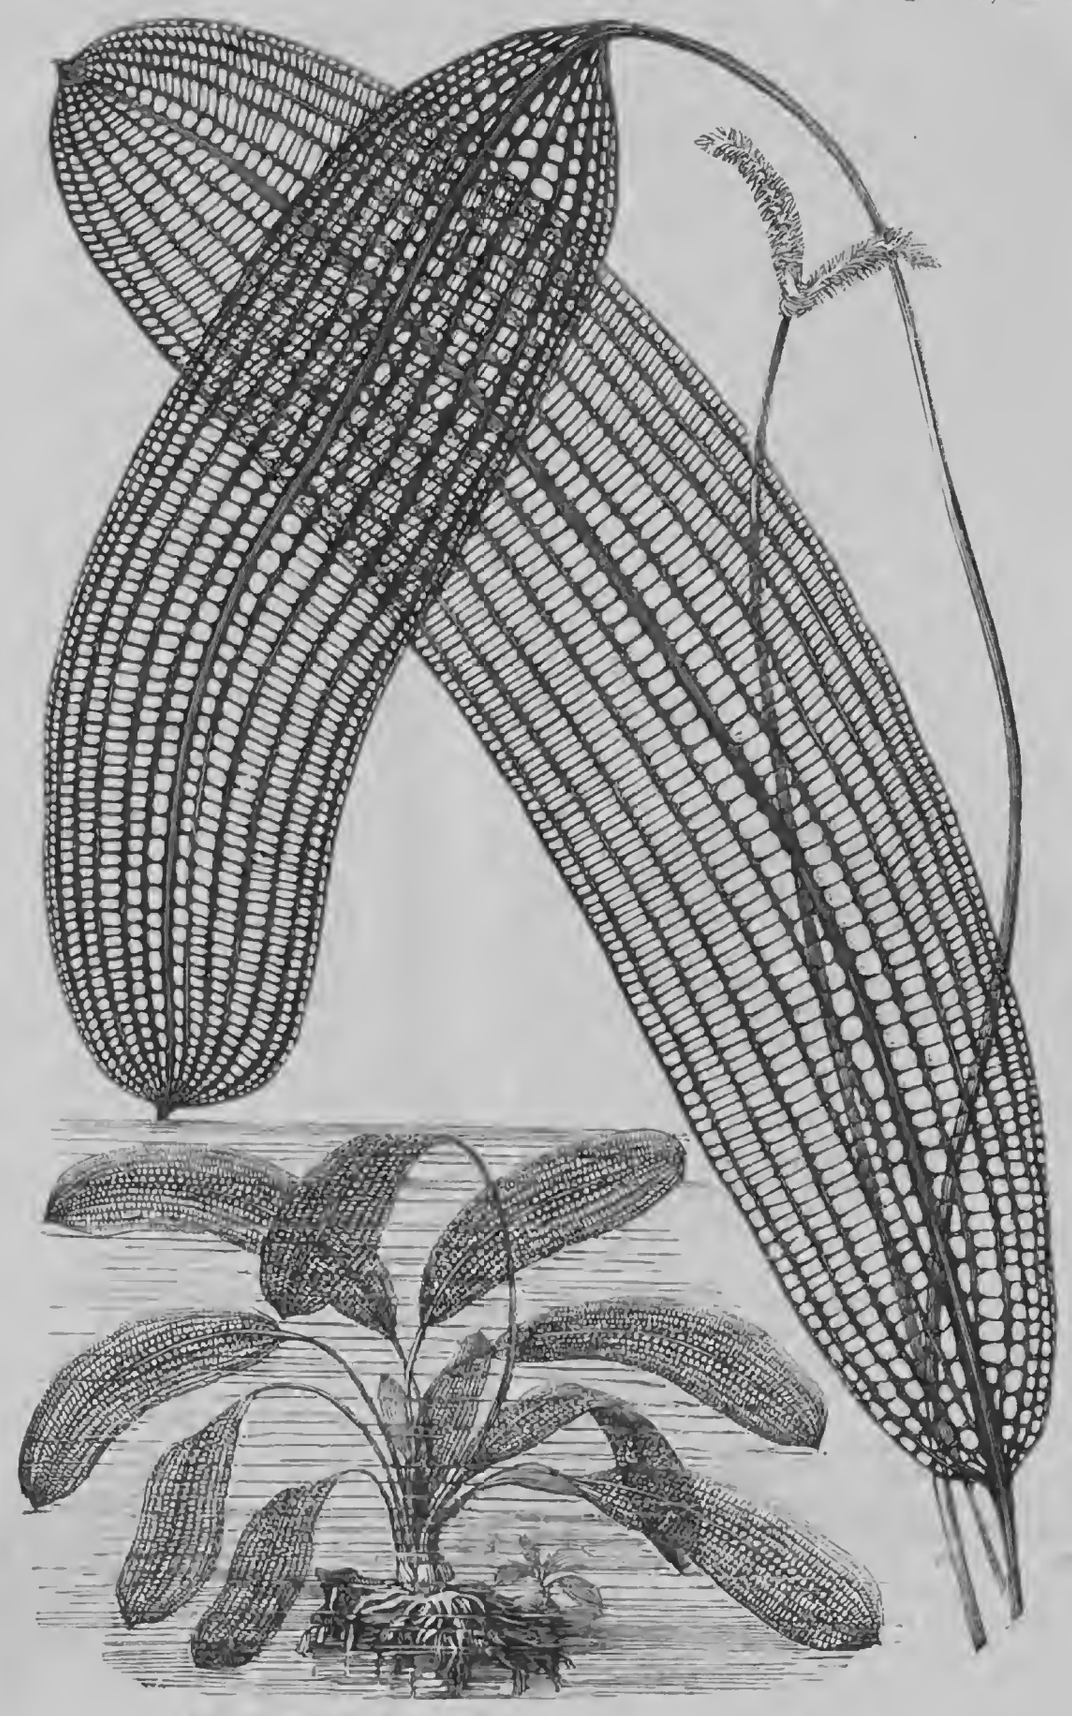
A plant in Kew Gardens has no fewer than 173 leaves on it, the largest of which are 15½ inches in length and 3¼ inches in breadth. This plant is growing in a tin pan, seven inches deep and fourteen inches in diameter, in a compost of fresh, turfy, yellow loam, and a good admixture of silver sand. In the bottom of the pan a layer of crocks is laid, over which some of the roughest pieces of the loam are placed, and the remainder filled up with the compost from which the finest part has been separated. In potting, the soil is pressed rather firmly around the plant, and the whole is watered with tepid water through a fine rose, an operation which not only firmly settles the soil, but thoroughly cleanses the leaves.

On a side shelf in the warmest part of one of the stoves is a wooden tub fourteen inches deep and two feet six inches in diameter; in the bottom of this are placed an inch or two of cleanly washed pebbles, and the remainder is filled with soft water. In this the pan containing the plant is placed, the top of which when the tub is full of water is about six inches under the surface. Some may think this too near the surface, but experience has proved that the plant succeeds very well at that depth. In shallow water the leaves float immediately below the surface, although in our illustration they would appear to be much deeper. The temperature of the house in which it grows ranges during the winter months from 55° at night to 65° during the day, with sun heat, and this is increased as the days advance in length. An ordinary-sized pot of soft water is placed beside the heating pipes every evening, and the following morning its contents are emptied over the plant through a fine rose into the tub, which is kept level so as to admit of an equal overflow of the water on all sides. By this means the plant is not only benefited by the daily application of fresh water, but also by the speedy removal of any sediment likely to accumulate about the leaves. Conferva sometimes prove troublesome to the lattice plant, and some kinds of water are more favorable for their production than others. Should their presence about the plants become apparent, they should be at once removed; the aquarium should be well washed with clean water; fresh gravels or pebbles ought to be introduced, and the plants should be watered rather forcibly overhead, and returned as soon as possible to their former quarters.

The flower spikes rise directly from the root to a few inches above the water and are separated at the apex into two, and sometimes more, divisions, which produce flowers of a whitish color. Seeds from these flowers frequently ripen, and if sown immediately will produce young plants. Young plants, too, come up thickly from self-sown seed on the surface of the soil around the parent, and sometimes among the pebbles in the bottom.

By some the plants are grown in an earthen pan in the warmest corner of an orchard house, and are treated exactly similar to the one above described. Young plants, however, require a higher temperature during the winter months than established ones.

Besides by seeds the *Ouvirandra* may be propagated by means of division of the roots which are very tenacious of life. Mr. Ellis, in his "Madagascar Revisited," tells us that it grows there in places which are dry at certain seasons of the year; that the leaves then die down, but that the root, buried in the mud, retains its vitality, and when the water returns fresh leaves burst forth. Whenever the earth around even the smallest portion of it remains moist, that portion puts forth leaves when again covered with water. The other species



LATTICE-LEAF PLANT—(Ouvirandra fenestralis.)

from Madagascar, *O. Berneriana*, requires deeper water than *O. fenestralis*. Its leaves are not so open, and are from 15 to 20 inches in length. It is, in short, altogether a coarser growing plant than *O. fenestralis*.

NAMING PLANTS.

If our correspondents wish us to name plants for them, they must send good specimens. More than two-thirds of those received are merely a small section of a plant. Sometimes nothing but a single leaf, or a half developed flower. It is sufficiently difficult to name dried plants from good specimens; but when only fragments are sent, we cannot afford the time of solving such problems. We must have well pressed and preserved specimens of both leaves and flower, at least as a starting point, and we hope our correspondents will do this much to aid us as well as themselves.

J. W. M. sends three small specimens of three different plants, and only one is sufficiently complete to name, viz.: No. 1, which is *Aquilegia canadensis*, or wild Columbine.

FLORICULTURAL NOTES.

Goatsbeard Spiræa.—I send you specimens of two plants for name. No. 1 is a wild flower found in Illinois; it is found both on high land and low. The white plume-like flowers are beautiful; the leaf resembles a raspberry leaf. No. 2 is a plant given me by a friend, who did not know the name. I send a stem with leaves, also one which has bloomed. Every leaf has a white silvery looking stripe through the center.—Mrs. M. A. W., *Petersburg, Ill.*

The first is *Spiræa Aruncus*, or Goatsbeard Spiræa. It is a handsome herbaceous plant, found wild from Western New York, Southward and West. It is also cultivated in gardens, and offered for sale in almost all nurserymen's catalogues. The other plant we cannot undertake to determine the name from so poor a specimen.

My Medley Basket.—I've sickened on half a dozen costly florists' "novelties," and concluded to refresh myself with a change; so I've filled a basket with our commonest plants—wild "Gill-over-the-ground," ferns, blue-flowered myrtle and "love-entangled" moss. I pierced innumerable little holes all around the sides, and, with a blunt stick, pressed in it little slips of vine. It is a fair ball off greenness, and will endure sunshine or shadow, flood or drouth, heat or freezing about equally well. We have many pretty vines with better pretentions, but I like this best of all. I intend, as a civilizing touch, to plant a Caladium in the center.—Rose Geranium.

China Brier.—Please give me through the Rural New-Yorker the name of the leaves inclosed. It is a vine, hardy here, growing wild.—F. W. Heroman, *Baton Rouge, La.*

Smilax Pseudo-China, or False China Green Brier. There are many species of the Green Brier, native of both the Northern and Southern States. Some of the species are a great pest in woodlands and hedges, the stems bearing quite long, hook-shaped thorns, others, like this species you send, have few or no thorns and are quite handsome ornamental plants for covering arbors and rock work.

Astralagus and Anemone.—Inclosed you will find two wild flowers, for which please give name in your valuable paper.—C. H., *Worthington, Minn.*

The one with a small, long, violet colored flower, is an *Astragalus*, but we cannot determine the species without the seed-pods. Preserve specimen in the various stages when in flower as well as in fruit. The other plant with handsome purplish flowers is *Anemone Nuttalliana*. It is a very handsome plant, and worthy of careful cultivation.

Leaf for Name.—Will you please give the name of the inclosed leaf? We call it Holly. There are two varieties, one bearing tiny white flowers. It is evergreen and hardy if inured to the open grounds.—Rose Geranium.

Euonymus Japonica.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Morello Cherries on Mazzard Stocks.—*June* 16.—Nine years ago I planted fifty Montmorency cherry trees in my orchard. This variety is one of the large class of Morellos, or what is usually termed sour cherries, and the tree is of the usual form of growth, low spreading heads, although vigorous and healthy. The Morello is far more hardy than the Mazzard or Mahaleb, and some of our Western nurserymen consider it an excellent stock upon which to work the more tender sorts; but my greatest objection to all the Morellos is their tendency to produce suckers, and when I purchased the fifty trees named above I procured those worked on Mazzard stocks instead of upon those of their own class. The result has been entirely satisfactory, the trees growing strong and healthy; not a sucker has started from any of the roots, although the plow has passed among the trees several times every summer. The trees at this moment are loaded with large, handsome ripe fruit, which would probably bring a better price in market than almost any of the choice sweet sorts. For culinary purposes the sour cherries usually are in greatest demand, and in most markets command a ready sale and a good price.

The Morellos being far the most hardy of any class of cherries in cultivation, they are suited to Northern localities; but they are very subject to be attacked by what is called the "black knot," a fungoid disease which attacks trees, the vigor of which has been weakened by overbearing or of neglected culture. Now, the point which I want to make is this:—Use healthy, strong stocks and give good and constant culture, and black knot will seldom appear on Morello cherry trees. The old scrubs to be seen along the fences and in gardens where the plow and hoe are never seen, is proof enough that this disease is the legitimate result of neglect. A large proportion of the different varieties of Morello cherry trees to be seen in various parts of the country, were grown from suckers taken out of some old neglected garden, hence it is not strange that they show declining vigor as well as disease.

Life Among the Weeds.—*June* 17.—Little do we know of what is transpiring in the great insect world down among the weeds and grasses of the fields. There is wooing and winning, births and deaths. Royal feasts are spread upon leaf and flower; guests come and go, some being gay and hilarious, while others are quiet and unobtrusive; but all do the bidding of their great Creator. As we pass through the meadows we see only a very few of the larger creatures which surround us, and even "those who have eyes to see see not;" or at most an infinitesimal small portion of God's creatures. At this season Nature is busy, and I confess to enjoying a few moment's leisure in sweeping the grass and weeds with my drag-net, which brings out from their hiding places thousands of insects of all conceivable forms and colors which the most fertile brain could imagine. I have just been using my net for a half hour in a low meadow near by; and the names alone of the insects taken would fill a page of my Diary. Who could be lonesome in the country where life is far more abundant than in the largest and most crowded city? These little creatures have passion, skill and intelligence, but none of the vices of the human race. You who have a desire to know something of the great principle called Nature or Life, procure a sweep-net and use it for an hour, studying the creatures collected, and therein learn your great ignorance of nature. Our best naturalists have not as yet learned the first letter of Nature's alphabet.

Watering Plants.—*June* 18.—A few dry days remind one that newly set plants require watering in order to keep them alive. I do not believe that a slight sprinkling does much good, and I have never practiced watering plants as extensively as many do who keep a good garden. Unless we can apply water enough to soak the earth down to and about the roots, it really does more harm than good by making the surface compact and impervious to air. Whenever flower beds or any ground on which small plants are growing is watered artificially, the surface should be stirred soon after, or at least before it has time to become hard and dry again. I have never watered a tree in all my experience in gardening; for if I think they are likely to suffer for want of moisture, I apply mulching to the surface about the roots, which is, as a general rule, far better than any artificial application of water. Of course mulch cannot be so readily applied to small delicate plants or seeds; besides, the looks of the thing is decidedly against its use in the flower garden, and our only recourse in time of drouth is to water. But the condition of the soil, as well as the time and manner of application, has much to do with its value. The surface of the soil should be well stirred before the water is applied in order to secure its rapid descent into the earth. Evening is also the best time to apply to prevent evaporation, and above all, let the quantity be a liberal one—none of the too common surface sprinklings.

The Garden.

TO DEVELOP CAULIFLOWERS.

D. BURY, in Field, says:—"There are one or two simple means of bringing out the best qualities of the cauliflower that may be worth noting here. It is needless to dwell upon the desirability of placing the crop in rich, deep, sweet soil. There are few plants that take more out of the ground in a given time than cauliflower; hence the obvious necessity of storing it well; for a stoppage of growth, arising from a scarcity of food or any other cause, is simply ruin—that is, bitterness, hardness, worthlessness—to this most valuable crop. But it is of surface help that I now write. The first and best is a surface layer of fine farmyard manure six inches thick over the whole of the ground occupied by the cauliflower; or, if this is impracticable, then half a barrowload to every five plants when the hand lights are lifted or taken off. The effect of such dressings is wonderful; one can almost see the plants grow. The leaves seem to drink in the volatile ammonia, and the roots soon find their way into this new surface larder; the crowns fill in and swell out with amazing rapidity; and this despatch is the great secret of high quality. There is another way of aiding and quickening growth, especially during dry weather. Lay the mulching of dung on as before, and wash it down with house sewage. This last is also of great service by itself, and for pouring over spent hotbed manure, leaves, or other matters that have little strength of themselves. These mulchings are useful to keep out the drought and encourage the roots upwards. The sewage will feed this well, and it seems to be absorbed and converted with wonderful rapidity by this crop. No one who values sweet and crisp cauliflowers should waste a drop of sewage; it is one of the most powerful and best of manures for this crop. If sewage is not come-at-able—although with proper arrangements it is accessible everywhere—any kind of liquid manure will answer the same purpose. None should be dropped on the leaves, and of course no one would allow any sort of manure water to wet the hearts of the plants.

There is one more feature about this crop that deserves a passing notice. As a rule, as soon as cauliflowers are cut the stems are pulled up and thrown away. With early, highly fed-plants, this is a great and reckless sacrifice of growing force. Plants treated as I have recommended have roots like trees—huge masses filling the soil in all directions. Why should these not be pressed into the production of a second crop? To this end, simply cut the cauliflower with the usual complement of overlapping leaves; leave all the other leaves on the stem for a week or two. By that time most of the stems will have broken into from three to six shoots. Go over them, and choose from two to four of the best placed and strongest; three to each is a capital average. Remove or bend down any leaves that interfere with these advancing growths, and also any decaying or old worn-out leaves; allow all others to remain. Give the stems several good soakings of manure water, and another layer of dung if thought desirable; and in an amazingly short period of time another crop, perhaps as heavy—or heavier in the gross—as the first, may be cut from the old stalks. After having done this double service, away with them, and see that the ground is immediately deep-trenched or manured for strawberries, or some crop as different as may be from cauliflowers, of which, notwithstanding all our feeding, it will have had enough for a year or two."

ORANGE-MILK MUSHROOM.

Lactarius Deliciosus.

THIS mushroom is the only one which has orange red milk, and which turns green when bruised, which distinguish it from *L. torminosus*, the only one which in any way resembles it. The orange-milk mushroom chiefly affects the Scotch fir-tree, and as generally found beneath the drip of the branches around the tree. It is found in hedgerows occasionally, but is most abundant in plantations of Scotch fir or larch. It is thus described:

Pileus smooth, fleshy, umbilicate, of a dull rufous orange, turning pallid from exposure to light and air, but zoned with concentric circles of a brighter hue; margin smooth, at first involute and then becoming expanded; from three to five inches across. Flesh firm, full of orange-red milk, which turns green on exposure to the air, as does any part of the plant when bruised. Gills decurrent, narrow, each dividing into two, three several times from the stem to the edge of the pileus; of a dull yellow by reflected light, but being translucent, the red milk shines brightly through them. Stem from one to three inches high, slightly bent and tapering downwards; solid, becoming more or less hollow with age; short hairs at the base; sometimes pitted (scrobiculate).

This mushroom is very highly esteemed as a delicacy. Its flavor is said to resemble tender lambs' kidneys, though it is called better by many. One writer says of it:—"Very luscious eating, full of rich gravy, with a little of the flavor of mussels."

The following modes of cooking it are given: EDWIN LEES says:—"The rich gravy it produces is its chief characteristic, and hence it commends itself to make a rich gravy sauce, or as an ingredient in soups. It requires delicate cooking, for, though

ORANGE-MILK MUSHROOM.

fleshy, it becomes tough if kept on the fire till the juice is exuded. Baking is, perhaps, the best process for this agaric to pass through. It should be dressed when fresh and pulpy."

Mrs. HUSSEY says:—"The *tourtiere* (or pie-dish) method of cooking suits *Lactarius deliciosus* best, as it is firm and crisp in substance. Be careful to use only sound specimens. Reduce them, by cutting across, to one uniform bulk. Place the pieces in a pie-dish, with a little pepper and salt, and a small piece of butter on each side of every slice. Tie a paper over the dish, and bake gently for three-quarters of an hour. Serve them up in the same hot dish."

To make a pie of them the following mode is given:—Pepper and salt slices of the agaric, and place them in layers with thin slices of fresh bacon, until a small pie-dish is full; cover with a crust of pastry or mashed potatoes, and bake gently for three-quarters of an hour. If with potato crust, brown nicely before a quick fire.

For pudding, cut into small pieces; add similar pieces of bacon; pepper and salt, and a little garlic of spice; surround with crust, and boil three-quarters of an hour.

It is also recommended to fry in slices, properly seasoned with butter, or bacon and gravy; and serve up hot with sippets of toast. A steak in addition is a great improvement.

GARDENERS' NOTES.

How to Re-set an Old Asparagus Bed.—In the fall when the seed is ripe, instead of burning off the tops of the Asparagus, as is the usual practice, I cut them off close to the ground and lay them down on the bed, cover them with manure and let them remain until Spring, when I remove those that have not rotted and cover the bed again with manure. I find that by this process I can re-seed the bed without the trouble of sowing the seed. The young shoots should not be cut until they are from one to three years old. The philosophy of it, I suppose, is that when the tops, which are full of seed, are cut off and laid down, the placing of the manure on them sprouts the seed and in the Spring following they came up.—C. E. T., *Burlington, Ky.*

Bugs and Vines—Preventive.—A correspondent of the Fruit Recorder says: "Having used the following compound for bugs on vines, I find it very efficient in keeping them away. It is composed of two tablespoonfuls of spirits of turpentine, well mixed with one quart of plaster. The turpentine and plaster must be well rubbed together when mixed. Dust the plants or vines with this two or three times a week, and the yellow striped bug will do the vines no harm, and by putting a small amount around plants and vines on the ground, so as not to touch the plants, it will keep the cut worm away from the plant."

The Poultry-Yard.

ON CROSSING.

As I have received so many communications on this subject, as to what advantages may be obtained by crossing fowls, and what fowls cross to the best advantage, I shall state what is my opinion as the result of study, observation and experience. I favor crossing only in a few necessary cases. The great facilities now offered for obtaining fresh blood and almost any variety of stock that one may desire, in its perfection, reduces the necessity of crossing down to only a few instances. If you desire perfection in comb, legs, form and plumage, you must select from both sides, the male and female, the very best specimens, and then breed from the very best specimens of this progeny. After obtaining your point you then may go back and breed parent to daughter or granddaughter, or mother to son or grandson; but never brother and sister. If you should observe any deterioration in size or constitutional defects, you may bring in fresh stock or improve the same by judicious crossing.

It is believed and urged by some breeders that size is attained, maturity surely developed, strength and hardness of constitution produced, and laying increased by cross-breeding. In the main I believe this to a certain extent is true. But I have never seen any improvement in size or in any of the other natural instincts over the thoroughbred. The smaller-sized fowl may be increased in size by crossing it with a larger; but unless a proper selection is made you may be liable to diminish the size of either. Size may be imparted to a Dorking by crossing it with a Cochin. Constitution may be obtained by a cross with the Game. As Games are generally bred at the present day for exhibition purposes, I should prefer the Dark Brahma or Partridge Cochin, which for giving vitality and constitution I know of no better.

Game fowls that have deteriorated in size, strength and fierceness by long in-and-in breeding, may have all these qualities restored by crossing with the powerful, gigantic and quarrelsome Malay; and his peculiarities afterwards bred out. By crossing a Houdan cock with a Hamburg hen you may increase the size of her eggs without much, if any, diminution of the quantity; and you would also produce larger Hamburg chickens. By crossing the French breeds, Creve Cœur, Houdan and La Fleche, with the Dark Brahma, you will gain some in size, but very much in constitutional vigor. A Houdan cock crossed with a Brahma hen, says Mr. FERGUSON BLAIR, produces the finest possible chickens for market; but he observes that he always found the *second* crop worthless. In crossing, cockerels will generally resemble the male, the pullets the female. The chickens of Dorking fowls, when crossed, often show five toes on one foot and only four on the other. This is one of the reasons that the Houdans, if not carefully selected from strains that have been bred through and through, and are perfect, will revert back to the original cross.

Mr. DOUGLASS, a great authority, states it as a strange fact that a cross of a black with a white Game throws birds of both breeds of the clearest color. The fact is not so strange and mysterious as the laws that govern the phenomenon. I can state a fact equally remarkable — that by crossing a white Guelder cock with a black Guelder hen you will throw beautifully plumaged cuckoos. How the reverse of this will operate I hope to know by the end of the breeding season. I have never yet seen a cross exceed in size a thoroughbred. You may take any two fowls of the large variety and cross them, and you will get no larger than can be produced by pure blood properly managed and fed. Mongrels I detest; they are more voracious and consume a larger quantity of food without turning it to good advantage. Well-bred fowls eat less and quickly convert their food into fat, flesh and eggs. ISAAC VAN WINKLE.

Greenville, N. J.

POULTRY NOTES AND QUERIES.

Fowls in Ohio Dying Suddenly.—Plowing my Early Rose potatoes about 5 P. M. the other evening, my hens followed the plow, picking up something—I did not notice what. They were then lively and in good health. The next day by 12 M. fifteen were dead. They lost the use of their legs entirely, so that they could neither stand nor walk, but could use their wings to such an extent as to move themselves along on the ground, until a short time before they died. Two that were taken the following day, in the same way, recovered. In about a week two others were affected in the same way and recovered. This happened before the potato beetle made its appearance; since its arrival my hens have kept the potato vines clear of them and fatten on them. If any RURAL reader has had a similar experience, and has found cause and cure, I should like to learn through the RURAL NEW-YORKER.—J. E. B., *Salina, O.*

Profits of Poultry.—At the Shaker Convention, near Cleveland, they do things on a system which enables them to tell whether they make or lose by the operation. I asked them to give me their record of poultry keeping, and these are the figures:—Number of hens kept over, 95; No. of chickens raised, 150, worth 50 cents each, $75. Sales of chickens, $27.47; eggs sold, $82; eggs consumed worth $45.44, and 30 chickens consumed; add the above, say $230. Amount paid for feed, $56; balance in favor of keeping, $174. The poultry business of the Shakers is managed by the Sisters, who are diligent readers of the People's Practical Poultry Book, and of the RURAL NEW-YORKER.—S. D. H.

New Zealand Ducks.—A writer in Harper's Weekly says:—"A duck found in the interior of New Zealand is said to differ from other ducks in not exhibiting any solicitude for the safety of its young. Capt. HUTTON, an eminent naturalist, thinks that this supports the Darwinian theory, as the ducks belong to a genus peculiar to New Zealand, where there were no destructive animals previous to the arrival of man, and in which genus, therefore, instinctive fear has not been developed; indeed, the absence of fear is said to be a peculiar characteristic of the animals of New Zealand."

Frank G. Hart's Poultry Statement.—In our dear RURAL I notice FRANK G. HART'S account of poultry raising. I think his mode of treating his hens while sitting is of no use. I sat 200 eggs; 160 came off chickens, without all his "fal-da-ral." The less you fuss with a hen, the better it is while sitting.—MAGGIE J. LENHART.

The Naturalist.

ABOUT RATS.

A GENTLEMAN, who has passed many years of his life at St. Helena, told me several stories about rats, so curious that I thought them worthy of record. He said at one time the common brown rat was extremely common all over the island, in fact, a perfect pest; and to avoid its attacks his father had constructed a large store, rat proof: namely, a rat once in could not get out again. A number, however, came in with produce and goods from the ships, and bred there. Around this store were Venetian blinds to the windows, and one day one of his men, when it was raining, watched a rat sitting on the Venetian and putting out his tail to collect on it the drippings of water at the edge; he then withdrew it, and licked it. The servant told his master, who immediately understood that the rats could get no water inside the store, and therefore directed that a butter firkin should be cut down to four or five inches, and in the top a large circular wire rat cage trap should be fixed. Several small planks were placed for the rats to get up to the entrance of the cage, which exactly fitted the firkin. No food would have induced the rats to enter the trap, but water did, and many were thus captured. There is one peculiarity with these rats—namely, their very often building or making their nests in the trees. I have, in India, several times found rats' nests in trees; but they have always been stolen nests, such as deserted abodes of the squirrel or sparrow; but here my friend, who is no naturalist, tells me they construct them principally of fir spines, on the ends of the boughs, some twelve or fifteen feet from the ground, in the common fir trees. The spots selected are just where the overlapping bough nearly meets the lower one. He said that all know the rats' nests, and that he had seen them fired at, when many rats were killed and fell out to the ground. He could tell me no more, and I think that, if original nests, as he held them to be, some grass must be woven in their constructions, as fir spines have but little power of cohesion. The situation of these nests was worthy of notice, although there is scarcely a situation where a rat's nest has not been found.—*Science Gossip.*

Domestic Economy.

GOOD BREAD.

"The unpardonable sin in man is from good grain to make poor whisky; and in woman, from good flour to make poor bread." The latter is a crime of frequent occurrence, and has nothing to excuse it, for it is just as easy to always have sweet, light, wholesome bread, as to ruin one's digestive organs with hot saleratus biscuit, or to disgust one's olfactories with "salt risings." After several years of trying bread recipes, taking advice from other housekeepers and experimenting myself in the matter of bread making, I have finally a recipe that never fails. It may not be new to many RURAL readers, but I have never seen it published.

To commence with, good yeast and flour are, of course, essential. If you use dry yeast cakes, have them thoroughly soaked in tepid water. At night, boil half a dozen potatoes, put them through a colander, with the water in which they are boiled. Pour in cold water until the potato water is lukewarm, add the yeast, cover, and put in a warm place over night. You observe that no flour is put in at night. This is the peculiarity of this recipe. In the morning, heat the potato water, stirring constantly, and being careful not to scald it. Stir in flour till it is a thick batter, and let it rise. When sufficiently light, knead in all the flour you can. It is at this stage that kneading is most effective; so knead it just one hour. Don't say you haven't the time to spare; you had better on that "baking day" make only three kinds of cake, instead of the usual six, or even omit the inevitable "pies" altogether, rather than have the "staff of life" anything short of perfect. After it has again risen, mold into loaves, and when light, bake. The result will be bread that is white, with the pure wheaten taste, that can be pressed into one-half its bulk, and will immediately expand to its original size, and when broken apart, can be peeled off in flakes or layers. This is one of the results of long kneading, and is proof that the bread has "attained unto perfection."

It is surprising how few people know what really good bread is. So long as their bread is not positively sour or heavy they eat it, blissfully ignorant that it can be made better.

A few days since a young housekeeper showed me, with evident pride, a loaf of bread of her making, remarking that the ability to make good bread was her one accomplishment, of which she was justly proud. Said bread was hard, dark and coarse-grained. Mr. RURAL, what could I say? To the class of housekeepers which she represents, who consider their method of doing anything right, simply because it is "their way," it is useless to try to teach anything; but to those who are trying to learn, the above recipe may contain some useful suggestions.—G. R. B.

ODDS AND ENDS.

Keeping Eggs Fresh.—Eggs cannot spoil if the air is thoroughly excluded; in other words, if their shells are made air tight. But this is a very difficult thing to do; for an egg-shell is as porous as a mineral filter, as is shown by the manner in which the egg itself is affected when placed, as is the common practice, in a lime solution to preserve it. An old French custom is to rub the egg with melted butter; but if a spot the size of a pin-point is overlooked the treatment does no good. Paraffine has more recently been suggested, and is better than butter, because it will not become rancid; but the same excessive care is required as with the other. Still another mode is to dip the eggs for a moment in boiling water, which coagulates a thin film of the albumen or "white" next the shell. This is stated to have proved very successful, but it is manifest that the eggs should be kept in a cool, dry place; for even coagulated albumen will decompose under the influence of moderate warmth and moisture. Shellac varnish has also been suggested for coating the shells; and, perhaps, if two or three successive coatings were given to insure against even the slightest neglect of any part of the surface, this would prove superior to any of the other plans proposed with more or less plausibility, and tried with more or less, but never with absolute success.—J. A. W.

Recipe for Johnny Cake.—In the RURAL NEW-YORKER of June 3d, 1871, is a recipe for a Johnny cake. I have improved on it, and will send the altered recipe as I use it:—"One-half pint of meal, one-half pint of flour, one-half pint of canelle, 1½ pints of buttermilk, two eggs, one cup of sugar, or a half a cup of molasses, one heaping teaspoon of saleratus or soda, one salt-spoon of salt; bake in two tins for half an hour, or till done." I have made after this recipe a good many times and have not failed. I wish some of the RURAL housekeepers would try it. I never baked bread but once, until after I was married. Now, for a farmer's wife, I think I can show as good loaves as an experienced housekeeper. Brown bread, white bread, and Johnny cakes disappear like hot buckwheat cakes at our house now. —MRS. A. DOANE.

Tomato Catsup.—MINNIE R. asks some one to give her a recipe for tomato catsup. A friend of ours having excellent catsup furnishes the following:—To a peck of tomatoes, boiled soft, and strained through a sieve that will allow a little of the pulp to pass through, add four tablespoonfuls of salt, four of ground pepper, four of ground mustard, two of ground allspice, two of ground cloves, one of Cayenne pepper and one quart of strong vinegar; boil gently several hours; cool and bottle.

Granulation of Maple Sugar.—I do not presume to answer LUCY LINSEED'S question as to the best method of getting a cake of sugar out of a bottle, but would simply say that I tried the experiment suggested by W. A. GRAHAM, page 134 of RURAL NEW-YORKER, Feb. 24th, and found it a perfect success. I put alum in the sirup, and sat it away, leaving it exposed to the air, and it has no more appearance of crystalization now than when first made.—CHARLEY F., *Wilmington, Ill.*

Graham Bread.—"Keep it before the people," and on the table, till dyspeptics are no more. One quart of new milk, half a cup of new yeast, and half a cup of molasses, or one pint of bread sponge, with milk and molasses. Stir in Graham meal until stiff; let rise, and bake three-quarters of an hour; never mold as for fine flour bread. When the meal is coarse, as is best for pudding, stirring in a cup of shorts, or fine flour, will make it less harsh.

Covered Broiler.—Set in the stove as other stove furniture, a blaze underneath; no heat or smoke in the room. Where and by whom manufactured? Let them advertise in the RURAL NEW-YORKER.—MRS. Z. S., *Madison, Ohio.*

Domestic Inquiries.—What will remove iron rust from white linen? Will some one give a good method of preserving Siberian crabs?—WESTERN MOUNTAIN GIRL. . . . Will some one tell me how to pickle cucumbers in *whiskey and water?*—M. J. W. M.

Smoking Griddles.—Keep the griddle smooth and clean; use no grease; all kinds of griddle cakes will turn without it. Try it and see. Polish with salt.

Arboricultural.

Weeping Cedar.—Is there such a thing as weeping cedar? There is a tree near here the branches of which are from two to four feet long and very slender, the termini of which are composed of smaller ones clad with leaves, causing it to hang in festoons which, when moved by the wind give it a graceful and beautiful appearance. Is it a freak of nature, or is it a common occurrence?

THERE are a few varieties of Weeping Cedars, but there is room for more. These Weeping Cedars are freaks of Nature, and may be perpetuated by the usual methods of propagation. You had better call the attention of some nurseryman or other gentleman acquainted with such trees to the specimen referred to, as it may be distinct and better than any of the varieties now in cultivation.

Sugar-Producing Trees.—The Sugar Maple (*Acer Saccharinum*) has hitherto been regarded as the best sugar producing tree. A few years since it was discovered that the Ash-leaved Maple or Box Elder (*Negundo aceroides*) is quite equal to the Rock or Sugar Maple. Now we have the Black Walnut *Juglans Migra*) added to the list; and a Kansas farmer asserts sugar has been made from the sap of "Blue Eye" (what is that?) and Hickory. We know that sugar has been made from the Birch and other trees, but not profitably. The three trees first named seem to be the only ones, as yet, that may be regarded as yielding sugar in profitable quantity among our native forest trees—at least that have been discovered.

Scientific and Useful.

SCIENTIFIC AND USEFUL NOTES.

Sophistication of Sugar.—"Sanding" the sugar is an old joke and an old practice with grocers, but in recent times the trade has improved upon the clumsy old-fashioned method. To make it look better the merchant frequently runs the substance through a crushing mill, which destroys the lumps and mingles the impurities more intimately with the mass so that they cannot be so readily distinguished. The finely pounded white sugars are mixed with terra alba, a white earth imported from Ireland. But there are other and more scientific methods of deceiving the purchaser as to the quality of the saccharine product. It is well known that, as in blueing clothes in the wash, a slight blue tinge will increase the apparent whiteness of a material, and hence in Europe manufacturers have been in the habit of mixing a little indigo, and sometimes even ultra-marine and aniline blue in their sugar. These are different from most adulterations, however, in being quite harmless in their nature.

Flour from Wood.—Chemists know that cellulose, the clean fibrous portions of wood, have the same chemical composition as starch. If the cellulose, therefore, was equally soft and capable of digestion it could be made into flour from which bread could be made. The softest and most easily reduced variety of this material is found in the inner portion of the bark of trees, and, indeed, in Norway, where in past times terrible famines have frequently occurred, pine bark has been often made into a fine powder and mingled with rye flour for baking. If we choose to be at the trouble to separate the other components of the wood we can dry and powder the cellulose and make bread of it without the addition of flour. In an old book we find directions for this which we condense as follows:—Take beech wood, or some other that contains no turpentine; pound it in a mortar with water; Then wash and dry in an oven alternately several times in succession until all the foreign matter is removed, and then grind as fine as possible in a mill. The flour thus produced has a yellow color, and if boiled yields a jelly-like boiled starch, and like starch is capable, under certain conditions, of fermentation. Loaves of spongy and eatable bread have been made from it. Being pretty much the same as starch it could of course be converted into grape sugar by chemical means, and also be fermented and distilled into alcohol. So we see that if we choose we could make biscuit, sirup and brandy out of a stick of common cord-wood. —J. A. W.

Sawing Wood Without a Saw.—Dr. GEORGE ROBINSON, of this city, has invented a process of cutting wood by passing a galvanic current over a platinum wire in sufficient quantity to raise its temperature to a red heat. He has found that gently pressing a piece of wood against a red-hot platinum wire, especially when aided by a slight sawing movement, the wood was divided in any required direction as by a handsaw, and, of course, without any effort of skill or appreciable expenditure of muscular power. The Scientific American says: "By arranging the wire with handles or other means, so as to guide it readily, the lumber, whether in trees, logs, or planks may be cut easily as desired. There is here, therefore, a simple and easily applied force, which, in a child's hands, may be employed to fell trees, divide them into logs, and, in short, perform all the operations of the saw and the ax. The surface of the wood where thus divided is, of course, slightly charred, but the black layer is very thin, and for many purposes not disadvantageous, as it is known to preserve timber. The battery employed need only be of the simplest character, as quantity, and not intensity, of current is required."

Liquifying Dead Bodies.—M. DONAC has laid before the French Academy of Sciences, a project by which he proposes to convert a dead body into a sirup without color or smell. He claims that a moderate-sized man can be got into six bottles; he don't say of what size. This may answer the morbid moods of some people, but we think the best way of disposing of dead bodies, of whatever sort, is to bury or burn them.

The Siphon Question.—Will the old subscriber, who had a troublesome siphon, please inform the readers of the RURAL whether he has succeeded in making it work, and if so, how he did it? In the RURAL NEW-YORKER of June 15, page 395, W. H. S. gives two reasons why the siphon might not operate; the first of which was suggested several weeks ago, and his second reason is rather *thin*. In accordance with hydraulics, it would not make any difference if the *well* end of the pipe was two inches in diameter, and the *down hill* end but half an inch in diameter, or *vice versa*.—A. J.

Carbolic Acid vs. Molds.—We find it asserted that the decomposition of paste may be prevented by adding to it a small quantity of carbolic acid. In the same way, the disagreeable smell which glue often has may be prevented. If a few drops of the solution be added to ink or mucilage, they will not mold. For whitewash, especially when used in cellars and such places, the addition of one ounce of carbolic acid to a gallon will prevent mold and disagreeable odors.

Cleaning Ivory.—W. P. R. is informed that one method of cleaning ivory is to immerse it in a saturated solution of alum for an hour, which softens it; then take it out, rub with a woolen cloth, wrap in a piece of linen to dry throughout, and then polish. By another method, the ivory is heated in a thin paste of lime until it turns white, when it is dried and polished.

How to Make a Cheap Refrigerator.—I would be pleased to hear from some RURAL reader on the best plan of making a *cheap* refrigerator—one for store use—that will hold several hundred pounds of butter. My cellar is a poor one in hot weather, and I need some contrivance whereby I may keep butter in good condition until shipping day.—A. G.

To Drive off Rats and Moles.—A correspondent of the Pomologist has found that potash placed in rat-holes and mole-runs will clear the premises of these pests in a short time.

The Largest Ruby in the World is said to be owned by Prof. SHEPARD of Amherst College. It weighs 315 lbs., was found somewhere in the South, and cost the Professor $300.

To Soften Old Putty.—Wanted—Something which will soften old putty on windows so that it can easily be removed.—PORT HOPE.

To Renew Patent Leather.—A correspondent asks for "Something which will fill the cracks and renew Patent Leather."

Entomological.

ENTOMOLOGICAL NOTES.

Insects on Currants.—Will you please inform me through your paper how to destroy the insects which I inclose. Do they make the large worm which was so destructive in western New York five years ago? I was living there then but have been living among the Alleghanies for five years past, and this year have the promise of an excellent garden through the help of your valuable paper. Our currant bushes were full of fruit, but 'tis all falling off.—F. W. FOUSTER, *Renovo, Pa.*

THE worms were so badly smashed when received that we could not determine the species. But at venture we would suggest you apply freshly slaked lime pretty freely to the bushes. Apply when they are wet with dew or just after a shower. There are few insects that will thrive where lime is freely used.

Moth of Salt-Marsh Caterpillar.—Please name the inclosed moth and oblige —G. D., *Conway, Mich.*

THE moth is the male of *Spilosoma acræa* of DRURY, and the larva is the well known and very troublesome salt-marsh caterpillar. These caterpillars often infest the grass on low meadows to such an extent as to nearly destroy it, and the best way of getting rid of them is to cut the hay very early, and thereby cut off the supply of food, and expose the young caterpillars to their natural enemies.

Potato Beetle Remedy.—I have found an effectual remedy—at least it has completely driven the striped and dun-colored beetles from all of my potatoes, and off of my farm. Dissolve one pound of sulphate of copper (blue stone) in five gallons of water and sprinkle vines or other vegetables in the morning. Repeat the operation after every rain if troubled again.—A. E. B., *Cleveland, Tenn.*

Modes and Manners.

MINTWOOD'S CONVERSAZIONE.

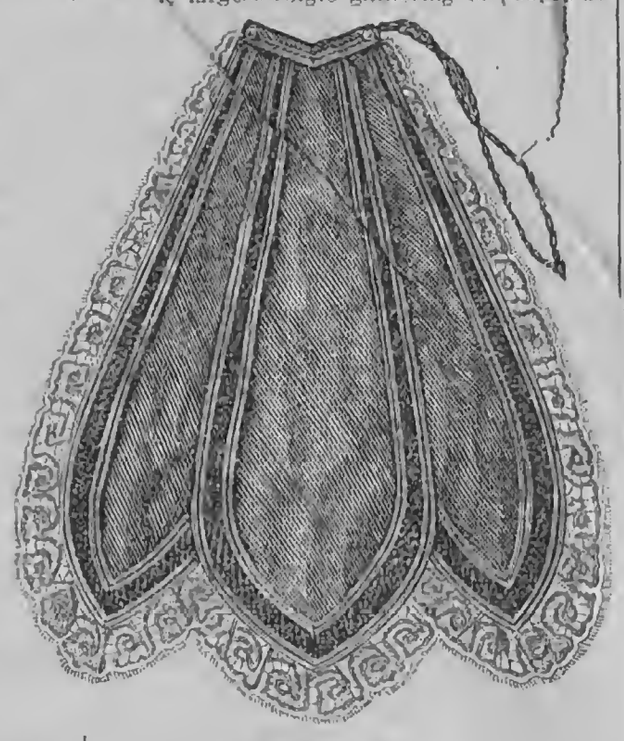
Answers to Correspondents.—E. A. B., Brooksburg, N. J.—Fig. 1, in illustration of June 28th, would be a suitable style for fawn-colored worsted goods, substituting side plaiting for the scalloped flounces. It could be made very stylish by using two shades of the goods.

GEORGE M. S.—White flannel suits are very popular and stylish; some gentlemen prefer pants and vest of white duck, with flannel coat. A fine Panama hat may be had for $35. When at a place of entertainment, or party, it belongs to the lady to suggest the time for departure.

FLORA.—"Some of the best photographic artists" in the city are KURTZ, BRADY, ROCKWOOD, SARONY, etc. A letter addressed to any one of them as "Photographic Artist, Broadway, New York," would reach its destination.

L. W.—Japanese silk is made up in the same style as French or American silk. From 20 to 25 yards are required. The skirt may be ruffled to the knee, and the polonaise trimmed with ruffles or fringe. A lady of forty has her dresses made in the same style as if but twenty-five, as regards most dresses.

Black Silk Apron.—The apron is made of black gros-grain silk, cut in three pieces, as shown in illustration, and trimmed with black velvet, cut on the bias, bordered with folds of ribbed silk, or satin, and edged with lace. The three gored parts (each 25½ inches long), running to points below, are made of stuff from 19 to 19¾ inches wide, by folding this to the half in the length, and then 4 inches from the side edges cutting through across from one corner to the other; the straight outer sides of the cut-off pieces are now sewn on again to the cross edges of the largest part. Each of these stuff parts is to be rounded on each side to a point 5½ inches deep.



BLACK SILK APRON.

"Poppy, Snuffower & Co.," Onondaga Co., N. Y.—It is a mere matter of taste or convenience, and not of special table etiquette, whether you "eat hard pickles from your fingers or fork." The RURAL knows of no effectual depilatory that is harmless. A suitable present to give a "young man to whom you are engaged and not costing over ten dollars," would be half a dozen pocket-handkerchiefs with his initial beautifully embossed in one corner; or a gold necktie ring; or locket for watch guard. "Kilt plaiting" is side-plaiting—plaits laid one way, suitable for nearly all kinds of goods, including "Chinese grass." "What kind of a Leap-Year Party can 'we girls' make, something to come off in about six weeks—very pleasant, but not expensive?" Croquet, with out-door refreshments *a la* pic-nic.

N. B.—Col. HARRIS was amused at your supposing him to be "Mintwood," and wrote at the top of the forwarded letter "Do people mistake the solid old missionary for a light comedian?"

Industrial Societies.

GREAT INDEPENDENT EXHIBITIONS.

THERE are now held in the United States four annual exhibitions of the products of agriculture, horticulture, and the mechanic arts, which are larger and more prosperous than any of the regular State fairs. These are the exhibitions of the American Institute, at New York; of the Northern Ohio Fair Association, at Cleveland; of the Cincinnati Industrial Exposition Company, at Cincinnati, and the St. Louis Fair Association, at St. Louis.

These associations are carried on without State patronage, and are managed as men manage their individual business, with economical thrift and liberal expenditure. The annual announcements of the two Ohio Associations are in the columns of the RURAL NEW-YORKER, and those of the others should be. Largely successful as was the Cincinnati Exposition last year, the arrangements for this year point to a larger and more liberal patronage and expenditure. In 1871 this Exposition considerably exceeded that of the American Institute, which is saying a good deal. Last year the buildings were all under one continuous roof, covering a floor-space of over three acres. Across the street, in front of these buildings, is an open square, or park, upon which will be erected a large and handsome building for the horticultural department, connected by a bridge with the main building.

The length of time which this exposition is open to the public, does away with the immense and uncomfortable jam of people which throng to a four-day's fair, and enables select parties from any neighborhood to join and make an excursion trip at reduced fares and at their own convenience. This was a great feature of the exposition last year. Being held in the city, without open grounds, there can be no show of live stock connected with it; but for everything else it is independent of wind and weather.

The *Northern* Ohio Fair Association owns and occupies the largest and handsomest fair grounds in the United States. The cost of the grounds was about $100,000, and the fitting up has cost nearly as much more. There is a full mile driving course, made in the completest manner, with its abundance of raised seats under cover. The show grounds are beautifully grown to ornamental trees, and plentifully furnished with all manner of buildings—large additions to which have been made this season.

The attendance at the Northern Ohio Fair, for the two exhibitions which have been held, has been the largest single gathering of people at any fair in the country, except on several occasions at St. Louis. For the present season, it will be made worthy of still larger public patronage.—S. D. H.

INDUSTRIAL SOCIETIES.

Massachusetts Society for the Promotion of Agriculture.—The following officers were elected for the ensuing year, June 12: *Pres.* THOMAS MOTLEY. *Vice-Pres'ts.*—David Sears and Leverett Saltonstall. *Cor. Sec.*—R. S. Rotch. *Rec. Sec.*—E. N. Perkins. *Treas.*—Henry Saltonstall. *Trustees.*—Amos. A. Lawrence, William R. Robeson, Theodore Lyman, George M. Dexter, John G. Cushing, Charles S. Sargent.

The Meeker Co., Minn., Agricultural Society holds its next Fair at Litchfield, Oct. 10, 12.

Musical Instruments.

THE ARION PIANOS Excel all others in Tone and Durability, and in Elegance of Finish they are unsurpassed. Write for Descriptive Circular, which we mail free, and state where you saw this notice. Address THE ARION PIANO-FORTE COMPANY, No. 5 East 14th St., New York City.

DUNHAM & SONS,

(ESTABLISHED IN 1834,)

MANUFACTURERS OF PIANO-FORTES.

Warerooms, 17 Union Square, N. Y.

VOLUME XXVI.

THE RURAL NEW-YORKER this week enters upon its Twenty-Sixth Volume, under very favorable auspices. Without making any special promises, we may state that no proper effort or expense will be spared to render the paper increasingly interesting and valuable during the publication of the volume, and we hope its issues will prove so acceptable that many thousands will be added to our already large and widespread parish of readers. And while we faithfully labor to augment its value, we trust the Agents and other ardent friends of the RURAL will kindly continue to lend their influence to extend its circulation and consequent usefulness in their respective localities.

—Among other changes which are regarded as improvements, we shall hereafter close our News and Market pages on Monday evening—thus enabling us to give reports two days later than formerly.

POLITICAL REFORM REDIVIVUS.

EDITOR RURAL NEW-YORKER:—In your issue of Dec. 16, 1871, you published a very able article on the subject of "Political Reform," which commended itself to a host of intelligent, right-thinking citizens. Now, Mr. MOORE, let me ask you one plain question. *Dare* you re-publish that article in your next number?—or will you decline to do so, because a large body of honest men have recently met at Cincinnati, and in a most emphatic manner indorsed the opinions you then expressed in the RURAL NEW-YORKER?

Yours, A FRIEND OF POLITICAL REFORM.
Brooklyn, N. Y., June 25, 1872.

The above challenge is accepted, for we never refuse to fight in a good cause. Of course when the article was written we knew nothing of the complexion which was to be given to the political canvass of 1872. But, in common with thousands of others, we felt the necessity for reform, and thought that the time for a thorough political revolution was at hand—when it was not simply justifiable but imperative. We believed the People and Country demanded reform, and did not care whether it was effected by an old or new political organization. So thinking and believing we wrote the article which is re-published below. What has since transpired shows that others have been thinking in the same direction, and that we were, in a large degree, in accord with the Reform Spirit.

Now, we have nothing to take back—no word to change. We seek the greatest good to the Country. We care not what party assumes the task of accomplishing it. We are in no sense partisan in spirit, feeling or purpose. The RURAL NEW-YORKER is not a partisan paper. But it is so independent that it will commend the good and condemn the wrong accomplished by any or all parties.

POLITICAL REFORM;

Some Views and Suggestions Thereupon.

EDITOR RURAL NEW-YORKER—*Sir:* The noble stand you have taken (not only in this but former years) against the corruption and venality of Governmental or political affairs of all classes, has won for your journal many ardent friends and supporters among the honest and intelligent portions of community. Your condemnation alike of the swindlings and stealings of both Republican and Democratic officials, proves that you are not partisan, or, if so, that you would sink Party to save a Country whose only salvation, it appears to me, must depend upon the purity and honesty of its officials. Thus sincerely believing (and also that those in your position can do much toward guiding the People and Nation aright), I desire you to express, through the columns of the RURAL NEW-YORKER, your opinion in regard to the necessity and expediency of organizing, at this juncture, a great *National Reform Party*, composed of such members of the existing political parties as believe in and would insist upon the uprightness, intelligence and honest accountability to both the Government and the People of all appointees to positions of honor and trust.

And further, if you concur in the above-stated proposition, (as I am confident you will, judging from what has appeared in your able and independent journal,) please name such men as candidates for President and Vice-President of the United States as you think would properly represent such a party as I have indicated.

By replying to the preceding you will oblige the writer (who is a Reformer, or come-outer, and practices what he preaches), and no doubt gratify thousands of others. While giving you, below, my real name and address, allow me to subscribe myself, for publication, AN EARNEST REFORMER.
Western New York, Nov. 2d, 1871.

THE writer of the above has been known to us for a score of years as a prominent Western New-Yorker, one who has held many positions of honor and responsibility, to most of which he was elected by the united efforts of such members of both parties as believe integrity and capacity the proper qualifications for office. Had he been an ambitious politician or demagogue, he might ere this have been Governor or U. S. Senator—for he is as competent as several who have occupied those distinguished positions. Called upon by such a man, and in such a manner, we feel constrained to respond—as briefly and pertinently as may be, however, as our space is limited.

I. The pecuniary interests and general welfare of the great commercial, producing and industrial classes of the country undoubtedly demand a decided reform—an honest administration of our National, State, Municipal, County, and even Township affairs. This will be conceded by every intelligent reader who does not hold a sinecure position, (and we trust few of our subscribers, at least, are of that character.) That many of our office-holders have become corrupt and venal is patent to all who read the journals of the day. As to the thefts of Tammany and U. S. Government officials, we have already expressed strong views, see, for example, our article entitled "On the Make," in this Journal of Sept. 30,) yet much more might be said on this prolific subject, did we space for its discussion.

II. That Reform is necessary to preserve a Republic which has not yet existed one hundred years, we verily believe,—and we furthermore believe that *the People must come to the front*, and put down political schemers and demagogues. *But* whether it is expedient to unite the honest and independent members of the two dominant political parties, is an open question. We think *it ought to be done*, and that the impending crisis renders it expedient. The intelligent and straightforward portion of community who pay the expenses of Government, are disgusted with the management, corruption and venality of political leaders and office-holders, and if there ever was a time when a change which would be an improvement should be made, it is now. The people are aroused—as witness their recent triumph over the Tammany corruptionists in New York City. This triumph was accomplished by the union of Republicans and Democrats, and the nomination and election, on one ticket, of the best men of both parties. And influential journals of both parties appreciate the issue, and seem to be preparing for a great political upheaval—a new programme or deal which shall comprise the honest and straightforward men of all existing party organizations.

III. As to naming candidates for President and Vice-President on a Reform Ticket, that is a delicate matter for a neutral or independent Journal, but, having said thus much, we will suggest the names of a few men whom we believe to be competent and incorruptible. For example, a National Reform Party could probably safely adopt either of the following tickets, each comprising men of different politics. The first-named person in each paragraph is for President and the second for Vice-President;

HORACE GREELEY (R.) of New York, (the Empire State of the North); JOSHUA HILL (D.) of Georgia, (the Empire State of the South.)

CHARLES FRANCIS ADAMS (D.) of Massachusetts; B. GRATZ BROWN (R.) of Missouri.

LYMAN TRUMBULL (R.) of Illinois; JOEL PARKER (D.) of New Jersey.

W. S. GROESBECK (D.) of Ohio; MARSHALL P. WILDER (R.) of Massachusetts.

JACOB D. COX (R.) of Ohio; JAMES L. ORR (D.) of South Carolina.

S. J. TILDEN (D.) of New York; AUSTIN BLAIR (R.) of Michigan.

—Our Reform Platform would be substantially as follows—though other planks equally important, may be omitted in our haste of writing:—1. Only one Presidential term of six or eight years.—2. Such Reform in the Civil Service as would prevent the abuse of the appointing power and its prostitution for partisan aggrandizement.—3. No more grants of public lands to railways or other corporations.—4. An Indian policy which would recognize the Indians as citizens, and treat them as such.—5. Abolition of the Income Tax.—6. Reduction of taxation to the lowest point possible, and meet the just demands and obligations of the Government.—7. An economical administration of affairs.—8. No repudiation of the National Debt.—9. Reduction of rates of postage to the lowest possible point, and the abolition of the franking privilege.—10. A liberal regard for, and support of, all scientific investigations that tend to aid in the development of our resources and to promote the general prosperity and appreciate the standard of general intelligence.—11. A firm and dignified position relative to other nations, and a swift and effective defense of our Flag and of American Citizenship in all parts of the world.—12. Last, not least, Universal Amnesty to all who uphold the Union.

HON. JOHN W. HARRIS, Boone Co., Mo., has offered a gold medal worth $50 to the member of the Senior Class of the Missouri State University who will present the best essay on the best breeds of cows for dairy purposes—the premium to be perpetual and awarded annually.

RURAL NOTES AND QUERIES.

The Eight-hour Strike continues, though as we intimated in our last issue, the entering wedge of defeat and disintegration among the laborers had been driven by themselves. The employers have organized and at a recent meeting resolved to hereafter pay their workmen by the hour, (as we have advocated should be done) and only employ such as are willing to work ten hours. And they also resolved hereafter not to retain in their employ any workman guilty of any act "looking to the arbitrary establishment of relations between the employer and employed." In other words, they do not propose to allow outsiders, trades unions, societies and leagues to interfere in the relations they hold to their employes. They propose to pay the best workmen the best wages, and inferior workmen only what they earn. And every good workman is interested in securing such a condition of things; every poor one will thereby be interested in making himself a better one. In our judgment the strike is going to end disastrously for the workingmen—that is, they will have lost money and gained little or nothing in the end. They will have affected values, which will enhance the cost of their own living, if indeed they will not have imperilled their own means of gaining a livelihood by driving the capital which employed and paid them into other channels. The malcontents who are responsible for this state of things are a very small per cent. of those who have struck, and are generally men who have nothing to lose by striking.

Transactions of the New York State Ag. Soc. for 1870.—We have just received this volume. It contains some valuable information. The more pretentious papers are a "Contribution to the Biology and History of the Development of the Ustilagineæ," by Dr. A. FISCHER VON WALDHEIM—a German translation; Dr. FITCH'S Fourteenth Annual Report on the Noxious, Beneficial and other Insects of New York, Principles of Breeding Domestic Animals, by JAMES LAW; Wool and Mutton in America, by J. R. DODGE; Extracts from Dr. VOELCKER'S Reports 1869-70; On Straw Chaff, copied from the Journal of the Royal Agricultural Society of England; Improvements in Hop Growing, from the same Journal; Scab in Sheep, from Transactions of Highland Ag. Soc. of Scotland; American Grape Culture, by S. J. PARKER, M.D. We wish that there was genius, good sense and public spirit enough possessed by the officials having the preparation of these volumes in charge, to enable them to render it of greater value as a work of reference by appending to it a full index of its contents. There never has been an index made of one of these volumes, that we are aware of. True, there is a "Table of Contents," but so far as practical value is concerned, it is about as serviceable as an aid in reference, as to label a hundred varieties of apples in exhibition with "These are apples," for the benefit of the student of pomology. It is an illustration of old fogyism which is no especial credit to our State Society.

Patent Right Venders.—R. N. P. is advised not to invest in any patent right that may be hawked about through the country, unless he is a mechanic, knows the principles of mechanism well, can judge for himself, knows the needs and supply of the class of people who are expected to buy the patented articles and has money that he can lose without affecting materially his duty to his family and his creditors, if he has any. There are a great many things that look as if they ought to succeed that do not; sometimes the cause of non-success is in the thing itself and sometimes in the man who buys it. We advise great caution in buying patent rights.

Editorial Convention.—The editors of the State of New York, to the number of two hundred, with some forty editors from the South as their guests, held a Convention in Watertown, the beautiful seat of Jefferson county, June 25-28. The city gave them a magnificent reception, and Senator Winslow took them on an excursion down the St. Lawrence. The next place of meeting will be Poughkeepsie, in 1873.

THE SEASON, CROPS, PRICES, ETC.

Middle Tennessee.—The wheat harvest has been fair in quality, but not heavy. The reapers were in the crop before the middle of June.—W.

Central and Western Ohio.—We are in our third year of drouth, and crops will average short this season, except upon moist bottoms. The limestone hills have not been thoroughly wet down for over three years.—H.

Northern Mississippi, Yalobusha Co., June 18.—Crop prospects are good. Cotton is rather late, but looks well. Wheat is good and corn looks well; oats not very good. Corn is worth $1.10 per bushel; bacon 10c. per lb.; farm hands from $15 to $20 per month.—J. S. R.

Hickman, Ky., June 20.—Wheat harvest is nearly completed. The grain is good, yielding per acre much over an average and an unusually large area sown last fall. Corn very promising; oats good; Irish potatoes splendid. This is an excellent farming country. We need more and better farmers.—AGENT.

South Shore of Lake Erie.—The region along the south shore of Lake Erie, especially in the State of Ohio, is very much blessed this season with good crops of grain and fruits. Wheat-fields are looking splendid, and the apple and peach orchards are heavily laden with fruits of a fair quality. The cherry crop has been large, and the fruit fairer than for many years. The grape crop is not so heavy as we usually expect, though some kinds in some places will make fair crops of grapes. The strawberry crop has been large, and the fruit of excellent quality.—S. H. H.

Columbus, Platte Co., Neb., June 19.—Spring wet, cold and backward. Corn, wheat and oats look pretty well on old and high ground; on new and low ground poorly. Heavy hailstorm yesterday; broke glass, prostrated wheat, broke off potato vines. Very high winds here almost every day in the year. Rained all night last night, and blows and rains so now that it is difficult to go outside the door.—M. A. H. H.

Fostoria, Seneca Co., Ohio, June 17.—It has been dry and cold until June, which has been good growing weather. All crops are damaged by the drouth and cold. The wire worm has been very bad. The cut worms have never been known to be so prevalent, and the Colorado potato bugs are so very numerous. Fruit crop is light; peaches all killed. Wheat, $1.55@$1.60; corn, 40c.; oats, 35c.; butter 12c.; eggs, 18c.—T. H. M.

Wellsboro', Tioga Co., Pa., June 24.—Spring cold, dry and nearly a month later than last Spring. The past week warm, with occasional showers. Corn and cabbage injured by the cut worm. Grain on the ground generally looks well. Hay, light crop and late. Apples, prospect good. The completion of the railroad to this place, and opening of the coal mines near here, make business lively, and enhances the value of real estate.—M. H. P.

Prospects of the Wheat crop of 1872.—From the reports and estimates of the Department of Agriculture we learn that the area in wheat is 98 per cent. of last year; condition of the crop the first week in June 6 per cent. below average. Last year's crop was estimated at 230,000,000 bushels, or 11½ bushels per acre—say 4 1-6 per cent. below average. The returns therefore indicate in the first week in June a prospect of 220,000,000 bushels.

RURAL BREVITIES.

H. L. HALL can have his address changed as he desires.

JACOB M. SHERK is informed that we do not know anything about the "Chester Co. Mammoth Corn."

S. O'BRIEN should address his question concerning the soldiers' land warrant to "Land Commissioner, Washington, D. C."

THE Farm and Fireside Journal is the name of a neat little monthly, carefully edited, just issued by the F. & F. J. Publishing Co., 100 E. 16th st., N. Y.; price 50c. per year.

THE Bee Keepers' Magazine is the name of a new monthly devoted exclusively to bee culture, published by H. A. KING & Co., New York City. It is handsomely printed and carefully edited.

Publisher's Desk.

NEW VOLUME THIS WEEK!

THE TIME TO RENEW AND SUBSCRIBE!

ALL OUR READERS are advised that Vol. XXVI. of the RURAL NEW-YORKER commences this week, and will close with December—comprising Twenty-Six Numbers. And will they do us and their neighbors and friends who don't (but ought to) take the RURAL, the favor to announce this fact? Note, also, that Single and Club Subscriptions are now in order and respectfully solicited from all parts of the Union, Canada, &c. Our Inducements for clubbing are the same as last Winter. Those forming clubs for the New Volume will receive specific premiums, or free copies, etc., in the same proportion as for yearly subscribers—two six months (or volume) subscribers counting for one yearly. Clubs may be composed of part yearly and part half-yearly subscribers, at convenience of Agents. To aid those forming new clubs, or making additions to present ones, specimens, premium lists, etc., will be sent free.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commences this week. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

THE TRUE REMEDY FOR TROUBLE.

DON'T try to quench your sorrow in rum or narcotics when in trouble. If you begin this, you must keep right on with it, till it leads you to ruin; or if you try to pause, you must add physical pain and the consciousness of degradation to the sorrow you seek to escape. Of all wretched men, his condition is the most pitiful who, having sought to drown his grief in drink, awakes from his debauch with shattered nerves, aching head and depressed mind, to face the same trouble again. That which was at first painful to contemplate will, after drink, seem unbearable. Ten to one the fatal drink will be again and again sought, till its victim sinks a hopeless, pitiful wreck.

Work is your true remedy. If misfortune hits you hard, you hit something else hard; pitch into something with a will. There's nothing like good, solid, absorbing, exhausting work to cure trouble. If you have met with losses, you don't want to lie awake and think about them. You want sleep, calm, sound sleep, and to eat your dinner with appetite. But you can't, unless you work. If you say you don't feel like work, and go loafing all day to tell Dick and Harry the story of your woes, you'll lie awake and keep your wife awake by your tossing, spoil your temper and your own breakfast the next morning, and begin tomorrow feeling ten times worse than you do to-day.

There are some great troubles that only time can heal, and perhaps some that can never be healed at all; but all can be helped by the great panacea, work. Try it, you who are afflicted. It is not a patent medicine. It has proved its efficiency since first Adam and Eve left behind them with weeping their beautiful Eden. It is an efficient remedy. All good physicians in regular standing prescribe it in cases of mental and moral disease. It operates kindly as well, leaving no disagreeable *sequelæ*, and we assure you that we have taken a large quantity of it with most beneficial effects. It will cure more complaints than any nostrum in the *materia medica*, and comes nearer to being a "cure-all" than any drug or compound of drugs in the market. And it will not sicken you if you do not take it sugar-coated.

THE MENDACITY OF FIGURES.

THAT "figures won't lie" has been asserted so often and so long that people have come to accept it as an established fact, when the truth is, that there is comparatively little lying done in the world in which figures do not bear a part. If an oily-tongued charlatan would chant largely, he always calls figures to his aid. No ruinous speculation was ever made but imposing rows of figures proved beforehand that success was inevitable. How many, strong in the faith of the verity of figures, have pored over intricate calculations till faith became enthusiasm, and rushed into bold experiments, the failure of which has ruined them, and made figures thereafter seem like MACBETH'S

> "Juggling fiends,
> That keep the word of promise to the eye
> And break it to the hope."

Had the proverb been "figures won't tell the truth," it had been, if not correct, nearer the fact, for figures seem to have a marvelous predisposition to error. Ask the young bookkeeper, who seeks to effect a balance after last night's wine party, when the figures seem to dance before his eyes and in "clear cussedness" persist in grouping themselves in rows that will not "add." Ask the school boy, on play intent, who, with aching head and tear-stained face, tries in vain to curb this innate propensity of figures to deceive—will he not bear testimony that figures never tell the truth till forced to it.

Yet these are only cases where a preoccupied or disturbed brain fails in power of controlling the capricious wickedness of figures; but if we take the man of strong, vigorous brain, who can make the figures *lie* any way he pleases, what wonders of mendacity they will express! Standing as apparently innocent symbols of verities the faith of many generations has upheld, with the whole world shouting "figures won't lie," how they will teach false history, false politics, false science, distort social facts, degrade religion, make heaven a myth and hell an impossibility! Did not COLENSO prepare himself for attacking the authenticity of the writings of MOSES by studying, nay printing, an arithmetic? and were not his assaults made altogether with figures? Why, even the good and benevolent, the "world betterers," when they would cure some great evil, call figures to their aid; and what lies they will tell, in all innocence, being unable to control the evil influence of these mendacious symbols. If their calculations were true, we should find that there are more sick and diseased people in the world than its entire population, and more die than the bills of mortality would show if each yearly list was a daily one; but they are figures, too, and probably lie. The phrase "lie like a bulletin" would never have been written had not the bulletins been so largely made up of figures.

Yet we cannot do without figures. The purest man must deal with numbers. What, then, should be done? Obviously, we must learn to control them—*make* them tell the truth. We must learn to watch them, and discover whether the story they tell is a true one. When this is done—when a clear-headed, honest man curbs the wild license belonging to their Oriental origin—figures are grand things, for they epitomize all human knowledge, and are the records of all human power. "The tools to him who can use them." The ignorant, the careless, the dishonest, are alternately the directors and the dupes of deception through figures. Even the learned man who has failed to fathom *this* mystery, is the slave of those who have, and the sport of incorrect statisticians and blundering tabulators.

Let the young, therefore, knowing the evil there is in figures, and that they *must* use them, learn to use them rightly. Let our young men make themselves competent to analyze a prospectus and pick out the grain of truth hidden by multitudinous husks of figures. Let them beware of speculations supported by figures only, till they are sure they have mastered the mystery the figures reveal, and even then never invest more than can be lost without injury; so will they save money and avoid being the dupes of the mendacity of figures. D. M. C.

FRANKFORT-ON-THE-MAIN.

THIS city, famous for being the birthplace of Goethe and the seat of the German Diet until the recent accession of the King of Prussia to the Imperial Crown, is situated in a fertile valley on the right bank of the River Main, twenty miles above its confluence with the Rhine, near the Taunus Mountains. Its population is about eighty thousand. It has a public library of about seventy thousand volumes. The Cathedral of St. Bartholomew is a very splendid building, in the Gothic style, the tower of which is still unfinished.

The principal business of Frankfort is banking. It is, consequently, a very rich city, its situation making it a convenient medium of exchange between Paris, Vienna, Trieste, Hamburg and Berlin. Its chief local manufactures are carpets, table-covers, jewelry, playing-cards, oilcloth, tobacco, snuff, and Frankfort black. It has about twenty daily and periodical publications, and, after Leipsic, publishes more standard books than any other city in Germany.

Our illustration embraces a fine view near the center of Frankfort—showing the handsome quays and buildings on one of the principal streets, and the peculiar ferry boats which ply upon the Main.

THE QUAYS OF FRANKFORT-ON-THE-MAIN.

WHO IS A GENTLEMAN?—H. L. A gentleman insults no woman, no matter who she is, or what she does. The man whose behavior is fashioned by his associates, instead of his self respect, is no true gentleman.

HE who seeks to build his reputation on the weakness of another has an unsafe foundation.

Our Story-Teller.

ENTERTAINING AN ANGEL.

BY A. M. DANA.

RUFUS HARVEY, returning from the village where he had been having the reaping machine mended, tossed a letter over the hollyhocks to little FRANK CLARE, who was playing in the door-yard. "Here's a letter, father," cried the youngster, bursting, boy-fashion, into the house, his face somewhat excited by the rather uncommon circumstance.

Dinner was just over—a dreadful harvest dinner. That is, the farm-hands had gorged a large supply of meat, vegetables and pie; and now Mrs. CLARE, worn out by a hard morning's work, after arranging plates for the children trooping in from school and play, sank, with the babe in her arms, into her place with a view to forcing an appetite and then satisfying it with some of the lukewarm viands yet remaining in the dishes.

"Are those all the peas there's left, mother?" asked FRANK, who, having delivered the letter, made a rush for the table.

"Yes, dear. It was all I had time to shell," answered the mother; and, instinctively—for true mother love knows no selfishness—the small portion of the one (to her) tempting thing upon the table, was transferred to the plates of hungry FRANKY and the little sisters, whose piteous lips told that they too wanted a share of the dainty.

Meanwhile, Farmer CLARE, sitting with his chair tilted back against the wall, read his letter. At the close, as he refolded it, he said:—"It's from cousin CYRUS. He writes that his daughter GERTRUDE is in want of country air and is coming to make us a visit. It won't be a bad thing for us, I reckon, for though he doesn't say anything about board, he's sure to make it up some way. CYRUS was never one to lie under obligations to anybody. Shouldn't wonder if he gets me the highest price for wheat again. Let me see—to-day's the fifteenth. Well, she'll be here to-morrow. BEN can wait for the train when he goes in with the milk."

And having arranged everything to his own satisfaction, he laid the letter upon the table for his wife to read if she pleased. Poor woman! She cared but little to glance over the business-like penmanship. To her it was more like a death-warrant than anything else. At the first announcement of the visit, the faint color dropped entirely out of her cheeks, and a cold, leaden weight seemed to settle down upon her heart. And yet she was not naturally inhospitable. Far from it. There *had* been a time, in her girlhood, and the early days of her married life, when the task of entertaining company was only a pleasurable excitement; but now, with a rapidly increasing family, and, alas, *not* increasing strength, she dreaded it as an over-tasked galley-slave dreads an additional burden.

Let us see what her day, so far, has been. Up before four o'clock, but not to enjoy the fragrance of dewy hay and glad matinee of bird songs, except so far as one can enjoy these while skimming milk, scalding milk-pans, scrubbing dairy shelves, grinding coffee, frying bacon, and all the other preparations for a farm breakfast. Then came the children. Four of them to wash, dress, feed and make ready for school. Before this was finished baby was awake, and it was only in short intervals of his fretting that she was able to wash the dishes, sweep up the house and make the beds. The lamps—those fearful kerosene nuisances which make more work than city people would believe—must stand till later; for now it is nearly lunch-time, and the unfailing pies must be ready to carry to the field as well as for the table. Add to this the cooking of a dinner for six men beside her own family, and you will not wonder that her heart failed her at the prospect of a city visitor. No wonder that she longed for time to take a good cry. Poor thing! It might have helped her. Had there been but one word of commisseration or sympathy from her husband—had he but said, "MARY, this will make it harder for you"—she could have borne all cheerfully. But unconscious Farmer CLARE would as soon

have thought of addressing such words to his self-regulating cultivator.

"He will hold thee, when his passion shall have spent its novel force,
Something better than his dog, a little dearer than this horse"—

may be true of the rollicking English Squire. It evidently is *not* true of a certain class of American farmers. For while the horse is guarded and cherished as a valuable beast of burden, the automatic wife is apparently considered as being above and independent of all such needs. Am I putting this too strongly? Alas! many will recognize the picture as a true one. I do not say that there is no love for the faithful helpmeet, but this love—if there be any—too often does not reveal itself until the weary hands, browned and seamed by excessive toil, are folded by a pitying Father within the coffin.

It was with a mind shadowed by gloomy forebodings that Mrs. CLARE proceeded with her afternoon's work, part of which now was to arrange the spare chamber. She might not have time to-morrow morning; so, with baby amused with trinkets from the bureau, she spread dainty sheets and laid out snowy towels for the unwelcome guest.

When, as a school girl, GERTY CLARE had several years ago paid a short visit to the farm, MARY had rather liked her, but lately rumors had reached them which were far from re-assuring. It was said that since attaining young-lady-hood, instead of contentedly enjoying her father's wealth, Miss CLARE had imbibed certain modern notions of individual responsibility—of woman's mission to women, of advanced progress for her sex, and so on. Her name had been mentioned as belonging to a far-famed club of ladies—the chosen butt of unthinking ridicule and shallow sarcasm. True, the avowed object of the energetic and influential ladies composing the Association was to lend a helping hand to their struggling, fainting sisters; but poor MARY CLARE, absorbed in her daily toil, and hearing only the one side, anticipated nothing but contempt for her homely, womanly habits and employments.

This feeling of sadness was still upon her when, at length, night brought a respite from labor. The last meal is cleared away; the last dear little face washed, kissed and laid upon its pillow; the sponge set for to-morrow's baking; and now, in the lingering gleams of the long summer twilight, while a low, cool breeze creeps up from the meadows, the tired mother—whose back aches, and whose temples throb as only the overworked can know—sits in the porch reading from a little, worn volume. It is growing rapidly darker. She cannot read much. No; but the peculiarity of this old book is that a very few words contain a great deal of meaning—of comfort. Ah! these precious moments at nightfall are the secret of her uncomplaining meekness, her patient continuance in well-doing. We see a tiny piece of mechanism gliding back and forth, back and forth in its place, noiselessly, yet steadily. It is so delicate that a child's hand might crush it, and yet, impelled by the mighty power of steam, it becomes almost irresistible. A small brooklet trickles feebly among tangling grasses, over stony barriers and through narrow openings. Sometimes almost hidden, yet always ceaselessly flowing—aye, and singing a cheery song as it goes, for away up somewhere among the everlasting hills is an unfailing fountain of supply. And so it is that many a frail life, linked by a subtle bond to Omnipotence, becomes mighty to endure and to achieve. "My strength is sufficient for you," has a meaning for this life as well as for that which is to come.

It was to this sure source of comfort that Mrs. CLARE brought her weariness in the present and her fear for the future. Perhaps it was by accident, but, as it seemed to her, providentially, the little Bible opened at the last chapter of Hebrews, and immediately following the first short verse see and read:—"Be not forgetful to entertain strangers; for thereby some have entertained angels unawares." Surely it was a message sent to herself; she whose heart was fainting at the thought of her coming task. She took the full consolation it conveyed, went to her rest cheered and encouraged, and when, the next morning, a stylish young lady, in a jaunty brigand hat and a fashionable traveling suit, alighted at the door, those Divine words were as a talisman exorcising the demons of jealousy and inhospitality, and giving her strength to utter from her heart a cordial welcome.

That first day, Miss CLARE's clear, gray eyes were only calmly observant; but on the second morning, when the thermometer stood at eighty degrees Fahrenheit, and when poor, weary Mrs. CLARE, exhausted by the early work, was almost fainting at the thought of lunch and dinner, her sister suddenly appeared in the kitchen, wearing a loose robe of cool, gray linen.

"Cousin Mary," she said, placing her soft, white hands upon the shoulders of the tired woman, "I've been sweeping and darkening up the sitting room. It is shady and quiet there, and baby is waiting for you to rock him to sleep. When he goes, lie down upon the lounge yourself and get a nap. I'll take your place here."

There was quiet resolution in her tone, but MARY, overcome by surprise, noticed only the strangeness of the proposal. "You!" she exclaimed, in unfeigned astonishment.

GERTRUDE laughed—a clear, ringing laugh, which reminded her companion of the past. "To be sure," she said. "Why shouldn't I? You are tired and I am not. Or"—with a queer little grimace—"is it because you doubt my ability? Don't you be a bit alarmed about that. What's the use of attending a whole course of Mons. BLOT'S lectures, or"—throwing back her magnificent shoulders and stretching out the arms, which under their rounded smoothness concealed finely cultivated muscles—"learning gymnastics, not to speak of studying practical chemistry, if I ain't equal to cooking one farm dinner? Come, now, let me try it—there's a dear. It will be only fun to me."

Poor Mrs. CLARE thought of the old fable of the boys and the frogs, with another application. But, though the vision of rest was most tempting, she still demurred. "It wouldn't be using you well, GERTIE," she said, adopting, half unconsciously, the familiar name of that earlier visit.

"It would be using me beautifully to let me have my own way," answered the coaxing voice. "Now that you call me GERTIE once more, I know you will consent." And persuasive arms were drawing her from the kitchen.

"But the pies," suggested MARY, in one faint, final effort at objection.

Again Miss CLARE's merry laugh burst forth. "Dear Cousin MARY, are the pies inevitable? Well, even my commiseration for the poor men's digestive organs shall not interfere. The pies shall be forthcoming. Listen," she added, "there is baby calling you, and *I* will call you when I want you here again. Now!" and, with a kiss which somehow fell upon her brow like a pitying benediction, Mrs. CLARE was fairly banished from the scene of her unceasing labor.

Without at all understanding why, Mr. CLARE and his men enjoyed that day's dinner with peculiar relish. From some unexplained cause, the potatoes were mealier, the beefsteak juicier, and the pie-crust crisper and flakier than usual, while for the second table, around which gathered the more delicate mother and children, was a trifle of a pudding, so light and nutritious, yet so cool and refreshing, that the daintiest appetite must have been tempted thereby. "Most as good as ice cream," was the approving comment of little FRANK, whose knowledge of the city luxury—gained a year before at a Fourth of July celebration—had served ever since as a model of toothsome excellence.

This day proved to be only initiatory. Once having obtained a foothold in the kitchen, GERTRUDE held to her advantage. Daily, upon one pretext or other, she managed to send the weary housewife to lighter tasks, or showed her a wiser mode of performing her duties. On the plea of sending for samples, a large order bearing her name went to the city for delicate farina, sparkling gelatine and such light and nourishing preparations, and gradually the unwholesome fare of the farmer's table gave place to these simple but elegant luxuries. MARY'S over-stocked work-basket grew rapidly lower, as nice little pinafores and sun-bonnets upon the children showed that mother's harvest hurry was over, and some of their wonted fullness came back to her wasted cheeks. Her eyes regained their sparkle, while her mind, so long clouded by excessive toil, under GERTRUDE'S gentle guidance caught some of the latter's inspiration, and the great questions of the day—interests agitating the whole world—ceased to be mere meaningless words to her. Hourly she grew more and more attached to her visitor, and when at length the bright weeks were over, and the stylish traveling-dress once more donned, she watched her departure with a sadder heart than she would have believed possible. "Truly, I *have* entertained an angel," she thought as the carriage disappeared down the lane.

Could she have heard Miss CLARE'S conversation with her husband she might have felt yet more convinced of the angelic nature of her guest. GERTRUDE was bound for Newport. Her trunks had been awaiting her there for weeks, and troops of gay friends—giddy with the nightly German—were clamorous for her coming. Hitherto a divine pity had prolonged her stay in the country; and now, before entering upon her season of gayety, she resolved to make one earnest effort for the weak sister left behind in bondage.

"What beautiful scarlet leaves!" she exclaimed, innocently, alluding to some glowing sprays adorning the hedgerows, as they passed. "Premonitions of Autumn."

"Yes," answered unsuspecting Mr. CLARE; "I shouldn't wonder if we have an early fall."

"That means leisure for you, does it not?" was the bright reply. "I am glad, for I am sure all tired farmers *and their wives* require rest after the summer. And this reminds me of something which I wanted to say to you. When you come down to the city about the grain this fall, I want you to be sure to bring cousin MARY with you. The change will do her good, and I would be so happy to have her. I could n't get her to promise positively—she seems to think it would be difficult for her to leave home—but, of course, that's all nonsense; she can bring all the babies along. I depend upon your influence in the case, and you will certainly use it, will you not?"

Mr. CLARE passed the lines nervously from hand to hand before answering.—"Well, I can't promise, exactly," was his reply at last. "I reckon MARY knows best. Traveling is expensive, and there is n't any need of women going about much."

"Need!" was GERTRUDE'S mental cry, followed by an exclamation mark sharp and deep as the woes of women—"*Need!*" and an indignant outburst was upon her lip; but she was too skillful a diplomat to betray excitement, and after a pause she continued calmly:—"Cousin JAMES, have you any objection to telling me the amount of your profits for the year; I mean the approximate amount, of course."

For a moment or two Mr. CLARE appeared to be giving undivided attention to his horse's ears. Not every one could have asked this question with impunity, but during these last few weeks his respect for "Cyrus' girl" had vastly increased, and feeling that he had an intelligent as well as interested auditor, he replied;—"Take it all in all—summer grain and corn land together—I reckon I'll clear nigh on to three thousand dollars. It's been a pretty good year."

The tone of satisfaction was not to be mistaken, and GERTRUDE hastened to rejoin:—"Yes, excellent, I should say; and to gain this sum you have had the help of several men. There has been no really exhaustive toil, and the end of the year finds you a clear gainer. No wonder you are thankful. How different from poor cousin MARY, who, after *sacrificing her very life*, has nothing tangible to show as the result of her labor."

She sighed as she spoke, but a burst of rough laughter from her companion checked it.

"What gammon you women can talk when you get started!" he said. "'Sacrificing her life!' I like that. Why, what's a woman good for, if she can't work for her family? That's some of your city notions. But you needn't put any of that nonsense into MARY'S head. She's rugged enough, I guess. She'll have to be, anyway."

Once more the impetuous words rushed to GERTRUDE'S lips, but she was wary. Moreover, a deep flush creeping up under the sunburned cheeks showed that the man was not so callous as he seemed, and, lying her hand gently upon his arm, as one from a serene height above him she made reply: "Cousin JAMES, you do not mean—you do not know what you say. I am sorry to appear harsh, but I must tell you your wife is in great danger. Thanks to the thorough education which my father has given me, I know something of medicine, and I had not been one hour in your house before I noticed certain symptoms which, unless removed, will assuredly lead to the gravest results. She bears daily a burden sufficient to crush her into her grave, and it rests with you to lighten it. By-and-by it will be too late. These thousands, which you make so comfortably and spend so grudgingly, will be of no avail when your children are motherless. And remember! it will be a life spent for you and yours."

They had reached the depot now, and a shrill scream of the locomotive cut short her appeal. There was a hasty clasping of hands and the beautiful monitress was whirling away toward another life—a life of dance and song; but MARY, watching for the return of her husband, was surprised to find him accompanied by a strong-armed German help—yet more so when, a few weeks later, he proposed and arranged a visit to the city. But the climax of her astonishment was not reached until Christmas-time brought her a handsome sewing machine, and in the lightened labor and increased leisure she recognized the blessed fruits of Entertaining an Angel.

Sabbath Reading.

MY CROSS OF MOSS.

A TINY cross
Of soft wood moss,
And that is all!
And yet it hath a voice and speaks to me,
Of patient faith and holy victory—
Faith that could triumph in Gethsemane,
And for our sins a sinless sufferer be,
Upon the Cross.

A shadowy cross
Of soft gray moss,
And that is all!
But when from sinful thoughts I fain would flee,
This little cross reproaches silently,
As if it said: "Can't thou ungrateful be,
When Christ, to cleanse from sin hath died for thee,
Nailed to the Cross?"

A little cross
Of velvet moss,
And that is all!
Yet when I've left my darlings with the dead,
And storms of sorrow have swept o'er my head,
I've seen this beacon cross through tears, and said,
What grief he bore! I will be comforted,
And bear my cross.

Oh! tiny cross
Of forest moss,
That is not all!
I'll have thee for my daily guard and guide,
And learn of thee to conquer sin and pride;
Thou shalt speak oft of Jesus crucified,
And all the burden of life's woes I'll hide,
Beneath His cross.

RELIGIOUS VALUE OF FLOWERS.

THE Bible, the most valuable of all books, speaks of the Rose of Sharon and the Lily of the Valley. Christ pointed to the latter for the purpose of illustrating and enforcing truth. The poet feels the inspiration of flowers, and employs them as rich materials. One speaks of never-fading flowers that smile upon the everlasting fields of Paradise, and another of the shady rills of Sharon, where the lily and rose contribute with their beauty and fragrance to the happiness of the devout. Their influence on the health and happiness of families, where cultivated, is proverbial. Were I to picture to myself a happy family, I would place all, parents and children, around an altar of devotion, where each one present was clad with the beauty of holiness, and took delight in cultivating a meek and quiet spirit; and as we always feel an inward influence corresponding with outward circumstances, I would have home beautified with walks and flowers, where parents and children could take recreation together, and drink in the inspiration of all that is beautiful. This would tend to the refinement of the sensibilities and purity of the moral feelings. Absolutely, we must surround ourselves with things beautiful and agreeable, or sink to a kind of heathenism.

KEEP THE HEART ALIVE.

THE longer I live the more expedient I find it to endeavor more and more to extend my sympathies and affections. The natural tendency of advancing years is to narrow and contract these feelings. I do not mean that I wish to form a new friendship every day; to increase my circle of intimates—these are very different affairs. But I find that it conduces to my mental health and happiness to find out all I can which is amiable and lovable in those I come in contact with, and to make the most of it. It may fall very short of what I was once wont to dream of; it may not supply the place of what I have known, felt and tasted; but it is better than nothing. It seems to keep the feelings and affections alive in its humanity; and, till we shall be all spiritual, this is alike our duty and our interest.—*The Moravian.*

THE popular notions that, at the day of judgment, the past life of each shall be exhibited before men and angels, do not seem to be morally valuable, or likely, as far as we can judge, to be literally true. In that other world those who feel rightly will have no wish for, and take no pleasure in, the concealment of anything about themselves, and would feel nothing but pain at the revelation of the sins and weakness of others. Who, then, at this great audit, will be the spectators of whom we are to be ashamed? Such spectatorship, unsympathizing, and prepared for a merely human and curious interest, for triumph and contempt, belongs to earth, not to heaven.—*Grote.*

LET the day have a blessed baptism by giving your first waking thought into the bosom of God. The first hour of the morning is the rudder of the day.—*Beecher.*

Ladies' Port-Folio.

GATHERING ROSES.

OUT in the shaded porch she stood,
Twining the sweet rose-vine,
Said I, "There is one bright rose I see
That I fain would keep as mine."
"I'll toss you your choice," she gayly said,
The rose leaves fluttering o'er her head.

"My rose," said I, "is the largest there,
And if that one you refuse—
The sweetest, brightest, best of all—
None other will I choose."
"Come gather your rose yourself!" said she,
Turning her blushing face from me.

Gladly I did her bidding then,
And clasping her hand in mine,
Gathered my rose all close to me
Under the fragrant vine.
"This is the one I want!" cried I:
Only a kiss for her reply.

EVERY-DAY LIFE.

BY LEAD PENCIL, ESQ.

ROSEMARY, who is not far from a poetess, writes me a note which reads in this wise:

Waiting, waiting, waiting for proofs in this little office, and thinking, thinking, thinking! There is the clatter of machinery, and sooty-faced men pass the door. Now I glance at their faces and their automatic movements, then look over the Herald, then turn away from its tales of horrors, and my eyes look out the window, and find away below, in the midst of this busy place, "a touch of nature"—a little patch of earth, veritable earth, filled with fancifully made flower beds—geraniums in the center, in their brilliant scarlet bloom, and, all about, wee little seedlings asserting themselves; and still the clatter, clatter, clatter goes on, and people labor, and in its midst, loving thought, in hasty, stolen moments, shapes itself in little patches of brown earth, and expresses itself in color and perfume.

And there is sky up there! You can see its serene beauty, even through the dusty window-panes, and white clouds are flitting across it. This comes of being *so high up*. The smoke of a thousand chimneys cannot dim that sky! But here come my proofs, and my eyes rest upon these words:—"There are not good things enough in life to indemnify us for the neglect of a single duty." And this weaves into my indolent thought; and I ask, What is duty? Is it the machinery in the next room, with its eternal clatter? Or the little flower-bed nestled between the buildings, where even the sunlight is but reflected, or slides down under protest? Is duty waiting—"only waiting?" Is it patient, unquestioning submission to exile? Is it everything worthy—effort, expression of the sweetest instincts, endurance of the inevitable? If all these things are duty (and perhaps they are), then duty *consists* of "good things," if not agreeable things. So one need not sacrifice one to the other. But the question is always which has the first claim?

Has not ROSEMARY answered her own questions. And is not this little impromptu glimpse of a woman's thought and the discharge of her daily duties a worthy sample of the unobtrusive, unrecognized Every-Day Life of a great many honest, thinking, struggling souls?

I met IDA FOXGLOVE the other morning. She had been telling me of the holy horror with which some of her friends regarded some of her unconventionalities. I asked what "holy horror" was. She did not tell me, but said, "*I* do not look with 'holy horror' upon *anything*, save that which weakens and mars the spiritual beauty of the soul and creates inharmony. I do not know anything about 'creeds, dogmas, devils and gods!' I can see the sun rise, the grass grow, the light in the eyes of those who love me, and feel the compensation which reacts from what I do or do not neglect to do, and that is enough for me. Many ideas which people have I cannot understand at all, and so I conclude they are not *for* me and do not try. I am too selfish to hug a belief which will make me unhappy, and my face a doleful reproach to look upon; and I have too little fear to be 'scared;' so I just select the shoes that will fit from this big boot store of life, and do not spend time trying on others."

How is that for a woman's philosophy? It strikes me as very common sense. It indicates a healthful condition of mind at least. Some will call it an indifferent mind. But I, who know IDA FOXGLOVE, know better. There is a great deal of conscience in it. I know of no more exemplary life nor consistent one, no more self-abnegating one. She lives as she talks. She strives to do nothing which will "weaken and mar the spiritual beauty of the soul." And the man or woman who does that will find plenty of striving to do.

THERE never was any heart truly great and gracious that was not also tender and compassionate.—*South.*

THE WORLD'S PEACE JUBILEE.

OF this great affair, which has created such "noise and confusion" of late, a lady writes the RURAL (under date of Boston, June 25) thus enthusiastically:

WORDS were never made to describe this perfectly stupendous affair. It only ranks with the *Chicago fire* in stupendousness. And to-day, of all days, is marked with a white stone. *Such* a crowd—*such* enthusiasm! No one thinks of growling, except the New York reporters, and that has become proverbial of them. The seats, aisles, halls, rooms and pretty much *all out-doors*, are packed as closely as though a contract had been given out to a Cincinnati pork dealer. I'm disgusted. I hate to be *jammed*, like blackberries or any other delicious fruit; and then I hate to be *squeezed*, like currants, even though they do make good wine. The great *Tanner* is here—accounting, in one sense, for the *furore*. It was as good as a circus to see him come (thunders of applause above; I hope the "*barn*-floor" is *substantial*,) in his "coach and four," escorted by the Boston Lancers on their prancers. Well, it *is* wonderful. I vote for a GILMORE statue before he dies; or before there is another Peace Jubilee, for surely no man *could* live through a *second* thing of this kind. It's a *perfectly wonderful affair.*

THE OLD TIMES.

THERE is a strange pain in coming suddenly upon some relic of one's lost youth—some lock of golden hair, cut when your hair, gentle lady, *was* golden which is so white now—some portrait painted when life was young, when the lips' red charm and the pride of the brow were in their prime, when the skin was satin which now is parchment. *You* feel it, too, strong man though you are, and your lip curls half sorrowfully, half scornfully, under your grizzled moustache, as you look at the face of boyish bloom which a wandering artist painted, a quarter of a century ago. Was that *you*—that young face, with the frank, fearless eyes which no care had made dim, the tell-tale color, the eager mouth? What were the ambitions of that old time? How different they were, those day dreams, from the sober schemes of to-day! How you hoped—how you trusted—with what sublime faith you looked on into the future! Now you are old, and the world is cold, and the rose-color of youth has faded into the sober gray of middle age. This is a better thing, you try to think—you are wiser, you are stronger—but there is a little pain, nevertheless, a sigh of longing for the "something sweet" which

"Followed youth with flying feet,
And can never come again."

SENSE AND SENTIMENT.

ONE loses all the time that he can employ better.—*Rousseau.*

MEANS are always in our power; ends are very seldom so.—*Fielding.*

YOU will find poetry nowhere unless you bring some with you.—*Joubert.*

WE let our blessings grow moldy and then call them curses.—*Beecher.*

EVERY production of genius must be the production of enthusiasm.—*Disraeli.*

OUR actions are our own; their consequences belong to Heaven.—*P. Francis.*

MEN, like peaches and pears, grow sweet a little while before they decay.—*Holmes.*

FLOWERS are the sweetest things God ever made and forgot to put a soul with.—*Beecher.*

IT is only great souls that know how much glory there is in being good.—*Sophocles.*

LIFE is like wine; he who would drink it pure must not drain it to the dregs.—*Sir W. Temple.*

IT is impossible to speak against Christianity without anger, nor to speak for it without love.—*Joubert.*

PRAYER is the peace of our spirits, the stillness of our thoughts, the rest of our cares, the calm of our transports.

IT is one thing to wish to have truth on our side and another to wish to be on the side of truth.—*Whately.*

THE only vice that cannot be forgiven is hypocrisy. The repentance of a hypocrite is itself hypocrisy.—*Hazlitt.*

GOD has so made the mind of man that a peculiar deliciousness resides in the fruits of personal industry.—*Wilberforce.*

THE root of sanctity is sanity. A man must be healthy before he can be holy. We bathe first and then perfume.—*Mad. Swetchine.*

Reading for the Young.

THE DIFFERENCE.

THERE was an old lady all dressed in silk,
Who lived upon lemons and buttermilk;
And thinking this world was a sour old place,
She carried its acid all over her face.

Another old lady, all dressed in patches,
Lived upon nothing but lucifer matches;
So the world it made her strangle and cough,
And sure as you rubbed her you set her off.

Another old lady, all sunny and neat,
Who lived upon sugar and everything sweet,
Declared, when she heard of their troubles, she "never!"
For the world was so nice she could live on forever.

MORAL.

Now, children, take your choice
Of the food your hearts shall eat;
There are sourish thoughts, and brimstone thoughts,
And thoughts all good and sweet;
And whatever the heart feeds on,
Dear children, trust to me,
Is precisely what this queer old world
Will seem to you to be.

LITTLE THINGS.

GREAT events, we often find,
On little things depend,
And very small beginnings
Have oft a mighty end.

What volumes may be written
With little drops of ink:
How small a leak, unnoticed,
A mighty ship will sink!

A tiny insect's labor
Makes the coral strand,
And mighty seas are girdled
With grains of golden sand.

LETTER TO THE LITTLE PEOPLE.

BY ROSE GERANIUM.

DID I not promise to write a letter about Flowers? I intended telling you about something else, but I "guess" I'd better keep my promise, for I can't well think of sober things with the intoxicating sweetness of the Syringa floating about me. How I like to have the snowy blooms clustering in my hair and at my throat! I have an odd fancy that their presence makes it easier to do right. If I ever lose my temper, or entertain uncharitable thoughts, you may be sure it is when my flower-monitors are absent.

"You are so fond of blossoms, why not wear artificial ones? GOD makes them," said a lady recently, in opposing my "Quakerish" notions of dress.

"Ah, but my dear friend," I replied, "He has nothing to do with the tame, odorless creations of art, that haven't even the power of withering." I object to wearing artificial flowers less on account of creed than because I really don't like bad imitations.

But about the garden pets. If you like something that will flourish and only thank you for robbing it of its brilliance, cultivate a bed of Petunias, all colors, but be sure and have plenty of white—it is so fragrant; and it is pretty, too, for a basket. The double Portulaccas will keep you supplied with bouquets, but unfortunately they wither early in the day. Another plant that blooms from Spring to hard frost is the yellow Lantana. It is lovely.

Don't try to cultivate *many* varieties of flowers. Better have only a few and keep them well tended. A thrifty group of pansies or phlox or verbenas is a thousand times preferable to fifteen or twenty kinds choking with dry dust, and half hidden by weeds.

Every little girl should have, if possible, a house-plant to call their own. A Vermosa rose, a Fuchsia, Caladium, Geranium, or even a simple Mignonette—any of these will be a treasure worthy your best care, and if you cannot have a rare flower, a pot filled with the commonest grass is better than nothing. Indeed I think it very ornamental, and have often suffered a spire to grow and be green among my winter plants just because I love it.

THE GREAT LAKES.

THE following facts in regard to the five great lakes in North America, are not generally known, and will prove especially instructive to young people:

Lake Superior is the largest body of fresh water in the world. Its greatest length is 355 miles, its greatest breadth 160 miles, and its area is given as 39,000 square miles. Its average depth is variously given at 688 and 1,000 feet. It is 600 feet above the level of the sea, 22 feet higher than Lake Michigan and 50 higher than Lake Erie.

Lake Michigan is 320 miles long, 108 miles in the widest part, and the main depth of it is 600 feet. In its greatest length it is longer than Lake Superior, being 390 miles. It has an area of 23,000 square miles.

The greatest length of Lake Huron is 200 miles, the greatest width 100 miles, the main depth 600 feet, and the area 20,000 square miles.

Lake Erie's greatest length is 250 miles, its greatest width 50 miles, the mean depth of its waters 84 feet, making it by far the most shallow of all the five lakes, and it has a superficial area of about 9,000 square miles.

The greatest length of Lake Ontario is 180 miles, the greatest breadth 65 miles, the mean depth 260 feet, and the area 9,000 square miles.

The length of all the Lakes is more than 1,500 miles.

PERSEVERANCE.

BOYS should never give up, but remember and act upon the old motto or adage, "*Perseverando et vinces*"—"Perseverance conquers all things." Hear what HENRY CLAY once said:—"Constant, persevering application will accomplish anything. To this quality, if I may be allowed to speak of myself, do I owe the little success which I have attained. Left in early life to work my own way alone, without friends or pecuniary resources, and with none other than a common education, I saw that the pathway before me was steep and rugged, and the hight upon which I had ventured to fix the eye of my ambition could be reached only by toil most severe and a purpose the most indomitable. But, shrinking from no labor, disheartened by no obstacles, I struggled on. No opportunity, which the most watchful vigilance could secure, to exercise my power, was permitted to pass by unimproved."

Hammond, Hanover, Ill., lost 50,000 young trout during a recent storm, from the effects of lightning. The assessment roll of California aggregates, with the valuation of former years as a basis, $800,000,000. The new postal cards are being manufactured....Buffalo has had a holiday over the laying of the corner stone of the new city building ...The success of the French band at the Boston Jubilee is regarded as marvelous... Richmond, Va., has had a solemn funeral service for the re-interment of 718 Confederate soldiers who fell at Gettysburg.... The Philadelphia strike is nearly at an end.... The N. Y. State Sunday School Convention has been held at Norwich ...A dinner was given in Boston, July 1st, to the Grenadier Guard Band ....The great Jubilee goes on from one triumph to another. Class day at Harvard passed off pleasantly.

Crimes.

JOHN W. AVERY was executed at Hackensack, N. J., June 28, for the murder of Jacob Eebe....Lizzie Tomlin, Brooklyn, N. Y., was stabbed June 27, by her father, Wm. J. Tomlin, because she loved a man he did not want her to love....David Murphy has been sentenced in New York city, to be hanged for the murder of Charles Barry ... The Indians threaten hostilities in the Sevier region, Utah, and the miners are arming themselves.

Disasters.

JUNE 27 a severe hail storm passed over Cleveland, O., doing much damage, the lightning killing one woman in her bed... Fanny Salmon, Newark, N. J., poured kerosene oil on a fire to kindle it, and was so severely burned that it is feared she cannot live....A terrible boiler explosion occurred in the Penitentiary at Columbus, Ohio, on the 21st ult. A large building was demolished, and 32 persons were wounded....On the 22d ult. a railway accident took place at Belleville, Canada, caused by a broken rail. Twenty-five persons were scalded to death, and forty-four horribly wounded.

Political.

THE Republicans of the Fourth Congressional District of Illinois (Gen. Farnsworth's) have nominated Gen. Stephen A. Hurlburt for Congress....The Ohio, Illinois, and Virginia Democracy have instructed their delegates to Baltimore to vote for Greeley and Brown....The Democrats of Ohio have nominated Gen. Aquilla Wiley for Secretary of State, John L. Green for Judge of Supreme Court and Isaac B. Riley for member of Board of Public Works. Judge David Davis has written a letter withdrawing his name as a candidate for the Presidency, he having been nominated by the Labor Reformers ... Att'y-Gen. Williams says Oregon is wild for Gen. Grant ...The Liberal Republicans of Newark, N. J., have held a Greeley ratification meeting, at which Gen. Kilpatrick made a telling speech. ...El Dorado, Kansas, has been in a state of war over the attempt of Augusta people to move the county seat.... .The much-talked-of Fifth Avenue Hotel Conference was held on the 26th. It proved to be so strongly in favor of Greeley that no business was done ...Some Democrats have held a consultation at Long Branch, where S. S. Cox is stopping for his health... On the 21st it was believed that the Treaty of Washington was safe, and the question of indirect claims had been settled... California will go for Greeley at Baltimore ..A conference of Free Traders at the Fifth Avenue Hotel has nominated Wm. S. Groesbeck and Frederick Law Olmstead for President and Vice-President ....Brooklyn has held a great Grant ratification meeting....Olmstead declines to run for Vice-President.

Washington, D. C.

J. C. WOODWARD, of Iowa, has been appointed Principal Examiner of the Patent Office; J. E. M. Bowen, of Washington, First Assistant Examiner of Interference, and M. S. Hopkins, of Virginia, First Assistant Examiner of Trade Marks....According to a statement by the Treasury Department, the cash balances outstanding against Collectors of Internal Revenue are less than one-tenth of one per cent. of the amount paid into the treasury from March 3, 1859, to March 3, 1872.

FOREIGN NEWS.

From France.

M. THIERS is firm in favor of a Republic. .. The negotiations for the final payment of the German indemnity have been completed.... France has paid Switzerland two millions of francs, a part due for maintaining Gen. Bourbaki's army while it was in Switzerland....A political crisis is approaching in France; the members of the Right have decided to leave M. Thiers; the Ministry tendered its resignation.... Marguerite Dixblanc has been reprieved.

From Switzerland.

THE Geneva Court of Arbitration has decided that the United States claims for indirect damages are inadmissible, and the United States has withdrawn the claim. The British Government has withdrawn its request for an adjournment for eight months, and filed its argument...Dispatches have been received stating the fear in England that the Court of Arbitration will make an affirmative decision on the American claims for direct damages, is well founded.

Miscellaneous Foreign News.

DR. HOWARD has been released by the Spanish Government.... A treaty providing for evacuation of German troops from French territory was to have been signed the 28th ult .. The masters, and workmen on a strike in London are seeking to adjust their differences by arbitration ..The Spanish Ministry is in favor of a separation of Church and State.. .Recent engagements have taken place in the Eastern Department of Cuba. ...The revolutionists in Mexico propose to submit to the Juarez Government ...A pleasure boat on the Rio Grande, containing Americans, has been fired upon by the Mexicans....The American vessels at Rio de Janeiro saluted the Grand Duke. The Emperor visited the Flagship of the Russians ..The German fleet bombarded the town of Port-au-Prince for seven hours! The Government paid the Germans $15,000 on account.... A great banquet was given to Lord Lisgar, at Montreal, on the 21st ult.

SEMI-BUSINESS PARAGRAPHS.

Facts for the Ladies.—Mary Carman, Farmer Village, N. Y., has used 15 different patent sewing machines in family sewing; none does so beautiful work, fine or coarse, as the Wheeler & Wilson Lock-Stitch, or is so readily changed from one kind to another; has sewed with one that has been in use 16 years, without a cent for repairs, and has the same needles that came with the machine, with two others in use 10 years, each without repairs. She has supported a family of three, sometimes earning $4.00 per day, or $1.00 in an evening. See the new Improvements and Woods' Lock-Stitch Ripper.

Have You Seen Her?—A lady who for the last five years has been a leader of fashion in New York, and who may be seen twice a week in her elegant calèche driving a pair of superb ponies in Central Park, has recently stated, in the select circle to which she belongs, that the only article in existence which imparts beauty and luster to the complexion without ultimately impairing the texture of the skin and causing it to collapse and wrinkle, is Hagan's Magnolia Balm.

Watch 2266 Stem Winder—bearing Trade Mark "Fayette Stratton, Marion, N. J."—manufactured by United States Watch Co., (Giles, Wales & Co.,) has been carried by me four months; its total variation from mean time being five seconds.—David T. Brown, Sup't Lackawanna and Bloomsburg R. R., Kingston, Pa.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, June 29, 1872.

THE July Dividends occupy Wall street at present. The disbursements will reach seventy millions in this and the neighboring cities. The Treasury pays $26,500,000, and the savings banks of New York and Brooklyn, $6,000,000. The States (in credit) and the Railroads, on their Stocks and Bonds, will pay about $40,000,000. The Treasury anticipated the July interest several days ago when called for. These disbursements will throw a large amount of money on Wall street for reinvestment, and the rates of interest are already ruling cheap, 4 to 6 per cent. on call loan, and 6 to 7 per cent. on mercantile discounts. The Stock market is looking firm, especially on the latest news about the Washington Treaty, which looks more like a definite and satisfactory settlement than for some months past. Indeed the chief difficulty of "indirect claims" has been removed, and the Geneva Board will now proceed to settle the amount of direct damages from the piracies of the Alabama,

General trade is not active this week. The export demand for Grain, Tobacco and Provisions continues good, and the clearances of the week from this port are of the value of nearly $5,000,000.

Gold has ruled very steady. It was inclined to go lower early in the week, but an improved demand for Foreign Exchange, at full gold shipping rates, has made the market steady again.

The Fourth of July holiday is likely to add to the quiet of general trade next week, and will also interfere with the movements of the Stock Exchange somewhat.

Among the highly prosperous counties of the rich State of Missouri is Greene, which has a total debt of only $115,000, while its assessed valuation is over $8,000,000. Messrs. Gwynne & Day have been selling rapidly the 8 per cent. bonds of this County, and announce that they have only $100,000 remaining, which they will sell at 80 and interest.

The following are the comparative movements of the City Banks for the past fortnight:

	June 15.	June 22.
Capital	$87,151,000	$87,151,000
Loans	288,764,300	292,806,800
Gold and Greenbacks	75,724,200	73,841,400

PRODUCE AND PROVISIONS.

NEW YORK, Monday, July 1, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,660,000	Pork, bbls	950
Oats, "	360,000	Flour, "	15,200
Wheat, "	823,000	Beans, "	1,280
Meal, "	3,575	Eggs, "	9,550
Rye, "	37,000	Cotton, bales	8,030
Barley, "	5,655	Hops, "	337
Malt, "	3,500	Wool "	2,616
Meal, bags	616	Butter, pkgs	13,890
Seed, "	423	Cheese, "	45,350
Peanuts "	1,330	Lard, "	7,800
Cut Meats, bbls	3,200	Dried fruits, pkgs	4

Beans and Peas.—The market for beans shows very slight changes. The arrivals the last day or two have been fair, and there is scarcely so firm a feeling. Prime medium, $3.25@3.35, fair lots do., $2.80. Prime marrowfats, $3.55@3.75; fair do., $3. There is no sale for peas.

Beeswax—Is in the buyer's favor with a moderate trade. Sales at 38@40c. for Western and Southern.

Butter.—There has been a very fair trade since our last, and prices for western have improved in favor of sellers in fine grades. The weather has been bad for butter for several days; stock in store and on the wharves has sunk seriously in quality, owing to severe hot weather. Receipts are smaller, still they are abundant enough, particularly for this week, the issue of which will be largely broken up by the celebration of the Fourth, which latterly takes a noticeable number of our population out of the city. In the absence of State, pails have advanced, but the increase has rather restricted the demand for them. We quote:—State pails, choice, 28@30c.; other, 22@26c.; State selections, 26@27c.; good to prime firkins, 24@26c.; do. half tubs, 24@26c.; do. Welsh, 2?@23c.; other grades of State, 18@22c.; Western Reserve choice, 18@19c.; Western fair to good, 14@16c.; common, 10@11c.

Cheese.—Prices have been steadily declining. The hot weather has been against the trade, holders generally pressing their stocks for sale. The shipping orders have not been to an extent to clear the market, although with the important concessions made shippers buy close up to their wants. A good deal of the stock has been ill cured, and much affected by the warm weather. We quote State factory fine at 12c., good do. 11@11¾c., common do. 10c., skimmed as low as 3c.; State dairy, 11@11¾c. for prime, fair do., 9¾c.; Ohio factory 11@11¾c.

Cotton.—Prices for spot lots are rather weak. The demand is moderate, and is mainly from spinners. For forward delivery the market is lower and weak.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20¾	20¾	20¼	20¾
Good Ordinary	23¾	23⅜	23⅜	23⅝
Low Middling	25¼	25⅜	25⅜	25⅜
Middling	26¾	26¾	26⅜	26⅜
Good Middling	27⅜	27½	27⅜	27⅜

For forward delivery latest sales on the basis of low middling, are as follows:—For June, 21 15-16c.; July, 21 13-16c.; August, 25 3-16c.; Sept., 23c.; Oct., 20¾c.; Nov., 20c.; Dec., 19¾c.

Dried Fruits.—The promise of a large crop, and the dullness prevailing that is unusual even for summer, have produced an easy feeling throughout the market. We quote cherries at 30c.; raspberries, 30@32c.; blackberries, 11@12c.; apples, new State quarters, 10@11c.; extra sliced, 12@13c.; Southern new quarters, 8@9c.; do. fine sliced, 11@12c.; new prime Western, 9@10c.; common Western, 6@8c.; unpeeled peaches, 4½@5c. for quarters; 5½@6c. for halves; peeled peaches, 17@19c. for North Carolina, 13@14c. for Virginia, and 15@16c. for Georgia; plums, State, 27@28c.

Eggs.—There has been a rapid advance in prices owing to light receipts and the customary 4th July trade. The best marks of Western will bring 21@22c., common and fair do., 18@19c., State, 22c. Pennsylvania at 22c., Jersey, 23c.

Flour. Further concessions of twenty to forty cents per bbl. have been submitted to, but there is no animation to trade, most buyers disposed to take only just enough stock to carry them along. The report from the other side of good crop prospects is the chief feature working against this market.

Superfine State	$5 30	@	6 00

Good to choice do	9 80	@	13 00
Rye, common to fine	4 00	@	4 90

Fresh Fruits.—The variety is larger but the quality of apples, peaches and some other new items is not inviting. Strawberries are about over with; raspberries follow them in the popular demand. Prime old apples are doing better. Sour cherries sell readily upon arrival. We have had another abundant week of cherries. It is difficult to give an idea of steady prices. The weather is severe upon packed fruits of all kinds, and the preserver has about his own way after the morning sales. We quote:

Russets $5@6.50, Southern apples $2@3 ₱ bbl., 75c.@1.50 per crate; fancy strawberries ₱ quart 15@20c. small hulled do. 2½@4c., Antwerp raspberry 3ds 13@14c., black caps ₱ qt. 10@12c., blackberries seedling ₱ qt. 20@25c., common 5@10c.; gooseberries ₱ bush. fair size $3@4.50; Southern peaches per crate in good order $1@5; cherries, fancy, including prime sour, 12@15c., do. fair 5@8c., poor 3@4c.; a few pears quote ?@$3.25 ₱ crate; peanuts $1.40@1.85 for common to fair and $2@2.20 for prime.

Grain.—For wheat prices are decidedly lower, with reports from the other side against a shipping trade even at the reduced figures. No. 2 in store at $1.55@1.58; No. 1 in store at $1.62@1.64; winter red western at $1.65@1.71; amber western, $1.72@1.75; and white western at $1.70@1.80. Rye is dull; western, 85c. Oats are lower and moderately active; western, 44½@45c.; Ohio, 45@46c.; State, 45@46c. Barley malt is in fair demand at $1.05 for two-rowed State. Corn is plenty and lower. The export business is lighter. Sales at 63@64c. for steamer lots western mixed; 64@65c. for sailing do.

Hay and Straw.—The market has been very steady the last few days, with shippers closing out their orders more freely.

Shipping hay, $1.15@1.20, retail $1.40@1.60, salt 95c@$1, clover 80@90c. Long rye straw $1.10@1.15, short 85@90c., oat, 70@75c., wheat 60@65.

Hops.—About 400 bales old have been exported, and there is, if anything, a firmer market. Brewers are in the market for best lots, which are scarce, and pay full prices. The reports from the growing crop here are conflicting. The German crop is doing well.

New Yorks, growth 1871, 42@65; 15sirech do. 22@30c., Western do. 22@30c., Yearlings do. 70@30c., Olds do. 10@15c., Bavarians 65@75c., English 60@65c.

Poultry and Game.—Selling close up to the receipts, and full prices are obtained. Live Poultry—Spring chickens 75c@1.12 per pair. Fowls—Jersey, 18@19c.; do. Western, 17@18c. Turkeys—Jersey, 15@16c.; Western, do., 15@16c. Ducks—Jersey, pair, $1.25@1.50.; do. Western, 75c. Geese—Western, $1.50@1.75. English Snipe, per doz., $1.75@2. Wild pigeons, stuffed, per doz., $2@2.50.

Provisions.—Pork is in the buyer's favor, with a fair amount of stock on sale, and unfavorable reports from the West. Mess at $13.20 for June, $13.30 for July, $13.40 for Sept. Western prime mess, $12.50@12.75. Dressed hogs are weak, with a large supply; city, 5¾@6c. Middles are held firmly, with small stocks and a moderate shipping trade; long clear, 7¾c. Cut meats sell in small lots at 11@12½c. for hams in pickle, 9¾@10½c. for do. in salt, 5¾@6¼c. for shoulders in salt, 5¾@5¾c. for do. in pickle. Smoked hams meet with a fair trade at steady rates; hams, 13¾@14c., shoulders 9@9½c., clear rib 8¾@8¾c. Lard is offered freely at reduced prices. New Western steam, 8¾c. for June and July; 8¾c. for Aug. and Sept. Old is selling at 9¾c. for June and July; City at 8¾c.; prime steamer, 9¾@10c. Beef hams, $20@21. Beef is quoted at $7.50@9.50 for prime Western mess, $10@12.50 for extra mess. Tierce beef at $13@16 for prime mess, and $17@20 for India mess.

Seed. Grass sell in small lots only. Clover 9¼@9¾c. for Ohio, 10¾@10¾c. for Slide, 9¾@10c. for Indiana and Michigan. Timothy at $3.25@3.50.

Tobacco.—Kentucky leaf has been sold freely to consumers and moderately well to shippers at steady prices. Seedleaf meets with increased attention from shippers with full prices paid. Virginia grades are held above the views of large buyers. We quote Virginia common to good lugs, 7½@8¾c.; low to medium leaf, 9@10½c.; good to fine, 11@14c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

Vegetables.—Old potatoes are neglected. Hoblers are crowding their supplies on the market, but they cannot realize enough to pay freight. There is a glut of new potatoes, and much lower prices are accepted.

New potatoes, L. I., bbl., $2.25@2.75; do. Jersey, $2.25@3; Southern, $1.25@2; old do., 25@50c. Tomatoes, $2.75@3; Squash, crate, $1@1.50. Cucumbers, Norfolk crate, $1.50@1.75; do. Jersey, bbl., $8. Green peas, bag, 50@75c. String beans, bag, 75c.@1. Onions, Hermuda, $1@1.25. Turnips, Russia, bbl., $2@2.25; do. Jersey, 100 lbs., $3@6. Cabbages, bbl., $?@8.

Whisky—Is higher, but closed unsettled. Western, 91c.

Wool.—In fleeces buyers are scarce, the disposition being to wait until the price of the new clip is settled. Farmers have shaded their prices, but are still asking much higher figures than the trade will pay, relying upon a light clip. In Ohio, 65@70c. is asked. There are sellers of the old clip at marked concessions, but buyers name still lower prices. There is considerable Texas coming in; this stock is offered freely. Foreign is more in the buyer's favor. Latest sales are at 65c. for lambs pulled, 70c. for super, 61c. for extra, 52½c. for Texas, 33c. for burry do.; Cape at 41½c., Australian 60@61c., Mediterranean 38c.

LATEST.—Monday, July 1st, 4 P. M.—Beeves.—Arrivals to-day, 171 cars at Communipaw, 107 at 100th St., and 17 at Weehawken, making 4,480 for sale. Many of the cattle were thin, and some could not be sold. This kind was rather lower, Texans selling at 8@9½c., while fair to good ill. went at 11½@13c.; few extras, 12¼c. Bulls sold at 3½c. per lb., live weight.

Sheep and Lambs—Arrivals for to-day's market, 15 car loads at Communipaw, 6 at 48th St., and 9 at 40th St., making 6,005 on sale. There is no change in sheep, but lambs are holding back for the Fourth, making them scarce to-day. They sell at 7½@11½c.

Hogs.—Receipts to-day, Sunday included, 51 car loads at Communipaw and 54 at 30th St., making 11,540, all for slaughtering firms. Dressed are weaker, selling at 5¾@5¾c., with few light at 5¾c.

LIVE STOCK MARKETS.

NEW YORK, July 1, 1872.

THE past has been emphatically a hot week, and butchers found that it required the greatest vigilance to prevent meat from spoiling. There has been a falling off in receipts of live stock, but not enough to prevent a decline in everything save fat cattle and prime sheep. Our markets have been filled with poor stock at a bad time. So many of the buyers of coarse meat are now out on strikes and unable to eat much meat, butchers are having an exceedingly tough time of it to get rid of coarse beef. All the really prime goes off well. Many of our citizens have gone out of town for the summer, but the greater portion have not gone beyond the reach of meat sent from this city. Never before have we had such an out-of-town demand for meats, and they go long distances, packed in ice.

The following are the receipts of live stock shown in comparison with other years:

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	7,738	132	3,654	21,371	36,536
" last week	9,413	72	3,437	22,471	37,237
Corresponding week last year	7,894	113	4,229	26,035	29,140
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—With quite a falling off in receipts, as compared with the previous week, there are still too many cattle, droves holding over nearly every night. Prices are lower for common stock, but there is not much change in fat cattle. The quality of the stock has very much deteriorated since we run out of corn-fed and begun upon grass steers, before they have had time to become fat. They will be improving each week, feed being good at the West. Texans are pouring in fast, most of them coarse, rough, half-fed cattle not wanted here. They would do in a bare market, but with a glut like the present, butchers will only take them at a discount. The last drove was sold at 8c. on the scales, 66lbs. to the 100 lbs. live weight. They weighed 1,140 lbs. gross. Above these are thinnish Western steers at 10½@11c., with fair at 11½c. and good to prime at 12¾@12¾c., very few reaching 13c. There were present, at the last general market on Monday, 191 car loads of cattle at Communipaw, 112 cars at 100th street, and 9 at Weehawken, but were not all sold. The arrivals since then have been moderate. Nearly 900 Texan cattle came in last week. We have accounts from Kansas showing that 149,032

Texan cattle had entered that State over the "Chisholm Trail" this season, which is rather less than passed over at same date last year. Our markets here close heavy with stock being carried over for Monday.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb.	12¾ @ 13	13 @ —
Good to prime	12¾ @ 12¾	12¾ @ 12¾
Ordinary to medium	10¾ @ 11¾	11 @ 12
Lowest grade	8 @ 10	9 @ 10
Average sales	11¾ @ —	12 @ —

Milch Cows.—The decline in poor beeves, hot weather, lower ruling of milk and sundry other things cause a marked dullness in fresh cows. Prices are rather lower, but the great trouble is to sell at all. While milk is left over to sour in the cans nearly every day at the Harlem and Hudson River R. R. depots, for want of purchasers, there is little inducements for any one to buy fresh cows. We quote them at $40@55 each for poor to below medium, $60@70 for fair to good, and $75 for prime milkers.

Sheep and Lambs.—On account of a poorer average quality, what good sheep do come in are selling for more money. Poor have fallen to a low point, but they are of very inferior quality—used up old bucks, and thin ewes, which have just had lambs taken from them. Some of these have been sold at 4@4½c. per lb., with thinnish lots at 5@5½c., medium to good, 5¾@6¼c., and prime to extras at 6¾@6¾c., one or two lots of just the right size, and with extra fat for dressing off inferior lambs, selling at 7c. Lambs vary from 7 to 9c. for poor up to decent Western, and 9@11c. for State and Jersey, a few extras at 11½c., as a lot 62½. Jerseys at latter price. Fat Jersey lambs are getting scarce, and stock is coming from Canada to take their places. The average of 2,316 lambs sold during the week was $6.19 each, with 3,888 sheep at $5.59, being mostly good stock.

Hogs.—There is a slight falling off in receipts, but, like beeves, hogs have declined in price, leaving no margin for operators. We have seldom seen hogs come in so healthy during such hot weather. One cause is that shippers find it pays to give them extra care, employing men to ride on the cars and drench them with water at the engine tanks. The last sale of live hogs was State stillers, at 4½c., but they would not exceed 4¾c. to-day. Dressed sold at 5¾@5¾c., mostly at 5¾@5¾c.

Veal Calves.—Prime milk veals are not plenty, and are no lower, but medium and poor calves, especially those known as "grassers" and buttermilk calves, are lower. One reason is, they are poorer than those sent in earlier. The season for grass calves proper has just arrived, and they come in too fast even for the low prices of 3@4c. ₱ lb. Most of them are heavy, but poor. One large lot of 190 lbs. sold at 3c. ₱ lb., while another lot sold at $5 each. Some a little better sold at 1c. Most of the medium to prime State calves sell at 8@8½c., with very few extra Jerseys at 9¼c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., June 29, 1872.

THE market opened dull at Little Falls for the week ending June 29, and the decline in prices has been from ½c. to 1c. below last week's rates. The delivery of farm dairies was about 800 boxes, and sales were made at 10½@11¼c., only a few lots bringing the last figure. We heard of but one sale going above 11¼c.—that of the Orkwold, which brought 11½c.

The offerings from factories amounted to some 6,000 boxes, about half of which were sold. Some lots were sent on commission, while some were held over.

We give quotations of leading transactions as follows:

Newport	12¾	Bethel	12¾
Dairy Hill	12¾	Cook & Ives	12¾
Herkimer	12	Craine's Corners	12¾
Euphrata	12	Countryman	12¾
Fonda	12¾	Danube Cold Spring	12¾
Stone Arabia	12	North Fairfield	12¾
Eatonville	12¾	Henderson Ass'n	12¾
Palatine Union	12¾	Henderson Home	12
Cold Creek	12¾	Herkimer Co. Central	12¾
Fays	12¾	Little Falls Central	11¾
Manheim Center	12¾	Manheim	12¾
Flat Creek	12¼	Mineralville	12¾
Avery & Ives	12¾	Nowville Ass'n	12¾
Brocketts' Bridge	12¾	A. Smith & Co.	12¾
Fairfield Association	12¾	Stratford & Salesbury	12¾
Bates	13	Zimmerman Creek	12¾

We have advices from abroad for the second week in June. Our London correspondent says that new American cheese, to hand, sells at quotations, extra ling going at 68s.; fine, 62@68s.; good, 56@58s.

The other descriptions of cheese sell as follows: English Cheddar (new) 56@70s.; Wiltshire double, 64@70s.; Scotch (new), 64@68s. Dutch Cheese.—Edams, 50@70s.; Gondas, 48@56s.; Derby shape, 50@58s.

In butter, Normandy sells as it arrives; other descriptions of foreign, slow sale. We give quotations: Cloonicll's, 118@128.; Normandy extra, 114s.; Friesland, 102s.; Canadian, 90s.

The heavy rain on Monday was favorable and timely for the grass crop, and puts it beyond all danger from drought. The yield will be fair, and much better than was anticipated early in the season. Pastures are now yielding abundantly, and cows are, generally, doing well.

DIED.

MILLER.—In San Francisco, Cal., June 14, LEONARD W. MILLER, late of Rochester, N. Y., aged 47 years and 8 months.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES

and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS Co., No. 683 Broadway, New York.

New Advertisements.

Health and Economy.

The Colwells, Shaw & Willard M'f'g Co., having had an experience of over six years in the manufacture of TIN-LINED LEAD PIPE, have reached that perfection in its construction, which leaves nothing to desire. Our patent Tin-Lined Lead Pipe is as flexible and easily soldered as ordinary lead pipe, and is cheaper when strength and durability are considered. Water flows through it as clear as at the fountain head, and free from the slightest taint of lead and zinc poison or iron rust. In addition to the plumbing of houses, it is largely used for conveying water from wells and springs; also, for beer pumps, mineral waters, soda fountains and water coolers—in fact wherever purity and safety to health are desirable. Circulars and samples of pipe sent by mail free. Price 15 cents a pound for all sizes. Address THE COLWELLS, SHAW & WILLARD M'F'G CO., No. 213 Center St., New York. Also, Manufacturers of Block-Tin Pipe, Sheet Lead, Lead Pipe, Solder, &c. Orders filled at sight.

STATE OF MISSOURI.
EIGHT PER CENT. BONDS
Of GREENE COUNTY.

Less than $100,000 of these very desirable Bonds remain unsold, which the undersigned continue to offer at 80c. and accrued interest, at which rate they pay OVER ELEVEN AND A-QUARTER PER CENT. PER ANNUM ON THE INVESTMENT.

Interest payable semi-annually, in New York, at National Park Bank.

Entire debt of County, including these Bonds, in $415,000. Assessed valuation of taxable property (which is about one-half its real value), $8,000,000.

Pamphlets and any further information furnished on application, either personally or by letter.

GWYNNE & DAY,
16 Wall St., New York.

NOTHING WILL AFFORD "YOUNG America" so much instructive amusement, or be so convenient and useful for small jobs of printing, which every business man has occasionally to do, as our

$5.00 $5.00
Boy's Printing Office.

Consisting of neat little press, with convenient form for printing Envelopes, Cards, Labels, Letter Heads, etc., with fonts of 3 to 7 alphabets each, of 3 different sizes and styles of type; also, figures, spaces, blanks, &c. Fully supplied with printer's ink, bronze for gilt printing, inking pads and directions.

Boxed securely and forwarded by Express to any address on receipt of price. Address **F. P. FOLLETT, 91 Asylum St., Hartford, Conn.**

WEBSTER'S PATENT
BUTTON-HOLE WORKER.

The most perfect Button-Hole Worker ever invented. So simple that a child can work a more perfect button-hole with it than the most experienced hand can without it. It does away with pricking the fingers, straining the eyes, and with imperfect and irregularly worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold.

Local and traveling agt's wanted for this and other new and useful articles. Address **GEO. DAVIS,** 91 Asylum St., Hartford, Conn.

Sample worker, with full directions for use, sent post-paid by mail on receipt of 50 cents.

OSCILLATING PADS.

Easy, effective and durable; simple in construction, yet adjustable to every case. Highly finished, with metallic parts nickel-plated. No leather; no rust; always neat and clean. Sent by express on receipt of EIGHT DOLLARS, or C. O. D.

THE ELASTIC RUPTURE BELT

Can be worn night and day. Sent by mail, prepaid, on receipt of $4.50. Give description of case, hight, size, shape, &c. Address

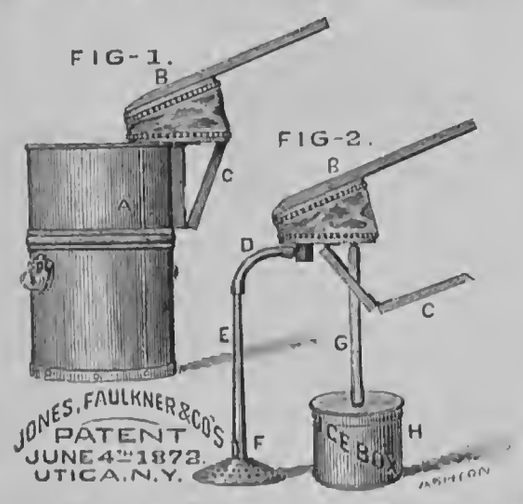
POMEROY & CO., 741 Broadway, New York.

Descriptive Circular of Pomeroy's Celebrated Finger Pad Trusses sent on application.

ARCHITECTS and others will find good common sense articles on Bricks, Lime, Mortar, Cements and Foundations, in "THE MANUFACTURER AND BUILDER." $1.50 per year.

WESTERN & COMPANY, Publishers,
P. O. 5969. 37 Park Row, New York.

MILK AERATOR AND COOLER.



Just the thing! Cheap, durable and efficient! *Sells readily.* Canvassing Agents wanted. Rights for the manufacture granted on liberal terms. For further information, address L. H. DEVENDORF,
General Agent, Utica, N. Y.

SAFE AND PROFITABLE!
THE
CANADA SOUTHERN
First Mortgage Sinking Fund
Thirty Years
7 Per Ct. Gold Bonds
AT
90 and Accrued Interest.

The Road runs from Buffalo to the Detroit River, and is the Eastern link in the new AIR LINE from BUFFALO to CHICAGO, and has been under construction for about two years past by railroad men who have seen the necessity for a STEEL RAIL, LOW GRADE SHORT ROUTE between the great railroad systems which diverge from Chicago, Toledo and Buffalo.

Among the builders of the road, by whose cash subscriptions 200 miles (out of 230) have already been graded, bridged and made ready for the superstructure, a large part of the steel rails bought, all of the materials for the stations and a part of the equipment purchased, are:

MILTON COURTRIGHT, JOHN E. TRACY, WM. L. SCOTT, DAVID DOWS, HENRY FARNHAM, R. A. FORSYTH, HENRY H. PORTER, JOHN M. BURKE, M. L. SYKES, JR., B. F. ALLEN, all Directors either in the Chicago and Northwest or in the Chicago, Rock Island and Pacific; GEN. ODYKE, of the Midland Road; JOHN H. ALLEN, SIDNEY DILLON, DANIEL DREW, J. S. CASEMENT, J. & J. CASEY, O. S. CHAPMAN, JOHN ROSS, DAVID STEWART and F. H. WINSTON.

THE ROAD will be

33 MILES SHORTER THAN ANY OTHER ROAD,

either BUILT or in contemplation, between Buffalo and Chicago, and will also shorten the distance between Toledo and Buffalo 23 miles.

THE MAXIMUM GRADE on the entire line does not exceed FIFTEEN FEET to the mile—and Ninety-six per cent. of the Road IS STRAIGHT.

The ROAD WILL BE COMPLETED and in running order on or before December 31 of this year.

The principal and interest of the bonds are payable either in New York, London or Frankfort.

We confidently recommend the bonds to all classes of investors.

LEONARD, SHELDON & FOSTER,
No. 10 WALL ST., NEW YORK.

NOTICE.

Having become associated with Messrs. Leonard, Sheldon & Foster in the Agency of the Canada Southern Railway Company, we offer the above named Bonds for sale.

After a thorough investigation, we recommend them to our friends and customers as a sure and reliable investment. Pamphlets and all information furnished on application.

WINSLOW, LANIER & CO.,
27 PINE STREET, NEW YORK.

THE SUPERIOR HAY TEDDER
IS THE BEST. Only $55.

Liberal discount to Agents for cash orders. Send for Circulars.

NEW YORK PLOW CO.,
94 Beekman Street, New York.

JEWELRY.

LADIES' AND GENTS' WATCH CHAINS, AT **$1.00, $1.50, $2.00, $2.50 and $3.00.**

In appearance are equal to a fine gold chain. Will wear very well. Sent by mail, post-paid. Will fill orders for all kinds of goods. Send stamp for Circular. Address J. R. BROWN, Conshohocken, Pa., near Philadelphia. ☞ Refer to S. FULTON & CO., Plymouth Iron Works, Conshohocken, Pa.

THE ANNUAL EXHIBITION
OF THE
Pennsylvania State Ag'l Society,
For 1872,
Will be Held at the City of Erie,
Commencing Tuesday, Sept. 17th, to continue Four Days.

The competition is coextensive with the United States and Provinces, and the citizens of the several States and the Dominion are cordially invited to compete for our prizes. There is no Entry Fee charged. For Premium Lists, and other information, apply to either of the undersigned, at Harrisburg, until August 20th, after which date headquarters will be at Erie.

JACOB R. EBY, President.
D. W. SEILER, Recording Secretary.
ELBRIDGE McCONKEY, Cor. Secretary.
Harrisburg, Pa., June 1, 1872.

Northern Ohio Fair.

THE
THIRD ANNUAL EXHIBITION
OF THE
Northern Ohio Fair Association,
WILL BE HELD
On their Beautiful Fair Grounds, in the CITY OF CLEVELAND,
ON THE
9th to 13th days of September, 1872.

This is the largest Fair between Boston and St. Louis. For schedule of Premiums, &c., address

GEO. W. HOWE, Sec., Cleveland, O.

Trees, Seeds, Plants, Etc.

CABBAGE PLANTS—All kinds. 100, 35c.; 1,000, $3, prepaid. LANSLEY & CO., Poultney, Vt.

POMONA NURSERY.—The largest, best and cheapest *Imperial* and Colossal Asparagus; *Herbert* and Brandywine Raspberries; Blackberries, Rhubarb and Strawberries; Apple, Peach and Pear Trees. Send for Catalogue. WM. PARRY, Cinnaminson, N. J.

NURSERYMAN. A Fine Tract of Land, combining unusual advantages for Nursery and Florist; on Brooklyn car route; gas and water. Will be leased, or partnership formed with a man of experience, enterprise and moderate capital.
Address MR. DAY, 55th St., Brooklyn, N. Y.

PLANTS, SEEDS, BULBS.

THE BEST CATALOGUE yet Published, containing a complete list of **Vegetable and Flower Seeds;** Bulbs of every sort for spring planting; also Roses, Geraniums, and other Bedding Plants, Small Fruits, &c., &c. Fully illustrated.

☞ Sent Free to all Applicants.
Address C. L. ALLEN & CO.,
76 Fulton St., Brooklyn, N. Y.

Real Estate, Etc.

FOR SALE.—THE GRIST MILL on Doughoregan Manor, with three Burrs and Bolting Cloths. Two distinct water powers. Has lately undergone thorough repairs. 7½ miles from Ellicott City, Howard Co., Md., on Frederick Turnpike. Price $6,500. HARPER CARROLL, Ellicott City, Md.

A NEW COLONY IN KANSAS!

AT "SKIDDY," in Neosho Valley, on Missouri, Kansas and Texas Railway.

Under the auspices of the NATIONAL BUREAU OF MIGRATION.

THE AMERICAN COLONIST AND HOMESTEAD JOURNAL, containing Maps, with full particulars as to the Organization of the Colony, the Lands, Productions, Climate, Wood, Water, etc., SENT FREE on application to S. R. WELLS, Secretary of the National Bureau of Migration, 389 Broadway, New York.

NORTH CAROLINA
LAND COMPANY.

(*Chartered by Special Act of the Legislature in* 1869)

Offers for sale 200,000 acres of best Farming Lands, near Railroads, Rivers and Towns, with good houses and improvements. Prices, from $2 to $10 per acre. Also, 300,000 acres of Timbered and Grazing Lands. Prices from 50 cents to $2 per acre. Also, numerous Mineral and Mill Properties, Water Powers, &c., at various prices. REV. E. G. ROBINSON, D. D., has received the degree of LL. D. from Brown University, of which institution he is President elect.

W. F. STOREY of the Chicago Times, while stepping upon the train at Springfield, Ill., one night last week, fell, and his leg was broken.

GEN. WM. T. SHERMAN was entertained at dinner by the Hon. Horace Rublee, the Minister of the United States at Berne, on the 27th ult.

THE PLOT AGAINST HAWLEY.

CHAPTER I.

HOW THE PLOT ORIGINATED.

Near noon, the 5th of September, 1852, a man laboring under great excitement was walking hurriedly up Broadway, New York. His features were flushed and convulsed, his glances wild and restless, his whole mien indicative of keen anguish.

Turning to the right into Bleecker street, he soon reached a plain three story and basement brick house, to which he gave himself admittance.

"Are you there, Ruth?" he called from the hall.

A step was heard overhead, followed by the rustling of a dress, and a young lady descended the front stairs. Despite several points of marked contrast, there was a family likeness about the couple that proclaimed them to be brother and sister.

"Why, what's the matter, Luke?" cried the latter, starting at sight of the disturbed countenance that met her view. "Are you ill?"

"I've just received bad news," replied the brother, leading the way into the parlor—"news which has given me a terrible shock."

"Shocked? *You!* What has happened?"

"In a word, Clara Aymar is married!"

"Married!" echoed the sister, recoiling. "Clara Aymar married! Is it possible?"

"Yes, married! the girl I've been laying siege to for years past—the only girl I ever cared a pin for. Imagine the shock this event gives me. I'm nearly crazy."

"Then you really loved her?"

"*Loved* her! I must have *worshipped* her, or else this thing would not have so completely upset me."

"Oh, as to that, the loss of a thing always gives us an exaggerated notion of its value," said the sister philosophically, as she sank languidly into an easy chair, and smoothed out a fold in her showy morning robe. "You are simply shocked, as you say. But by to-morrow you will laugh at the whole matter."

"Don't, Ruth!" implored the brother, sinking heavily into the nearest chair. "Clara Aymar is more to me than my life! My love for her is a delirium! It's no such passing fancy as you suppose, but an everlasting passion—a rage—a flood of molten lava! And I've counted all along upon marrying her. True, she has rejected me twice, but I thought she'd change her mind—"

"She was in no way committed to you?"

"No, of course not. She has never given me any encouragement. But I am none the less surprised. I supposed that everything was favorable enough to my wishes. I knew that she was still young to marry—an orphan—without money and without friends—presumably without suitors; and I flattered myself that she couldn't always remain insensible to my attentions."

"You reasoned wisely enough, of course, Luke; but reason never decides these matters," declared the sister, with a sort of contemptuous compassion. "A whim—a chance meeting—a smile or a word—a moment's weakness—any trifle—these are the things by which marriages are brought about. But who is the bridegroom?"

"Ah! that's a point that will touch *you* a little, I think. Can't you guess who he is?"

"I haven't the least idea."

"Well, then, he's Will Hawley."

The sister sprang abruptly to her feet, clasping both hands to her heart. The changing colors of her brother, his agitation, his anguish, all passed to her own features.

"Will Hawley?" she gasped. "Oh, you don't mean it, Luke!"

"But I do though. It's God's truth. Clara Aymar and Will. Hawley are husband and wife."

A heavy fall succeeded. The sister had fainted. She lay upon the floor as one dead.

"Did she think that much of Hawley?" muttered the brother, astonished. "I didn't suppose—"

He hastened to bring a pitcher of water and bathe the white features, and then set himself to chafing the clenched hands.

Capt. Luke Pedder was twenty-seven years of age, with an originally light complexion, which had reddened with generous living and bronzed with exposure to wind and sun. His form was of the average size and hight, and his features of the most ordinary type. He was singularly selfish and unscrupulous, but of gentlemanly manners, being well educated and used to good society. His ability as a navigator was fair for a man of his age and experience, but he owed his position as commander of a fine Australian clipper, more to respect for his late father and to sympathizing favor than to his own merits.

Miss Ruth Pedder was two years younger than her brother, and consequently twenty-five years of age, although she owned to only twenty. She was tall, thin, and a little inclined in her outlines, as in her temper, to angularity. She was not particularly bright, but she was bold and unscrupulous, and possessed a fierce energy which was capable of compensating in any emergency for lack of genius.

The father of the couple had been a prominent ship-owner and merchant. But in his latter days the senior Pedder had been unfortunate, and had finally been broken up completely—a result hastened, it was whispered, by the wild ways and financial irregularities of his son. The old man's failure had soon been followed by his death, and already—for such is fame!—he was generally forgotten.

"How odd it is!" ejaculated Capt. Pedder, as he rubbed his sister's cold hands. "*She* madly in love with Will. Hawley, and *I crazy* after Clara Aymar! And now Will. and Clara are married, and Ruth and I are left out in the cold."

Under the vigorous treatment he had adopted, Miss Pedder soon recovered her senses.

"Are you sure they're married?" she demanded.

"Perfectly. I learned the fact half an hour since from Hawley's commander—Captain Greggs, you know. Captain Greggs was at the wedding. It took place last Friday evening—the very evening after Hawley's return from his last voyage to Rio. It was a quiet affair. Only a few friends were invited. But let me ask you a question. Did Hawley ever propose to you?"

"No. But I expected that he would soon do so. He has been here often enough—"

"Yes, he came several times to ask me for a berth in my clipper. I promised to think of him at the first opening, and I really meant to help him, for I knew in a general way that you liked him."

"I thought he'd realize that you could be of service to him," explained Miss Pedder. "I thought he'd remember that mother left me this house and a few thousand dollars to do as I pleased with. I was conscious, too, that I possessed a fair share of personal attractions. And as I supposed him to be entirely heart-free, I took it for granted that I should get him. His attentions seemed marked enough—"

"He treated you politely, of course," interrupted Pedder, "and he couldn't have well done less, after asking me to befriend him. But he never made any formal declaration?"

"No, he didn't. As mate of a Rio ship, he was away seven-eighths of the time, and I didn't expect a regular courtship. But I took it for granted—"

Pedder made an impatient gesture.

"We've deceived ourselves," he muttered. "We've been carried away by our feelings. The girl's rejection of me was really intended to be final, and Hawley's visits here were merely visits of business and friendship. But why Clara should prefer Hawley to me I can't imagine," added Pedder, drawing himself up haughtily. "Hawley has neither name, nor money, nor position!"

"Nor can *I* see why Hawley should prefer Clara Aymar to *me!*" said Miss Pedder, as she glanced at her reflection in one of the long mirrors near her. "She's a hired attendant, or something of that kind—the creature."

"I'd no idea that you thought so much of Hawley," observed the brother, as he strove to calm his painful emotions.

Miss Pedder moaned. Her eyes filled with tears.

"I thought all the world of him," she murmured.

A long silence fell between the couple.

"Well, well, they're husband and wife," at length muttered Pedder hoarsely. "And this, I suppose, is all there is to be said."

Miss Pedder compressed her lips until they bled, staring at her brother with a fixedness amounting to ferocity.

"No! no!" she breathed fiercely. "The matter shall not end here. That marriage—that abominable marriage—"

She clutched at her heart again, as if suffocating.

Pedder opened his eyes widely.

"Why, what can we do?" he queried. "You wouldn't have me murder Hawley, I suppose? *That* wouldn't make him your husband; and, on the other hand, it wouldn't do *me* any good if you were to kill Clara Aymar."

"But there is a way, Luke, of undoing that marriage."

Pedder started toward his sister as if electrified.

"Do you mean it?" he demanded.

"I mean it, and I swear it! I'll never consent to that girl's having Hawley! I'll dig a gulf between them as broad as the ocean! I'll undo that marriage, or *die!*"

"Softly! Where is Kate?

He referred to their single servant.

"She's out for the day," answered Miss Pedder, arising and planting herself in a chair. "There was little to do, you know, as I did not expect you home until dinner."

"Then no one will hear us."

He drew a chair nearer to that of his sister, and sat down beside her.

"What's your idea?" he asked, in a whisper.

"My idea is to separate them; to turn their love to hate; to dig a pit beneath their feet that will remain open forever!"

"But how?"

"Will Hawley is poor, isn't he?"

"Certainly; there is no mistake about that. His mother was a helpless invalid for the last ten years of her life, and Will insisted on her using for her comfort every penny he earned. It hasn't been six months since he was relieved of that burden. He's poor, therefore, as you say—poor as Job's turkey!"

"Then he'll have to leave his darling Clara," sneered Miss Pedder, venomously. "He'll have to absent himself from his dearly in order to earn their mutual bread and butter. In short, he'll have to go to sea again!"

"Well, yes; I suppose he will," assented Pedder. "He can get better wages at sea than elsewhere. He will sail again soon, no doubt."

"I thought as much. And the sea is full of terrible dangers! When do you sail again for Australia?"

"In about two weeks—possibly ten days, as the ship's filling up rapidly."

"Hawley is thoroughly competent to be your first mate?"

Pedder looked wonderingly at his sister a moment, and then answered:—

"Of course. I know of no better man for the post."

"He must be your first mate, then. You have influence enough with your owners, I hope, to turn out the present incumbent?"

"Why, the post is already vacant. Mr. Jarding—you have seen him—Mr. Jarding has just been called home suddenly to Ohio, on account of his father's illness—"

"Good! That's fortunate. You must recommend Hawley for the vacant place to your owners, and get them to engage him. The thing can be done?"

"Without the least doubt. It was understood, you know, as I just now remarked, that I was to help Hawley at the first opportunity. We'll accordingly suppose that he sails with me as first mate the next voyage. What then?"

"You must leave him—not dead, but a prisoner—on some desert island between here and Australia!"

Pedder looked his astonishment.

"If it can be done," he said, after a pause, "what next?"

"You must come back and report that he is dead, furnishing full details and good proofs. Those details and proofs will not be difficult to manufacture. Then you must be all kindness and sympathy to the young widow, as she will suppose herself to be, and in less than a year thereafter she will be your wife."

"Oh, if this thing were possible?" sighed Pedder, beginning to look relieved.

"*Possible!* It's as simple as kissing. And the moment you are married to Clara, I will take a trip to Australia for my health, and naturally enough stumble upon the very island where you have left Hawley; effect his rescue; tell him his wife is dead; condole and sympathize with him like an angel; and conclude the whole comedy by becoming his wife and settling in Australia. You'll thus have your Clara on this side of the ocean, and I shall be happy with Hawley on the other."

She was smiling now, with every sign of anticipated triumph.

As to Pedder, he twisted nervously in his chair scarcely venturing to breathe.

"There's just one difficulty," he muttered—"that of getting Hawley on the desert island without his suspecting anything."

"It can be done," and the lips of Miss Pedder came together like the jaws of a vice. "There's no difficulty about finding a suitable island?"

"Not the least. I saw the island in my mind's eye the moment you uttered the word, and a glorious one it is for our purpose."

"It will be easy for you to get Hawley upon it," suggested Miss Pedder thoughtfully. "If it's near your route you can call there for water. If it's out of your way, you can be blown there by adverse winds, or be drifted there by unknown currents, or fetch up there by a mistake in your reckoning or a fault in your chronometer. And once there, you can have Hawley seized by some trusty agent, while he is ashore upon business, or you can send him ashore under some pretence, such as looking for a deserter from the ship or for a shipwrecked sailor, and then sail away without him—"

"Say no more," interrupted Pedder, with wild exultation. "I see how to manage the affair from its beginning to its end."

"And you now see that we can undo that hateful marriage?"

"Perfectly—perfectly. The affair will require a little time and patience, of course, and a little expenditure of money, but we are sure to triumph. Capital! glorious! What a load you have taken from my soul, Ruth! What a genius you are!"

He leaped to his feet and began pacing to and fro rapidly, with the most extravagant signs and exclamations of joy.

"First to get Hawley on his island," resumed Miss Pedder musingly. "Next for you to marry the pretended widow. Then for me to rescue the prisoner and marry him. And finally for you and me to be happy, you in your way and I in mine—you with Clara in New York, and I with Will in Australia. You comprehend the whole project clearly?"

"From the first step to the last. There's only just one possibility of failure—"

"And that one?"

"A refusal on Hawley's part to accept the post offered him—a refusal based upon his marriage."

Miss Pedder turned pale at the thought.

"But he won't refuse," she soon declared, recovering her equanimity. "He has long been wanting just such a place. Married or single, he can't neglect his bread and butter."

"Well said, Ruth. I think we can count upon him. The post he came here to ask me for is now vacant, and I will accordingly have it offered to him, just as if nothing had happened."

"Exactly. You needn't speak of his marriage, or seem to know anything about it. You could simply offer him the post in question, in accordance with the old understanding. And he will accept it. He can't possibly have any suspicion of anything wrong. Outwardly and apparently we are all on good terms with one another, and will remain so. Let the wages offered him be liberal. Possibly he may object to leaving his young bride so soon, but the next voyage after this one—"

Pedder interrupted the remark by a gesture of impatience. He was all eagerness now—all determination.

"That next voyage after this one will not answer," he declared, "Hawley shall accompany me on my very next trip. To make all sure on this point, I will have him engaged this very day. In fact I will see to this *now.*"

He seized his hat and gloves, addressed a few words to his sister, and quietly took his departure down town. The last glances the couple exchanged at the door were full of jubilant wickedness.

The next three or four hours passed slowly to Miss Pedder. She was beginning to fear that the whole project had miscarried at its very commencement, and was fretting herself into a fever, when Pedder suddenly made his appearance. One glance at his vivid flushes, at his dancing eyes, at his airy manner, was sufficient.

"We triumph then?" she cried, throwing herself into his arms for the first time in years.

"Completely! I saw my owners on the subject, and they sent for Hawley. He at first offered some objections, as was natural, but the high wages, the great step upward, the kindly interest we all manifested, soon brought him to a grateful acceptance!"

"Splendid!" murmured Miss Pedder, with a rippling laugh. "I knew the thing was feasible. And so in two weeks more our fond bridegroom will be plowing the sea again—"

"In two weeks more, Ruth! We shall be off in six or eight days. The cargo is fairly tumbling aboard the *Flying Childers*, to say nothing of a fair list of passengers. The honeymoon of our loving doves will be abridged to six short days more, you may be certain."

CHAPTER II.

A GREAT STEP TAKEN.

In the midst of the Antarctic ocean, a little off the route from New York to Australia, there lies a large island named Kergueleu's Land, or—as Capt. Cook called it—the Island of Desolation.

It was discovered just a hundred years ago, (in 1772,) by the French naval officer whose name it bears. It was uninhabited then, and is to-day as deserted as ever.

The smallest school-boy among our readers can find it upon his map of the world, about midway between the south end of Africa and Australia, well up toward the South Pole.

It is a hundred miles in length by fifty in breadth, and is, consequently, three or four times as large as Rhode Island.

Its coasts are so wild and dangerous that its discoverer, during the two expeditions that he made to it, did not once bring his ships to anchor in any of its bays and harbors.

Its shape is very irregular, but something like that of an hour-glass, it being nearly cut in two by a couple of large bays; but these two divisions are unequal in size, the northern peninsula being much larger than the southern.

Its coast line is wildly broken and jagged, its immmemdable gulfs being long and narrow, and its promontories are correspondingly sharp and slender, reaching out into the ocean like fingers.

The body of the island indeed resembles that of some huge monster of the antediluvian world, even as its capes and headlands resemble such a monster's unsightly limbs and claws.

A more terrible solitude than this Isle of Desolation does not exist upon our wrecked planet. Neither the snows of Himalaya nor the sands of Sahara can outvie its terrors.

No inhabitant is there, not even a savage—no house, no tree, no shrub, no fence nor road, no field nor garden, no horse, no dog—not even a snake or wolf.

Lone, blasted and barren, it looks like the skeleton of a land that has perished.

It may indeed be that Desolation is the relic—the surviving fragment—of a continent that went down here countless ages ago, with hosts of inhabitants, in some vast convulsion of nature.

It has certainly undergone dreadful visitations; been rent by earthquakes, pulverized by frosts, lashed and wasted by fierce tempests.

Its mountains are only of moderate hight, but are capped eternally with snow.

Its vegetation is limited to a few dwarfish plants, including some mosses, a species of lichen, a coarse grass, a plant resembling a small cabbage, and a sort of cress.

Its winds are raw and piercing, its summers cold and frosty, its winters those of the Polar Circles.

The interior of the island is occupied by immense boggy swamps, where the ground sinks at every step.

The rains in Desolation are almost incessant, in their season, and the island is accordingly veined with numerous torrents of fresh water, some of which have worn out of the solid rock tremendous cavities and gullies. The only other season than that of the rains is one of almost constant snow.

The fogs of that ghastly region are well worthy of the rains, being of a cloud-like density and hovering almost continually over the whole face of the island.

The sun of Desolation is usually hidden by a canopy of lead-colored clouds, and appears, on the rare occasions when it is visible, scarcely brighter than the moon in other latitudes. As to the moon itself, and the stars, the clouds and fogs rarely permit them to betray their existence.

No fish worthy of note, not even fishes of prey, abound in the adjacent waters, by reason, perhaps, of their containing poisonous minerals or deadly exhalations from the volcanic fires beneath them.

Yet the dark, grim sea inclosing Desolation has done something to repair the sterility of the island.

Penguins, ducks, gulls, cormorants and other roaring birds are plentiful in some of its harbors.

Seals also abound.

Strange and terrible land!

Not a single human being, so far as is known, has ever lived there, save as is now to be recorded in these pages.

Near the middle of a dull, dismal afternoon, some eleven weeks later than the date of the preceding events, the good ship *Flying Childers* drew near to the island of Desolation, shaping her course toward its northernmost bay, called by Captain Cook, Christmas Harbor.

A fair breeze was blowing from the north, and the ship was carrying every stitch of her canvas, including studding-sails.

Her crew—both watches—were busy about the deck, and her passengers—a score in number—had gathered in groups, mostly forward, and were gazing with great interest upon the wild, rugged shores before them, so far as the fog suspended upon those shores permitted them to become visible.

The ship had come here for water, nearly all her water casks having been stove or started during a squall of ten days previously, and every soul aboard of her having been since that date upon short allowance.

Upon the quarter-deck stood Capt. Luke Pedder, looking unusually happy, with Will Hawley beside him.

"I mean to get our water aboard before dark, Captain Pedder, and so avoid losing a night here," said the young executive, totally unconscious of the plot to leave him alone on the desolate island, and of the extraordinary adventures which were before him. The strange events that happened there, and indeed the whole of this thrilling story, will be found in The New York Ledger, which is now ready and for sale at all the book-stores and news-depots. Ask for the number dated July 13, and in it you will get the continuation of the story from the place where it leaves off here.

NEWS CONDENSER.

—A Michigan clergyman had himself photographed in his pulpit, which was flowered for the occasion.

—The French band now at the Peace Jubilee has been authorized by the President of France to visit Chicago.

—Bob Pond, near Middletown, Conn., without visible feeder or outlet, nobs fifteen feet up and down quite regularly.

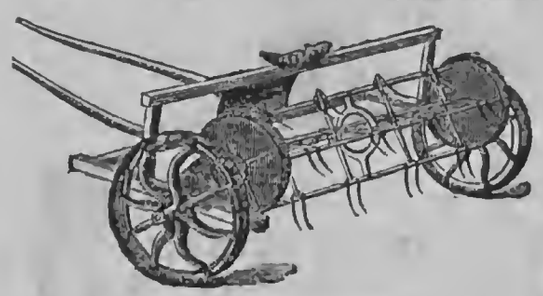
—Most of the Democratic State Conventions held last week appointed Greeley delegates to the Baltimore Convention.

—The representatives of the press at the Jubilee, during its first week, used up twenty-two reams of paper—chiefly in abuse.

Implements, Machinery, &c.

THE

AMERICAN HAY TEDDER



Enables the most important Agricultural product of America to be cut, cured and stored in the barn in one day. Improves the quality and increases the value of the hay crop. Prevents all risk of damage from storms and sudden showers. Is simple, durable and of light draft. Was awarded the New England Agricultural Society's only first prize, at the Great Field Trial, at Amherst, Mass., as being superior to all others, and the best and only perfect machine for tedding or turning hay.

MADE ONLY BY

AMES PLOW COMPANY,

53 Beekman St., New York,

and Quincy Hall, Boston.

ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats; Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler; No. 3, a medium size, having 3.85 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing:

Anderson's Low Pressure Steam Heater,

for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

For further particulars address

P. P. MAST & CO., Springfield, Ohio.

CIDER AND WINE MAKERS.—For description of the best Hand or Power Screw Press, and other Machinery, address A. D. STRONG, Ashtabula, O.

CARHART'S PULVERIZING CULTIVATOR has more practical points than any cultivator in use, and is indispensable as a farm implement. Price, $20. C. C. BRADLEY & SON, Manufacturers, Syracuse, N. Y.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

The Herdsman.

KERRY CATTLE.

ILLUSTRATIONS of Kerry cattle are given herewith. These Kerry cattle belong to the "curved or middle-horned race," and are considered the sole modern representatives of the ancient breeds of Irish cattle. The true Kerry is described as "a light, neat, active animal, with fine and rather long limbs, narrow rump, fine, small head, lively, projecting eye, full of fire and animation, with a fine white cocked horn tipped with black, and in color either black or red"—never roan.

There are several crosses or sub-varieties of the breed. One, and the most prominent, is known as the "Dexter," which "has a round, plump body, square behind; legs short and thick, with the hoofs inclined to turn in; the head is heavy, and wanting in that fineness and life which the head of the true Kerry possesses; and the horns of the 'Dexter' are inclined to be long and straight." It must not be supposed, however, that the "Dexter" is to be considered a spurious Kerry, although not an original Kerry, which is the meaning we wish to convey by the term "true Kerry."

The Kerry cow is handsome, small in point of size, very docile, a great pet when kept by owners of suburban villas, bears confinement well, is very easily kept, and an excellent milker when well cared for in proportion to the amount of food consumed, fattens easily and the beef is fine and well-flavored. Just now more careful attention is being paid to the breeding of Kerrys than heretofore, and this "Poor man's cow" is attracting merited attention.

NOTES FOR HERDSMEN.

A Cow that Did Not Clean.—I have a young cow that dropped her second calf on May 30th. She did not clean; then I gave her some oats and rye meal, but it did no good. I then got a cow doctor to take it away (I mean the after-birth). The hand was introduced into the passage, and nothing found. He said she was all right. It appears not, for now it is dropping away from her. Is there anything that will hasten it along? She does not appear sick, but looks thin, and seems to eat well. Last Summer, after dropping the first calf, she gave nine quarts of milk; now she gives only seven. Is the milk fit to use? I might add that when she lays down this comes away from her in pale yellow matter.—A READER, *June* 10.

PROBABLY, the cow is well by this time. Good care and good feed is the best remedy we know of, letting nature work her own cure. It is not a dangerous condition, so long as the cow retains her appetite. We have had many in the same condition, with never unfavorable results. This should have been answered before, but was overlooked.

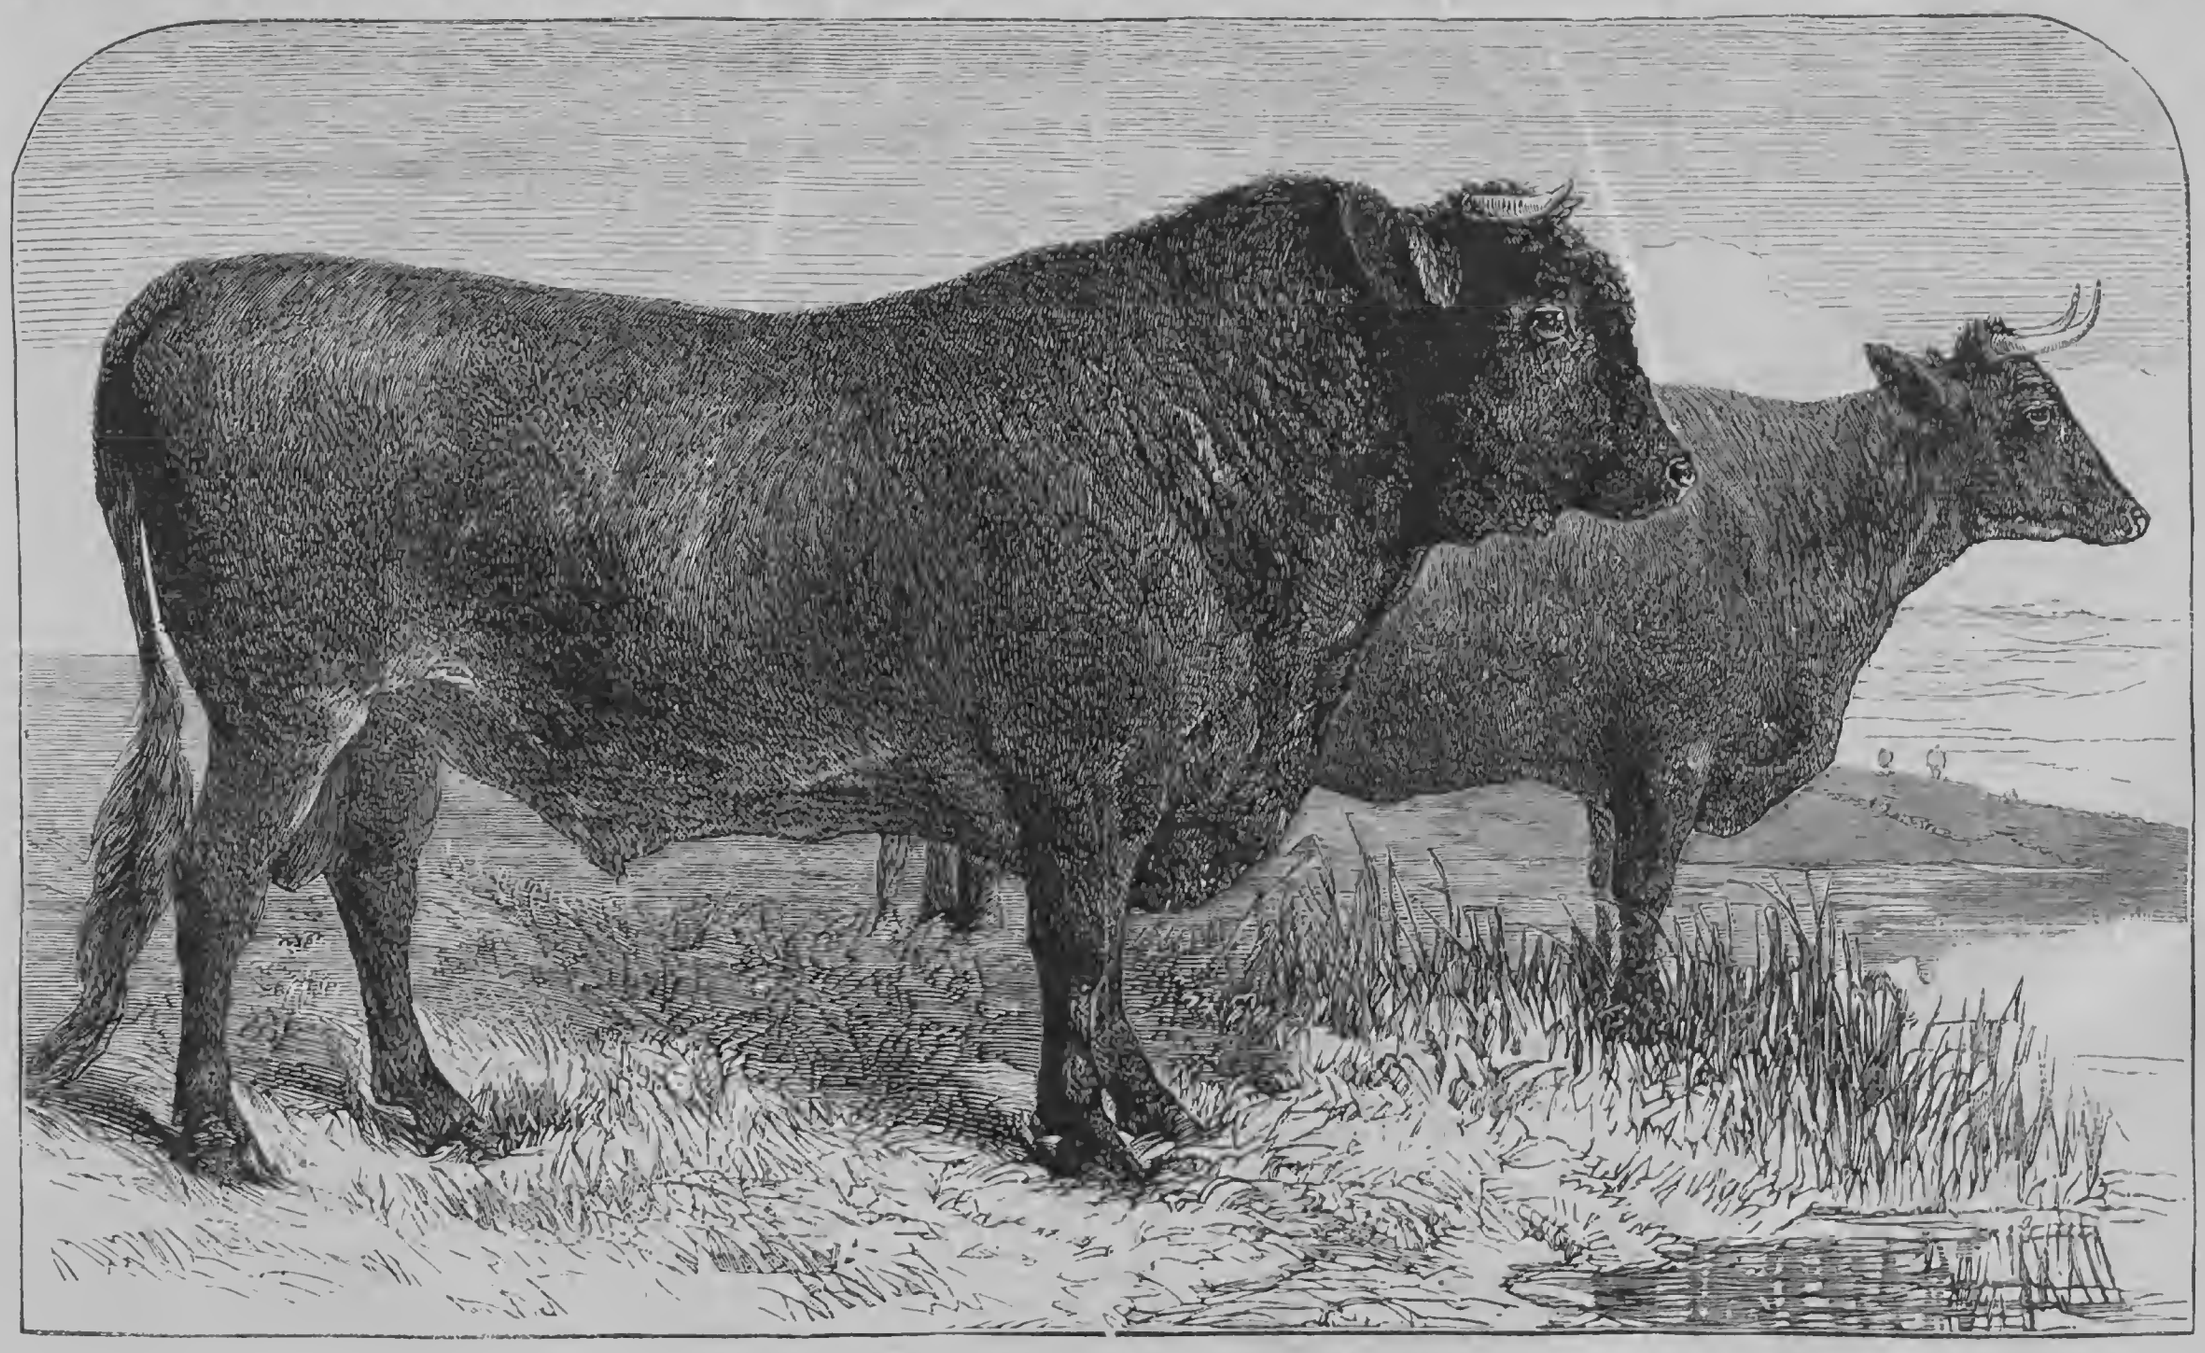
Caked Udders.—The most efficacious remedies are bleeding about one week before the period of gestation expires, and the withdrawal of the milk from the udder so soon as it begins to fill to any extent. These apply at the time of calving; but signs of caked udder at other times should be allayed by bleeding and a dose of one table spoonful of saltpetre, dissolved, and given in the cow's drink or mixed with meal. If cows are occasionally troubled with caked bags, an admixture of saltpetre with their salt will usually have an allaying effect on the difficulty. High feed engenders the disease, and should be diminished in such case, especially just before and following the dropping of the calf. If a fleam is not to be had readily, a slit in the end of the tail is nearly as advantageous as bloodletting with that instrument.—G. B. D.

Preserve the Calf-Flesh.—A celebrated Irish farmer once gave the following excellent advice to a young herdsman: "As a breeder, you must be careful not to lose the calf-flesh. If you do so by starving the animal at any time of his growth, you lose the cream—the covering of flesh so much prized by all our retail butchers. Where do all the scraggy, bad-fleshed beasts come from that we see daily in our fat market; and what is the cause of their scragginess? It is because they have been stinted and starved at some portion of their growth. If the calf-flesh is once lost, it can never be regained. A great deal of tallow may be got internally by high feeding, but the animal can never again be made one that will be prized by the great retail butcher."

Cow that Leaks her Milk.—IRA WOOLSON asks for a remedy for a cow that leaks her milk. It is sometimes prevented by placing an India rubber ring around the teat after milking. Another way is to milk the cow three times a day. This we think the better method. Another way, often practiced, is to apply a small quantity of collodion to the end of the teat after milking. This forms at once a thin, tough membrane, or skin, which will prevent leakage, and is easily removed before milking. Collodion may be had at the druggists.

Cows in Clover.—NELSON JUDD should not turn his cows into fresh clover when it is wet; and at first they should only be allowed to remain there long enough to get a good feed without gorging themselves. In case they bloat, turn to the RURAL NEW-YORKER May 13, 1871, page 304, follow directions and learn how easy it is to make the money invested in this paper save you the price of a cow.

To Stop a Horn Bleeding, cover a cloth with tar and bind up. Keep on till healed.



KERRY CATTLE.

Field Crops.

GREEN CROPS FOR THE DAIRY.

Now that some green crop to feed during Summer in case of drouth is considered by a majority to be *absolutely* necessary, may it not be well to inquire "What is the best crop which can be raised for that purpose?" The fact that it is profitable to raise and feed sowed corn, and that is the crop, nine cases out of ten, raised for that purpose, may *seem* to indicate that it is the most available crop; but it does not prove positively such a proposition.

At various times during the last few years several of our best farmers and some practical scientific men have pronounced against the use of sowed corn, and have tried to show that from its composition it could not be well adapted to the production of milk, but that it merely helped the cow as a flesh-former and sustainer of animal life, leaving the flow of milk to be supplied by the other food consumed. This may or may not be true; still, if nothing better can be found, it will pay to raise and feed this crop, for it takes a large proportion of what the ordinary cow eats to sustain life.

Some of those who have opposed the use of fodder corn have offered nothing to supply its place; and some *have* proposed another crop which, it is claimed, is its superior for green soiling, viz., clover. Now, allow me to state briefly wherein, after thorough trial of the latter crop, I believe it to be much better for the purpose named than sowed corn:—First, sowed corn, it is well known, requires very rich land, and is a very exhaustive crop. It is quite customary for farmers to have a small piece of suitable land which they will keep exclusively for sowed corn, giving it a liberal dressing of manure every year. I presume that few have ever considered how unjust to the rest of the farm such a course is; and how expensive it really makes such a crop. Now, clover is well known to be just the reverse of this. Of course, to raise a heavy crop the land must be in good condition; but such land is *not* impoverished by the heaviest growth of clover, if cut green—the roots making good for all that is taken off. This I think will not be disputed.

2d. It can be raised with less labor. If a farmer follows a rotation of crops, which is done by most of the best farmers, he will have enough for soiling every year with no extra labor of raising. To illustrate this: On a farm where thirty cows are kept there will rarely be less than five acres to break up every year, and the same amount to seed down, thus giving five acres of clover every year. If the land is rich, this will give two crops, the first of which should be cut *early*, before it lodges; and then the second crop, treated with plaster if the season is very dry, will be up so as to mow a good swath early in August, about the time feed will be needed for the dairy; and it will be enough to feed thirty cows a good mess daily until killed by frosts, after which time corn is the only available crop. It may be said that the sowed corn can be included in the regular rotation of crops, the same as the clover, and the expense of raising thus be avoided. But, as a rule, only two crops of grain should be taken in succession; the farmers need to have the first a regular corn crop, and the second must be a crop with which the land can be seeded to grass.

3d. It is much more easily and cheaply cut and fed. Green corn is a very bad crop to cut and handle, especially in wet weather, when it is impossible, or nearly so, to cut and handle it without getting one's clothes completely saturated with water. Clover, however, can be mowed with a hand scythe into "backswaths," and then pitched on to a wagon between two of these, with a three-tined fork, easily and rapidly; and in wet weather a rubber coat can be worn, and as the clover does not have to be taken in one's arms, as in handling corn, a person can keep dry, besides doing it much easier.

If now to these three reasons can be added the fourth, that it will produce more milk, it will be clear to all that it is the better crop of the two. On this point I do not claim any scientific knowledge, and but slight experience, but the little experience I have had with the two crops would lead me to give clover the preference as a milk producer; and "I know whereof I speak" in regard to the labor of cutting and feeding clover. Furthermore, every scientific opinion I have read is that clover very much exceeds sowed corn as a milk producer.

Cattaraugus Co., N. Y. B. B. W.

WHEAT FOR HOEING.

A CORRESPONDENT of the RURAL NEW-YORKER inquires as to the quantity of wheat to use, and the distance apart to put the drills, for hoeing. As I have had a little experience in that line, I thought I would give him the method and the result for what they are worth.

Last Spring, my brother and myself each got one pound of wheat of D. W. RAMSDELL, and, wishing to make the most we could of it, we concluded to plant in drills and cultivate it. Accordingly, we prepared a rich piece of ground, and marking out in drills from 13 to 14 inches apart, the wheat was dropped, one grain in a place, about six inches apart in the drill, and properly covered, and it was hoed twice during the season. I believe that, in the manner in which we planted, it will take about 12 pounds to the acre.

It made a rapid growth, and stooled out wonderfully, making from 5 to 25 good stalks to the stool, so that by the time it headed out, the ground was completely covered, and the heads stood as thickly as they generally do in fields of grain. But the ground in which we planted was too rich; for it made so rank a growth that a hard storm, which we had shortly after it headed and before it had filled, laid it almost flat on the ground, and, in consequence, it filled very imperfectly. Notwithstanding this, however, my brother threshed, from his one pound of seed, four and a half bushels, good heaping measure; but, as mine was planted several days later, and was, consequently, less advanced at the time of falling down, I received but three and a half bushels.

This I consider an extraordinary yield from the quantity of seed sown; but lest Mr. D. W. RAMSDELL should humbug others with his wheat, as he already has some, and as he has thousands with his Norway oats, permit me to state in connection that the wheat is utterly worthless, as it is so extremely hard and flinty that it will not make flour. That people may be on their guard, I will state he calls it "RAMSDELL'S Green Mountain Wheat."

Cedar Falls, Iowa. S. S. BOZARTH.

FIELD CROP REPORTS.

IT is wonderful to see, when we take time to analyze them, how few of the statements that we hear made in ordinary conversation are supported by facts; they are generally the result of prejudice alone. This was forcibly suggested to me the other day by a conversation that I had with an old man, a farmer, and a representative of a pretty large class, too, from Iowa. We were talking of corn. He spoke in a derogatory manner of our Alleghany hills, and said that he could raise corn more profitably in Iowa at twenty cents a bushel than I could here at seventy-five; a pretty general impression, I believe, but a mistaken one. As I, too, might be accused of prejudice, I will, if any one desires it, give figures to "back my opinion." I would like to suggest to all the farmers in the country who think that farming will justify them in applying their knowledge of double entry, that an accurate account of their corn crop be kept, and, in November, sent to the RURAL NEW-YORKER, (and I ask the RURAL to publish as many such reports as it deems advisable). Give the value of land, the price of labor, horse time, and the implements used; also, the cost of plowing, planting, working and harvesting, and the value of the crop, corn and fodder on the farm at regular market price. Such a system as this, generally adopted and persevered in for a few years, would come nearer giving us the true centers of the profitable corn-growing region than Mr. WALKER has.—A. R. K., *Charleston, W. Va.*

WE will gladly give space to such reports, if they are furnished us.

TOPPING AND CURING TOBACCO.

As one of your readers wishes to know the proper time to top tobacco, and another the best plan of curing, I have concluded to give you a common way of doing each with us. For topping, wait until the button is seen, and then break out the top, leaving the top leaves on the plant four or five inches long. Prune off the ground leaves when the tobacco is hilled, clear of the dirt.

For curing yellow tobacco, put it in the barn as soon as cut, and begin to cure (which is called steaming) with a heat of about 90°; keep at that heat thirty-six hours; then raise the heat slowly every few hours until the leaf is cured, not going higher than 120°. After the leaf is cured, the heat may range as high as 160°, to cure stalk and stem. The whole time occupied in curing a barn of tobacco, stalk and stem, should not be more than four days.

In cutting tobacco, we split the stalk to within a few inches of where it is cut off at the ground and straddle across a stick about four and a-half feet in length, putting six or eight plants to the stick.

Pisciculture.

FISH CULTURE AS A SOURCE OF FOOD SUPPLY.

[CONCLUDED FROM PAGE 11.]

When men tell us they have raised a hundred pounds of trout from fifty pounds of chopped liver, we may be pardoned for smiling incredulously. It is true that they may actually have produced a hundred pounds of fish; but it is certain that if this be so, they have omitted some very important elements in the calculation. Indeed, most of these alleged cases of large results obtained by the consumption of a small amount of food are really due to causes which never enter into the calculation of the narrator. Thus some person encloses a portion of a running stream and stocks it with trout. He feeds them with a known weight of animal matter, and obtains, as the result of his efforts, a weight of fish that far exceeds the actual amount of food consumed. In this case it is very obvious that the fish have drawn their supplies, not from his hands alone, but from the whole extent of the stream above him, and every such enclosure that is made in the upper part of the stream will diminish his receipts. When fish are kept in the open stream they never become so numerous as to give the results obtained by these experimenters, the reason obviously being that the enclosed portion of the stream presents to us, in a concentrated form, the results due to the productive power of all that part of the stream that lies above it—a part that may be miles in extent.

These obvious facts lead us directly to the weak point of artificial fish culture. So long as the fish are fed on the natural productions of the stream it will be profitable to raise them, but whenever the additional food that they require exceeds in amount that which can be procured as waste, their culture must fail to yield a profit. A certain amount of cheap food, such as the offal of slaughtered cattle, and the curd of milk used for making butter, can always be obtained, but if we attempt to go beyond this and raise cattle and milk for the mere sake of the fish, the process cannot pay. Except in very peculiar situations, a gallon of milk is worth a great deal more than the amount of fish that it will produce. And yet in the face of these almost self-evident propositions we hear the most extravagant accounts of the weight of trout that have been raised from the milk of one cow.

The production of cheap fish depends, then, primarily upon the production of cheap animal food for them. Of course we now speak of such fish as trout, bass, perch, pickerel and other carnivorous fish, which, however, form the great bulk of the fish that are consumed by man as food. There are a few, such as carp, that feed partly on animal and partly on vegetable food, and fortunately for the fish culturist, there are numerous species of small fish that thrive well and multiply freely on a purely vegetable diet, though they all eat insects, worms and small fish when they get the chance. The trout is the most important fish on the list of the pisciculturist; its food consists chiefly of insects, small fish and worms. Of these, insects seem to be the most fattening, and worms the least so; the following experiment, which to our mind is not conclusive, however, being adduced in support of the proposition:—Equal numbers of trout were confined for a certain time by gratings to three several portions of the same stream. The fish in one of the divisions were fed entirely upon flies; in another upon minnows; and in the third upon worms. At the end of a certain period those which had been fed on flies were the heaviest and in the best condition; those fed on minnows occupied the second place; while those fed on worms were in much the worst order of the three.

FRANCIS, who gives the details of this experiment in his work on "Fish Culture," says that the probability is that had another pen been set off, and the fish fed with a mixture of all these species of food, they would have far exceeded any of the others in weight and condition. We are not told, however, whether or not the different lots of fish were arranged one above the other; if this was the case, it is probable that the relative positions of the fish had more to do with their condition than had the character of the food supplied to them. Fish generally depend for their supplies upon the food that is carried *down* the stream, and if the several pens had been arranged one before the other, the fish in the upper pen would have taken all the best food for themselves.

If, then, we exclude artificial feeding, except in the case of very young fish, we must depend upon the following sources of food for the support of our stock:—1, the insects bred in the water; 2, the small fish that feed chiefly on vegetables and insects; 3, insects blown on the water from the land. The first named source of food is altogether the most important. Insects are either vegetable feeders or they live upon dead animal matter and those microscopic animalculæ that from their very minuteness escape the vision of larger animals, and, consequently, do not serve as food for ordinary fish. And we risk nothing in saying that the key to successful fish culture will be found in such discoveries as will enable us to propagate and raise large quantities of water insects of all kinds. To attain this end their habits must be observed, the kinds of food best adapted to them must be studied, and everything that may tend to aid us in raising them in large quantities must be carefully investigated. It will probably then be found that an essential accessory of every trout pond or stream is a series of small pools in which are grown such vegetables as best promote the growth of these peculiar insects that form the special food of the trout. To these insect-breeding places the trout should never be admitted, lest they should so thin the stock that breeding would proceed too slowly. If kept free from the intrusion of the trout, they will multiply very rapidly, and means should be provided for sending occasionally through their inclosure a stream which will wash a small quantity of them into the main pond. It is well known that it is owing to the marvelously abundant insect life with which it is supplied that the famous Caledonia Creek is so well adapted to the raising of trout. One cannot lift a stone or pull a weed in that stream without finding it alive with insects or their larvæ.

In their native streams small fish form a considerable item in the bill of fare of every good sized trout; but in ponds and cultivated streams the raising of these small fish is too expensive a process. Every one of them will probably consume as many insects as would have raised a trout of equal size, and after all they form but a mouthful for a large fish. It is well known that in Scotland many lakes have been seriously injured by the introduction of minnows, from the fact that these pigmies can follow the insects into the shallowest water, and they consequently destroy not only the surplus that escape into the deep waters of the lake, but the breeding insects as well.

The insects that fall into the water, or are blown into it from the shore, form an important part of the food of most fish in ponds and streams. It therefore becomes a serious question whether or not the injury inflicted by the falling leaves of deciduous trees is not more than made up by the insects which are attracted by those trees, and which, in their flutterings, fall into the water. In all cases, however, low bushes are to be greatly preferred to tall trees. The particular species that should be selected has not as yet, we believe, been determined.

In its purely scientific aspect, fish culture presents one of the most beautiful of those wondrous cycles which we find so constantly occurring in nature. The sun-light falling on a sheet of water, starts into life myriads of microscopic vegetable organisms which not only absorb the deleterious organic matter, such as the soluble parts of dead plants and animals, and thus purify the water and prepare it as a habitation for living animals, but they decompose the poisonous carbonic acid and replace it with life-giving oxygen. These minute plants, most of which are visible only under powerful microscopes, and are therefore useless as food not only to fish, but to the larger insects, become the prey of minute animalcules, most of which are themselves too small to be available as food to trout or even to minnows. But they are eagerly devoured by minute insects and crustacea which fatten rapidly upon them, and form in their turn admirable food for the smaller fish and for those insects that are most valuable to the pisciculturist. And thus the circle is completed, unless where broken by the hands of man, for when these larger fish die a natural death they ultimately become food for the very microscopic plants from which, through a long chain of changes, their substance was originally derived.—J. P.

Dairy Husbandry.

DAIRY MATTERS IN RUSSIA.

We recently were favored with a visit from Paul Winogradoff of St. Petersburgh, a very intelligent Russian gentleman, who comes to this country for the purpose of examining our dairy system and obtaining a knowledge of the best methods of factory cheese making. We learn from Mr. Winogradoff that sixteen cheese factories are at present in successful operation in Russia. They are located between St. Petersburgh and Moscow, and around the latter place, say within a radius of one hundred to one hundred and fifty miles. The factories in Russia are upon the plan of the co-operative dairies of Switzerland. Indeed the buildings and the machinery are all modeled after Swiss patterns. The factories vary in size, the number of cows from which milk is delivered ranging from two hundred to four hundred.

The first factory in Russia was introduced during the year 1865, by Nicholas Verestchaguin of St. Petersburgh. He had made himself acquainted with the co-operative dairy system of Switzerland, and was induced to make the experiment of establishing a factory in Russia purely from philanthropic motives, in order to promote the prosperity and well being of the peasants. Possessed of large wealth, and under the old system the owner of serfs, he felt desirous for the advancement and progress of this class under their newly acquired freedom. He believed the system of co-operative dairies to be one of the means in accomplishing the object sought, and so far it has proved eminently successful. Up to this time, we are informed, the Russians have followed pretty closely the various systems of cheese making as practiced upon the continent of Europe. Even in the delivery of milk at the factory the peasants owning but few cows carry the milk in pails to the manufactory, while the more wealthy have it deposited in barrels, which are slung upon hand-barrows, and in this way the men deliver the milk.

The varieties of cheese made at the factories are the Edams, a small, ball-like cheese weighing some five or six pounds, "Switzer kase," or Swiss cheese, is also quite common; the Limburger and Gruyere and Schabzeiger, and other European kinds, all of which find a ready market in St. Petersburgh and other Russian cities.

Farm dairying is carried on in Russia to a considerable extent, the dairies sometimes numbering from 100 to 150 cows.

At the factories patrons receive from the sales of cheese in proportion to the quantity of milk delivered, and the expenses for manufacturing are also shared among them in the same proportion. In this respect there is little difference between their system and that of America.

In the sale of cheese they have an admirable arrangement which is worthy of adoption in other countries. They have co-operative stores where the cheese is received and sold, on account of the patrons, eight per cent. on sales being charged to cover all expenses for conducting these establishments. All the transactions are for cash, and as soon as sales are made the money is transmitted to the factory to be divided among patrons. Under this system it will be seen the cheese does not pass through the hands of dealer after dealer as with us, and consequently the patrons get the whole profits on sales instead of dividing them up with the middle men, as under our system. The best grades of cheese sell at the co-operative stores at an average price of from 15c. to 18c. per pound, but badly made, inferior or damaged cheese often goes as low as from 5 to 6c. per pound.

Cheese making at the factories commences about the 1st of April and closes in October, except in certain factories where it is made the whole year round. Cheese makers are imported from Switzerland and Holland, and are paid in proportion to their skill. A good cheese maker and his wife as assistant get about $500 per annum and board. The latter being provided in the raw state, that is to say, a certain quantity of wheat, of pork and beef, of butter and cheese, together with a vegetable garden being given, sufficient for the maintenance of the family.

Milk is sold in St. Petersburgh and other cities on the co-operative system at the stores. It is packed in bottles holding about two quarts each which are set in cold water while being carried to the store, and are also placed in cold water after delivery. Those desiring milk go to these stores and procure their supply from day to day.

There are also butter factories in Russia, the butter being made on the Holstein plan, and by manufacturers brought from Holstein especially for the purpose. The skimmed milk is sometimes made into skim cheese, but more frequently it is fed to swine, provision being made at the factory for the disposal of the whey or milk in this manner.

Mr. Winogradoff expresses himself greatly pleased with the superiority of our dairy system and our manufacture over all others. He has been greatly interested in the perfection of our cheese making machinery and appliances, and proposes to introduce them into Russia. He states that various papers from our pen have been translated into the Russian language, and that there is much interest manifested among his people to obtain the best information respecting the American dairy system, and that he might see and learn practically that system he undertook the journey to America. He brings letters of introduction showing the object of his mission, and from his intelligence and keen faculty of observation we have no doubt he will carry back to Russia very much that will be useful to that people.

FORMATION OF FAT IN MILK AND CHEESE.

Commissioner Hirschberg, in a communication to the *Milch Zeitung*, makes the following interesting remarks concerning the formation of fat in milk and cheese. He says:—Subsequently to Herr Voit's demonstration that fat arises from the decomposition of albumen in living organisms, Herr Kemmerich satisfied himself that the same process goes on in albumen after it has been removed from the body. He found that the fatty matter contained in milk increases in quantity for a few days after it is drawn, while the amount of albumen becomes less. But the formation of fat in milk freely exposed to the air is conditional on the development of fungi. If their germs are deranged by the milk being raised to a temperature of 180 Fahr., or if means are purposely taken to prevent the admission of fungus germs to it, while the access of air is still permitted, the fatty contents of the milk diminish; the existing fat is oxidized by the air, and no new compensatory supply is formed.

Exactly analagous processes attend the formation of fat in cheese. Here, also, the existing proportion of butter is diminished by the atmospheric air on the one hand, while on the other a fresh supply is formed by the influence of the fungi which are being developed. According to the preponderance of one or the other processes the fat contents of old cheese will rise or fall in amount.

"Practically," says Herr Kemmerich, in concluding his paper on this subject in Pfluger's Archives of Physiology, "the method by which we can regulate the formation of fat in ripening cheeses to any desired degree has long been known to us. If we wish to produce extremely rich "hand-cheeses," above everything, very cool and not too dry cellars are required, and care must be taken to pack small cheeses very close together, so as to prevent, in some measure, the access of air."

The philosophy of curing cheese is imperfectly understood, at least in America. Many dairymen, as well as cheese dealers, do not believe that fat in cheese can be produced in any other way than by the cream which is in the milk. And yet it has been proved over and over again, that cheese properly cured, though made from milk partly skimmed, is often more mellow and rich-tasting than cheese made from whole milk, but not so well cured. Perhaps our cheese makers will get an idea from the above communication that may be turned to some practical account in the curing of cheese.

Floating Curd.—Dr. Stone at N. W. Dalrymen's Convention said the floating curd arose from various causes. It might arise from disease in cows. Milk that is productive of this curd has a sweety, sickish taste. Such milk don't develop acid fast enough; mixing a little sour whey with such milk is profitable. Floating curds are not plenty and can be generally avoided by cooling and airing the milk. The doctor used a rake in stirring milk, but it had clean teeth. Sufficient rennet should be used to bring the curd in 15 minutes, or say 30 minutes. Rennets had different degrees of strength, and cheese-makers should try their strength when using them.

Sheep Husbandry.

SHEEP ON COTTON FARMS.

D. Wyatt Aiken of the Rural Carolinian believes in sheep for cotton farms just as Northern farmers do for wheat farms. His process for joining wool growing to cotton growing is, substantially, after this manner:—Annually, in September or October, two, three or a half dozen acres of land are thoroughly prepared by deep plowing and heavy manuring, and sown either in barley or rye. If the fall is late and the grain grows too rapidly, it is eaten down by my sheep until about Christmas. When the time arrives to shear the sheep the lambs are properly marked and trimmed, and turned upon this rye or barley field, to remain until they are weaned. The ewes are daily driven to pasture and at night are hurdled. All the straw and chaff of the grain crops should be carefully saved for Winter fodder for the sheep. Three acres of good land, well manured, broken up and cross-plowed and nicely harrowed, in the latter part of May, will yield a sufficient crop of crab-grass hay to feed fifty ewes during an ordinary Winter.

Cotton fields may be sown to rye or red oats, at the last plowing, and would produce luxuriant pasturage for sheep from the first of October till the tenth of March. The manure dropped by the sheep would benefit the land, and the remains of the green crop, to be turned under at the April plowing, would be so much the better for the next crop of cotton.

By the first of October the oats sown in the cotton fields in July are high enough to pasture the sheep upon. If the cotton is picked out so as to prevent its being knocked out by the sheep as they pass through it while grazing, they will pasture off the oats close to the ground before eating a boll of cotton, or injuring it in any way beyond stripping the luxuriant stalks occasionally of their too heavy foliage. This is beneficial, for it admits heat and light to the hidden bolls, thereby hastening their maturity and preventing their decay. Usually this programme may be followed to the letter. I have seen fields, just after the first freeze in the fall, white with cotton, presenting the beautiful picture of being gradually darkened by the hands picking rapidly the snowy fleece whilst trampling amongst the luxuriant oats or rye half leg high, and at the same time a flock of industrious sheep deployed across this blackened area, rapidly converting into mutton and manure what would otherwise be lost.

Broomsedge, that bane to Southern farms, can be most economically utilized for Winter feeding of sheep. The 4th of September, 1871, I mowed two acres of broomsedge. In 24 hours it was completely cured and housed, making a pretty, lively-colored, greenish hay. Four hundred pounds of this hay were baled and exhibited at our State Fair, in November, and sold conditionally—if nothing would eat it, no price; if eaten, same price as the other bales of clover and crab grass sold to the same man. He has since informed me his cow made no distinction, but ate from the three bales with equal zest. The remainder of this broomsedge hay was fed regularly during the Winter to my sheep and calves, and eaten voraciously. This broomsedge had taken possession of a plot that had become "clover sick," and looked so luxuriantly green when about shin high, that the experiment of harvesting was suggested, and I have no cause to regret having made the experiment.

Any broomsedge old field burned off about February 1st, will show a green coat sooner than any other summer grass, and serve admirably as early Spring nipping for sheep, some time before cows can eat it. Indeed, sheep will fare well during the Winter on broomsedge fields alone, for in every tuft of the grass, even in mid-Winter, there are one or more sprigs of green grass, which sheep soon learn to burrow for, and, hence, find nutritious food on the very land that would impoverish and ultimately starve a cow.

During the fall of 1871, I housed and salted and packed away, bright clear straw from 175 bushels of barley, 30 bushels of rye, and 1,000 bushels of oats, and about two tons of slightly damaged clover hay. This provender was supplemented by shucks from 350 bushels of corn, 100 bushels of cotton seed, and three acres of very fine turnips; and the whole quantity was fed during the Winter carefully and regularly to twenty head of small cattle, three of them under two years old. By the 5th of April every vestige of this bulk was gone, my cattle poor and requiring additional food.

At the same time last Fall I housed the second mowing from three acres of clover, two acres of crab grass and two acres of broomsedge, which was supplemented by one hundred bushels of cotton seed, for my ewes and lambs in wet weather, and the oat fields for them in dry weather. On the 5th of April my oat fields manifested no injury from being pastured till the 15th of March; the hay nor cotton seed are yet consumed; my 125 grown sheep are in good condition, some of them fat, while the 56 lambs are as sprightly and nimble as cats, and growing rapidly.

The native Southern scrub cow, the hardiest of horned kine, is as expensive to Winter as twenty Merino sheep, (remembering the oats in the cotton fields;) and I would rather carry twenty-five Merino ewes, and as many lambs through such a Winter as the past, than one Durham cow.

Such is my experience and practice, and I see no reason why it is not perfectly feasible on every farm in the South. And not only feasible but profitable, and if profitable worthy of adoption. A flock of sheep on each and every Southern farm, equal in number to the acres on that farm, devoted to cotton, would be valuable adjuncts to the crop, and being of an almost inappreciable cost, would remunerate the Southern farmers more handsomely than any other possible investment of the same amount.

Land Department.

NOTES AND QUERIES.

A Congressional Township, Mr. L. Whitney, Morris, Ill., explains, is a tract of land six miles square, containg 36 square miles or sections of land, numbered from 1 to 36, as per accompanying dingram:

6	5	4	3	2	1
7	8	9	10	11	12
18	17	16	15	14	13
19	20	21	22	23	24
30	29	28	27	26	25
31	32	33	34	35	36

It is so called because surveyed in this manner by direction of an act of Congress. The sections are sub-divided into halves and quarters so that a person may very easily describe his farm by saying that he owns the N. E. quarter of Sec. 6, etc., as the case may be, each quarter of a full section containing 160 acres—just the amount allowed to each soldier for a homestead.

"Shall We Go South?"—We find the following paragraph in the New York correspondence of the Chicago Evening Journal:—"A few weeks since thirty families in St. Lawrence county decided to form a colony and migrate to Virginia. They were all well-to-do farmers, and belonged to a most desirable class of population. A few weeks since they dispatched several of their number to select a locality. The latter, after prospecting extensively, have now returned and counsel an abandonment of the scheme. Their principal ground for so doing is the fact that they were received with no cordiality. Instead of meeting with a warm reception, they report the Virginians gave the cold shoulder to them. They found many Northerners scattered through the State who generally complain of isolation and social ostracism. The scheme has accordingly been given up."

Forest Hill, Harford Co., Md.—There is a great deal of nice land for sale cheap in this State—particularly in Charles Co. I have a son near Bryantown, 26 miles below Washington, D. C. The Baltimore and Potomac R. R. is nearly finished, running through the county. Beantown is the station. I have spent several months there in the last two years, and like it much. The land is free from stone, easily improved, well watered, abundance of timber of different kinds, is healthy away from the Potomac and Pantuxent rivers on which steamers run to Washington and Baltimore three times a week.—L. M. V.

The Poultry-Yard.

THE URAL ICE PIGEON.

THIS Pigeon is of German origin. There are many sub-varieties of it, some of which are of a pale silvery blue, without wing-bars, and without being penciled or spangled, and are designated Plain or Self-colored Ice Pigeons. Others have wing-bars, and are long-muffed or feather-legged. This sub-variety occasionally is to be found spangled, but too often imperfectly so.

The whole plumage of the Ural Ice Pigeon is of a very pale, silvery blue, with the exception of the tips of the tail and flights, which are a dark, slaty color. The wing-bars are formed by neat black zigzag lines, and the pencilling or spangling on the shoulder is neatly defined. The eye is of a hazel color, and the general contour of dove-like appearance, but in size much larger. The neck should be of graceful formation, with a slight infusion in the huckle feathers of a dark greenish tinge, showing a various iridescence. The mandibles are slightly curved, and of a bluish-black color; the feet and legs when not clothed should be of a coral red.

The Ice Pigeon is naturally of a wildish disposition, and a very high flyer, but soon becomes docile, and accustomed to locality, more especially if there are gardens, where it will roam undisturbed for hours together.

For country amateurs this variety is recommended, being a good breeder, feeding and rearing the young moderately well, and generally breeding true to feather.

A flight of the Ural Ice Pigeons on a bright summer's day has a novel appearance when the rays of the sun shine on their delicate plumage, showing the pale silvery hues, which could not fail to please the eye of the most fastidious fancier. This Ural Ice variety of Pigeon has figured most prominently at many of the leading shows, being less common and more graceful than the plain long-muffed variety.

The Siberian or Russian Ice Pigeons are similar to the Ural Ice, but more delicate in their markings. They received their appellation from a well-known retired German fancier and keeper of those varieties.

Many good specimens of Ice Pigeons are to be found with orange and gravel eyes, which are equally admissible with the hazel eye, yet this color is more frequent. Some have been seen with pearl eyes, though rarely.

ABOUT INCUBATORS.

I NOTICE an article under the "Poultry-Yard," headed "Incubators," in which a correspondent asks whether any one, however unskilled, can operate one successfully. Now, this is a rather delicate question to answer, as one would not suppose that any person *entirely unskilled* in the hatching of chicks would wish to dip into artificial incubation; but *this much I can say*, that during the last Winter I purchased an Incubator of —— manufacture (I do not propose to advertise any maker) and at the first attempt made a most *beautiful failure*, hatching only three from fifty-one eggs, which was enough to discourage most poultry breeders; but having the old maxim before me, that "if at first you don't succeed, try, try again," I kept, at it and can say that I would not be without one under any circumstances (if possible). The greater portion of my fowls have been hatched with an Incubator, and I can truly say that it has greatly exceeded my expectations. If your correspondent has purchased one and cannot work it, and will call on me, I will be happy to give him all the information I can, or if he desires any information and is unable to call I will do the best I am able by letter. EDWARD A. ROWE.

Tremont, Westchester Co., N. Y.

POULTRY NOTES AND QUERIES.

Partiality among Cocks.—A henwife in Massachusetts, says the Massachusetts Ploughman, when remonstrated with for keeping two cocks with a flock of twenty-five fowls, explained that one cock was partial to a part of the hens, and showed a decided dislike to the others, and she was satisfied that was the reason why about half the eggs she had set had proved to be rotten, when the balance would bring forth bright and lively chickens. If your readers will watch when they feed their hens, they will often see the cock maliciously run at and fight a part of the flock, showing a constant dislike to them. Be sure not to set eggs from those rejected hens, as they would not prove fertile, but select eggs from hens to which the cock is partial.

Inquiries About Pigeons.—Your correspondent would like some information on the subject of pigeons, particularly on the following topics:—1. What kind of a house should they have for shelter, and how should it be planned and be built? 2. What arrangements must be made for raising them? 3. At what age do they reproduce? 4 What food do they require at different periods? 5. How should they be cared for in Winter? 6. What is the average ratio of increase, annually, under ordinary circumstances?

By answering the above questions, or furnishing an article on Pigeon Culture, from some source, you would greatly favor many who are interested in this subject.—JOHN Q. ADAMS, *Kent Co., R. I.*

Fowls Dying.—A Jamestown, N. Y., correspondent has been troubled for two years with his fowls dying. "They sit around, stupid for some days—some a week, and some only a few hours. They get white around their heads, their comb becomes white, their droppings are thin, and sometimes a greenish and sometimes a yellow color. We have sometimes had a dozen die in one day. Who can give us a preventive or remedy?"

"Big Things" in Fowls.—E. D. WILT writes us:—"I have a cross-bred hen that laid an egg every day for ten months and two weeks in the years of 1870-71; that is, from October, 1870, to October, 1871. I also have, alive and well, in my yard a full Brahma hen seven months old, that was hatched from a double-yolked egg; also a pair of chicks that were hatched from a double-yolked egg.

Floricultural.

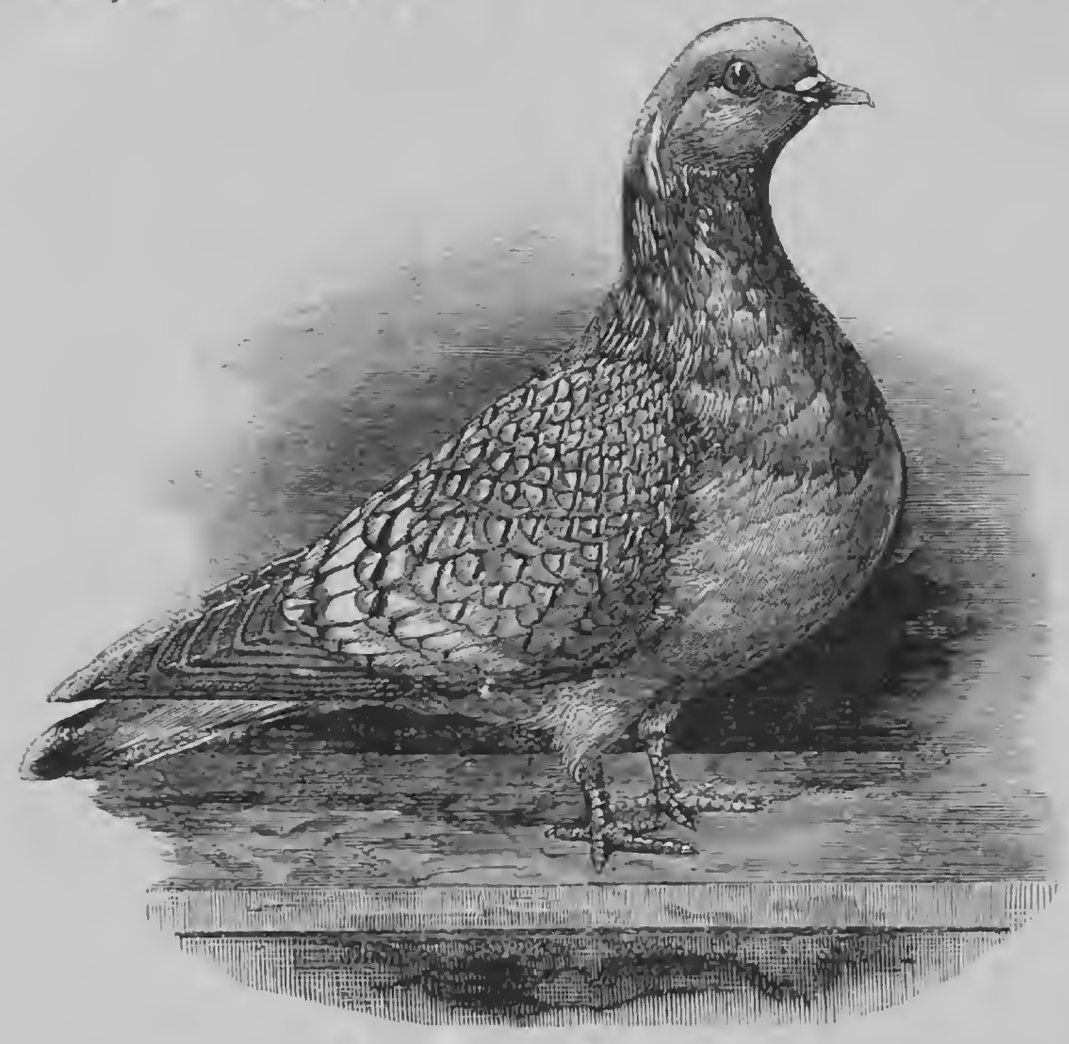
FLORICULTURAL NOTES.

Erythririo Herbacea.—I inclose, for name, the leaf and two flowers of a plant I have. The root is perennial. It grows luxuriantly from 1st May to early frost. Is now in bloom. The flowers are in spikes, with nine blossoms in a cluster around the stem—the whole spike containing some ten or twelve of these clusters. The flower spike is directly from the ground (root), and has no leaves on it. The plant is a shrub, growing during the season as much as six and eight feet. It throws up a great many stalks (leaf) from the root; on these stalks the leaves are alternately placed, not in circles as in case of the blossoms. It is a very handsome plant, and the flower spikes beautiful.—FRANKLIN GARRETT, *Monroe, La.*

A beautiful plant, the name of which is given above.

Seeds from the South.—Through the medium of the RURAL'S columns, I formed the acquaintance of a Southern lady, to whom I am indebted for many rare and beautiful plants, natives of Mexico and Texas. Several species of Cacti have proven nearly hardy, and two are the most persistent bloomers. I have Erythrina, Acacia, and scarlet-flowered Pomegranate growing nicely in the open ground. I received the seed of several varieties of wild plants without names. They germinated with difficulty, but the plants look so well as to amply repay the care they required.—ROSE GERANIUM, *Luzerne Dale, W. Va.*

Salt Water Sand for Propagating Purposes.—B. S. P. is advised if he can get fresh water sand, for propagating purposes, he had much better do so. Salt sand is not highly esteemed for this purpose by florists. It soon becomes covered with a green fungoid, which is fatal to plants.



THE URAL ICE PIGEON.

Ants and Peony Buds.—What will keep ants from destroying Peony buds when nearly ready to bloom?—WESTERN MOUNTAIN GIRL.

SULPHUR, lime or ashes; but are you sure that the ants are destroying your Peony buds? Look closely and see if they are not attending to the *Aphides* that are on the buds. We should always be careful and not accuse an insect of doing harm until we are quite certain of the fact.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Dwarf June Berry.—*June 26.*—I mentioned this beautiful variety of the common shad-bush or June berry in my Diary of June 9th, 1871; but the plants are bearing so profusely again this year that I cannot allow the opportunity to pass for calling attention to it again. The past cold winter did not injure the plants in the least, and every sucker of a foot high is covered with dark purple berries. It is true that they will not compare with strawberries or raspberries in flavor; but when we take into consideration the beautiful show that the flowers make early in spring, it cannot be denied that this June berry is an acquisition to our gardens. The berries commenced ripening early in the month, and the bushes are still loaded with ripe and green fruit. Birds and children at least will favor the cultivation of this shrub, even if there is no demand for the fruit in market.

Among the Black-Caps.—*June 27.*—The earliest of the black-cap raspberries are ripening quite rapidly, and I am looking about to see which I can spare best among the few that were saved from the bonfire last spring. In examining the garden black-cap, sent out a few years since by Mr. DOOLITTLE, I have been somewhat surprised that any man should have dared to risk the dissemination of such a worthless fruit. Now Mr. DOOLITTLE gained quite a world-wide reputation in disseminating what is known as the Doolittle Black-cap Raspberry, and although he was neither the originator or discoverer of this sort, still his name became attached to it through his advertising the plants, and thus he became quite famous in the horticultural world. He evidently considered fame as a salable commodity, hence the sending out of his "Red-flavored Black-cap;" but afterwards changed to "Garden Raspberry," which is neither a black or red raspberry, but a dull maroon, appearing to be half decayed even before it is ripe; and in flavor it is no better than in color. It is a great pity that so many men will work years and spend a fortune in gaining fame and an honorable reputation, and then let it all go for a "mess of pottage." Of course we are all inclined to be charitable and remember a man's good deeds; still the stench of the bad ones will lurk in his surroundings.

I could not help thinking of this last fall, when Mr. E. W. BULL'S new grapes, Una and Cottage, ripened. Mr. BULL, as everybody knows, was the originator of the famous Concord grape, which has pleased more people and given better general satisfaction than any variety of grape ever grown in this country; but he was not satisfied with all this, and must try to make a little more money out of grape vines, and so he sent out the Una and Cottage, two of as vile fox grapes as ever I met in any Northern forest. Oh! Mr. BULL, the fragrance of the Concord is strong enough, but the stench of the Una and Cottage will linger about your name for years to come. But it will not do to tell the whole truth, even *sub rosa*, about fruits, their merits, or how they were introduced; for there is many a flower, etc., and we must be content with the good, and in this we are blessed with an abundance.

If there happens to be a few black raspberries like the Garden, there is also plenty of good ones—*i. e.*, to those who like this fruit. Among the early sorts, Fay, Doolittle and Westchester suit me best. Surprise, Elrie, Seneca and McCormick or Mammoth Cluster are my choice in the later sorts. Of course, there are several other varieties almost, if not quite, equal to some of these, as, for instance, the Canada, Ontario, Lum's Everbearing and Miami; but as they are not superior to them, it is useless to multiply names and varieties without adding merits.

Early Red Raspberries.—*June 28.*—There may be localities where the very best of our improved red raspberries will not succeed, and as a *dernier* resort the black raspberries should be cultivated. I have known persons who preferred them to the more juicy and luscious varieties of other species; but there are very good red varieties that will succeed as far North as Hudson's Bay, and there are few people who want fruit in a more Northerly locality. The black varieties are usually supposed to ripen a little earlier than those of other species; but the first dish of raspberries gathered from my garden this year was that old, but still valuable sort, the Kirtland. I thought when spring opened that the canes were so badly injured that they would bear no fruit; but in this I was mistaken, for they are now loaded with brilliant light crimson fruit which is both handsome and good. The berries are not quite as large as some of the European sorts, but are firm and of excellent flavor, and it is also one of the hardiest of our native varieties.

My next best of the thoroughly tested early native sorts is the Susqueco; also known in some localities as the Cumberland. The plant is rather dwarfish in habit, the canes seldom growing more than three feet high; but it is very productive and the berries large, handsome, bright color and excellent quality. Some persons would object to this variety on account of its habit of producing a great number of suckers from the roots; but I have never considered this as a serious objection, because one must cultivate the ground about the plants, and the suckers are as readily killed as weeds. With all varieties that produce suckers very freely, it is necessary to set out new plantations every three or four years; at least in my experience I have found that this was a much more economical plan than to retain the old plants and endeavor to keep up the vigor by manuring and extra cultivation. It is neither an expensive or very laborious task to plant an acre of raspberries; and rotation may be practiced in small fruit culture with as much profit as in ordinary farming.

The Herstine Raspberry.—I have this new sort in fruiting for the first time, and I am much pleased with its appearance and quality. The canes were not protected the past severe Winter, but they are fruiting abundantly. It is among the earliest of the red varieties, and the berries very large, equaling some of the best of the foreign sorts. Of course one year's fruiting is not sufficient experience to determine its value; but I must say that it promises to be one of the very best, if not the best, of our native varieties.

Hygienic Information.

HYDROPHOBIA.

Dr JOHN P. GARRISH in a recent paper on this subject made some statements that will be found of interest. He says:—All animals, and even poultry, are susceptible of contagion from rabies. Actual contact of the saliva of a rabid animal with a wound or abraded surface is required for the development of hydrophobia. It is generally the case, however, that where the animal bites through the clothes the poison does not reach the system. On this point the Doctor referred to the case of a lady who, in sewing up a rent in her dress, which had been made by a rabid dog, passed a thread across her mouth, from which she imbibed the poison, and soon died.

The period of incubation before the poison from the bite of a mad dog begins to show its presence in the system, varies from three to seven weeks, rarely more or less than that period. A remarkable experiment in the interest of science was once made: 138 dogs were collected which had either been bitten by mad dogs or inoculated with the foam freshly collected from the mad animals. Of this number, 68 went mad—a few within a few days, but most of them at intervals from 20 to 90 days. It appears that instances of hydrophobia occur much less frequently in southern than in northern latitudes. South America is said to be entirely free from it. The months in which the largest number of cases of the disease have been reported are September, October and November. This tends to show, considering the long period required for the development of the poison, that the greatest number of persons are bitten about the time of the dog-days.

There are conflicting opinions as to whether the bite of a dog which is simply very angry and not rabid, may produce hydrophobia. The authorities quoted by Dr GARRISH maintain the negative of this question. It has been urged, however, by the German school of physicians, that rabies may thus be engendered. When one has been bitten by a dog, Dr. GARRISH argues, the dog must not be killed on suspicion of rabidness. Let him be kept in order that the physician may be aided in construing subsequent symptoms of the person bitten. When hydrophobia has once been developed, it appears that no medical skill has ever yet availed to save the life of the victim. But it appears that where there are reasons to believe that hydrophobic poison has been communicated, it may be eliminated from the system if measures be taken before the period of incubation has expired.

Dr. STERL said that he had himself been bitten by a mad dog two years ago. In these cases the effect of the poison had been prevented by immediate excision of the parts bitten, and the application of nitrate of silver. Dr. GARRISH alluded to the various powerful medicines which had been unsuccessfully applied, and gave his own decision in favor of the vapor bath as an effective means of eliminating the poison from the system. The most of those present concurred in the view; and it was stated to be, in effect, the same plan as that successfully employed by the Indians in the case of rattlesnake bites, etc., the exciting of the capillary ducts to convey the poison out. The use of stimulants for their supposed effect of neutralizing the poison of rabid dogs or rattlesnakes, was condemned. Dr. GARRISH added that there were gross errors prevalent as to the signs of madness in the dog. It is assumed that the rabid dog never has fits—that the existence of epilepsy is a clear proof that there is no rabies. On the other hand, a rabid dog does not shun water.

They will stand and lap the water, with no spasm attending the effort to swallow, but swallowing little on account of the invariable paralysis of the muscles about the jaws and throat—a sign by which the rabid dog may be detected.

HYGIENIC NOTES AND QUERIES.

Remedy for Salt Rheum.—Take of narrow dock-roots, scabious, and swamp sassafras, equal parts, boil down strong and add one pound of lard; simmer down to an ointment. Rub the parts affected three or four times a day. If the complaint is attended with any inflammation, it must be first subdued by a poultice made of slippery elm bark and fresh milk. Medicines must be taken to purify the blood. An excellent beer is made by boiling in a suitable quantity of water the following articles:—Take the root of sassafras, burdock, black alder, wild cherry tree; of this let a strong decoction be made; then sweeten with molasses or honey, and when about blood-warm add a sufficient quantity of yeast to ferment it. The patient should take freely of this beer.—H. N. W., *South Addison, N. Y.*

Fever and Ague and the White or Ox-Eye Daisy.—A correspondent of the Evening Mail thinks he has made a discovery. He thinks the Flora of a locality where people shake and burn with chills and fever may have something to do with such results. He has noticed that the white daisy grows abundantly where the fever and ague prevails. But he is like a good many observers who jump at conclusions. He thinks the daisy has to do with afflicting people with the disease. He does not seem to know that chills and fever prevail where the white daisy does not occur; and that the white daisy grows abundantly where chills and fever do not afflict and never have afflicted the people. He will have to try again.

Sexuality of Heart Disease.—Dr. RICHARD QUAIN reports that enlargement of the heart, one of the most distressing and fatal diseases, is more than twice as frequent in males as in females, the precise proportion being 8 to 3. This remarkable liability to enlargement of men's hearts, as compared with those of women, is, he thinks, unquestionably due to the greater amount of work and anxiety which, under the present dispensation, falls upon man.

Remedy for Rheumatism.—To two gills of alcohol and one of water, add two ounces of red pepper. Take internally one-half teaspoonful, and gradually increase the dose; also, apply freely externally to the parts affected at the same time; at first use it once a day, afterwards twice. I know this remedy to be good by experience. After having the rheumatism over two years, I cured it with this medicine.—F. W. B., *St. Charles, Ill.*

Dyspepsia Remedy.—In RURAL NEW-YORKER of June 22 I saw an inquiry by D. A. WHITE, "How to cure dyspepsia?" If Mr. WHITE will take one ounce of blood-root, have the roots cracked in an iron mortar, add to it one gill of pure brandy, let it stand for twenty-four hours, take four or five drops in water (one wineglassful before eating), in a short time he will find relief. Avoid eating warm bread or too much grease. This cured me.—ARTEMUS WHITE.

Hygienic Inquiries.—KATE E. SHIMER asks Mrs. MARTHA SOMERBY to state where cundurango bark and extract of caragcen (in her prescription for consumption) can be procured. She does not find it at country drug stores.

Ringworm Remedy.—Paint it with iodine a few times and it will entirely destroy every vestige of it.—MRS. T. J. KIRKWOOD.

Iodine and Boils.—As soon as a boil becomes hard and inflamed paint it with iodine. The poison will not be scattered, but will be absorbed by it.—T. J. K.

Entomological.

GRAPE VINE FIDIA.

I SEND you another batch of beetles caught eating the leaves of Delaware, Martha and Rogers No. 19; I also inclose leaves of three varieties. They work on the top of the leaf and sometimes are found underneath, and when disturbed will drop off and play possum, but not always.—J. W. M., *Brownville, Nebraska.*

THE small, light brown beetle infesting your grape vines is the grape vine Fidia (*Fidia viticida*, WALSH). It has been known to do considerable injury to vines in some of the Western States, but we were not aware before that it had reached Nebraska. Having the habit of playing possum, that is, dropping from the vine and keeping quiet for a few moments whenever disturbed, it is readily caught in nets or dishes partly filled with hot water. Chickens will also devour it in great numbers, and Mr. C. V. RILEY says that the late WM. PESCHELL of Hermann, Mo., on whose vines this beetle had been exceedingly numerous, raised a large brood of chickens in 1867, and had them so well trained that all he had to do was to start them into his vineyard with a boy in front to shake the vines, and himself follow behind the chicks. The chickens picked up every beetle which fell to the ground, and in this manner Mr. P. kept his vines so clean that he could scarcely find a single beetle in 1868.

LADIES' PARASOL.—[SEE PAGE 31.]

LITTLE GIRL'S DRESS.—[SEE PAGE 31.]

This beetle is likely to become a great pest in all the Western States and Territories, wherever grape vines are cultivated, and too much care cannot be given to its extermination. The longer it is allowed to feed undisturbed the greater will be the number and the more difficult it will be to destroy it.

ENTOMOLOGICAL NOTES.

Paris Green and Colorado Potato Beetle.—A correspondent of the Scientific American uses Paris green to destroy potato bugs in the following manner, successfully:—"Take one large tablespoonful of Paris green and mix it with ten tablespoonfuls of flour. These must be mixed very thoroughly, till the mass is of one shade of color throughout. Take of this mixture two tablespoonfuls, and put it into a gallon of water. Stir this till it is all well mixed through the water, and stir it occasionally to keep it from settling,—for if it is not kept stirred, it will settle. Put the water thus prepared into a sprinkler, and apply when the plants are dry and the larvæ are at work. In a few minutes the larvæ will have gone to 'that bourne whence no traveler returns.' The liquid applied this way, twice or three times during the season, will be sufficient to protect the plants. Used in this way, while it will destroy the insects, there is no danger of its hurting the plants; nor does sufficient go into the ground to do any harm."

Wire Worms in Corn.—On some of the flats or creek bottoms of this section the corn has been badly injured by a small yellowish-jointed worm, usually about three-quarters of an inch in length and about as large round as a knitting needle. We call it the wire worm. Can you give us some remedy for this pest?—A READER, *Canton, Pennsylvania.*

WE cannot give the name of the worm without seeing a specimen. Neither can we suggest a remedy without knowing in what manner the worms attack the corn. Do they feed upon the roots, upon the stalk or upon the leaves? Always be explicit in your question, giving all the particulars, if you wish direct and explicit answers.

Chrysalis of Zanais Archippus.—Inclosed find a curiosity to me. What is it?—J. F. FLAHERTY, *Stewartsville, Mo.*

WE give the name of the curiosity above. If you had watched the chrysalis a few days, you might have discovered what it was, because one of the common red butterflies would have emerged therefrom. The larva of this butterfly is very common on the milkweed, and the chrysalis can usually be found in abundance near by.

The Cicadas or 17-year Locusts have made their appearance in this neighborhood in small numbers, for about a week past. Circumstances do not permit me to give much information about them, only I know they have appeared here.—KATE E. SHIMER, *Birchville, Chester Co., Pa., June 22.*

The Naturalist.

NOTES FOR NATURALISTS.

Books on Natural History.—As I take an interest in the study of natural history, will you please answer the following questions:—1. Where is the American Naturalist published, and price per year? 2. Where can I get a good work on Ornithology; also, give price of the same? 3. Which is the best work on Zoology?—H. ROGERS.

1. AT Salem, Mass., by the Peabody Academy of Science. Price $4 per year. 2. The Birds of North America, by SPENCER F. BAIRD, is one of the most complete and valuable works of the kind of recent publication. It contains a complete account of the birds of North America, with an Atlas of one hundred colored plates. Price, $20. 3. JENNEY'S Zoology is an excellent elementary work, price $3. All the above can be ordered through this office at prices named.

Care of Aquariums.—I will be glad to be informed if the water in an aquarium, where callas are growing in earth, requires changing, and how often; and if the fish in it require food?—X. X.

IF the plants in the aquarium grow well, there will be no need of changing the water oftener than once in six months, and then mainly for the purpose of cleaning out the filth that always accumulates more or less in water that is seldom in motion. But if you put in too many fish, then it will be necessary to change the water quite often, even if plants are growing therein. Do not overcrowd your aquarium with either fish or plants. Give the fish a little food two or three times a week, but not a very large quantity at a time. Crumbs of bread or the white of eggs are good food.

Domestic Economy.

SOFT AND HARD SOAP.

I THINK the process is not generally understood, for I have had many ask me how I made hard soap. The ingredients are lye and grease, which must first be made into good soft soap. The grease may consist of rinds, bones, scraps of lard or tallow, and all waste grease about the house. Any fat or oil may be used as grease. The lye may be made of good, hard wood ashes, with a little lime mixed with them if not strong enough to make good lye without; or, it may be made from concentrated lye, which may be procured of the manufacturers of concentrated lye, or of most druggists.

People who burn wood can save their ashes in a brick or stone ash house, at a proper distance from the house, or they may be placed in a leach if proper precaution is used. If stored in a leach wet them so as to extinguish all fire or heat in them. This will not hurt the ashes for making soap at all, unless sufficient water is put on them to start the lye, which need not be, to put out all fire or embers in them, if well stirred up. They must not have sufficient water put on them to start the lye until ready to make soap. A box, barrel, cask or hollow log may be used for a leach.

Make a foundation with large blocks or stones, a little slanting one way. This lower side must be high enough to set the kettles under in which to catch the lye. Place on this a very wide or tightly matched board, if a hollow log is used, as it has no bottom in it. If a box, cask or barrel is used, having a tight bottom, so that the lye will not run through except where you want it to, and you can manage your platform so as to balance it, the board may be dispensed with, but not without. A tight box or cask must have holes bored where the lye can run through on the lowest side.

Place a few sticks in the bottom of the leach, with a handful of straw over them; then, if your ashes are not quite strong, add a peck of slaked lime to them; but if strong, they will do with less, or none at all. When ready to make soap, pour on water at intervals until the lye begins to run. Then place your grease, more or less, into your kettle over the fire, add your lye, and boil, taking care not to let it boil over, in which case you would lose much of your grease, as that rises to the top; and as long as you can see grease on the top of the soap, it will bear more lye, if you have it. Sometimes, when a small quantity of lye is added to the grease at first, it will become soap after boiling a short time. If you have added more grease than your lye required, it will remain on the top of the soap, and may be taken off to use again, if you have not sufficient lye to use it all up at once.

Rancid grease will make soap sooner than sweet grease; but it often takes from five to ten hours' boiling to make soap. Dip out a little to cool to tell when it has come, and if quite thick when cool, and you see oil on the surface, add more lye and boil longer.

When it is well come into good soft soap, add a small quantity of salt, and boil until the soap separates from the lye. Do not add too much salt, as it will be crumbly and brittle. Put in a teacupful in a half barrel of soap at first, stir, boil, and watch to see if the soap and lye separates, the soap rising to the top, and the lye settling to the bottom of the kettle. If it does not so separate after boiling a half hour, add some more salt gradually, until it does separate; but be careful not to add too much.

This process will make common hard soap, which will be of the color that your soft soap would be, made of the same grease and lye; and as good for the various uses for which common hard soap is used as any. But if you want a yellow-looking soap, such as you have seen sold in bars, you must dissolve one third as much resin as you use of grease, and add to the lye, or place it in the lye to dissolve before adding the grease. In this case your grease needs to be free from refuse to estimate its weight, unless you can guess what quantity of resin to put in. If you do not put in resin enough, it may not be quite as yellow as that you buy, but equally as good.

If you wish to make some of it into perfumed or fancy soap, dip some of the soap, while warm, into a tight box, first wetting the bottom and sides of the box with cold water, stir in your perfume or coloring, —cover up, and let stand to cool, when it may be taken from the box and cut in small cakes, and placed on boards to dry in an airy room.

That wanted for common hard soap may be covered up and left in the kettle to cool, and then cut into bars and placed on boards to dry, or it may be dipped into other kettles, leaving the lye and sediment in the one in which it was made, and boil that dipped off, to evaporate more lye from it, so that it will cure sooner; then turned into tight boxes to cool, as it will cut in better shape; then place on shelves to dry, and the drier and older it gets the farther it will go in washing. It can be used in a short time, or kept any length of time, as it is improved by age. H.

ODDS AND ENDS.

That Monday's Dinner.—In the RURAL NEW-YORKER of June 1st a lady tells us how she got her Monday's dinner. She tells us that she baked bread, mince pies, cookies, ginger snaps and fruit cake. What became of her washing? She is supposed to do it herself, because she speaks of doing her own work, and of its being wash-day and making arrangements accordingly. She does as much baking as an ordinary woman could accomplish in one forenoon, besides getting her dinner. What had her different varieties of cake to do with her dinner? In a later article she tells us that for tea (I suppose that same Monday) she had delicate cake and cookies. It is my opinion that the person who wrote that article has never seen much actual service in the kitchen. A woman who knows what it is to do the washing for a family and get dinner the same forenoon, will be very likely to be satisfied with one kind of cake for her tea table, which she appears to have had baked. My sister housekeeper at Fulton, from whom we heard last week, understands the matter, as do others of your readers who know whereof we affirm.—HOUSEKEEPER, *Ontario Co., N. Y.*

Domestic Inquiries.—Mrs. A. E. S., Creston, Iowa, asks for a good recipe for muffins. . . . MARY P. R. asks some one to tell her how to make a lettuce salad with sugar, cream and eggs. She has eaten it but never had opportunity to find out how it was made. . . . Mrs. V. P. MUZZY asks some of her "sister readers" of the RURAL to tell her how to cook mutton kidneys. . . JOSH H. BROWN says:—"I wish there was a more general diffusion of knowledge upon the best mode of frying potatoes. I have eaten potatoes, fried, that were delicious; I have eaten potatoes, *said to have been fried*, that were perfectly abominable. Who knows, among the RURAL'S readers, how to fry potatoes and have them edible? I will take off my hat (and do far more if necessary) to the woman who sends you a mode of doing it by which my lovely and loving wife will be enabled to do justice to the subject—*and to me!* Who wants to see me doff my hat? Publish the first hundred recipes, will you?"

Preserving Grapes with Honey is recommended by those who have tried it, it being asserted that many kinds of fruit are preserved nicer with it than by the use of sugar. Mrs. TUPPER says:—"Grapes, plums, and all kinds of crab apples are especially nice. Jam or "butter," made with honey is delicious, whatever fruit is used. We have preserved grapes in this way for years, as follows:—Seven pounds of fruit (in perfect bunches if possible,) 4 pounds of honey, 1 pint of good cider vinegar, and spices of any or all kinds, to suit the taste. Boil the honey and vinegar together, with the spice tied in a cloth; pack the grapes closely in a jar, and turn the boiling sirup over them. If it is sealed at once no further care is necessary—it will keep for years. If not sealed, the sirup should be turned off the ninth day, re-boiled, and turned again on the fruit."

Put Up Jam While Hot.—It is said that ordinary jam—fruit and sugar which have been boiled together for some time—keeps better if the pots into which it is poured are tied up while hot. If the paper can act as a strainer, in the same way as cotton wool, it must be as people suppose. If one pot of jam be allowed to cool before it is tied down, little germs will fall upon it from the air, and they will retain their vitality, because they fall upon a cool substance; they will be shut in by the paper, and will soon fall to work decomposing the fruit. If another pot, perfectly similar, be filled with boiling hot mixture and immediately covered over, though, of course, some of the outside air must be shut in, any germs which are floating in it will be scalded, and in all probability destroyed, so that no decomposition can take place.

Scientific and Useful.

WATER FROM A SPRING.

I HAVE a spring of water which I would like to use in watering stock in the barn-yard, a distance of some thirty rods. What power can I use to best bring the water, and where can I get said power? Will a hydraulic ram do the work? Are they practical? What will be their probable cost?—C. W. S., *Lake Co., O.*

WHAT agency you use to force the water from the spring to the barn-yard must depend upon circumstances you do not detail. For instance, you do not tell us what quantity of water your spring will supply, the hight to which it must be elevated, nor what fall can be obtained in order to operate a ram. For instance, if you can get a fall of 3½ or 4 feet from the spring to the ram, and a supply of water that will fill an inch and a-half pipe, say 30 feet long (the distance from the spring to the ram) it will elevate a constant stream of water one-half inch in diameter 35 or 40 feet, and force it thirty rods or more.

The following rule is given for ascertaining the quantity of water, and the hight to which it may be elevated, by a given fall and volume of water—the discharging pipe being not over 50 rods in length. Find, by means of a common level, the fall of your spring or stream; then find the quantity of water it discharges per minute, or hour. Then multiply the hight of the fall by 5, for the elevation, and divide the number of gallons discharged by the spring or stream by 7, for the quantity of water raised. For instance, if you have a spring with a fall of 8 feet, discharging 28 gallons per minute. Multiplying the fall 8 by 5, we have forty feet as the hight to which a ram will elevate it. Divide 28 by 7, and we have four gallons as the amount the ram will discharge per minute at a distance of not over 50 rods.

HORACE L. EMERY, Albany, N. Y., a gentleman experienced in such matters, says: "To enable any one to select the size ram, it is necessary to compute the elevation to be overcome, the greatest amount of fall that can be conveniently obtained, divide the first by the last, and the quotient will be the proportion of water (passing through the drive pipe) which will be raised; first, however, deducting for waste of power and friction, say one-fourth of the amount. Thus, with 10 feet fall and 100 feet elevation, one-tenth of the water would be raised if there were no friction or loss; but deducting, say one-quarter for loss, and 7½ gallons for each 100 gallons would be raised, all the balance of the water being required or wasted to accomplish this result."

But if our correspondent has a spring that will not supply water enough to run a ram with this proportion of waste, or if he cannot get fall enough to operate one, then the best agency for raising water (if it must be elevated), is a wind-mill and pump. Of the prices, and where hydraulic rams and wind-mills and pumps can be obtained, we know nothing that our advertising columns do not tell.

SCIENTIFIC AND USEFUL NOTES.

Desiccated Vegetables.—It is somewhat remarkable, considering the feasibility of drying vegetables so as to at once reduce their bulk and insure their preservation, that this plan has not been more extensively carried into practice. It has, indeed, been talked about for the last half century, it being, we think, nearly fifty years since it was proposed to dry and powder the West Indian plantain and export it to Europe as a substitute for ordinary breadstuffs. It is as much as twenty-five or thirty years since the use in the same manner of the sweet potato was proposed. For ordinary purposes drying by currents of hot air is preferred, and the limited quantity of desiccated vegetables now in the market is prepared in this way. But for army rations, for travelers, etc., a foreign method in which seven or eight per cent. only of the moisture is evaporated, and the rest expelled by compression under a hydraulic press, is found to give the best results, from three to four thousand pounds of cabbages, or other juicy or succulent material, being brought within the compass of a cubic yard. Special and costly machinery is required in carrying out this process, and this explains why it is not likely to come into very common use.—J. A. W.

Laying Brick in Chimneys.—In RURAL NEW-YORKER of June 22d, page 410, I notice manner of laying up brick chimneys, and making mortar. The dusting of the brick and soaking in lime water is certainly a very good plan, and will undoubtedly make a permanent wall. The mixing of mortar, however, *without sand*, is a novelty even in these days. The writer says slake 30 lbs. lime with four gallons water, (this must be quick lime I understand, or it would not slake in water), then mix dry with seven times the measure of stone lime; run through a sieve of 100 meshes to the inch; then wet up in the usual manner. Now these directions for mortar-making, to an old bricklayer or plasterer, are of *no use* whatever, and will require a considerable degree of explanation to make them of any benefit to a novice. Does the writer mean to use any sand at all? and if so, in what proportion to the lime used? I have been engaged in building 25 years, and have always seen sand used in various proportions in the composition of mortar.—D. T., *Topeka, Kansas.*

Nitrogen in Plants.—It is well known that the quantity of nitrogen contained in the crops exceeds in enormous proportion that existing in the manures, the excess undoubtedly being derived from the air. It is now a question whether this is extracted directly from the air by plants, which would thus have the power of assimilating directly, or if it is first taken from the air by the soil so as to combine with organic matter and form an assimilable compound. According to DEHERAIN, oxygen, in the presence of organic matter, combines directly with nitrogen to form a compound analogous to the humus of the earth, or to ulmic acid. To illustrate this he placed in a tube oxygen, nitrogen, glucose and ammonia. On drying the tube and heating it, a black, nitrogenized matter was left, and a portion of the nitrogen in the tube was found to have disappeared.—*Scientific American.*

Useful and Scientific Inquiries.—Will some one give a recipe for making a yellow or straw-colored paint—such as is used for painting plows and other farm implements? —R. W. B.

Arboricultural.

WHY CHESTNUT TREES DIE.

CHESTNUT trees, like many other nut-bearing and certain fruit trees, will seldom flourish at all satisfactorily after they have been transplanted, for the reason that it is a habit of the tree to send down a long and strong tap-root, to fortify the growing tree against injury during dry weather. The office of the long tap-root, with its system of laterals, is to supply the branches and leaves with moisture in a dry time, when the surface roots cannot collect one drop of water from the dry soil. When a chestnut tree is transplanted, the long tap-root is so badly mutilated, or left entirely where the tree stood, that the growth of stem and branches will be exceedingly small; and many times the tree will barely keep alive for two or three seasons, after which it will die. The correct reason of the failure is, the tap-root is gone.—*Exchange.*

The above is going the rounds of the press, and we presume many will believe that it is all true. In fact, we have often heard the same reasons advanced in support of the supposed to be deterioration of some kinds of forest and fruit trees. There is, however, not a show of truth in this talk about the importance of the tap-root on trees. No one appears to think that a leading or top branch is so very important, or that a tree is likely to die or become sickly if it should happen to be removed; still it is just as necessary to a tree, under certain circumstances, as a tap-root.

Whenever a tree has plenty of other roots, the center or tap-root is of no value to it, and, in fact, it is seldom found on very old trees, showing that nature provides for its decay when of no use. It is the nature of almost all tree seeds to produce one root which grows downward and a single stem which is of a similar form but shoots in an opposite direction. Now, because the first shoot takes an upward direction it is no good reason why it should be preserved intact in order to preserve the health or insure long life to the tree. The same rule applies to tap-roots, and there is neither reason nor common sense in all the stuff which is continually being promulgated in regard to their importance. In stony soils, or where the subsoil is too hard to be readily penetrated by roots, the trees have no tap-roots or probably never had after the first year or two of their existence; still some of our best forests are on just such soil. Trees in swamps and low grounds seldom have tap-roots, they having died and rotted away while the trees were young; and is there any one who will assert that to cut off a root is any more injurious than to have it rot off?

The Literary World.

NEW PUBLICATIONS.

The Life of Horace Greeley. Editor of "The New York Tribune," from his birth to the present time. By JAMES PARTON. Boston: James R. Osgood & Co.

MR. PARTON'S Life of HORACE GREELEY is well known as a standard work, and since Mr. G. has been nominated for the Presidency thousands of people will be glad to see this new edition, with its latest additions. The story of the life of Mr. GREELEY is most interesting and instructive; we believe few can read it without making up their minds to vote for Mr. GREELEY. Mr. PARTON is one of our best biographers, and he relates in a very fascinating way the life of our "Later Franklin." The book is well illustrated, and the frontispiece consists of an excellent portrait of Mr. GREELEY when a somewhat younger man than he is now. The book sells for $2, and is well worth the money. It closes with his letter of acceptance of the Cincinnati nomination.

The Plebiscite. A Miller's Story of the War. From the French of Erckmann—Chatrian. New York: Scribner, Armstrong & Co.

THIS is a minute and vivid description of the late war in France, with an account of some of its saddest phases and most terrible consequences. The story is told in simple language, from a French point of view, which will make it none the less interesting for American readers.

Six Years Later; or, the Taking of the Bastille.—By ALEXANDER DUMAS. Philadelphia: T. B. Peterson & Bros.

AN exciting historical novel. By some, this story is considered one of Dumas' best.

Harper's Hand-Book for Travelers in Europe and the East.—By W. PEMBROKE FETRIDGE. New York: Harper & Brothers.

THIS is the eleventh edition of a well-known book, which contains a vast amount of information for travelers. Magnificent maps of Europe, London, and Paris come with the book, which also contains 80 maps of cities. With the exception of the chapter on the United States, the book is brought down to the latest date. America, in the eyes of Mr. Fetridge, appears to be a land of no consequence. Matter which he published ten years ago is re-printed to-day; the result is, it is very antiquated

The Farmer of Chappaqua Songster.—New York: R. M. De Witt.

THIS is the title of a twenty-five cent campaign song book. It contains a good steel portrait of Mr. GREELEY, and songs enough to suit all classes. Some of the poetry is peculiar and needs editing badly. The following is a sample:

"In my Southern home I sit,
Thinking of the days gone by,
When we laid our gray, and stars and bars aside,
Then we thought our mother dear
Would be good and kind to all,
When she promised all our little sins to hide."

The Dangerous Classes of New York, and Twenty Years' Work Among Them.—By C. L. BRACE. New York: Wynkoop & Hallenbeck.

THE author of this book has long been at work in New York, sending poor children West. He knows their wants and trials, and ought to be able to write an interesting book, if anybody can. We have found much in it which will gain the attention of the country reader. The author states many facts, and relates many incidents. The work is well illustrated.

Bible Music.—By FRANCIS JACOX, B. A. Boston: Roberts Bros.

A HANDSOMELY printed volume of musical themes from Scripture. Among the topics discussed in a pleasant, rambling manner, are Tubal's inventions, organs, a musical monarch, temple music, the brute-world and music, songs of exile, etc. Mr. JACOX is a pleasing writer, and his book will delight all lovers of music.

The Dickens Dictionary. By GILBERT A. PIERCE. Illustrated. Boston: James R. Osgood & Co.

THIS handsome volume is a key to the characters and principal incidents in the tales of CHARLES DICKENS. It is a valuable hand-book, lacking in nothing, which should find a place in every library containing DICKENS' works. The illustrations are very good, and numerous. Every admirer of DICKENS will be glad to possess this book.

Get Thee Behind Me, Satan! By OLIVE LOGAN-SYKES.—New York: Adams, Victor & Co.

MRS. SYKES is already known to a certain class of readers as a cheery, sprightly, intense and interesting writer. In this, her latest work, she discusses, in a familiar strain, many phases of the woman question, from a social point of view. She calls it a "Home-born book of home-truths." She is very severe on her own sex.

Cloisy, A Novel. By JAMES P. STORY. Boston: James R. Osgood & Co., 1872.

No. 20 of Osgood's library of novels. A story of American and French life, full of scenes in New York, Philadelphia and Paris, and rather too full of French words for those who do not understand that language. In every sense of the word, a fast society story.

The Lord's Prayer.—By F. D. MAURICE. New York: Hurd & Houghton.

A PLEASING little volume, containing nine sermons on the subject named, preached by the late Professor Maurice. He was an earnest man, and wrote with much vigor of thought. Many will get new light from this small volume.

The Sermons of Henry Ward Beecher. Fifth and Sixth Series. From Sept. 1870, to Sept. 1871. New York: J. B. Ford & Co.

TWO large and handsome volumes of 450 pages each, containing some 26 sermons to a volume. The works of Mr. Beecher are so well known it is only necessary to notice the fact of their publication.

Is It True? Tales, Curious and Wonderful, collected by the author of "John Halifax, Gentleman." New York: Harper & Brothers, 1872.

A BOOK of short and delightful fairy and other tales, told in simple and pleasing language. Children will be only too glad to read these fascinating romances.

My Hero. By Mrs. FORRESTER. Philadelphia: T. B. Peterson & Brothers.

AN autobiographical love story of a girl of 17 years of age, by a new English writer who has made something of a sensation in her own country. The story is called fascinating.

Modes and Manners.

MANNERS AT HOME.

IT is indeed surprising to me to know that many of the readers of the RURAL NEW-YORKER will take the pains to subscribe for and read its pages, month after month, and year after year, without ever thinking to adopt any of the good advice it contains. Although I am favored with the *best* of all mums, (MARY,) I sometimes think if my experience could have been foretold, MARTHA might have been considered more appropriate; for I am in love with the habit of having a "place for everything and everything in its place;' but when I am compelled to submit to the will of others, who care so little to put in practice this rule, and instead of encouraging by a look or word of approval, say, "What's the use for things of so little consequence?" when it is of the greatest consequence in the world to me. There is the letter, dear MINTWOOD, of advice in "Rules for Home Etiquette," I wish of all things might be put in practice; teach the children by example of older ones to appear at meals and in the family circle with thoughtful care; have the time pass cheerfully and with propriety when they enter the house. It is pleasant to see a family, instead of coming carelessly in, throwing hats, boots, coats, etc., off in one place and another, without any regard to the order which prevailed previous to their coming, commence to partake of nicely prepared meals for their refreshment in a sullen manner, without having spoken a word to any one, regardless of any one's social greeting; passing the first "course" in a style more suited to throwing the snow from the sidewalk, or "making toilet" for the horses, or serving the inhabitants of the poultry yard, never observing the neatly folded napkin, except to throw it aside in disgust, unless in case of forgetting the pocket-handkerchief it is made a substitute. It is especially disgusting to see a head of a family make use of their own knife in the butter-plate, (and the next "follow suit,") and still worse to dip with the fork in the meat platter, the bread, piece after piece, they wish to season and make especially palatable, "sopping" one side and then the other, hurrying with all diligence through the meal; seldom, if ever, asking the question if any one will be helped to anything more, leave the table before any one else and give one thorough explosion at the stove ash-box.

How I love to see the practice just the opposite! How desirable to see a family enjoy a social hour together, with a merry (not boisterous) laugh, and a funny story which each can enjoy. Does not the influence of a man in the family have greater impression upon the boys, when it is worthy, manly and respectful, (or otherwise,) than all the persuasion of a mother who is nearly crushed by the insolence and neglect to which she may be subject continually. It is "second nature" for them to follow the footsteps of the "stronger sex" at a certain age when they seem to care little for the opinion of any one, (and more consequence than it is often believed to be). It was the advice of a learned professor to a class of young men, "Young gentlemen, with all your getting, I would advise you to get a little manners."

After the busy day is passed how pleasant, indeed, *almost heavenly*, to enjoy the evening together—not for one to monopolize the whole by commanding silence or "you can leave the room." Shall we make home attractive and keep the children with us, or shall they wander abroad to find amusement? Would we not do better for our own interest and theirs to find ways of employment, as well as study, for their benefit? With a little assistance and encouragement many nice little ornaments may be produced by their hands, not counting the cost too much, if thereby we may have accomplished good to them, which may be like "Bread cast upon the waters, and return to us after many days." Who of us do not look forward to days of "second childhood" perhaps, and wish for a kindly hand to smooth our pathway, and shield us from the chills of a wintry morning, making our "rising up" a pleasure to us by their thoughtful care, which removes the icy figures from the window-pane, warming our hearts towards the dear ones so mindful of us? What can be the expectations of those parents and guardians, or of anyone who has the opportunity to do good to those who are in need of their care, if they are regardless of those they might benefit in a way the "good LORD approves?" Does He not command us to love our neighbor as ourselves?

X. Y. Z.

Our Fashion Illustrations.—(See page 28.) Fig. 1 represents a little girl's dress of blue and white striped cambric, trimmed with plaits of plain blue cambric. For a brunette, pink and white cambric. These wash suits are very pretty. Hats like those shown in figures 4 and 5 RURAL, June 1.

Fig. 2, a style of parasol the outside of which should be of the same color with the dress with which it is to be worn, with lining and trimming to match those of the dress. The one shown is a blue silk, ruffled with white organdy to match a white costume with blue ribbons.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages,** is handsomely and fully illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot well canvass one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.

By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely illustrated, and printed and bound in extra style. Contains 221 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Pres. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2.

OUT-OF-DOOR NOTES.

An Editor Getting Fresh Air.

If our readers only knew what nectar there is in the country air they habitually inhale without thought, they would be more thankful for life and health and the joys and delights which seem to make little impression upon them. In pursuit of fresh air I visited "Daily Rural Life" to spend a day or two under the Chestnuts and Oaks and in the sunlight, among his evergreens, deciduous trees, plants and fruits. From the din of the city and the furnace-air of its streets and offices, with its ten thousand perfumes yielding more of death than life to those who inhale them, to the peaceful quiet and repose of a country home, is a transformation such as it is worth enduring some suffering in order to realize the enjoyment which results. But I'm not going to describe my enjoyments. If I cannot learn something that may profit those who read I'll keep my pencil still.

The Profit and Pleasure of Industry.

Talk about eight hours labor per day! It is well enough to measure a day's work just as we measure strawberries; but it does not follow because eight hours is a day's work that there is to be no more labor that day, any more than it follows that because two pints make a quart of strawberries a man may not buy and pay for three pints. I was struck by the work my friend has done during the past eight years—showing what unremitting industry will, and what it alone can, accomplish.

Eight years ago he came on to this little place with $75 in cash. It was a rough, unhewn rock and a barren, sandy, unproductive bottom land. During these eight years he has expended, he says, $25,000 upon it, all *earned* by his own labor! Did he work but eight hours, to dig this cellar, quarry and dress the stone that is the foundation of his beautiful cottage, that paves his walks, that forms the walls of his picturesque ice-house, that are the bases of his barns and that support the glass of his green-house? Early and late he wrought. The miserable rail fences are supplanted by neat, plain, yet sufficiently ornate and painted board fence. There has been filling in of holes and the shaping and rounding and rendering beautiful the outline of rocky, rough surfaces. Ferneries have been planted among the rocks; vines garnish their sides; every plant natural to a locality or situation, that is worth cultivating for study or because of its beauty, finds its appropriate home. Lawns have been made upon the sand; groups of deciduous and evergreen trees planted; herbaceous plants have their neatly kept border, and flower *parterres* illuminate the whole with their brilliant and artistically combined colors, fringed with green in graceful outline. The barren sand has been enriched by thousands of loads of muck and manure, and is supporting hedges, vineyard, thousands of small fruits and flowering plants.

Now, what has done this? *Purpose!* Industry! Hard work! Steady and unremitting labor! And the man who did it neglected self-culture and imbruted himself? Not a bit of it! The development of the mind has kept pace with the efforts of the body. The mind has really been the force which has propelled the body. Without a knowledge of small fruits in the start, he to-day stands second to none as authority concerning them. With no entomological knowledge two years ago, to-day he has a cabinet of thousands of named insects, combined with a knowledge of their history and habits, that is of the greatest service to him as a horticulturist.

It is not simply profit, but largely pleasure—the pleasure of knowing what he sees, of understanding its place and functions in the great Economy of Nature—that impels to this studious industry and investigation. The plants which grow about him, the weeds by the roadside, the insects which hum these Summer days, and the moths which singe their wings in the home light, and the beetles which bump against the window panes in the Spring and Summer nights, all are familiar to and teach him something. And these are the pleasures and profits of industry—some of them.

Going A-Bugging.

We took a sweep-net (such as was illustrated in RURAL NEW-YORKER of April 20, page 251) and roamed over the low grounds and among the trees, sweeping bush and brake, grass and tree, for insects. It is wonderful what an amount of minute life of the greatest diversity in form and relation, a few sweeps of the net over the grass surface will gather, involving hours and often many days of investigation and study to name the specimens and determine their places in the great natural orders to which science assigns them.

With bottles of ether and alcohol to receive specimens, we wandered through the fields, filling and emptying the net and with our glasses examining the new life which was thus revealed to us. Then in the entomological workshop these were examined, compared with specimens already named and placed in cabinets; or if an unknown species was found it was carefully laid aside to "work up;" that is to consult entomological authorities, visit other collections, consult other collectors and thus determine its identity.

Why, trout fishing is nowhere compared to the excitement and interest awakened by such pursuit of knowledge! Then the satisfaction of having taken one step forward!—of knowing that each step taken makes the next less laborious and increases both the speed and momentum!

But what is the practical object of telling about this bug-hunting? This: I want to urge the boys and girls in each neighborhood to organize Entomological Clubs, or if you please, Collecting Clubs. It will be easy for a half dozen or more young men and women to know and name nearly every insect within their own neighborhood. If they cannot name them themselves there are people who will be glad to do it for them. Those who help themselves in such matters are sure to get helped. The RURAL has already given directions for collecting, preserving and transporting. The entomological field is so vast, the work to be done so great, and this work in its relation to the Agriculturist so important, that there should be such organizations everywhere—if for no other purpose than that of collecting insects for Entomologists to examine and determine.

Again, we happen to know that there are many boys and girls already enthusiastically engaged in this work. One little girl, we hear of, whose tastes lie in the direction of Natural History, has been taken from the boarding school, has ceased drumming the piano, has been furnished with works on entomology, and sent by her parents into a Western State to hunt and study bugs—to learn to love Nature in its highest and best sense—to secure beauty and vigor of form by the freedom which such studious pursuit involves; and in learning what is to be learned of entomology, she will find other knowledge essential, and will be stimulated to broaden and extend her studies. She will learn that there is no such place as the "graduating" point in human knowledge; that the desire to learn will steadily grow; that she will never desire a diploma that she is "accomplished." The sweet humility with which *real* knowledge invests its possessor will add to her grace and refinement more than all the artificial training a French governess and posturer can give her. We expect, some time, to be compelled to quote this young miss as an entomological authority.

RURAL NOTES AND QUERIES.

The Milk Supply of New York is estimated to be 320,000 quarts, 200,000 of which are sold at retail and 120,000 at wholesale to hotels, restaurants, grocers, etc. It is estimated that it will require $350,000 to procure wagons, carts and equipments to properly distribute the milk; and it is proposed that the farmers supplying milk raise this amount of capital and organize a Milk Supply Association. To secure this amount it is suggested that certificates, drawing seven per cent. interest may be issued, each of which would constitute the owner a member and entitled to sell milk through the agency of the Association—the Association to pay its members a stipulated price for the milk, and the profits, after expenses are paid, to be shared by the members in annual or semi-annual dividends, the books showing how many quarts of milk each has supplied, and the dividends to be *pro rata*. Thus producers and consumers will be brought together, the producer receiving all the profits which flow from his product, and secure in them so long as he remains a member of the Association. Any departure from honest dealing, however, is to result in his forfeiting all his rights as a member. In this way, it is believed farmers will receive fifty per cent. more for their product than now, and consumers better milk.

The Long Strike may be said to have ended after losing to both employers and employed millions of dollars. The employees, many of them, would gladly go to work again under the old *regime*, but cannot obtain work. Capital refuses investment at the risks which such strikes involve. The employees, as we predicted, have gained little. In some exceptional cases they have gained all they ask, in order that contracts might be filled; but no new contracts will be taken, and the disaster in consequence will then become more apparent. But the cost to the strikers is not alone the money they have failed to earn. A far more serious item in the estimate is that of demoralization, idleness, drunkenness, anxiety and the losing the tenure of steady, remunerative employment. These men, in our judgment, have wrought for themselves a grave injury—one that it will require much time to recover from. We are sorry it is so; but we cannot ignore facts patent to all impartial observers.

American Institute Fair.—The Forty-Fourth Exhibition of the American Institute will open at the usual hall in N. Y. City, Sept. 4th, 1872. The Board of Managers, in order to accommodate exhibitors of heavy machines in practical operation, have decided to open all parts of the buildings devoted to massive machinery on the 5th of August, thus allowing about three weeks for the erection of foundations, and making necessary connections with motive power. On Monday, August 26th, the whole structure will be ready for the reception of goods; and in order to insure promptness among exhibitors intending to make an important display, those who are earliest in applying for space, and in preparing to fill it, are promised special aid from the officers in charge.

Routes to the Virginia Springs.—By a recent arrangement, through tickets are now sold to all the Virginia Springs along the line of the Chesapeake and Ohio Railroad, from New York, either by the Old Dominion steamships, or by rail via Washington. The trip can be made to the White Sulphur Springs in about twenty-four hours from this city, with but one change of cars. In like manner through tickets are being sold for Western and South-western passengers at Louisville and Cincinnati, over the Western Division of the C. & O. road, a line of first-class stages running from the Gauley River to the Springs, seventy-five miles, until the railroad is ready for through operation.

"Instruction" for Agricultural and Horticultural Societies.—The National Agricultural Congress is reported to have adopted a resolution "instructing all Agricultural and Horticultural societies to offer premiums for the best agricultural and horticultural papers, and to do all in their power for the extension of their circulation." If this report is correct we may be permitted to say that we think the same object would be better accomplished by offering the best agricultural and horticultural papers *as* premiums, and thus not only extend their circulation, but stimulate the respective publishers to make their papers the most desirable for such offering.

Webster's Unabridged Abroad.—Messrs. G. & C. MERRIAM, the Publishers, recently filled an order for 16 copies of WEBSTER'S UNABRIDGED from Colombo, capital of the island of Ceylon, in the East Indies. During May, they had two orders from Japan, one of 80, and one of 36 copies; also, one of 12 copies from Constantinople. WEBSTER'S Speller keeps up its sale of nearly one million copies per annum. The actual number for the past year was 979,204.

"Handicraft: A Journal of Progress in the Industrial Arts. Designed for Workers and Thinkers." This handsome and well-filled monthly, started in April, is making great progress, evidently, and merits decided success. It is ably edited by Prof. JOHN PHIN, late editor of the Technologist. Published by The Handicraft Publication Co., 37 Park Row, New York, at $1 a year.

A Field Trial of Mowing Machines was held at Woodstown, N. J., June 18, under the auspices of the West Jersey Agricultural Society. A large number of farmers attended, and many of the best known machines were operated in competition. The Society awarded their first premium to the Buckeye Mower.

The Land Sales of the Union Pacific Railroad Company for the Month of June, 1872, were 23,900.41 acres, amounting to $103,610.62, at an average of $4.30 per acre. The total sales from July 28, 1869, to the 1st inst., were 571,169.76 acres, amounting to $2,300,410.55, at an average of $4.20 per acre.

THE short-horn cattle breeders of Indiana have called a convention at Indianapolis Nov. 20.

THE SEASON, CROPS, PRICES, ETC.

Purcellville, London Co., Va., June 30.—After a severe drouth of thirteen months we are having very fine showers.—G. W. W.

Lexington, Ky., July 3.—Farmers are in the midst of the wheat, rye and barley harvest. All these crops are good. There is not a large breadth of wheat being cut, but what there is seems very excellent indeed.—L. S. F.

Vernon Co., Mo., June 23.—Harvest is at hand, wheat looks bad; nearly all broadcast sown wheat froze out; hundreds of acres were plowed up. Oats, the best crop ever seen in this country. Corn looks well; Fruit of all kinds plenty; peach trees are breaking down with over supply of fruit. Grass looks well; weather dry and pleasant.—H. S.

Rose, Wayne Co., N. Y., July 1, 1872.—We are at present having very favorable weather for all kinds of grain, and the cool, wet weather which we had during the fore part of last month has proved quite favorable for fruit of all kinds. Wheat that is not Winter killed looks well. Corn is rather backward for the season, but is growing rapidly. Barley, oats and potatoes promises fair crops. Corn is selling at 60c.; wheat, $1.50; oats dwell at 35c.; eggs, 15c.—F. Y.

Camden Point, Platte Co., Mo., July 1.—Corn looks well here now. The dry weather of the latter part of June aided the farmers very much in cleaning their corn; the frequent rains in the earlier part of the season causing the crop to become very grassy. There is not enough fall wheat raised in this county to half seed it this fall. The same seems to be the case over all the northwestern part of the State. Some little Spring wheat and much oats are being raised here this season, both of which look very well. Fall wheat is worth from $1.75@2; corn, 30 cts. Sheep and cattle are both scarce and high.—M. P.

Heathville, Va., June 18.—The season was cool and backward, and rather dry to May 30th. This month, so far, warm and plenty of rain. Corn knee high and growing rapidly. Farmers cutting grass from the first week in the month, also harvesting wheat since the 12th. Part of the wheat is very good; one lot of new Southern brought $1.80 per bushel, in Baltimore, last week, and another lot brought $4.00. Fruit and all kinds of truck abundant. A splendid climate, and a people that appreciate and welcome all enterprising sellers that cast their lot amongst them; scores of nice homes are for sale at $10 per acre; some for less. Water good; wood abundant. Rivers abound in fish and oysters. Some Northern families all through this Northern neck. Corn, 80c. per bushel; oats, 50c.; rye, $1.00. Old wheat is used up. Butter, 25c.; eggs, 16c.; cows, $20 to $40; oxen, $80 to $100 a yoke. Horses, $75 to $150; flour, $10 to $12 per barrel. —A. R. S.

RURAL BREVITIES.

THE American Artisan comes to us materially enlarged and improved, and excellently illustrated.

THERE was a meager attendance of Ohio farmers at the Trial of Earth Workers at Springfield, Ohio, recently.

M. R. J., Dublin Depot, Va., can obtain "Our Father's House; or, the Unwritten Word," by remitting to this office $3.75.

"STUDENT," Silver Creek, N. Y., is advised to address "President of Agricultural College, Lansing, Mich.," for the information he desires.

A. C. ASKS if any of our readers know an effective mode of exterminating Canada thistles. Yes; cut them off as often as they appear above ground.

THE Boston Jubilee is called, by a Boston agricultural paper, a great agricultural success, because it has made such a market for farmers' and florists' produce.

THE Peninsular Fruit Growers' Association, Dover, Del., estimate the total Peninsular peach crop at 1,510,000 baskets—less than half that of 1871, which was about 3,500,000.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced last week. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

Additions to Clubs are always in order, whether in ones, twos, fives, tens, or more. A host of people are subscribing for papers about these days, and we hope our Agent-Friends will give everybody an opportunity to subscribe for the best.

BUSINESS NOTICES.

DR. STRONG'S REMEDIAL INSTITUTE,
Saratoga Springs, N. Y., is unsurpassed in the treatment of Lung, Female and Chronic Diseases. Turkish, Russian, Electro-Thermal and Sulphur-Air Baths Hydropathy, Vacuum Treatment, Movement Cure, Oxygen, Calisthenics, &c. TERMS LOWEST IN WINTER. Send for a Circular. Indorsed by Bishop Janes, Rev. T. L. Cuyler, D. D., and Taylor Lewis, LL. D.

HOW TO OBTAIN A "COLLINS"
Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.
Get Descriptive Pamphlet at 36 Dey St., New York.

Whitcomb's Remedy for Asthma is one of the best medicines in use.

Various Topics.

WHAT TO DO IN CASE OF SUNSTROKE.

Now that the true nature of the disease is known, the method of treatment becomes most obvious, and we learn not merely what to do, but also what not to do. As heat is the cause of the symptoms common sense points to the abstraction of the heat in some way as the mode of cure. And here again vivification comes into play. I have taken an animal, comatose, paralyzed by heat, apparently dying, and plunged it into a bucket of cold water. The temperature of the sufferer at once rapidly fell until it reached the normal point, and just in proportion that of the water in the bucket rose. As the animal cooled, its respiration became more regular, the unsteady whirr of the heart was stilled, by-and-by the eyelids were lifted and out from the glassy eye came the beams of new life.

If the period of unconsciousness had been short, the animal was in a few hours apparently as well as ever; if long, the animal would recover sufficiently to recognize its surroundings and to struggle for release, but when allowed to escape, the paralyzed limbs and the slow, imperfect progression indicated the profound injury the nervous system had received, and in a few hours the animal would be dead. The lessons of these experiments are too plain to be overlooked. Whatever is to be done in this disease is to be done quickly. Clinical as well as experimental observation enforces this doctrine. There should in such cases be no waiting for the doctor. The remedy is so simple, the death so imminent, that the good Samaritan passing by should save his brother. The good Samaritan must, however, have a cool head to be useful. Not every man that falls unconscious on a hot day has sunstroke. There is, fortunately, one criterion so easy of application that any one can use it. Go at once to the fallen man, open his shirt bosom and lay the hand upon his chest; if the skin be cool, you may rest assured that, whatever may be the trouble, it is not sunstroke. If, on the contrary, the skin be burning hot, the case is certainly sunstroke, and no time should be lost. The patient must be carried to the nearest pump or hydrant, stripped to his waist, and bucketfull after bucket-full of cold water be dashed over him until consciousness begins to return, or the intense heat of the surface decidedly abates.—*Dr. Wood.*

A WOMAN FAIR.

At the eastern extremity of the Kingdom of Hungary, there is a little province lost among the mountains, and inhabited exclusively by herdsmen. Confined by nature within their valleys, cut off from relations with the outer world, these people have remained but little more than half civilized. They have religiously preserved the manners and traditions of their ancestors. Among other remarkable and picturesque customs of this strange people, is a fair, which is certainly unlike anything else to be found in the world.

Every year on St. Peter's day, may be seen, in the Plain of Kalinasa, long trains of carts, accompanied by troops of peasants, arrayed in their best attire, laden with furniture and house-keeping utensils. They are followed by droves of cattle and sheep, decked out with ribbons and bells. The young girls, especially, are dressed in their newest and gayest. The carts, having arrived in the plain, form a line with the herds belonging to them. From the opposite side of the grounds, come, arrayed in their handsomest goat-skins, the young men who wish to take a wife. The review begins. The young men pass along the line of carts, and question the fathers with regard to the number of ducats and cattle. The dowries are displayed and compared, and the cattle are carefully examined. During all this time the young girls sit silent and motionless spectators of this inspection upon which their future lives so much depend.

There are marriage-brokers on the ground, who exert themselves, for a consideration, to effect negotiations which, however, are not unfrequently interrupted by the discovery that a pair of oxen have seen their best days, that a cow is intractable, or that the house-keeping utensils are incomplete. When a bargain is struck, the priest, who walks about gravely, is called. He chants a hymn gives the young couple the nuptial benediction, and the ceremony is over. The bride embraces her parents and relations, mounts her cart, and the husband drives her away with the rest of the live-stock, to a village she has perhaps never seen.

THE NIAGARA OF BRAZIL.

The Quebrada, or gorge of "Paulo Affonso, the King of the Rapids," is two hundred and sixty feet deep, and in the narrowest part it is choked to a minimum breadth of fifty-one feet. It is filled with what seems not water, but the froth of milk, a dashing and dazzling, a whirling and churning, surfaceless mass. Here the luminous whiteness of the chaotic foam-crests, hurled in billows and breakers against the blackness of the rocks, is burst into flakes and spray, that leap half way up the immuring trough. There, the surface reflections dull the dazzling crystal to a thick, opaque yellow, and then the shelter of some spur causes a momentary start and recoil to the column, which at once gathering strength, bounds and springs onward with a new crush and another roar. The eye is spell-bound by the contrast of this impetuous motion with the frail steadfastness of the bits of rainbow hovering above, with the "Table Rock" so solid to the tread, and with the placid, settled stillness of the plain and the hillocks, whose eternal homes seem to be here.

In "geological" times the Sao Francisco stream must have spread over the valley. Even now, extraordinary floods cover a great portion of it. Then, the waters, finding a rock of softer texture, and more liable to decay, hollowed out the actual "Talhadao," or great fissure, and in the course of ages deepened the glen. Here, also, from the beginning, is the greatest possible diversity of falling water; in fact, a succession of rapids and cauldrons, the mighty fall ending in the "Mairda Caehaeira"—that terrible tangle of foam we have just described.

The prospect lacks, however, the sublime and glorious natural beauty of Niagara, and we do not find in Paulo Affonso those beautiful sapphire and emerald tints that charm the glance in the Horseshoe Falls.

PAULO AFFONSO, THE NIAGARA OF BRAZIL.

SENSE AND SENTIMENT.

Misery requires action; happiness, repose.

Not one false man but does uncountable mischief.—*Carlyle.*

With the majority of mankind, forgiveness is but a form of forgetfulness.

Common-sense is only a modification of talent. Genius is an exaltation of it; the difference is, therefore, in the degree, not nature.—*Bulwer.*

If you have a place of business, be found there when wanted or in business hours.

Man is an animal that cannot long be left in safety without occupation; the growth of his fellow nature is apt to run into weeds.—*Hillard.*

It should seem that indolence itself would incline a person to be honest, as it requires infinitely greater pains and contrivances to be a knave.—*Shenstone.*

Men are often capable of greater things than they perform. They are sent into this world with bills of credit, and seldom draw to their full extent.—*Walpole.*

Curses always recoil on the head of him who imprecates them. If you put a chain around the neck of a slave, the other end fastens itself around your own.—*Emerson.*

Nothing more impairs authority than a too frequent or indiscreet use of it. If thunder itself was to be continual, it would excite no more terror than the noise of a mill.

I feel I am growing old for want of somebody to tell me that I am looking as young as ever. Charming falsehood! There is a vast deal of vital air in loving words.—*Lander.*

He who sedulously attends, pointedly asks, calmly speaks, coolly answers, and ceases when he has no more to say, is in possession of some of the requisites of man.—*Lavater.*

Generosity during life is a very different thing from generosity in the hour of death; one proceeds from genuine liberality and benevolence, the other from pride or fear.—*Horace Mann.*

Our Story-Teller.

THE EMERALDS.

One wintry afternoon in January, away up in the bleak attic of a wretched tenement house, a pale, sad-eyed woman sat sewing. The garment upon which she was engaged was very rich and costly, being a handsome party dress. The twilight closed in rapidly, with a blinding fall of snow, and a bitter, wailing blast, that made the windows rattle in their casements. Still the pale-faced woman stitched on.

"Mother," piped a slender voice from the cot beneath the window, "shall you get the fine dress done? Oh mother, I'm so hungry, if I could only have some tea, and a bit o' sausage."

The mother worked on steadily for a few moments, pausing only to brush a tear from her white cheek, then she arose and shook out the glittering robe.

"'Tis done at last," she said; "now mother's poor little girl can have her supper, only be patient a little longer, Flora. Ross, Ross, where are you, my boy?"

A manly little fellow came out from the little bedroom beyond.

"The fine dress is done, Ross," said his mother, "and you must run home with it as fast as ever you can. Miss Garcia will be out of patience, I know. Tell her I couldn't finish it one moment sooner, and ask her to give you the money. We must have it to-night. And you can stop in at Mr. Ray's as you come back and buy some coal, and we must have some bread and tea, and a mite of butter, and you must get a sausage, Ross, for poor little Flora."

"I'll get 'em all, mother," he said, "and be back in no time. You shall have a big sausage, little sis," he added, turning towards the cot.

The little girl nodded her curly head, and her great, wistful eyes sparkled with delight.

"And you shall have half of it, Ross," she piped, in her slender, bird-voice.

"Hadn't you better put on your thick jacket, my boy?" continued the mother; "the wind cuts like a knife."

"Pshaw, little mother; I don't mind the wind." And away he went, down the creaking flight of stairs, and out in the storm.

In her splendid mansion on Fifth Avenue, Miss Garcia Fontenay was in a perfect furore of impatience and anger. Her dear five hundred friends were assembling in the halls below, and her handsome dress had not come home. What did that beggar woman mean by disappointing her? At that moment there was a ring at the door, and a voice in the hall.

"Please tell Miss Garcia my mother could not finish it sooner, and she wants the money to-night."

The servant took up the handsome dress and message.

"I'll never give her another stitch of work," cried the angry beauty; "I ought to have had it three hours ago. Here, Fanchon, come and dress me at once, there's not a moment to lose! No, I can't pay to-night, I haven't time. He must call to-morrow."

"But we've no fire, and nothing to eat, and my little sister is sick," called the boy, pushing up the grand stairway.

"Shut that door, Fanchon, !" commanded Miss Garcia. And the door was closed in his face.

From her perch at the parlor window, little Pansie watched the whole scene, her violet eyes distended with childish amazement. "Poor little boy," she said, as Ross disappeared down the stairway, "sister Garcia ought to pay him. It must be dreadful to have no fire and nothing to eat."

She stood for a moment, balancing herself on the tip of one dainty foot, her rose-bud face grave and reflective:—then a sudden thought flooded her blue eyes with sunshine, and snatching something from the table, she darted down stairs. The servant had just closed the street door, but she fluttered past him like a humming bird and opened it. On the steps sat Ross, brave little fellow that he was, his face in his hands, sobbing as if his heart would break.

"What's the matter, little boy?" questioned Pansie.

Ross looked up, half believing that it was the face of an angel looking down upon him through the whirling snow flakes.

"O, I cannot go home without the money," he sobbed; "poor mother worked hard, and little Flora is sick and so hungry."

Pansie's eyes glistened like stars.

"Here," she said, "do you take this, little boy, and buy her lots o' nice things. 'Tis worth a great deal; papa bought it for my

birthday present, but do you take it and welcome."

She extended her dimpled hands, and something like a shower of falling stars tinkled to the boy's feet. He caught it up in a maze—a necklace of emeralds, lustrous, gleaming things set in tawny Indian gold.

"No, no!" he cried, running up to where she stood; "I can't take this, take it back."

But Pansie shook her curly head.

"You shall take it," she commanded imperiously. "I've lots o' jewelry and fine things—run home now and buy your sister something nice to eat."

She closed the door with a bang, and Ross stood irresolute in the stormy gloom. Should he ring the bell and return the jewels to Pansie's father, or should he do as she had bid him? He thought of his mother and poor hungry little Flora watching wistfully for his return. He could not go back and see them starve. With a sudden feeling of desperation, he thrust the glittering necklace in his bosom, and dashed down the snowy street.

The gas light blazed brilliantly in a fashionable jewelry establishment, and its bland proprietor looked down inquiringly on little Ross, as he approached the glittering counter.

"Would you like to buy this, sir?"

There was a tremor in the boy's voice as he asked the question, and the hand that held up the emerald necklace shook visibly. The lapidary took the gems, examined them closely for a moment, and then shot a sharp glance at the child.

"See here," he said, presently, his voice stern and commanding, "I want to know how you came by this?"

The boy's clear eyes fell, he blushed and stammered, evidently embarrassed. The jeweller put aside the emeralds, and taking the lad's arm, led him into a small ante-room.

"You are a thief, sir," he said. "That necklace belongs to Mr. Fontenay:—he bought it of me not one month ago. You stole it. You are a thief!"

The little fellow straightened himself, and his brown eyes blazed.

"I am not a thief," he retorted. "I didn't steal that necklace—a kind little girl gave it to me, and I know it was wrong to take it, but—but—my mother and sister are starving."

The jeweller hesitated.

"You don't look like a thief," he said, "but I will send for Mr. Fontenay, that will settle the matter at once."

He despatched a messenger accordingly, and Ross sat down in one corner, and sobbed bitterly, as he heard the driving winds, and thought of his mother and poor little Flora. In half an hour Mr. Fontenay came bringing his daughter, little Pansie, with him. The little creature darted in like a humming-bird, her cheeks ablaze, her eyes flashing lightning.

"He didn't steal my emeralds!" she cried. "I gave 'em to him to sell 'em and buy bread for his little sister."

Ross sprang to his feet, struggling hard to keep back his tears. He put out his little brown hand, which Pansie instantly clasped in both her chubby palms.

"I am not a thief, sir," he said at last addressing Mr. Fontenay; "I never stole anything in my life. I know it was wrong to take the necklace, but—but—sir, my little sister is sick and she is starving."

The merchant drew his hand across his eyes.

"You're a manly little fellow," he said, patting the lad's head, "and I do not in the least blame you, but we'll take back Pansie's emeralds, and she shall give you something more available. Here Pansie, give this to your little friend."

He put a gold piece into Pansie's hands, which she tendered to Ross, with the injunction that he should run straight home, and buy lots of goodies for his sister: a command he was not slow to obey.

"I think we'll not lose sight of the little fellow," continued Mr. Fontenay, as Ross disappeared in the stormy darkness, "shall we, pet? Let's see, what can we do to help him? He's a promising young lad, and an honest one I'm sure. Mr. Lenox, you're in need of an errand boy, why not try him? I wish you would."

The jeweller consented, to Pansie's great delight, and on the following day Ross was duly established as errand boy in the fashionable establishment.

Fifteen years after, one blustering March morning, a young man sat behind the counter of a thriving jewelry establishment in one of the Northern cities. He was a handsome man, a scholar and a traveler, a man of taste, intellect and money, for he was junior partner in the firm, which was a prosperous one. But despite all this good fortune, Ross Dunbar was not happy. His mother and little Flora had gone to their long home, and he was utterly alone, without kith or kin in the wide world.

Sitting alone that morning, with the roar of the March winds in his ears, his thoughts were running back to the days of his boyhood, to his mother's humble home. How vivid the past seemed, and how dear and sacred, despite its privations and sorrows. His eyes grew dim and his heart swelled. All were gone over the wide waters of time and change.

A tender smile softened his sad face as he recalled that stormy night, when he sat sobbing on the steps of Mr. Fontenay's mansion and little Pansie taking pity on him, dropped her string of emeralds. Darling little Pansie, the remembrance of her sweet face as he saw it through the snow wreaths that night, haunted him constantly. In all the fifteen years, never for one hour had he forgotten her. But she was gone; lost to him forever.

His revery was broken by the entrance of a customer, a lady closely cloaked and veiled. She approached the counter, with a jewel-case in her hand.

"Would you buy these sir," she asked simply, in a clear, sweet voice that stirred the young man's heart as no other woman's voice had power to do.

He took the casket and unclosed it, and spread out its contents. A watch, elegant and costly, a diamond ring, one or two rubies, and an emerald necklace. Ross Dunbar barely suppressed a cry of surprise as his eyes fell upon it. He turned it over with eager, trembling fingers, and there on the clasp was the name that had lived in his heart for so many long years; "Little Pansie."

"You wish to sell them all?" he asked, striving to steady his voice, and the wild throbbing of his heart.

The lady hesitated an instant, then she put out a slender hand and drew the emeralds towards her.

"I dislike to part with this, she said; "it was my father's gift—and—and—but no matter, take them all; I must have the money."

In her eagerness she had thrown aside her veil, revealing a lily face lit by lustrous sapphire eyes. Ross Dunbar stood silent a moment, every nerve in his manly frame thrilling with supreme delight. He had found her at last, the one idol of his life.

"They are very fine gems," he said after a moment, "and I am willing to give you a fair price—suppose we say one thousand dollars, will that do?"

The girl flashed a dazzling glance of glad surprise from beneath her heavy veil.

"So much as that," she said tremulously. "You are very kind, sir. O you cannot know how much this money will help me!"

The young man made a polite reply, and proceeded to put aside the jewels and to draw a check for the money. The March winds were still blustering without, and the girl shivered and drew her wraps closer as she started out.

"Wont you let me run down to the bank for you?" said the jeweller, catching up his hat, "You can play shop-lady the while; it won't be but a minute or two."

"But I am troubling you so," she faltered.

"Not a bit; just take this warm seat, please, you'll not be likely to have any customers." And seating her beside his desk, he took the check and hurried out.

Pansie Fontenay threw back her veil, and leaned her head upon her hand, a puzzled reflective look upon her sweet, sad face.

"Where have I seen his face?" she asked herself over and over again. "It is so familiar: who in the world can it be?" His return broke in upon her meditations, and receiving her money, she hurried away to her humble lodgings.

The following afternoon was even more blustering and stormy; the wind roared and the sleet beat and tinkled against the windows of the little room in which Pansie and her father sat. Severe misfortune and reverses had reduced them to poverty, and the old man being an invalid, all the care fell upon Pansie's slender shoulders. She sat busy with her sewing, while her father read aloud from a new book, which she had bought for him with some of the money received for her jewels. Her sweet face was wan and sad, and her future stretched before her sad and hopeless and gloomy.

There was a ring at the door, and a servant brought up a package for Miss Fontenay. An exquisite bunch of pansies, fragrant and golden hearted, done up in tissue paper, and attached to them a card, bearing the simple word:—"Ross Dunbar has not forgotten Little Pansie."

Pansie sat amazed for a moment, and then a rich bloom drifted up to her white cheeks.

"O father, she cried, "I knew him—I knew him! O we have found Ross at last!"

An instant later Ross was in the room, clasping her fluttering hands in his, and looking into her blue eyes with a glance that brought the rosy blushes to her face.

And a few weeks later, when the blustering winds were over, and the blue birds sang in the hedges, and the golden hearted pansies bloomed on the garden borders, little Pansie became Ross Dunbar's bride, and for her bridal gift he gave her back her string of emeralds.

WOMEN SMUGGLERS.

Women are frequently smugglers of fine laces, but rarely of jewels. On the Italy, however, some valuable jewels were recently seized, having been found quilted in an underskirt. A quiet-looking Frau, recently landed from Bremen, had a double-quilted petticoat filled with Shetland shawls, caps, and stockings. Another on the Westphalia had a quantity of the finest silk bindings, two valuable watches, two silk dress patterns, two dozen silver spoons, a dozen silver forks and eight pieces of silk galloon quilted into a skirt of serge. A companion on the same steamer had seventy-three bundles of sewing silk and twenty-nine pairs of kid gloves secreted on her person—scarcely concealed, however, as the foolish Fraulein had tied strong cords about her hips, and the smuggled articles were suspended in such a way that she was scarcely able to reach the dock.

The muff is a very ordinary cover for smuggled laces. An Englishwoman, recently landed from one of the Hamburg steamers, had the cotton removed from her muff, and its place filled with valuable laces. The muff was strapped to her person, where it stood for *embonpoint*.

In one petticoat of this lady were found gloves in quantity; in the facings of her dress, cigars; and in the voluminous gathers of a second petticoat were Meerschaum pipes in sections.

A French woman, extravagantly dressed, and moving about suspiciously, was invited into the room of the Inspectress recently. Her petticoat proved to be nine yards of superior black velvet, one selvedge being gathered into a waist-band, which also held a dress pattern of Poison silk. The facing of the velvet petticoat, which was put on with the nicest care, was well padded with Chantilly laces, cunningly run together; and the ruffle on the bottom of this imperial under-garment consisted of five rows of rich Chantilly flouncing, caught together, quite likely, in the hope that it would be taken for one piece. An immense seizure of English open-faced watches has recently been made upon the person of a well-appearing American woman, who had them neatly encased in the tucks of a heavy flannel petticoat.

Sometimes the German women seek to evade the tariff dues in the most awkward manner; as witness the stupidity of hanging nine watch chains about one's neck, with a valuable watch at the end of each chain. Frau Stumpf said she had been told that watches were worn by the passengers, and the officers did not take them.

A desperate-looking woman, coming on one of the English steamers lately, on being examined exhibited an amusing spectacle, with a silver cake-basket lashed to each hip, and two huge dress patterns festooned as "filling," there and thereabouts. On being detected, this woman, in terrible rage, drew a knife on the Inspectress.

Some of the smuggling expedients are, of course, extremely amusing. A *spirituelle* little Frenchwoman had on her husband's red flannel drawers, and these were tied in puffs, here and there.

On being "unpacked," there came forth a Bohemian glass toilet set, two dozen saltcellars, three dozen silver spoons, three dozen silver forks, several little articles of *bijouterie* in bronze and crystal, and some fine Swiss wood-carvings; all of which were put up in the softest tissue-paper and paper-shavings, that they might not strike against each other. When the little body was unloaded, no one laughed more heartily than she.—*Scribner's for July.*

Saxe says that Vermont is famous for four staples, "Men, women, maple sugar and horses. The first are strong, the last are fleet, the second and third are exceedingly sweet, and all are uncommonly hard to beat."

Sabbath Reading.

A GERMAN TRUST SONG.

BY LAMBERTUS—1625.

Just as God leads me, I would go;
I would not ask to choose my way;
Content with what he will bestow,
Assured he will not let me stray.
So as he leads, my path I make,
And step by step I gladly take,
A child in him confiding.

Just as God leads I am content;
I rest me calmly in his hands:
That which he has decreed and sent—
That which his will for me commands,
I would that he should all fulfill,
That I should do his gracious will,
In living or in dying.

Just as God leads, I all resign;
I trust me to my Father's will!
When reason's rays deceptive shine,
His counsel would I yet fulfill;
That which his love ordained as right,
Before he brought me to the light,
My all to him resigning.

Just as God leads me, I abide;
In faith, in hope, in suffering true;
His strength is ever at my side—
Can aught my hold on him undo?
I hold me firm in patience, knowing
That God my life is still bestowing—
The best in kindness sending.

Just as God leads, I onward go,
Oft amid thorns and briars keen;
God does not yet his guidance show—
But in the end it shall be seen
How, by a loving Father's will,
Faithful and true, he leads me still.

ONLY ONE YEAR, DAY, HOUR.

"Only one year," said a soldier, "and I shall return to civil life, to the bosom of my family to enjoy with them the blessings of peace, and the bounties and honors which my country bestows upon her heroes." But ere the year had closed the soldier filled an unknown grave in Carolina, "in the midst of the uncircumcised, them that are slain with the sword," and will there remain until the trumpet, louder than the din of battle, shall reanimate the dead. Far away, in his once happy home, was heard the wail of the widow and the orphan cry, and the year beginning in joyous expectation ended in woe.

"Only one day!" said a young lady, who, at the close of a school term at an academy, was making preparation to visit her home during the vacation. "Only one day, and I shall be with my parents, brothers and sisters, at our dear home." And she went on making preparations and chatting in a manner that little betokened the calamity that should close those lips in death before the consummation of her hope should be realized; yet so it was. Although similar instances of sudden death frequently occur, they seem insufficient to impress upon the minds of the young and gay the solemn truth that "In the midst of life we are in death."

"Only one hour!" said the passengers crowded in the spacious and palace-like cabin of the ill-fated Cambria; "Only one hour, and we shall reach the harbor, where kind greetings await us, and the scenes of ocean will be exchanged for those of the pleasant land." Light hearts discussed the all-absorbing topic. The man of business planning to increase his gains; the tourist noting the incidents of the way, and speculating upon his future travels, and final return home; the husband returning to the bosom of his family and planning a surprise; the wife, with her first-born, followed by the prayers and anxious solicitude of her husband in her home in distant America, on a journey to visit her anxiously waiting and expectant parents; and the new-made bride and groom, on their first tour of pleasure, alike put from them the thought of death—ghastly death, so near.

The ship sped on, but suddenly she struck upon a reef, and but a moment sufficed to reveal to the terror-stricken passengers their awful situation. Crowded upon the deck, in the murky night, their now helpless and rapidly sinking vessel, tossed on the dark billows lashed into fury by the sweeping gale; children clinging to their terror-stricken parents for protection; friend bidding friend a last adieu; the worldling pleading for mercy with God, whom all his life he had slighted; and the Christian, only calm in this awful hour, went down together, and the moaning sea sang the requiem of the dead.

Even in the absence of sudden calamity, "Man that is born of woman is of few days, and full of trouble. He cometh forth like a flower, and is cut down; he fleeth also as a shadow, and continueth not." So "Man lieth down and riseth not, till the heavens be no more, they shall not awake, nor be raised out of their sleep"—Job, 14: 1, 2, 12. How careful, then, ought we to be, in laying plans for the future, ever heeding the scripture injunction, "Boast not thyself of to-morrow, for thou knowest not what a day may bring forth."

Our lives should ever be characterized by a preparation for the judgment seat of Christ, at which we must all stand to receive for the deeds done in the body. Go to now, ye that say, To-day or to-morrow we will go into such a city, and continue there a year, and buy and sell and get gain. Whereas ye know not what shall be on the morrow. * * For that ye ought to say, If the Lord will, we shall live, and do this or that.

Adolphus Smith.

Ladies' Port-Folio.

DRIFTING AWAY.

BY ROSE GERANIUM.

DRIFTING away—drifting away!
Baby is leaving me every day,
Sailing far out on the treacherous sea
Where the bright glories of woman-life be.
Yes, on the hour-ripples, day after day,
Baby, my darling, is drifting away!

Drifting away—drifting away!
Every morn loses a golden ray,
Every night twineth a shade, less fair,
Over the tangles of clustering hair.
Yes, on the hour-ripples, day after day,
Baby, my darling, is drifting away!

Drifting away—drifting away!
Sailing and singing! O, bright little fay!
All the true strokes of thy silver-tipped oar
Float back to echo on memory's shore.
Yes, on the hour-ripples, day after day,
Baby, my darling, is drifting away!

Drifting away—drifting away!
Wonderful words can the dainty lips say,
Wonderful tasks can the busy hands do,
Wonderful journeys go tiny feet true;
Yes, on the hour-ripples, day after day,
Baby, my darling, is drifting away!

Drifting away—drifting away!
Baby is leaving me every day;
Steering far out on the treacherous sea
Where the bright glories of woman-life be,—
Yes, on the hour-ripples, day after day,
Baby, my darling, is drifting away!

Sycamore Dale, W. Va.

THE DECAY OF POLITENESS.

TEMPLE BAR, an English Magazine, has this sensible article:

In nothing is the decay of politeness more remarkable than in the relations between the sexes. Men and women are antagonistic as well as familiar. We will start no vexed questions to account for this antagonism, but suggest that it must be in some sort the result of steam and smoke, since it began with the railways. In olden times—not so very old either—when the stage coaches were our best and readiest means of traveling, woman commanded the care and attention of the gallant. In case of rain, gentlemen relinquished the comfortable inside places, and mounted to the roof in favor of the ladies. Coats, cloaks, umbrellas—every available convenience was at their service. They were waited upon at inns, handed out of the coach, assisted with their luggage—taken care of in short. Now the sight of a woman in a railway carriage sends the knight further. He rushes from the compartment until the obnoxious flowers that alarmed him are absent, and he gains that luxurious divan appropriate to the stronger sex, and called a "smoking carriage." If the warning whistle precipitates him in the company of the fair sex, he leaves it as quickly as he can, and does not tarry to offer a hand or protect a bandbox. It is just possible that these ladies who have taken to cigarettes may find more favor with the weary masculine traveler. The urbanities of domestic life, and the civilities of society, are not equally lost in smoke. Men herd together in clubs, where the pipe, emblem of low life in the last generation, is the calumet of peace of this. Women, who unaffectedly dislike the odor of tobacco, need not expect to be liked by the men. They are simply bores. Thus, if men prefer clubs to drawing-rooms, and pipes to ladies, women, asserting their rights in turn, form separate societies. They have their clubs. They become what is called "strong-minded," and the other sex, who "make chimneys of their noses," as James I. not inaptly said, puff out ridicule instead of puffing out politeness.

DRESS IN JAPAN.

THE style of dress in Japan is even more varied than it is on Chestnut street or Walnut street on a fine Sunday. A Japanese lady, thoroughly arrayed, is really an elaborate work of art. A large amount of attention, and no little expense to begin with, are devoted to the arrangement of the hair—even the common people regularly employing a hairdresser. If they cannot afford the luxury every day, they will make it last for two days by sleeping on a wooden pillow placed under the neck.

The item of next importance in a Japanese lady's toilet is her *obi*, or girdle, which is usually of bright colors, and arranged behind with great care, so as to form the camel's hump so popular among our ultra-fashionable belles.

The Grecian bend is an old institution in Japan. To see one of her dark-skinned ladies, with her extensive head-dress, a hump upon her back, an extremely narrow skirt, high, wooden-heeled pattens, her body thrown forward, and as she minces her steps, you would imagine she was caricaturing the brainless votaries of fashion in other lands; but she is only dressing as her people have dressed, and walking as they have walked, for centuries. The *obi* serves a purpose in Japan which I have not heard attributed to it elsewhere. When a woman becomes a widow she makes no change in it unless she wishes to announce her purpose never to marry again, in which case she ties her *obi* in front. How effectual this is to ward off all proposals I do not know; but as it is always and everywhere the privilege of a woman to change her mind, it is said the *obi* occasionally in such a case works its way around to its normal position behind.—*Prime's "Around the World."*

HOME INFLUENCES.

THE influences of home perpetuate themselves. The gentle grace of the mother lives in her daughters long after her head is pillowed in the dust of earth; and fatherly kindness finds its echo in the nobility and courtesy of sons who come to wear his mantle and to fill his place; while on the other hand, from an unhappy, mis-governed and disordered home, go forth persons who shall make other homes miserable, and perpetuate the sourness and sadness, the contentions and strifes and railings, which have made their own early lives so wretched and distorted.

Toward the cheerful home the children gather "as clouds and as doves to their windows;" while from the home which is the abode of discontent and strife and trouble they fly forth as vultures to rend their prey.

The class of men that disturb and disorder and distress the world are not those born and nurtured amid the hallowed influences of Christian homes; but rather those whose early lives have been a scene of trouble and vexation, who have started wrong in the pilgrimage, and whose course is one of disaster to themselves and trouble to those around them.

WOMAN'S CHEERFULNESS.—Concerning nothing do we come to more false conclusions and make more false steps, than concerning woman's cheerfulness. Ah! how many of these affectionate creatures are there who pine unknown, despond smiling, and wither jesting; who, with bright, joyous eyes flee into a corner, as if behind a fan, that they may right gladly break out into tears that oppressed them; who pay for the day of smiles by the night of tears—just as an unusually transparent, clear and mistless day surely foretells rain.—*Jean Paul.*

WOMEN, under any circumstances, can scarce do more than dip the foot in the broad and deep river of thought; they have not the strength to contend with the current. It is easy for women to be heroic in action; but when it comes to interrogating God, the universe, the soul, and above all, trying to live down their own hearts, they dart down to their nests like so many larks, and if they cannot find them, fret like the French Corinne.—*Margaret Fuller.*

LITTLE words, not eloquent speeches nor sermons; little deeds, not miracles nor battles, nor one great act of mighty martyrdom, make up the Christian life. The little constant sunbeam, not the lightning; the waters of Siloam, "that go softly" on their meek mission of refreshment, not the waters of the river, "great and mighty," rushing down in torrent noise and force, are the true symbols of a holy life.

ODDS AND ENDS.

A STUDENT defines flirtation to be attention without intention.

LOVE is to the moral nature what the sun is to the earth.—*Balzac.*

HERCULES was a model husband; rather than stay out at night he invariably carried his club home with him.

ENGLISH embroidery is again coming in fashion. It is easy to make and therefore an economical trimming.

A CHAIN composed of alternate platina and gold links with a platina locket on which is a monogram in raised gold, is the newest and most stylish necklet.

A YOUNG lady says that a gentleman ought never to feel discouraged when the "momentous question" is negatived by the object of his choice, "for in life, as in grammar, we always decline before we conjugate."

Reading for the Young.

THE GOLDEN AGE.

BY PERSIE VERE.

'TWAS long, and long ago; no written books can tell
Just how those days began, and how they closed as well.

'Twas in the "Golden Age;" turnips and trees could milk,
And roasted pigs and geese could leave the plate and walk.

And apples on the trees, in North or sunny South,
Called to the lazy man, "I'll drop, just ope your mouth,"

While dinners, nice and warm, served up in golden dishes,
Marched on, in order fine, to meet his spoken wishes.

So, no man racked his brain for bread to eat, as now;
Or toiled with weary hands and wrinkled, moistened brow.

And women did not brown and spoil their hands and faces
By washing, baking bread, and ironing shirts and laces.

Nor wear their patience out, and make themselves look old,
By sewing children's clothes with frill and tuck and fold.

For all the woods were full of fays and elves and sprites,
Torn coats and tattered frocks with charms were put to rights.

No man had need to scold for strings and buttons missing;
And so, no "fallings out" and "makings up" by kissing.

Nuts grew on stalks, like corn; shoes ripened like potatoes,
And stockings, every size, were plenty as tomatoes.

No little shivering boys were tumbled out of bed
To chop, or feed the calves; they slept and played instead.

And girls were never called to sweep or wash the dishes;
They flitted through the world as free as birds and fishes.

No school for girls or boys, no tasks their plans o'ertripping;
No matter what they did, there was no fear of whipping.

So *none* had aught to do, to help a friend or brother,
In time, there were no friends, no one who loved another.

The days and years rolled on. Some people grew too lazy
To raise themselves and walk; and some grew cracked and crazy.

The children grew too dull to run about and play,
Threw down their toys and slept, and gaped their time away.

At last the silver moon sailed through the silent air,
So near the careless earth that giants, living there,

Threw nets, and caught them all; then the great moon sailed on,
With all the lazy folks; and the "Golden Age" was gone.

ANOTHER LESSON IN NATURAL HISTORY.

BY AUNT PHEBE.

Anagrams of Dogs.

As the cat is a type of the *Felidæ* so the dog is the typical species of the family *Canidæ*, which also includes wolves, foxes, the jackal and the hyena. Of all these animals the dog seems to be the most intelligent. That may be, however, because he has a better opportunity to display his knowledge. It is asserted that wolves may be tamed when young, and will show as much affection for their masters as the dog. Some people really think that the *first* dog *was a wolf*. However that may be, the *domesticated* dog is the natural enemy of the wolf.

Foxes, too, are sometimes tamed—*that I know*, for I very well remember that our best Shanghai biddy fell a victim to our neighbor's pet fox. I read of two little girls who had a tame fox, and they used to put him to bed to play the part of wolf in "Little Red Riding Hood." Reynard would lie very still, and seemed to understand what was required of him. I think it must have been very funny to see his sharp eyes and *sharp nose* peeping out from the ruffle of grandmother's nightcap.

But about the dogs. You all know how smart and brave and noble some of them are; and I often think there wouldn't be so many "worthless curs" if all dogs were treated a little more like *intelligent* creatures. Did you ever think of the great varieties of dogs there are and the wide difference between them? Now I shall puzzle your brains with some more Anagrams, all of dogs—and yet there are but few of the varieties:—1, Kech gi snarl; 2, Dun lob hood; 3, Dun dan fel now; 4, Stiff Ma; 5, Groundhey; 6, Gobll du; 7, Hod of nux; 8, Gablee; 9, Tin rope; 10, Reriret; 11, Lopdoe; 12, Street; 13, Seal pin.

Here are thirteen varieties. Who can write them correctly? Did you ever see men whose faces reminded you of dogs? I do often. There is No. 4; I know a cross, sour, burly man that looks very much like him, and I don't believe his nature is half as noble as the dog's. I once had a school teacher that looked almost exactly like No. 10. He was Scotch; so is No. 10.

But I wanted to tell you a little about Ring. He was part Newfoundland, and the pet and playmate of our baby GENIE. The dog was very fond of the baby, but much preferred to show his affection in private. When he thought no one was looking at him, he would kiss his little master, licking his face and hands. But sometimes the boy would grasp old Ring by his whiskers and *compel* him to be kissed when others were by. Then the old dog's ashamed and sheepish look was really pitiful to see.

GENIE sometimes ran away, but he never went alone. And when we could catch a glimpse of Ring we knew where to find the baby. Once, when he could just creep, GENIE was on a high porch. Back and forth he crept, and back and forth trotted Ring, always keeping himself between the baby and the edge of the porch. But Ring became too fond of mutton, and so—"peace to his ashes."

[THE answer to the Anagrams of Dogs will be given in two weeks.]

"SUSIE," said a teacher to one of her pupils, "you shouldn't make faces. You'll grow up homely if you make faces." Susie looked thoughtfully in the teacher's face a moment, and then innocently asked, "Did you make faces when you was a little girl?"

The Puzzler.

ILLUSTRATED REBUS.—No. 2.

☞ Answer in two weeks.

MISCELLANEOUS ENIGMA.—No. 1.

I AM composed of 26 letters:
My 22, 10, 24, 12, 20 will eventually overtake us all.
My 1, 14, 22 should be always spoken of with reverence.
My 5, 14, 11, 25, 24, 7 is what we all are.
My 5, 24, 15, 13 was a person beloved by our Savior.
My 3, 19, 11, 8, 7, 13 is a word often used in the Scriptures.
My 16, 2, 18, 23 is what we are all commanded to do.
My 9, 6, 4 is a useful insect.
My 24, 17, 15 is composed of two gases—oxygen and nitrogen.
My 20, 10, 12, 21, 14, 11 is a luminous body.
My whole was original with an illustrious Virginian. O. K. F.

Sherburne, Chenango Co., N. Y.

☞ Answer in two weeks.

ACROSTICAL ENIGMA.—No. 1.

I AM composed of 24 letters:
My 1, 9, 15, 8, 11 is a fresh water fish of Brazil, about the size of a minnow, much esteemed for food.
My 2, 11, 17, 22 is one of the four cardinal points.
My 3, 15, 9, 16 is a grallatory bird.
My 4, 21 is an exclamation.
My 5, 20, 19, 13, 7 is an insect of the sub-order *Hymenoptera*.
My 6, 15, 9, 3, 11 was the burden of a famous song during the French revolution.
My 7, 13, 11, 17, 21, 10 is a useful plant.
My 8, 2, 14, 24, 10 is a very hard mineral.
My 6, 7, 5, 19 signifies *also*.
My 10, 18, 23, 15 is a constellation.
My 11, 17, 15 is a man's name.
My 12, 18, 23, 2 was a famous city.
The 13, 24, 3, 18 of birds of prey is usually elevated.
My 14, 11, 18 is a fish.
My 15, 1, 9, 11, 17, 7, 21, 3 is the trivial name of a bird.
My 16, 9, 11, 17 is a species of limestone.
My 17, 9 is a note of the musical scale.
My 18, 15, 20 is a plant.
My 19, 9, 20, 11, 17 is one of the eight satellites of Saturn.
My 20, 9, 14, 11 is a star in the constellation Cetus.
My 21, 16, 19 is a tree.
My 22, 3, 13, 20, 2, 10, 16, 11 is a genus of fungi.
My 23, 5, 1, 11, 1, 13, 3 is a palindrome.
My 24, 12, 7, 3, 9, 15 is a metallic oxyd.
My whole is exhibited by all Vertebrates.

Forest City, Ill. FOURTEEN.

INDUSTRIAL SOCIETIES.

The Adams Co., Miss., Ag. and Mech. Ass'n has decided to allow all exhibitors at the third Fair this fall (date not given) entitled to premiums, the choice of a yearly paid up subscription, from a catalogue of standard periodicals on Agriculture, Horticulture, Housewifery, Architecture, and kindred subjects, the subscription to commence with January 1, 1873. ALLEN T. BOWIE, Jr., Corresponding Secretary, Natchez, Mississippi.

An Industrial Exhibition of Newark, N. J., industries and manufactures is to be held at Newark, N. J., commencing the 20th of August and extending into September. A. M. HOLBROOK is Secretary.

RURAL BRIEF-MENTION.

PEACH trees in Kansas are breaking down with fruit.

THE GOD-made Country is far preferable to the Man-made Town these fearfully hot days.

THE hop crop reports from England are unfavorable; from Germany favorable, while the American crop promises to fall short of home requirements.

THE "Lyndale" stock sale (Col. King's of Minnesota) realized between $25,000 and $30,000; but the Western paper making the statement says the animals sold ought to have brought $40,000.

MRS. H. is informed that mushroom spawn can be obtained of any of the New York seedmen (we write this in New York, but Rochester seedmen can probably supply you) at 15 cents per pound.

HENRY SHIPLEY asks if there is any difference in results, when wheat is drilled North and South, East and West? Our own experience is in favor of drilling North and South. He asks the experience of others.

WE are requested to ask the officers of all Ag. and Hort. Societies, Farmers' Clubs, etc., to send the address of their Presidents and Secretaries to CHAS. W. GREENE, Secretary of National Ag. Congress, Jackson, Tenn.

W., Macon, Ga., is informed that we have heard and read of instances where a hen has laid 300 eggs in a single year, but we have never *known* any such case, and do not think they are at all common to any breed.

T. I. KITTS asks if any of our readers can tell him, from actual personal knowledge, if the Bermuda Islands are a good resort for invalids, who own the lands, how far they are from New York city, price of land, etc., etc.

A CORRESPONDENT of the Prairie Farmer says that WILLIAM SPROUCE was the original inventor of the scouring plow, without which prairie farmers would find it difficult to work much of their prairie soil. This claim will doubtless be contested.

THE "Reader" of the RURAL NEW-YORKER who protests that he and many other readers do not understand and cannot act upon all the articles that appear in the RURAL is informed that the RURAL is not published for any one class of readers, but for all classes who desire to learn something that will profit them in every-day life.

SEMI-BUSINESS PARAGRAPHS.

Watch No. 1788—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J.,"—manufactured by United States Watch Co., (Giles, Wales & Co.,) has been carried by me five and a-half months; its total variation from mean time being twenty seconds, being compared by me personally with Greenwich time, London, April 24, 1871.—HENRY MORFORD, 120 Broadway, N. Y.

Facts for the Ladies.—J. A. H. Abell, Warsaw, N. Y., bought a Wheeler & Wilson Lock-Stitch Machine in 1857; used it nine years in stitching clothing that eight hands prepared, and since in family sewing with not a cent for repairs; it runs now like magic, with no signs of wear. See the new Improvements and Wood's Lock-Stitch Ripper.

Plantation Bitters. The fact that it combines the properties of an invigorant with those of a regulator and alterative, in exactly the proportions necessary to produce a radical change in the tone of the system, and the action of the digestive and secretive organs, is an unanswerable argument in its favor as a general restorative.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, July 8, 1872.

SINCE our last report business has been resumed after the Holiday, with some signs of better prices and a larger demand for Stocks in Wall street. General Trade is only partially active. The exports of Produce are going on well, and there is a large trade in Tea and Coffee, now that the duties are free, and the accumulation in Bond is being rapidly reduced. The other reductions in the tariff do not come off until after August 1, and the consequence is that trade is somewhat checked in all articles upon which one-tenth of the old duties are then to be reducted.

The Public Debt schedule of July 1 shows a further reduction in the principal of the Debt of $2,000,000, making $33,000,000 since the 4th of March, 1869, under the present Administration. The comparative figures now stand:

	March 4, 1869.	July 1, 1872.
Funded Debt	$2,107,000,00	$1,788,000,000
Yearly Interest	124,000,00	103,000,000
Treasury Circulation	317,000,000	402,000,000

The following are the comparative movements of the City Banks for the past fortnight:

	June 29.	July 6.
Capital	$87,154,000	$87,154,000
Loans	289,002,800	290,901,800
Gold and Greenbacks	77,146,900	81,284,100
Deposits	232,387,200	241,771,900
Circulation	27,416,100	27,528,100

PRICE OF STOCKS AND BONDS.

American Gold	113⅜	N. Y. Central Scrip	28¼
U. S. 5-20's of 1867	*115⅜	Rock Island	112
U. S. 6s of 1881	*118	N. West	74½

Western Telegraph	75	American Express	82
Pacific Mail	75⅜	United States Exp's	87½
N. Y. Central Stock	98⅛	Bills on London	109¾

* Ex. Dividend.

The Government Stocks are ¼@1 per cent. higher than on our previous report, and the demand is active on a moderate supply, especially for the 5-20s and 5 per cents, which are dealt in abroad. The Railroad Stocks are 1 to 3 per cent. higher than on last report.

PRODUCE AND PROVISIONS.

NEW YORK, Monday, July 8, 1872.

IN addition to the extreme depression that has attended the severe hot weather of the past fortnight, the celebration of the Fourth has interrupted trade in a very great degree, and there is little to remark, beyond repeating the nominal quotations for a large portion of the list. Beans, dried fruits, broom corn and such items do not require any special allusion.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,132,000	Meal, bbls	1,365
Oats, "	368,800	Flour, "	45,000
Wheat, "	90,700	Eggs, "	7,510
Rye, "	—	Cotton, bales	6,100
Barley, "	—	Hops, "	150
Malt, "	3,900	Wool "	3,150
Seed, "	460	Butter, pkgs	10,895
Beans, "	1,595	Cheese, "	44,800
Meal, bags	550	Lard, "	4,530
Peanuts "	570	Dried fruits, pkgs	103
Pork, bbls	700	Cut Meats "	3,400

Beans and Peas.—In beans a number of lots of marrowfats that have been held back in the country for the top price have been sent forward this week, and the result is there is a weak feeling, as the demand is very slow. Mediums are in small demand, but, as the stock receives no important additions, prices are steadily held. The quotations are, for prime medium, $3.30@3.35; fair do., $2.80; prime marrowfats, $3.50@3.70; fair do., $3.25; prime kidney, $3.40@3.50; fair do, $3; red kidney, $2@3. Peas are neglected at this season; for green, $1.55@1.65; Southern B. E., per two-bushel bag, $2.25@2.50.

Beeswax—Has been sold much lower under very fair receipts. At present prices a fair amount is marked off to shippers. Sales of Western at 36@47c.; Southern, 37½@38c.

Butter.—Receipts of butter for June, 60,800 pkgs.; same month last year, 63,638 do. There is no demand beyond the actual wants of local trade, and prices are unchanged for stock that has passed safely through the damaging weather of the past week. There will be some heavy losses on lots that have had to remain on wharf for any length of time. Still, with the thermometer at 90 degs., it would have been quite as profitless to have them through this hot sun. A few Western creameries are arriving, but the quality is too tender to stand the summer sun, and only perfect parcels will bring 24@26c. We quote:—State pails, choice, 25@26c.; other, 22@25c.; State selections, 26@27c.; good to prime firkins, 24@25c.; do. half tubs, 24@25c.; do. Welsh, 24@25c.; other grades of State, 18@22c.; Western Reserve choice, 18@19c.; Western fair to good, 14@16c.; common, 10@11c.; green butter, 7½@9c.

Cheese.—Receivers have been compelled to shade prices from day to day, in order to keep the market clear of stock, the hot weather forcing this movement. There is very little really prime stock coming in. Shippers have been paying for the best lots 11@11½c., with occasional lots of strictly choice 11½. At these figures we carry over very little stock. We quote State factory fine at 11@11½c.; good do. 10½@10¾c.; common do. 9c.; skimmed as low as 3c.; State dairy, 10½@11c. for prime, fair do., 9c.; Ohio factory 9¼@10c.

Cotton.—The market has been very quiet. Exporters find no margin at present prices, and spinners will not buy beyond pressing wants. Prices are lower, but at the close there is no disposition to force business.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	20¼	20¼	20¼	20¼
Good Ordinary	23	23	23⅛	23⅛
Low Middling	24⅛	24⅜	24⅜	24⅜
Middling	25⅛	25⅜	25⅜	25⅜
Good Middling	26⅜	26⅜	27	27

For forward delivery latest sales on the basis of low middling, are as follows:—August, 24¼c.; Sept., 22c.; Oct., 20⅜c.; Nov., 19⅜c.; Dec., 19¼c.

Dried Fruits.—There has been no business in full parcels. For apples the jobbing trade have to pay late prices, but a large lot put on the market would have to be sold at a decline. Peaches are rather weak. Blackberries are lower, with a full stock, and close on to the season for new.

We quote cherries at 30c.; raspberries, 30@32c.; blackberries, 11c.; apples, new State quarters, 10@11c.; extra sliced, 12@13c.; Southern new quarters, sc@9c.; do. fine sliced, 11@12c.; new prime Western, 9@10c.; common Western, 6@8c.; unpeeled peaches, 4½@5c. for quarters; 5½@6c. for halves; peeled peaches, 17@19c. for North Carolina, 13@14c. for Virginia, and 15@16c. for Georgia; plums, State, 27@28c.

Eggs.—The market has been very dull. Receipts have been larger than desired, embracing many lots and prices are very much lower, with a disposition to realize at the quotations. Sales at 17½@18c. for Western extra brands, 16½@17c. for common do., 19c. for State and Pennsylvania, 21c. for Jersey.

Flour.—Another important decline in prices has been submitted to, and there is still a very depressed feeling. The crops at the West and in Europe look well, and both shippers and the home trade buy only as they have occasion to use.

Superfine State	$5 10	@	5 65
Common extra do	6 30	@	6 25
Good to choice do	6 30	@	6 45
Fancy do	6 50	@	7 15

Good to choice white wheat extras	7 25	@	8 85
Fair to very choice extra Minnesota	6 50	@	8 00
Common to fair extra St. Louis	7 20	@	9 30
Good to choice do	9 55	@	11 50
Extra Southern	6 85	@	8 90
Good to choice do	8 95	@	12 20
Rye, common to fine	3 90	@	4 65

Fresh Fruits.—There is an irregular market while so many steady buyers are absent from the retail trade of the city, and when arrivals of any item show abundance as before, the preservers and bakers spoil the short reign of good prices of the morning. Western strawberries are prolonging our supply, though they are not sought after with much activity. Raspberries are taking their place. Sour cherries are in demand, and the Rochester fruit sells well. Peaches from the South are offered regularly, but no inviting lots have come forward. Southern apples have a better range, as the quality improves. Cherries from near gardens are no longer quotable, one or two heavy showers having rendered the remnant unmerchantable. Southern apples are selling at $2@3 ₱ bbl., 75c.@1.50 per crate; fancy strawberries ₱ quart 15@20c. small hulled do. 2½@4c. Antwerp raspberry, 3ds, 8@9c., black caps ₱ qt. 8@10c., blackberries seedling ₱ qt. 10@15c., common 5@8c.; gooseberries ₱ bush. fair size $3@4.50; Southern peaches per crate in good order $1@5; cherries, fancy, including prime sour, 12@15c., do. late 5@8c., poor 2@4c.; a few pears quote 3@6 $3.25 ₱ crate; peanuts $1.40@1.85 for common to fair and $2@2.20 for prime. Florida Watermelons per 100 $15@50.

Grain. In wheat the crop prospects have put prices down 6@10c. per bushel, with very little business from the home trade, but more business from shippers at inside prices. No. 2 Spring, in store, $1.48@1.49½; No. 2, in store, $1.52@1.51; winter red Western, $1.50@1.60; amber Western, $1.62@1.65; white Western, $1.67@1.75. Rye is lower. Prime Western, 79½c. delivered. Oats are lower, with considerable stock arriving from Chicago that has been held there on speculation. Sales at 41½@43c. for Western, and 42½@43½c. for Ohio. Corn is in large supply; the total receipts thus far this season have been the largest on record. There is a good shipping trade, but not to an extent to prevent a burdensome accumulation of stock. Sales at 58@60½c. for steamer lots of Western mixed; 61@62c. for sailing vessels, do.; 62@65c. for yellow.

Hay and Straw.—Prices are no lower, but holders are anxious to sell. Supplies are fair, but trade is rather slow.

Shipping hay, $1.15@1.20, retail $1.40@1.60, salt 95c@$1, clover 80@90c. Long rye straw $1.10@1.15 short 85@90c., oat, 70@75c., wheat 60@65.

Hops.—Reports begin to come in from the hop districts, and are, thus far, in favor of a fair yield. Buyers, consequently, are somewhat indifferent, but holders do not name lower prices.

New Yorks, growth 1871, 22@65; Eastern do. 22@60c., Western do. 22@60c., Yearlings do. 70 10@30c., Olds do. 9@10½15c., Bavarians 65@75c., English 60@65c.

Poultry and Game.—There has been a lively trade in poultry for Fourth of July use, and prices are firm with stock well sold up. Live Poultry—Spring chickens 75c.@1.12 per pair. Fowls—Jersey, 19@20c.; do. Western, 18@19c. Turkeys—Jersey, 15@16c.; Western, do., 15@16c. Ducks—Jersey, pair, $1.25@1.50.; do. Western, 75c. Geese—Western, $1.50@1.75. English Snipe, per doz., $1.75@2. Wild pigeons, stall-fed, per doz., $2@2.50. There are no Woodcock in large quotable quantities. Sportsmen find a market near home.

Provisions.—Mess pork is fairly strong for wholesale parcels, though trade is restricted to a few pressing calls. Fresh inspected for jobbing, are quoted $13.65; round lots mess cash, $13.50; July, $13.40; Aug., $13.65, and Sept., $13.70@13.75. Beef has only a light movement. Plain mess, $8@10 bbl.; extra mess, $10@12 do.; prime mess, tcs., $12@14; Indian do. $17@20. Bacon is active for export, with long clear city ice cured at 7½c.; shirt clear in small stock firm at 8c. Lard stands at 9¼@9¾c. for spot or July Western steam. New Western and city 8¾c. In cut meats there is a brisk sale of city smoked hams. Western bagged hams do not find the favor of former seasons. City smoked hams, 11@15c.; do. shoulders, 6¾@7c.; pickled bellies, 7@7½c. for loose; 12c. for pickled hams, Western; 6½@7¾ for do. shoulders.

Seed.—Grasses are dull. Clover 9¾@9½c. for Ohio, 10¼@10¾c. for State, 9¾@10c. for Indiana and Michigan. Timothy at $3.25@3.50.

Tobacco.—Kentucky leaf meets with a steady fair sale. Manufacturers are preparing to work with increased prices, as the equalization of the tax from 16 and 32c. to a uniform one of 20c. per ℔. has gone into operation. For seedleaf the demand is quite active, and the best grades for export have advanced ¼@1c. Virginia common to good lugs, 7½@8½c.; low to medium leaf, 9@10½c.; good to fine, 11@15c.; dark wrappers, 13@15c.; bright, 20@40c.; smokers, 12@17c.

New crop Kentucky.	Light Grades.	Heavy Grades.
Lugs	8½@ 9 c.	9 @ 9½c.
Common to medium leaf	9¾@10	9¾@10¾
Good do	10½@11	11 @12½
Fine do	11½@12½	13 @14
Selections	13 @14	15 @16

Vegetables.—Old potatoes will not pay for shipment; the best range is 25@50c. ₱ bbl. The glut of new Southern has been shipped and worked off, and the fresh arrivals are of better quality, and are steady at quotations. Tomatoes are salable, and the supply has included a few N. J.

New potatoes, L. I., bbl., $2.25@2.50; do. Jersey, $2.25@2.50; Southern, $1.75@2; old do., 25@50c. Tomatoes, 75c.@$1; Squash, crate, $1@1.50. Cucumbers, Norfolk crate, $1.50@1.75; do. Jersey, bbl., $8. Green peas, bag, 50@75c. String beans, bag, 75c.@1. Onions, Bermuda, 75c. Turnips, Russia, bbl., $2@2.25; do. Jersey, 100 bchs., $5@6. Cabbages, bbl., $6@7.

Whisky—Is lower. Western, 90c.

Wool.—The market for fleece is very dull. There is a slow sale for manufactured goods, and there is scarcely any demand from manufacturers. Prices at the West are lower, but farmers find very few buyers as yet. Sixty cents is about the best bid. Foreign sells slowly. There is a large stock here which is freely offered. Sales of common fleece, 70c.; super, 71c.; fall clip, 25c.; scoured Cape, $1.10.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., July 6, 1872.

THE market at Little Falls for the week ending July 6 was extremely dull, with a further decline in prices. The delivery of farm dairies amounted to about 600 boxes, and sales were made at 9@11c., the latter figure being an extreme price for extra fancy lots.

There was a large number of factorymen in the market, and the offerings were fully 9,000 boxes, about half of which were sold and sent on commission. In the sales of factories the prices were about one cent lower than last week. We give quotations of leading transactions as follows:

Avery & Ives	11⅜	Herkimer Co. Central	11⅜
Bethel	11⅜	Johnstown	11
Canajoharie	11⅜	Newville Ass'n	11⅜
Cook & Ives	11¼	Norway Ass'n	11⅜
Countrymans	11⅜	Snell's Bush	11⅜
Cold Creek	11⅜	Stratford & Salesbury	11⅜
Davis	11⅜	Van Vetchen	10⅜
North Fairfield	11⅜	West Schuyler	11⅜
Old Fairfield	11⅜	A. Smith & Co	11⅜
Florida	11⅜	Shell's Bush	11⅜
Getmuc	P. T.	Top Notch	11⅜
Henderson Ass'n	11½	Eatonville	11⅜

There has been a very light delivery of butter with sales at 23@25c.—all taken for home use.

The weather has been very hot and sultry, which doubtless has had a depressing influence on the cheese trade. Grass in pastures is abundant and cows are making good returns in milk.

ROCHESTER, N. Y., July 4, 1872.—Flour dull and 25c. lower. Red Spring, $7.25@8.50@9.00; red amber Winter, $9.50@9.75; best white Winter retails at $10.75@11.50 for white, and $9.75@10.00 for red and amber Winter. Wheat, 5c. lower, selling at $1.30@1.65 for red Winter, $1.70@1.75 for white. Corn dull and lower, quoted at 60@65c. ℔ bushel. Oats, 42@44c. ℔ bushel. Barley and other grains, no sales. Corn meal, $1.30@1.40. Butter dull, at 18@30c. ℔ ℔. Eggs scarce, 18@19c. ℔ dozen. New potatoes, $1.75@2.25 ℔ bushel. Strawberries, 10@12c. ℔ quart. Cherries are abundant, at $1.50@2.00 ℔ bushel. Wool is quiet; buyers offer 50@60c. There are few sales, as farmers are holding for higher prices. Hay in good supply, $17@20 ℔ ton.

LIVE STOCK MARKETS.

NEW YORK, July 8, 1872.

BUT for the large out-of-town demand for beef and mutton the markets would have been very tame here, as many thousands of consumers left the city for some "rural" retreat in which to spend the national holiday. Country people often wonder why it is that New York makes away with so many cattle in hot weather when a large number of her people are away. They do not know, perhaps, that Long Branch, Newport, and even Saratoga, draws largely from our market here. The ice-boxes on board the cars and boats are packed with beef and mutton, and open at the watering-places in just as good condition as in our own butcher shops. The hot weather of the past week was trying to both live stock and dressed meats.

The following are the receipts of live stock shown in comparison with other years:

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	7,817	139	2,815	21,391	21,027
" last week	7,738	132	3,054	21,371	36,536
Corresponding week last year	7,542	102	2,943	26,581	29,110
Average last year	7,187	83	2,301	25,152	25,177

Beeves.—Cattle are coming in faster than they can be sold. We now have quite a stock on hand for the market of next Monday, let alone what are expected that day. The market has ruled dull, and prices are a little lower. Fat cattle continue scarce and in fair demand, but grass-fed steers and Texan cattle are too plenty to suit owners. Most of the cattle men lost money last week, and so did the butchers, for the extreme heat caused considerable mortality among the cattle. It is useless to send green Texas cattle here in the expectation of getting paying prices while our markets are so glutted. In a pinch they might go, but now they hang fire. We noticed one drove, weighing about 6¼ cwt.—a pretty hard lot—which butchers wanted for 7½c. They could have had them at 8c. Even thin Illinois were sold as low as 10c. on the scales, 55 lbs, ℔ cwt. Very many fair wholesale butchers' steers sold at 11@11½c., and it takes fat cattle to exceed 12c. The yards have not been cleared any day since Monday. The following is the order in which the different States contributed stock during the past week, viz:—Illinois, 4,917; Texas, 726; Kentucky, 521; Ohio, 491; Missouri, 171; Indiana, 272; Iowa, 127; Michigan, 81. The offerings at the principal yards were 1,232 at Communipaw, 2,631 at 100th St., and 732 at Weehawken.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ℔ ℔	12¾ @ 13	12¾ @ 13
Good to prime	11½ @ 12	12¼ @ 12½
Ordinary to medium	10½ @ 11¾	10½ @ 11¾
Lowest grade	8 @ 10	8 @ 10
Average sales	11¼ @ 11¾	11¾ @ —

Milch Cows.—There is a favorable turn in the cow market. The hot weather brought in a great deal of sour milk, while the demand for a sweet, ice-cold article was scarcely ever so great. This has made a call for fresh cows in and around the city, but prices are not materially altered, only they sell quicker. We quote them at $40@55 each for poor to below medium, $60@70 for fair to good, and $75 for prime milkers.

Sheep and Lambs.—The supply is larger, and sheep sell lower. One reason is that the fat stock was sent in for the holiday, and now we are getting inferior lots. Lambs, on the contrary, are doing better. The country was pretty well scoured for them for the Fourth, to send in every direction, and now we have such a scarcity that a lot of 100lbs. fat Jerseys, 60 lbs., sold at 12½c., though 12c. is really top price for fat lambs. Thin Western are no better, selling at 7½@8c., with good Canadas at 11@11½c. Next to Jerseys, Canada lambs now run the best, though there is now and then a lot of State which is about equal to them. We can instance 387 Penn. lambs, of 90½ lbs. average, sold at 11@11½c.; 99 Jerseys, 52 lbs., at 12c.; 55 Ohio, 48 lbs., at 8½c., and 161 thin Ind., 44 lbs., at 7½c. A lot of 505 Ohio sheep, 90½ lbs., sold at 6¼c.; 87 Ind., 85½ lbs., at 5¼c.; 200 Ohio, 81 lbs., 5¾c.; 54 Ind., 84 lbs.; 5c. It takes a fine lot of sheep to reach 6¾c. now.

Hogs.—The market rather declined for a few days after last report, but now, with lighter arrivals, is gaining strength again. Nothing selling alive, but dressed are quoted at 5¼@6c., those weighing 180 lbs. going at 5¾c., and 160 lb. hogs, 5¾c. Only pigs reach 6c.

Veal Calves.—There is a falling off in receipts, but not much change in prices. One great trouble with calves is their late arrival. The boats often get in about noon, and the calves must be kept over until the next morning, or sold considerably below the market price, to shysters who only buy cheap lots. Fat milk veals will sell at 8½@9c., and were 9½c. for very fine. Ordinary and medium are worth 7@8c., while buttermilk and other fed calves sell at 3@5c.

LATEST.—Monday, July 8, 4 P. M.—Beeves.—Arrivals to-day, 193 cars at Communipaw, 141 at 100th St., and 18 at Weehawken, making 5,721 for sale. Fat cattle were not in excess of the wants of buyers, and went at 12½@13c., but medium and especially thin Texan steers sold bad, or rather not at all. Those which did sell went at 7½@9½c.

Sheep and Lambs.—Arrivals for to-day's market, 13 car loads at Communipaw, 6 at 48th St., and 7 at 40th St., making 5,758 on sale. There is no change in sheep, several fat lots selling at 6¼c. Lambs are doing well, fat Jerseys selling at 13c., with good Canadas at 11¾c.

Hogs.—Receipts to-day, Sunday included, 20 car loads at Communipaw and 30 at 40th St., making 5,631 all for slaughtering firms. Dressed have further improved, selling at 5¾@6¼c. to-day.

Publisher's Desk.

NEW SEMI-ANNUAL VOLUME.

THE TIME TO RENEW AND SUBSCRIBE!

ALL OUR READERS are advised that Vol. XXVI. of the RURAL NEW-YORKER commenced last week, and will close with December—comprising Twenty-Six Numbers. And will they do us and their neighbors and friends who don't (but ought to) take the RURAL, the favor to announce this fact? Note, also, that Single and Club Subscriptions are now in order and respectfully solicited from all parts of the Union, Canada, &c. Our inducements for clubbing are the same as last Winter. Those forming clubs for the New Volume will receive specific premiums, or free copies, etc., in the same proportion as for yearly subscribers—two six months (or volume) subscribers counting for one yearly. Clubs may be composed of part yearly and part half-yearly subscribers, at convenience of Agents. To aid those forming new clubs, or making additions to present ones, specimens, premium lists, etc., will be sent free.

Bound Volumes of the Rural New-Yorker are constantly kept on hand at its publication offices. Vol. XX. for 1869, containing 828 pages and over 800 illustrations, $4. The four Semi-annual Volumes, issued during 1870 and 1871, are $2.50 each. The volumes being too heavy for the mail, are usually sent by Express or as Freight subject to charges. Bound copies of Vol. XXV., which closes this week, will be ready in a few days—price $2.25.

The Rural as a Present.—Our readers are reminded that in all cases where a *Subscriber* sends the RURAL NEW-YORKER to a relative or friend, *as a present*, we only charge the lowest club-rate—$2 a year. The lowest price for copies thus sent to Canada is $2.20 and to Europe $3—as we prepay postage. For a volume (six months) half the above rates.

Our Premiums. Agents entitled to Premiums are requested to designate what they prefer and notify us *how* and *where* to send—whether by Freight or Express, if articles are not mailable.

Show Bills, Specimen Numbers, Etc., of the RURAL NEW-YORKER sent free.

SPECIAL NOTICES.

FOR MOTH PATCHES, FRECKLES and TAN, use PERRY'S MOTH and FRECKLE LOTION. The well known and reliable remedy for Brown Discoloration of the Face. Prepared by Dr. B. C. PERRY, Dermatologist, 49 Bond street, New York. Sold by *Druggists*.

SAFE AND PROFITABLE!
THE
CANADA SOUTHERN
First Mortgage Sinking Fund
Thirty Years
7 Per Ct. Gold Bonds
AT
90 and Accrued Interest.

The Road runs from Buffalo to the Detroit River, and is the Eastern link in the new AIR LINE from BUFFALO to CHICAGO, and has been under construction for about two years past by railroad men who have seen the necessity for a STEEL RAIL, LOW GRADE SHORT ROUTE between the great railroad systems which diverge from Chicago, Toledo and Buffalo.

Among the builders of the road, by whose cash subscriptions 200 miles (out of 230) have already been graded, bridged and made ready for the superstructure, a large part of the steel rails bought, all of the materials for the stations and a part of the equipment purchased, are:

MILTON COURTRIGHT, JOHN F. TRACY, WM. L. SCOTT, DAVID DOWS, HENRY FARNHAM, R. A. FORSYTH, HENRY H. PORTER, JOHN M. BURKE, M. L. SYKES, Jr., B. F. ALLEN, all Directors either in the Chicago and Northwest or in the Chicago, Rock Island and Pacific; GEO. OPDYKE, of the Midland Road; JOHN B. ALLEN, SIDNEY DILLON, DANIEL DREW, J. S. CASEMENT, J. & J. CASEY, O. S. CHAPMAN, JOHN ROSS, DAVID STEWART and F. H. WINSTON.

THE ROAD will be

33 MILES SHORTER THAN ANY OTHER ROAD,

either BUILT or in contemplation, between Buffalo and Chicago, and will also shorten the distance between Toledo and Buffalo 23 miles.

THE MAXIMUM GRADE on the entire line does not exceed FIFTEEN FEET to the mile—and Ninety-six per cent. of the Road IS STRAIGHT.

The ROAD WILL BE COMPLETED and in running order on or before December 31 of this year.

The principal and interest of the bonds are payable either in New York, London or Frankfort.

We confidently recommend the bonds to all classes of investors.

LEONARD, SHELDON & FOSTER,
NO. 10 WALL ST., NEW YORK.

NOTICE.

Having become associated with Messrs. Leonard, Sheldon & Foster in the Agency of the Canada Southern Railway Company, we offer the above named Bonds for sale.

After a thorough investigation, we recommend them to our friends and customers as a sure and reliable investment. Pamphlets and all information furnished on application.

WINSLOW, LANIER & CO.,
27 PINE STREET, NEW YORK.

WEBSTER'S PATENT
BUTTON-HOLE WORKER.

The most perfect Button-Hole Worker ever invented.
So simple that a child can work a more perfect button-hole with it than the most experienced hand can without it. Money Found in the Sewers!

THE

Goux Fertilizing and Sanitary Co.

beg to call the attention of Farmers, Market Gardeners and others to their natural manure. This manure, manufactured from pure human excreta, collected by means of Goux's patent closet system, and mixed with the best fertilizing absorbents, is suitable for every kind of crop, and being remarkably rich in nitrogen (the basis of ammonia), and soluble phosphates, it affords the plant a liberal supply of natural food, in the most concentrated and readily available form possible.

For further information, apply to or address the Company, at their Office, corner of Varick, Vestry and Canal Sts., New York.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

GREAT IMPROVEMENT IN CHAIR SEATS.

Various have been the efforts of men to produce a seat which should be comfortable, light, comely, durable, and also admit of universal application. The degrees of success have been as varied as the effort; but within the last year the long-sought was revealed to an observing, practical genius, and is hereby offered to the public, in full confidence of its instant appreciation.

The seat is composed of three layers of veneer (boards as thin as a knife blade), the grain of each lying in an opposite direction to its neighbor, all glued firmly together in a slightly dishing form, adapted to the person. The entire thickness slightly exceeds one-sixth of an inch. We thus have moderate cost, little weight, neatness, great beauty if desired, and a lasting quality which, in usual service, may properly be called eternal. *While it is especially adapted to reseating chairs by any one who can nail down a carpet*, it is coming rapidly into use for the better class of chairs for sumptuous apartments. The slightest observation will convince the most skeptical of its unequaled merits.

A not infrequent scene at the fashionable sea-side resorts about these days.

HARVEY FISK. A. S. HATCH.

FISK & HATCH, BANKERS,

No. 5 NASSAU STREET, NEW YORK.

Having been associated with the CHESAPEAKE AND OHIO RAILROAD COMPANY as their financial agents for nearly three years, we have the most conclusive and satisfactory knowledge:

(1.) *Of the immense value and importance of the Road.*
(2.) *Of the thorough ability, economy and integrity of its management.*
(3.) *Of its resources for an enormous and profitable traffic.*
(4.) *Of the perfect security of the 6 per cent. Gold Bonds of the Company.*

We are consequently enabled to recommend these Bonds as an entirely safe and reliable investment, which may be held with as much satisfaction and freedom from anxiety by the most prudent and careful investor as Governments or Central Pacifics.

A large profit or increase of investment may now be realized by exchanging either of the above for the Chesapeake and Ohio Bonds.

Denominations, $100, $500, $1,000.

Interest payable May 1 and November 1.

Principal and interest payable in gold in New York.

Price 94 and accrued interest.

FISH & HATCH, Bankers.

TARRANT'S SELTZER APERIENT.

A HARVEST OF DIAMONDS

Has rewarded the toil of certain lucky adventurers under the burning sun of Africa; but what is the value of the rarest gem that ever glittered in crown or turban, when compared with that of a medicinal remedy that cures dyspepsia and biliousness, restores the appetite, regulates the disordered bowels, and tones and invigorates the whole vital system? Science has bestowed upon the world this inestimable gift in

TARRANT'S EFFERVESCENT SELTZER APERIENT,

which is to all other preparations of its class what the diamond is among jewels, and when foaming in the goblet of the fevered invalid, as bright and sparkling. Sold by all Druggists.

AGENTS WANTED—BEST TERMS Given for our New and Popular Works, including Bibles, &c. For full particulars, address QUAKER CITY PUBLISHING CO., 217 and 219 Quince St., Philadelphia.

Will contract to lay **Eagan's Improved Macadam Pavement** in any city or place in the United States. Contracts taken to make sidewalks, line cellars, lay sea walls and abutments for bridges, and also to furnish roofing, and drain, gas, water and sewer pipe. Rights to use this Patent will be sold.

Address SAM'L N. PIKE, Pres't, No. 78 Broad St., New York City.

HOWES' Concentrated Syrup cures Catarrh, Cancer, Scrofula, Dyspepsia, &c. Howe's Never-Failing *Ague Cure* and Tonic Bitters. ☞ Cure or no pay. Sold by Druggists, or address DR. C. B. HOWE, Seneca Falls, N. Y.

CONTRACTS TAKEN!

Rights for Sale.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:

It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING.

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES.

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEAWALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY, ST. LOUIS, Mo., 25th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

Floricultural.

PLEROMA SARMENTOSA.

THIS beautiful Peruvian plant was discovered by the well known naturalists and travelers, HUMBOLDT and BONPLAND many years ago, near Cuenca, at an elevation of about 8,000 feet. It is known by the natives of Peru as "Flore de Gallinaso;" and although known to botanists for a long time, it is only within the past half dozen years that florists have obtained the plants for cultivation.

This Pleroma is well adapted to green-house culture, and a splendid and valuable acquisition. The accompanying illustration is a good representation of the size and form of the leaves and flowers, but no words or painting can convey a true idea of the beautiful and brilliant color of the petals. The plant is a rather small, straggling shrub, the small twigs covered with numerous villous hairs. Flowers two inches or more in diameter, and of a deep violet color, produced in small panicles at the ends of the branchlets. The large, brilliant-colored flowers are so showy that a plant in bloom is an object that cannot fail to attract attention even among the most showy collection of green-house plants.

PINKS AND LILIES.

WHICH is the best time for sowing German pink seed, Spring or Fall? With us they are perfectly hardy and bloom better the second season than the first. What is the best method of raising carnations, and do they require protection during winter in this climate? What is the treatment for the *Lilium longiflorum*? Mine came from JAMES VICK, and bloomed handsomely last year; this year it spread very much, and has put up five or six stems, all healthy and vigorous-looking, but it is not going to bloom; none of the stems are more than six inches high, and I can find no sign of buds. Should the roots be divided this fall, or left where they are?—RALEIGH, *Raleigh, N. C.*

THERE is probably very little preference in regard to time of sowing seed of German Pinks or Carnations. If sown early in the Fall the plants will become strong enough before cold weather to pass safely through Winter, and bloom the following season. The Carnations are hardy even much further north than North Carolina, but sometimes suffer from exposure to sudden changes of temperature in Winter, and it is a safe plan to cover the plants with some fine hay or straw—just enough to shade them, but not sufficient to prevent freezing.

It is quite probable that the old or blooming bulbs planted of the *Lilium longiflorum* decayed soon after the flower stems died, and those now appearing are from the little bulblets which form around the flower stalk. After the leaves are off this Summer, take up the small bulbs and transplant, giving each sufficient room to grow, and, if large enough they will bloom next year. In some soils the large bulbs of nearly all the lilies become diseased, and decay soon after blooming, and it is necessary to keep up the supply from the little offsets, transplanting every Fall or in early Spring. The *L. longiflorum* is rather delicate, although we cannot call it a tender species; but it requires careful handling and a soil just suited to its wants in order to make its culture a success.

FLORICULTURAL NOTES.

Ferns for Baskets.—(See page 45.) We transfer from The Garden a hanging basket with the basket Fern, *Goniophlebium subauriculatum*, growing in it—the elegant fronds of which, in full-grown specimens, may often be seen hanging down five or six feet long. The Garden names the following of the Maiden-hair Ferns that are excellent basket plants:—*Adiantum caudatum*, *A. assimile*, and *A. Farleyense*. The best kinds of *Davallias* for baskets are *bullata*, *dissecta*, and *pentaphylla*. *Nephrolepis exaltata* and *pectinata* both look well when suspended, but are not so good for a basket as *N. tuberosa*. *Platyloma flexuosum*, *Doodia lunulata*, *Asplenium flabellifolium*, *Pteris scaberula*; all the species of *Drynaria* and *Nyphobolas* are excellent basket ferns.

Plants for Name.—I inclose three specimens of plants, which please name through the RURAL. No. 1 grows only in one place in this section of country, as far as I know, and is confined to one farm only. No. 2 is called *Wahoo* here, but does not answer to the description in our old botany. No. 3 we have under the name of "*Umbrella Plant.*"—C. V. S., *Viola, Ill.*

No 1. Squirrel-tail grass, (*Hordeum jubatum;*) common on the shores of the lakes and low, moist prairies. Its long awns probably suggest the common name.

No. 2. Burning Bush or Waahoo (*Euonymus atropur pureus*). There are several species and all are known in some localities as Waahoo, and by other local names.

No. 3 is a Cyperus, but we cannot give the specific name from the imperfect specimen you send. In forwarding sedges and grasses, we should have the flower or seed-stalks as well as the leaves.

Showy Lady Slipper.—I send you two flowers, leaf and stem for a name. A portion of the flowers are concave, or shaped like a bowl, with another portion serving as a lid or cover. It resembles poke, but the shape of the flower is different from any poke flower generally seen here. As I am no botanist, will you please to name it in the RURAL NEW-YORKER.—G. H. B., *Waupacca, Wis.*

THE name of the plant is *Cypripedium spectabile*, or Showy Lady Slipper: also called Spotted Moccasin-flower. The botanical or scientific name of the genus, *Cypripedium*, is made up from the Greek name for Venus and that of slipper or buskin, and means Venus-slipper. It is a very showy plant, and quite common in your State in low, moist grounds. There is also a small white species, *C. candidum*, and a yellow *C. pubescens*, found on high grounds in Wisconsin and other Western States.

Sowing Lily Seed.—C. G. PRINGLE says:—"My present practice is to sow the seeds, as soon as ripe, in frames or in the open ground, in boxes with open bottoms, across which a few laths are nailed. The boxes being plunged in the soil, these laths prevent their being thrown out by the frost, allow the moisture to rise from below, thus obviating the necessity of watering, which is liable in this instance to do more injury than good, permit the roots to feed in fertile soil placed under the boxes, and hold in place the soil in the boxes, if it is ever necessary to move them. The frames or boxes are supplied with light, sandy soil, with which leaf mold or peat has been freely mixed. Though a few plants may appear during the next summer, after sowing, I do not look for the seed to start till the second spring, eighteen or twenty months from sowing. The little bulbs should remain undisturbed two years or more."

Layering Roses.—Please tell me the best time to layer roses; also how to keep green lice off them, without injuring the plants or flowers.—C. P. PARKER.

JULY and August are the months in which roses are usually layered. The earlier the branches are layered the more roots will they produce before cold weather. Green fly, or lice, can be killed by the free use of tobacco water, or even strong soap suds.

Tuberose Bulbs three years old give the best show of spikes and flowers. We advise S. C. M. to select such.

Industrial Topics.

CORNELL UNIVERSITY.

Experiments with Potatoes Detailed.

On visiting Cornell University, last week, I inquired, with some interest, into the present condition of the Agricultural College which forms an integral part of it, and was gratified to find that it was slowly, though surely, growing into a position which will satisfy the expectations of its most ardent friends. It has always, from the very first, given the most ample instruction in the collateral branches of agricultural science, but until last year it was unable to procure a professor of scientific and practical agriculture. During the preceding year, W. A. Benham, a most successful farmer, and a large taker of the State agricultural prizes, had charge of the farm, which he has much improved; but it was conducted with reference to the improvement of the land, and not expressly for the instruction of the students, although it has given much employment to students in necessitous circumstances, having paid out $1,601.82 for students' labor expended on the farm, and $3,156.49 for labor on the buildings, roads, and other services not performed on the farm, making $4,758.31, in all, during the last nine months.

Last September, Prof. H. H. McCandless joined the faculty, and commenced his instructions, having been elected Professor of Agriculture in June, 1871. He was educated in the Glasnevin Agricultural School, in Ireland, and was a successful teacher and superintendent in that and other institutions in Ireland. He came to this country with a view of being a professor in the agricultural school projected in Ohio; but as the opening of that institution has been postponed, his services were secured by the Trustees of this University.

He has lectured daily during the past year, with much success and acceptance, and has imparted to the students a rich fund of agricultural knowledge. The trustees design to set off forty acres for a model and experimental farm, with buildings, stock and implements, which will be in full operation during the coming year. The most complete instruction will be given on this farm of the most advanced methods of cultivation, draining and irrigation. Grains, roots and grasses will be tested by the most rigorous methods; exact accounts will be kept, and the methods for the most exact experiments will be taught and practiced, so that all the disputed questions of agriculture may be settled on the most stable basis.

Prof. McCandless has been assisted by some of the most eminent agriculturists in the country, who have given lectures to the students on subjects with which they were specially familiar. We had the pleasure of hearing while there two lectures from Mr. E. A. Stewart of Lake View, on the feeding of cattle, which contained a rich store of information upon the subject, founded on experiments conducted with great care through a long series of years.

Potato Experiments.

Dr. Hexamer delivered a very valuable course of lectures on the potato in 1871, and presented to the University samples of 140 different varieties of potatoes which were planted by Mr. Benham, the director of the farm. They were planted on the 13th of May, 1871, and were dug on the 21st of October. The soil was a light, sandy loam and the season was uncommonly dry and the slope of the land toward the West. One potato of each kind was planted, and was so divided as to make three hills. The result was as follows:

Potatoes Yielding One Pound and Less.—Seventeen varieties, viz:—Early Indiana, ½ lb.; Seedling from South America, ¾ lb.; Royal Ashland Kidney, ¼ lb.; Caster, 1 lb.; Michigan Red, 1 lb.; Central City, ½ lb.; Nutmeg, ½ lb.; Mona's Pride, 1 lb; Wild South American, 1 lb.; Early Shaw, 1 lb.; Ohio Mercer, 1 lb.; Jones' Seedling, ½ lb.; Granite State, ¼ lb.; Mountain Pink Eye, 1 lb.; Coppermine, ½ lb.; Phiebrick's Early White, 1 lb.

Potatoes Weighing Five Pounds and More than One Pound.—Twenty-two varieties, viz:—Western Chief, 4 lbs.; Seedling Mercer, 3 lbs.; Ash-leaf Kidney, 2 lbs.; Early Snowball, 4 lbs.; Black Kidney, 2 lbs.; No Blow, 4 lbs.; Dykeman, 5 lbs.; Dover, 3 lbs.; Patterson's Irish Blue, 3 lbs.; Michigan White Sprouts, 3 lbs.; London White, 3 lbs.; Goodrich Seedling, 4 lbs.; Mercer, 3 lbs.; Titacaca, 5 lbs.; Ni Monitor, 4 lbs.; Amazon, 4 lbs.; Early Wendell, 5 lbs.; Early Queen, 3 lbs.; Seedling Rock, 5 lbs.; Mercer Seedling, 2 lbs.; Chenango, 4 lbs.; Early Golden, 4 lbs.

Potatoes Weighing Ten Pounds and More than Five Pounds.—Forty-six varieties, viz:—Michigan Peach Blow, 10 lbs.; Cow-horn, 8 lbs.; Western Prince Albert, 10 lbs.; Shaw, 7 lbs.; White Clinton, 8 lbs.; Maine Mercer, 9 lbs.; Lady Finger, 8 lbs.; Peach Blow, 10 lbs.; Western Red, 9 lbs.; New Kidney, 10 lbs.; Early Mohawk, 7 lbs.; Snow Ball, 7 lbs.; Extra Early White, 6 lbs.; Blue Pink Eye, 10 lbs.; Buckeye, 6 lbs.; Early Cottage, 6 lbs.; Early Victor, 7 lbs.; Early Stevens, 10 lbs.; Worcester Seedling, 10 lbs.; Patterson's Albert, 8½ lbs.; Pigeon Eye, 10 lbs.; Early Pink Eye, 7 lbs.; Scotch White, 10 lbs.; Rochester Seedling, 8 lbs.; Jersey Monitor, 10 lbs.; Fancy Red, 8 lbs.; Nova Scotia, 8 lbs.; Blue Mercer, 8 lbs.; Pink Eye Rustycoat, 8 lbs.; Early Rose, 9 lbs.; King of the Earlies, 6 lbs.; Lincoln Red, 10 lbs.; Breese's Prolific, 6 lbs.; Garnet Chili, 9 lbs.; Early Purple, 9 lbs.; Calico, 7 lbs.; Jackson White, 7 lbs.; Early Brandsworth, 6 lbs.; Shaker Russett, 10 lbs.; Cusco, 10 lbs.; California, 7 lbs.; Bulkley Monitor, 7 lbs.; White Mercer, 8 lbs.; Nansemond, 9 lbs.; Vanderver, or Manhassett, 10 lbs.

Potatoes Weighing 15 lbs. and Over 10.—Thirty-seven varieties, viz:—Calico, 12 lbs.; Sapstone Kidney, 13 lbs.; State of Maine, 12 lbs.; Merino, 12 lbs.; Peach Blow, 14 lbs.; Harison, 14 lbs.; White Chili, 11 lbs.; Early Henry, 14 lbs.; Cherry Blow, 12 lbs.; White Rock, 13 lbs.; Old Red, 13 lbs.; Utica Pinkeye, 13 lbs.; Chili No. 2, 14 lbs.; Early June, 13 lbs.; Purple Chili, 12 lbs.; Raspberry Leaf, 14 lbs.; New Hartford, 13 lbs.; Pale Flush Pinkeye, 14 lbs.; Rough and Ready, 11 lbs.; Red Streak, 14 lbs.; Early Prince, 14 lbs.; Holbrook, 12 lbs.; Willard, 14 lbs.; Early Peach Blow, 15 lbs.; Orono, 13 lbs.; Strawberry, 15 lbs.; Black Diamond, 13 lbs.; Sea Beach, 14 lbs.; Prairie Flower, 11 lbs.; Purple Mercer, 15 lbs.; Old Kidney, 12 lbs.; Mexican, 15 lbs.; Quimb's Seedling, 11 lbs.; King of Potatoes, 15 lbs.; Peerless, 14 lbs.; Chenery, 13 lbs.; Concord, 15 lbs.; Blanche White-eyed Peach Blow, 15 lbs.

Potatoes Weighing 20 lbs. and Over 15 lbs.—Eleven varieties, viz:—Excelsior, 17 lbs.; White Apple, 20 lbs.; Bermuda, 18 lbs.; Prince of Wales, 19 lbs.; Irish American, 16 lbs.; Great Western, 18 lbs.; White Peach Blow, 16 lbs.; Climax, 16 lbs.; Andes, 20 lbs.; Monitor, 17 lbs.

Potatoes Weighing Over 20 lbs.—Three varieties, viz:—Late Pinkeye, 21 lbs.; Torforshire Red, 26 lbs.; Dyright, 22 lbs.

Although the above weights do not measure the relative fecundities of the several kinds, except for the soil of the University under the conditions in which they were grown, yet they are of great interest as demonstrating the enormous differences in productiveness that exists among different sorts. It is of great interest to the practical farmer to know that there are seventeen varieties that average only a yield of 8.88 oz. to one planted potato; 22 varieties of the 2d class average 3.59 lbs.; 46 varieties of the 3d class, average 8.11 lbs; 38 varieties of the 4th class average 13.23 lbs.; 11 varieties of the 5th class average 17.63 lbs., and 3 varieties of the 6th class average 23 lbs. as the produce of a single cut potato divided into three pieces.

These facts explain very clearly why some farmers raise potatoes at a great profit and others at a great loss. If the latter will only take pains to select potatoes for seed that are exactly adapted for their special conditions they, too, can raise crops of potatoes that will be very profitable.

Three potatoes of each kind will be planted this year, and they will then be specially tested for quality.

I am happy to say that with a view to make agricultural education more easily accessible to farmers' sons, the Trustees have generously resolved to receive twenty young men, to be nominated by the State Agricultural Society, without the payment of fees. The foundations of the Sage Female College are being laid, and the building will be in readiness for the reception of pupils sometime in 1873. C.

COUNTRY SIDEWALKS.

Is there any law in regard to overseers of public highways spending a small part of the time assessed in their respective districts to improve the sidewalks as well as the wagon track or center of the road? If it is the same in other parts of the State as around here, there is almost as much travel by foot, to and from the villages, and from house to house, as there is with a horse and wagon; and it seems to me that we should try to improve the condition of the sidewalks so that we can pass from one house to another without taking the center of the road. Here, within half a mile of the village, the walks are very good: but as you go farther into the country they are made the catch-all for all the rubbish of the farm. If there is a load of stone to remove from the meadow, they are thrown by the side of the road: if there are trees to trim, the brush and broken limbs are thrown on the sidewalk. They are allowed to grow up with bushes, weeds and thistles until they become impassable.

Now, I think that if every farmer would spend a short time to cut the brush, remove the stone from the road, and then let the overseer of the highways take a little pains, and take the earth from the ditches for the center of the road, instead of from the sidewalks, leaving the edge of the sidewalk straight, put on a little gravel in the low places, they will be surprised to see what an improvement it will make; and we shall have the satisfaction to know that it will add to the value of our farms, and our wives and daughters can go from one house to another without being obliged to walk through the dirt or mud in the middle of the road. Ask them if, next to a nice dooryard, they would not prefer a good sidewalk, and I am sure they will tell you, "Yes!"

Johnstown, Fulton Co., N. Y. Reform.

We know of no law which prevents the improvement of the sides as well as the center of the road. Our correspondent makes a suggestion which has very likely occurred to most intelligent people who live in the country. And it is true that such action, like good roadways, good fences, roadside trees, and cleanliness of the fence corners, enhances the value of property in a neighborhood.

EIGHT-HOUR STRIKES.

The farmers, who are the real laborers of the country, who work from five in the morning until eight in the evening; who pay 80 to 90 per cent. of the whole taxes; whose labor mainly support the go-between and the mechanics, have looked silently upon this eight-hour question among the strikers and labor associations, leagues and our legislative halls long enough; especially when the price of their products are governed by *supply* and *demand*. The farmers should now move, not as aggressive, but as defensive.

They have an agricultural society organized in each State and in every county. Let such organizations resolve that they will not purchase any refined sugar, furniture, sewing machines, boots or shoes, nor any articles that are made or prepared in any establishment where eight hours is the rule, nor will they purchase of any retail dealer who purchases or offers any articles thus made. All the country papers of the Union are mainly supported by farmers, and they will readily aid in carrying out this policy.—A Farmer.

We publish the above as an illustration of the way producers are thinking, and to show how clearly they comprehend the effect of the eight-hour system where eight hours labor are substituted for ten at the same price per day. The strike is ended, and there is no need for any action as that suggested above; indeed there would be little need in any case; for men will buy where they can buy cheapest; and the eight-hour per day manufacturers cannot compete with the ten-hour per day class. Then, again, any increase in cost of a class of products that go into general consumption in the end enhances the cost of all other products. Eight hours labor not only means to the laborer an increase in the price of his labor, but it means, ultimately, a corresponding increase in the cost of his living.

Diggers in Ohio.—There was an official trial of all earth-working implements, held at Springfield, Ohio, on the third week in June, under direction of the Ohio State Board of Agriculture. The trial occupied four days hard field work, and was quite thorough in all respects. In plows there were a large number of competitors, and the judges gave them plenty of work. Besides plows, there were grain drills, corn planters, all manner of cultivators, harrows, corn markers, clod crushers, post augers, and a mighty stump puller which lifted a large green tree by the roots. The tests were very thorough and fair. The decision of the judges will not be made public until the holding of the State Fair in Mansfield, the first week in September.—S. D. H.

Arboricultural.

LARCH AND WOODEN PAVEMENTS.

The Pendulus Larch, (*Larix Pendula,*) sometimes called Red Larch, has been highly extolled for many uses, as a durable and valuable timber tree. But I do not recollect of much having been said about its superiority for wooden pavements. It is hard to split, very tough, quite durable, free from swelling or shrinking, and will not rot for many years. Therefore, if sawed into blocks, about ten inches in length, more or less, and made either four or six square, or round, and set on end, will make a more excellent pavement than any other kind of wood. The corks of the horse-shoe will not chip it, and it will wear longer and keep in better condition than any other timber now used for that purpose. When green, a cubic foot will weigh from 33 to 36 pounds, and after being thoroughly seasoned for two or three years, will yet weigh from 30 to 33 pounds, showing a very slight shrinkage in both size and heft, while most other kinds of wood will lose in drying from one-quarter to a third their original weight, and considerable in size. On this account it is also valuable for floor plank, and all kinds of building timber, especially for beam timber on which to lay the floors. Pine, oak, and white wood will shrink so as to crack the plastering or draw the base bourds away from the floors, which is very injurious to a first-class house.

It can be obtained in the Northern parts of the United States and Canada; is not more costly than most other kinds of timber. I am surprised that so little is known concerning its great value and usefulness. I hope that its properties will be fully discussed by those who are posted in the matter, so that the public may receive the benefits of so valuable a timber tree, especially when it is so easily procured. It is also better for car timber than oak; it is equally strong, much lighter, and will not splinter like oak in cases of collision, and it is well known that the splinters do much harm on such occasions. Isaac Esmay.

South Bend, Ind., July, 1872.

ARBORICULTURAL NOTES.

Dead Evergreens.—Many of them are seen in this vicinity. In many cases the western side is lifeless and the eastern green. That this change was entirely caused by cold weather during the past Winter I am not quite willing to assert; for I find that many evergreen trees are entirely lifeless, where there was a protection from the winds on all sides. It seems to me that the exceedingly severe drouth of last year, in connection with the severity of the past Winter, have wrought this change. It is a noticeable fact that those trees exposed to a long range of westerly winds have suffered most severely. My inference that the drouth had something to do with it, is drawn from the fact, those trees situated in dry soils have a greater portion of their verdure changed to a pale red.—G. R. D., *Pittsfield, N. H.*

A Venerable Black-Heart Cherry Tree.—During a visit to Perry Co., O., while shopping with an old friend, Mr. Rigin Franks, one of the old pioneers of that county, he showed me a cherry tree of black-heart variety, which stands on one of his farms in Thorn township, which was planted sixty years ago by a German named Miller. The tree measures 10 feet 7 inches around its body. Its lower limbs (which look like great trunks of trees) have spread out thirty feet each way, making sixty feet from point to point. It is about fifty feet high, is thrifty, and bears fruit every year. —S. Riddle, *Ashland, O.*

Mulching Trees with Manure.—I planted about 63 apple and pear trees this season, and was told to mulch with fresh stable manure, but was since advised that it would rot the roots. Shall I remove the mulching?—Port Hope.

If you have not put on manure more than a half-foot deep, let it alone, as there is no danger of injury, but a good chance to secure a healthy growth upon your trees. Of course, we would not advise putting fresh stable manure directly on the roots of trees; but upon the surface of the ground above the roots it will seldom fail to be beneficial.

Question About Hedges.—Are Spring and Fall equally good times to set out a hedge?—E. N. A.

Yes. But when you tell us what kind of a plant is to be used for a hedge we will endeavor to answer your question in a more specific manner.

Dairy Husbandry.

CHEESE SALES AND MARKET REPORTS.

THE Herkimer Co. Journal and Courier, in a recent issue, calls the Utica Herald to account for the "*persistent misrepresentation*" on the part of the Herald in its reports of the Little Falls Cheese Market. It says the Herald "has persistently and intentionally misrepresented our market, both as to quantity of cheese sold here and as to prices paid. In view of the past relations of the Herald with the dairymen of this county, it seems incredible that its proprietors should not know how incorrect, valueless and wantonly injurious these reports are."

The Journal quotes from the market reports of the Herald, beginning in May, from week to week, down to its last report in June, and comparing each with the facts, in which it appears that the Herald puts the quantity much below the actual figures and the prices from one-quarter to three-quarters of a cent below the true sales.

Of the several reports noted by the Journal we have space only for the following as a sample:

"The next week, May 27th, it (the Herald) said:

'Offerings of farm dairies amounted to 600 boxes, 500 of which were sold. There were some 4,000 boxes of factory offered and about 3,000 sold, at prices ranging from 12½@14¼c., the latter being the ruling price.'

Now, the facts were about 1,000 boxes of dairy cheese sold, and over 5,000 boxes of factory, full 3,000 boxes of the latter being reported in our list of factories. Instead of 'prices ranging from 12½@14¼c.' not a factory sold at less than 14c., and four sold at 14¾c. On June 3d the Herald said, in summing up, as follows:

'The ruling prices, however, were 13¾c. and 14c.'

The facts were that not a factory sold as low as 13¾c., and but two (out of fifty-four) at 14c. How's that for ruling prices? Nine lots sold for 14¼c., seven at 14⅜c., seventeen at 14½c., four at 14⅝c., and nine at 14¾c. On June 16th it said:

'When our reporter left, 13¾c. was the highest offer, several lots going for 13¾c. This latter was probably the ruling price.'

The fact was that before the Herald reporter need to have left *twenty-three* factories had sold at 13¾c., which was the ruling price of the day. Last week the Herald gave the impression that no cheese of any consequence was sold here. It said:

'In the factory trade a perfect apathy was apparent. Some buyers departed before the market opened, saying they had no orders, and, consequently, wanted no cheese. Some cheese was sent forward on commission; much more remained in the hands of the salesmen, and the remainder was sold at discouraging prices. We note sales at from 10@12c., with best figures at 12½c.'

The facts were that the transactions of the day were among the very largest of the season, our list of factories embracing nearly 6,000 boxes. The 'best figures' were not 12½c., but 12⅝c., received by several factories."

The Little Falls Cheese Market, on account of the large quantity of cheese offered, its excellent quality, and the high prices paid, has become the ruling market of America. Reports of its sales are looked for with interest, not only from all parts of the country on this side of the Atlantic, but in London, Liverpool and Manchester on the other side. Many of the leading newspapers of America have special reporters on the ground, to make reports of the market. The leading New York city papers, the Albany and Rochester papers, the Chicago Tribune and the Chicago Times are here represented. Doubtless, all of these papers get true reports of the market, and, therefore, dairymen at a distance from Central New York have the benefit of Little Falls prices in regulating their sales. But why the Herald should mislead the dairymen of Central New York in this manner we are at a loss to conjecture, without it be to give prominence to the Utica market, and induce salesmen to come there instead of Little Falls. Too great pains cannot be taken to have the market reports accurate and reliable; otherwise great injury is done to the farmers of the country in the sale of their products. Market reports should not be in the interest of the buyer or seller, but should stand in that neutral position, reporting rigidly the facts. Cheese, it would seem, is quite low enough in price, without any effort on the part of the papers to reduce the rates.

THE ENGLISH CHEESE TRADE.

THE London Milk Journal for June gives some interesting statistics in regard to the cheese and butter trade of Great Britain. These statistics are furnished by the Government, and give the imports of the first four months of the present year, 1872, as compared with those during the same period in 1871 and 1870. As American dairymen are interested in knowing how far England is supplied with the dairy products from other countries, we reduce the figures to our own standard weights and gold currency, that they may be more readily comprehended.

During the first four months of 1872, or, up to May first, there were imported into England 13,309,744 pounds of cheese, the value in gold being put at $1,687,555. During the same period in 1871, the imports were 25,678,128 pounds, valued at $3,339,625. During the same time in 1870 the imports were 15,460,816 pounds, valued at $2,342,235.

Thus it appears that the imports of cheese into Great Britain were about two millions of pounds more in 1870 than in 1872, for the first four months of the year, while in 1871 they were nearly double what they were in 1872, during the same time. But what will strike American dairymen rather forcibly in these statistics, is that in 1872 the cheese cost the English only a trifle above 12½ cents per pound, while in 1871 their imported cheese cost a little over 13 cents per pound, and in 1870 over 15 cents per pound.

As a rule, so far as American cheese is concerned, the prices during the four months named are generally higher than for any other season of the year, and although the first four months in 1871 show that the cheese imported into England cost a higher price than for the same time in 1872, the low prices during the balance of the year 1871 would probably put the cost of cheese imported into England considerably below the price named for the four months of the present year. The English must regard their cheese trade this year as opening at the most favorable rates. By their own showing the cost has been only a trifle above a York shilling per pound, during a third of the year when the highest prices prevail. For the rest of the year they can reasonably expect lower figures, so that 1872 promises to them a cheaper cheese than they have had for a long time. Whether American dairymen will be so favorably impressed with the situation as this exhibit indicates is another question. But the fact that England starts this year in her cheese trade with a balance of about a half cent per pound in her favor over 1871, is significant, and may well set our dairymen thinking.

Comparing the value of the cheese imported into England for the first four months of the years 1870, 1871 and 1872, respectively, we find the drop in prices last year was about two and one-half cents below 1870; and now this year we have a further decline of half a cent below 1871. The imports of Dutch cheese, it is true, are figured with American in the above estimates, but as prices on Dutch cheese have been remarkably uniform for the last few years, the difference in rates during the seasons named may be credited, we think, for the most part to the American product. As American cheese is supposed to be improving in quality and in handling capacity from year to year, it is not easy to reconcile the falling off of prices on American without a corresponding decline on the Dutch brands. But perhaps some of our commercial men can explain the anomaly.

DETERMINING THE CASEIN IN BUTTER.

A CORRESPONDENT asks how the casein in butter can be separated and its per cent. determined. We suppose the proper way for testing butter for casein would be to take a small sample of the butter, weigh it accurately, and put it into a flask. Then add ether to the butter contained in the flask and shake them together for some time. The butter is dissolved and the casein remains. Butter which contains a large percentage of casein does not keep in good flavor for long periods. Butter should be freed from buttermilk, so far as possible, without doing injury to its grain, since it is the casein in the buttermilk that is liable, from its decomposition, to do injury to the flavor of the butter. Washing the butter in clean, sweet water, we regard as the most effectual means of removing the buttermilk and casein; because when it is attempted to remove these by simply working the butter, there is always danger of carrying the process too far, or overworking, which spoils the texture of the butter by injuring its grain.

The Irish have a good system at Cork, where all butter designed for the trade is inspected by experts who separate the samples into different classes, branding the tubs or casks according to quality. In this way the consumer goes into market with some assurance of obtaining what he is seeking. He is not so liable to be misled into purchasing an article which turns out inferior and unsatisfactory as with us. We need some plan by which the quality of butter may be graded, and each class sold on its own merits.

PRESERVING MILK AND CREAM.

BETHEL'S method of preserving milk and cream is as follows:—"First the milk is scalded; then it is surcharged with carbonic acid by means of a force-pump and afterwards drawn off into strong metal barrels. By the aid of a valve-cock attached to a pipe leading to the bottom, the exit of the liquid, as may be wanted, can be managed. The milk may be placed in the barrels first, and the gas forced in afterwards, and this doubtless is the most convenient plan to be adopted when milk is to be preserved under this method.

Another method recommended is to sweeten the milk by adding clarified sugar at the rate of 4 ounces to the gallon of milk. Then to curdle the mass by means of rennet and separate the solid from the liquid portion with a sieve. The whey is evaporated to dryness and the residue mixed by the aid of heat and a little bicarbonate of soda, (1 part to 20 parts residue,) with the curd previously washed and pressed. When the amalgamation is perfect, sufficient tragacanth is added to promote the solidification of the mass. These methods are inferior to BORDEN'S, when the milk is condensed "*in vacuo*."

DAIRY NOTES.

Milking Cows up to Time of Calving.—A friend sends us a slip cut from some paper (we don't know what one) which contains the following:—"An intelligent correspondent expresses in the following paragraph a view which we have seen advanced by several good farmers:—"I am a decided advocate for milking cows up to calving; if the milk gets thick throw it away, but milk the cow. Always give her to understand that giving milk is her business, and keep her at it late and early. A cow that gives a moderate steady yield up to calving is far preferable to one that is very flush immediately after calving and then dries up before six months have passed."

Aeration of Cream.—Mr. GREENE in his paper upon the manufacture of butter in creameries, asks:—"Will any advocate of the theory that aeritication of the cream, while churning, is of no account, please explain why it is when a churn is too full, and the dasher does not rise to the surface, it requires so much more time to bring butter than when the dasher rises clear of the cream? This fact seems to argue that the amount of air forced down through the cream performs a chemical office in the operation of no small importance."

The Herdsman.

NOTES FOR HERDSMEN.

Weaning Calves.—A correspondent of the Maine Farmer says:—Calves which are to be raised should be with the cow till they are about a week old. If the cow's udder is caked or swollen, milk off a part so that the calf will give the udder a good bunting, which will save the trouble of rubbing her bag down. Most stock raisers teach a calf to drink by putting their fingers in the calf's mouth and holding its head down to the trough. A calf after sucking from a cow, is very unwilling to put his head down to drink, and often very severely wounds the fingers with its sharp teeth. I fix a rag around the nose of a watering pot (an old coffee pot will answer the same purpose) so that it will let out a small stream of milk, place the rag in the calf's mouth, cant the pot so that the milk will run, and the calf soon learns to draw upwards. Gently lower the pot to the floor, and after one or two trials, the calf will drink from a rag attached to the bottom of its trough.

Scour in Calves.—In reply to the inquiry of M. A. HULL, I would say that I have effected a cure for the above disease, when nothing else would allay it, by administering an "adult dose" of paregoric. If the first dose does not effect a cure, or relieve the calf's sufferings, give another in the course of two hours. Mix the paregoric with five or six times its bulk of tepid water, and use a long-necked bottle in giving it to the calf. Two doses wrought a cure for me when a calf got so weak it could not stand. —G. B. D.

WILL you allow a farmer's daughter to give her cure for scour in calves. Take two quarts of milk from the cow; add one tea cup of boiled flaxseed; give this night and morning till the calf is better. Then let it run on the grass, giving it cold skimmed or thick milk; do not warm it, as this gives the scours. I give mine sweet milk till they are three weeks old, then cold skimmed milk right out of the springhouse. Feed them separate, so that one will not get more than another. About three quarts is plenty for each one. I never have a calf sick or die in the Winter. We turn them into the stock yard, turn them out to water, and put them back to a trough of boiled oats and bran.—WILD IRISH GIRL

Cow Giving Lumpy Milk.—What will cure my cow, that gives lumpy milk out of her two hind teats?—T. G. WILLIAMS.

FEED the cow, with her grain or roots, a small piece of poke root (*Phytolacca decandra*) two or three times a week, until her milk ceases to be lumpy. See RURAL NEW-YORKER, June 15, page 390.

Texas Cattle in Illinois.—It is asserted by a Central Illinoisan that it has been satisfactorily demonstrated that Texan cattle cannot be brought to Illinois, summered, wintered, and fattened, and made a profitable business to the grazier.

Scours in Calves.—ISAAC WARNER writes:—Take ox-eye daisy and make a tea of it; put it in new or sweet milk, and give the calf two or three times a day. This will cure the scours in calves, lambs or pigs. It will also cure cold night sweats."

The Poultry-Yard.

SAVANNAH FOWLS DYING.

MY Brahma hens have been dying on my hands for two years past; and, as I cannot find here any cure, I write for information. Am obliged to keep them in a small yard, but they can run about and scratch, pick up table refuse, and have, daily, green stuff, grass, etc., ashes, good water and care. Eggs are plenty. Combs are red and fowls lively; but one by one they droop and die. Sometimes it seems to be gapes. They seem to be choked; open the mouth at every breath; squawk every few minutes; warts blind them; don't eat and, of course, die. Sometimes they just droop away day by day—no trouble in throat; crop full of watery substance and hot; head hot; comb black. In the first case I have tried the feather and turpentine, but find no worms; in both cases have removed the scale on the tongue and given usual remedies for pip. Good, smart laying hens will suddenly sicken, and in ten to twenty days die, apparently from starvation. Please tell me through your paper what is the trouble and what to do.—"DIXIE," *Savannah, Ga.*

HAVE any of our readers had similar experience? and can they advise our correspondent? We cannot.

POULTRY NOTES AND QUERIES.

Red-Cap Fowls.—Can you tell me anything about a variety of fowls called "Red-caps," which I have heard mentioned. What are they?—F. M. P.

WE do not remember to have seen any fowls with this name, but they are described as "a kind of Golden-Spangled Hamburgh, with the difference of being almost as large as a Dorking, and having the rose comb most prodigiously developed, that of the cock being often three inches across, and too heavy to stand upright." They are not called beautiful fowls, but are said to be enormous layers, and have a large, plump body. We do not know of any in this country. They are to be found in Yorkshire, England.

Chicken Cholera.—W. H. FEVOR, Mechanicstown, Md., says the following remedy has proved of great service in his neighborhood:—"Two ounces alum, two ounces resin, two ounces copperas, two ounces lac sulphur, two ounces cayenne pepper; pulverize, then mix three tablespoonfuls of the powder with one quart corn meal, and dampen for use. This quantity is sufficient for twelve fowls, and may be used either as a preventive or cure. For the first it should be given once or twice a week."

Field Crops.

RYE FOR SOILING MILCH COWS.

A. W. CHEEVER, Sheldonsville, Mass., commenting upon the MR. I. D. G. NELSON'S article in the RURAL NEW-YORKER condemning rye for milch cows on the ground that it imparts a disagreeable odor to milk and butter, says, in the New England Farmer:

Now, I consider it my duty, after a two years' trial of green rye for milch cows, to say that it does *not* impart any disagreeable odor to either the milk or the butter. I sowed enough rye last fall at three different times, to give me all I could feed to my stock while it would be soft and tender. On account of the peculiarity of the season this spring it has not lasted in a feeding condition as long as it would had the weather been different. The spring was extremely dry till the 19th of May, so that the rye did not thicken up as it would have done had there been more rain, and then when the showers came it headed right out and was soon too hard for good feed. Last year I commenced cutting the 8th of May, and had it thick enough to make a good swath. This year the first was cut on the 20th of the month, and it was too thin to be of the best quality. The latter sowings are much better. I have cut enough to-day,—June 5th,—that was lodged, to last probably a week.

My cows are very fond of it. They eat it very much better than they ever did any kind of millet. As soon as they commenced eating it, they increased in their quantity of milk to a large degree. And the butter made from them is of a much better color, and certainly of as good quality as could be made from any kind of feed, *except* the best pasture grasses. I have much faith in rye as a soiling crop, and shall continue to raise it in the future. It lasts but a few weeks at most, but while it is in feeding condition, it is one of the best crops I raise, judging by the quantity and quality of milk and butter produced, as well as by the way the cows put it out of sight when it is fed to them. There can be little risk in putting in a small field of it, for if it is not needed to feed green it can remain for seed, and with present prices of rye and straw it cannot be a very unprofitable crop.

I cannot conceive how Mr. Nelson could have come to the conclusion that his milk or butter was injured by green rye, for it is one of the sweetest kinds of feed when young and tender, as any one can prove by simply chewing a stock of it for a few moments, and while cutting and handling it, it gives off a pleasant odor, very unlike the disagreeable, pungent smell of green Hungarian grass.

I have just delivered a forty pound churning of butter, made this week, chiefly from green rye, and several of my patrons exclaimed when the boxes were opened, "How sweet that butter smells! I think your cows have been at pasture this week;" which was a mistake, for I have not yet turned out at all, but have fed only hay, grain and green rye. And the more rye fed, the better has been the quantity and quality of the milk and butter.

BERBERRY AND RUST ON WHEAT.

THERE is considerable difference in opinions in regard to the Berberry bush. It is claimed by some that it will blight wheat and other small grain; that the fungi on the Berberry and that which produces rust on wheat is the same, and that wheat grown alongside the Berberry will rust; consequently, the crop becomes worthless. There are others who claim that they have grown as good crops of wheat alongside the Berberry hedges as could be grown where there is none of it. I would like to hear from some of your correspondents on the subject; also, if there has ever been any scientific experiments in relation to the matter. We need something to fence our prairies, and prefer a living fence; and there are advantages in favor of the Berberry, if it can be used with safety to the crops.—D. R. A.—*Scranton, Iowa.*

As long ago as 1774—we do not know how much earlier—the injurious influence of Berberry on growing grain was noted and written about. Even though botanists have refused to believe the theory, the fact seems to have been well established that, under certain conditions, Berberry does promote the distribution of rust upon grain growing beside it. As long ago as 1806, it had come to be known by observing botanists that the leaves of the Berberry were attacked by a yellow parasitic fungus, larger, but otherwise resembling rust on wheat. DE BARY, the German Fungologist has established the truth of a suggestion made by Sir. JOSEPH BANKS, in 1806, in the "Annals of Botany," as follows: "Is it not more than possible that the parasitic fungus of the Berberry and that of wheat are of the same species, and that the seed is transferred from the Berberry to the corn?" DE BARY has established, by propagation of the Berberry fungus *Æcidium berberidis*, and the wheat fungus or rust, *Puccinia graminis*, that they are one and the same. The experiment was tried, with due precautions, of inoculating the leaves of the Berberry with the spores of the *Puccinia*, the result being the production, not of the same fungus, but of the *Æcidium*, while the sowing of the spores of this latter fungus on the leaves of couch or wheat produced conversely the *Puccinia*. By sowing the spores of either fungus on the plant on which it was itself parasitic, he failed altogether to reproduce the same plant; and this alternation of generation may serve to account for the fact, which has often been noticed, that rust is apt to appear not in successive but in alternate years on the same crop.

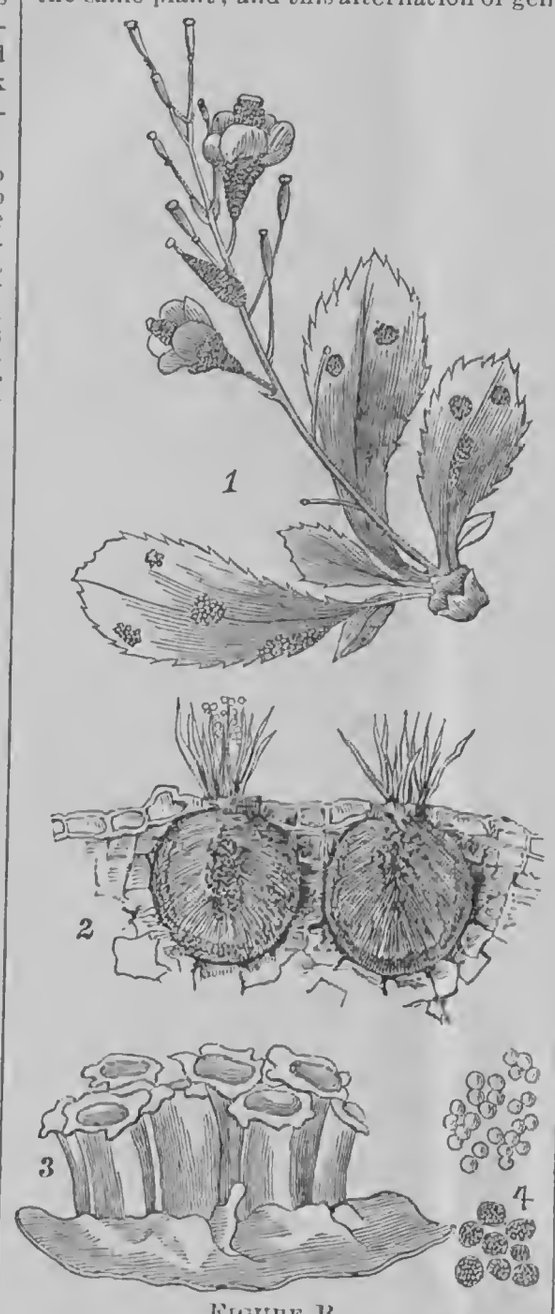

FIGURE B.

The *Bulletin de la Societe Botanique de France* for January, 1870, contains the following account of the action of a railway company in the South of France:—"In the commune of Genlis, Department of Cote-d'-Or, a Berberry hedge was not long since planted on one of the railway embankments; when immediately the crops of wheat, rye and barley in the neighborhood became infested with rust. The complaints of the farmers caused the appointment by the company of a commission to investigate the subject, who reported, after a full inquiry, that wherever the Berberry was planted the cereals were more or less attacked by rust; where they were absent, the crops were free from disease; and that the planting of a single Berberry bush was sufficient to produce the rust where it had never appeared before. The railway company's own commission held that compensation was due from the company to the farmers."

We give herewith illustrations of the fungi named above, and which it seems to have been proved by DE BARY'S experiments are identical:

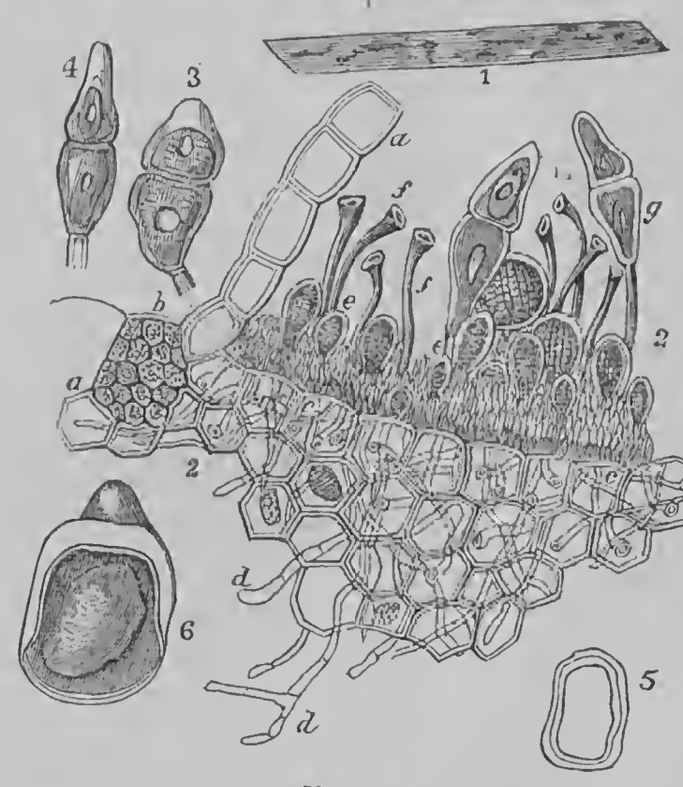

FIGURE A.

FIG. A. *Puccinia graminis;* PERS.—1. Leaf of grass, with mildew, natural size. 2. Section of the leaf, with a patch of mildew and rust; *a*, epidermis of the leaf; *b*, bast-cell-nerves; *c*, *c*, outer layer of cells of the leaf on which the parasite rests; *d*, *d*, mycelium; *e*, *e*, young and old spores of Cæoma lineare; *f*, *f*, stalks from which the spores have fallen off; *g*, spores of the Puccinia. 3, 4. Spores. 5. Section of the wall of the lower spore-cell. 6. Longitudinal section of the upper spore-cell with the spore-nucleus. (2—6 magnified.)

FIG. B. *Æcidium berberidis*, GMEL.—1. Branch of Berberry with spots of rust, natural size. 2. Spermagonia. 3. A group of Perdia with their orifices dentated. 4. Sporidia. (2, 3 and 4 magnified.)

The Canada Pea spoken of in our market reports, SAMUEL S. BARTON is informed, is the small field or yellow pea—about as large as buckshot, prolific and excellent stock feed and also good to grow to plow under. But in Bucks Co., Pa., we should prefer clover as a green crop to turn under unless time is important. In that case peas grow soonest. The Cow Pea of the South is excellent for fertilizing purposes. What the seed of the last named will cost we do not know. Vetch has been little grown in this country; and we know of no reason why it should not be profitably grown, both for soiling and fertilizing. It will thrive on soils too poor to produce clover it is said.

Sheep Husbandry.

THE WOOL CLIP OF 1872.

THE wool-growing States of the *old* West—embracing the region between the Alleghanies and the Mississippi—are showing a considerable increase in the number of sheep returned in 1872, over that of 1870, while still further on, in the *new* West, of the rocky Mountain and Oregon region, the increase in numbers has been nearly double the original stock of four or five years ago. Better than the increase in numbers of the sheep in this new West, has been the appreciation in value of the fleece, from better blood and better handling. By the opening of direct railway communication with the Pacific States, the influence of this increase is reflected directly back upon the old West, the Middle and the Atlantic States.

In the region of Ohio—the largest wool-producing State of the old West—the increase in the number of sheep since 1870 has been about 12 per cent. But, as affecting the clip of 1872, there is another element which materially increases its volume: the cold weather has put forward the time of shearing, at the least, four weeks, so that instead of a year's growth of wool we have thirteen months, and the best of flock masters tell us the fleeces of Merino sheep give an average of six to eight ounces above the usual weight. This will give in Ohio alone an increase of two million pounds of wool, for the clip of 1872, being nearly up to the largest production of this State when wool-growing was at its hight, some four or five years ago.

In the dairy regions cows have taken the place of sheep, to a large extent, and the present fair price of dairy products will prevent the rapid return to wool-growing which was imminent last year; and with the moderate prospects for wool under the reduced tariff, it is about an even choice between wool-growing and the dairy business, to be decided by special reference to local advantages.

Early in the Spring the wool trade was excited, and prices went up to 75 cents for XX Merino, and as high as 82 cents for fine staple; but now the market is dull at five to ten cents less than these rates.

WRINKLES ON SHEEP.

GEORGE GEDDES goes for the wrinkled sheep in this wise:—"By common consent it has been settled that Merino sheep should have some wrinkles, or folds, which grow out of the great looseness of the skin on various parts of the body. Dr. RANDALL says that the Spanish, French and German breeders have all of them approved of these folds in the skin, considering them as indications of a heavy fleece, and 'the French have bred them over the entire bodies of many of their sheep.' Many of our American breeders fell into this bad fashion of the French, and, as in the case of yolk, they carried a good thing so far that, from being a merit, it became an 'unmitigated nuisance, both in appearance and reality.' I have seen at a State Fair of an agricultural society a ram covered all over his body with wrinkles, along the outer edges of which grew hair, while between the folds tolerably fine wool grew—the whole filled with yolk, much of it indurated, that looked like the secretions of the human ear. A good shearer would require fully two hours of time to cut off this coat of mingled hair, wool and filth, that probably would not yield four pounds of cleansed wool. This brute was adorned with the ribbon that indicated that he had been awarded the first premium. The owner sat with his heels and legs on a bench, stretched along one side of his booth, the very personification of complacency. I very much wished for a picture of the whole thing—ram, owner and the committee that awarded the premium. Nothing could have illustrated with more force the evil effects of bad fashions when they carry even honest judges along their ruinous currents."

The Swine-Herd.

PIG-PEN PAPERS.

Lice on Swine.—I have a white Chester sow and pigs which are literally covered with lice, nearly destroying them. Have tried tar, grease, sulphur, kerosene, soft soap, etc., but can't eradicate them. Is there any remedy? I am satisfied the Chesters do not suit our climate; the Berkshires are much their superiors here.—M. M. MOORE, *Columbus, Ga.*

You must have a new species of lice if neither sulphur nor kerosene will destroy them. But we think if you use carbolic soap to wash them with they will leave. If they do not, send us a specimen in alcohol, that we may study him. We have tried the following with success. Wash the pig thoroughly with soap and water, and then apply one or two drachms of mercurial mange ointment, rubbed in every second or third day, as long as may be necessary. Of course the pigs should be kept in clean pens or pastures, with (if in pens) fresh, clean litter often.

Thumps in Swine.—This trouble is caused by sleeping under houses or in old beds that have been reduced to powder by long and constant usage. A pig in preparing his bed, where there is much fine dust, is sure to inhale it, and entering his lungs, it produces the peculiar motion in his sides called thumps. J. H. WENTWORTH may be correct; different causes may produce like results; but if a dry, hacking cough accompanies the disease, its owner may rest assured that its lungs are full of dust. Removal from the old bed, and (if he will eat it) a pickled herring out of the brine, every 24 hours, will effect a cure.—A.

Thumps in Pigs.—JOSIAH PENFIELD, Tremont, Ill., writes the National Live Stock Journal that he has had success in treating pigs with "thumps," in the following manner:—"I mixed tar and water together by heating, and gave it to the pigs warm for two, three or four successive mornings; and the pigs so affected and so treated appear now to be as well and hearty as any in my herd."

Measles in Swine.—R. F. P. is informed that we know no better remedy for measles than feeding sulphur occasionally.

The Apiarian.

HONEY-PRODUCING PLANTS.

In a recent issue of the RURAL NEW-YORKER was an article on honey-producing plants. Being an apiarian, to a limited extent, and having produced many plants of different varieties for my bees to gather honey from, and having eagerly watched the busy workers in their meanderings in search of honey, I am led to give the readers of the Apiarian Department the results of my observation and experiments.

The first food in the year carried into the hive is unbolted rye flour, or wheat flour makes a pretty good equivalent if mixed with sawdust to prevent the bees getting buried in it. This stimulates early breeding. After the flour the bees work, some on willows and maples, and collect cement from the balm of Gilead, but comparatively no work is done until the apple trees burst their fruit buds and expand their blossoms. It is then that the gatherers of the liquid sweets display their most prominent characteristic to the best advantage; and for the past three years this has been the principal honey season of the year. During June and July a large amount of honey is obtained from white clover; but during the last two seasons the severe and protracted drouths have cut very short this source of food for the models of industry. When circumstances are auspicious this is the main honey season.

After the flowers of white clover change from pink to chalky whiteness, thence to a dull brown, the main dependence is sweet mignonette, and I have found this to be the only variety of plants worthy of cultivation for the secretion of honey. My somewhat extended experience convincingly proves to me that buckwheat is of no value to bees in this vicinity, and the same is true of catnip, mustard and golden rod. Sweet alyssum takes rank next to mignonette, and is preferable to the three plants next previously mentioned.

The bloom of apple trees has been very full and of long duration, similar to that of 1870; consequently the store of honey has largely increased for the past three weeks, and, with a favorable season, the crop of apples, and honey from their blooms, will nearly equal that of 1870. G. R. D.

Pittsfield, N. H., June 5.

BEE NOTES AND QUERIES.

Fertilizing Italian Queens.—An Onondaga Co, N. Y., apiarian says.—"I have tried many different ways to get my queens fertilized by Italian drones, and I can say I have had good success in one way, and never failed when I have tried it in a full stock of bees. I select a stock with plenty of the best drones and fifteen or twenty rods from any other stock and as soon as the queen hatches, I clip one wing, raise a bed of sawdust three or four feet square, lay on a good broad bottom board, and set my hive on so that she can crawl back when she comes out. I have tried queens in this way for three seasons and have never lost one in full stocks, and the queens were all fertilized and lay first rate. A queen bee can be introduced from any stock and thus prevent in-and-in breeding."

Transferring Bees.—B. C. FRENCH in Bee Journal says:—"Here is *my* plan of transferring. Blow smoke in the entrance—invert the hive—place a thin cloth over it, to prevent the bees coming out, and rap on the hive for two or three minutes. The bees will fill themselves and gather at one corner of the cloth. Now take off one side of the hive and remove one card of brood, fit it in a frame and hang it in the new hive. Take the blanket with the bees that have gathered and cover the new hive; then turn the old hive down so the entrances of the two hives come together, rap on the old hive, and the bees will travel on the double-quick. I transferred twenty-four stocks this summer without the loss of a queen.

Reports on the Condition of Bees.—A correspondent suggests that our correspondents who keep bees will benefit each other if they furnish the RURAL a statement of the condition of the bees, and the probable honey produced in their respective neighborhoods. All right; we will print them if you send them on.

To Cure Bee Stings.—B. R. HUDSON Says:—"Take leaves of cross-weed, green; beat up fine—put in a kettle of water and soda, so as to form a soft poultice. Apply to the wound and it will cure it in a short time."

How to Distinguish Drone Comb.—Will some Bee-man tell me, through the RURAL, how I may know the *drone comb* from the comb containing the working bees?—ROBERT S. GARDNER.

Book on Bees.—Please tell me the name of a reliable and practical book on the management of bees and bee hives.—RALEIGH.

QUINBY'S Beekeeper's Guide. See our Book List.

Farm Economy.

SAWING DOWN TREES.

In the RURAL NEW-YORKER of June 29th FRANK BATCHELOR of Michigan asks how to saw down trees without injuring them. I have had considerable experience in sawing down white ash and hickory timber in the old Bay State, and this was my way of doing it:—First, ascertain which way the tree leans, or is likely to fall, and commence sawing on that side; as soon as the saw is in sufficient depth to allow it, drive a wedge, to prevent pinching, and continue the sawing until the tree is cut a little more than half off; then drive a wedge on each side as near the saw as possible, and take out the first wedge; the tree can then be cut off before falling, and thus prevent splitting up and wasting the timber.

If the tree should lean considerably, it might be necessary to let the first wedge remain in until the tree falls, but if it stands nearly erect, it should not be allowed to remain, as it might throw it over the wrong way. I once sawed down a tree that was so well balanced that it was necessary to push it over after taking out the saw; think if it had stood on the prairie the wind would have done that part of the job.—A. HALL, *Waterloo, Iowa.*

I NOTICE an article in the RURAL of June 29, from F. BATCHELOR, asking information about sawing down timber for saw logs, so as not to split the timber. Now, Mr. Editor, I should have thought that the results of the first attempt of Mr. BATCHELOR would have taught him how to have avoided splitting in the second attempt. We will select our tree and decide the way we wish to fall it (being certain it will fall that way, but that it does not lean too heavy); then go on the under side, and saw in from 6 to 10 inches, owing to size of tree; then drive a wedge in the saw surf; then go around on the upper side of the tree, and commence from 4 to 10 inches higher up, and saw until the tree falls. With a little experience you will avoid waste of timber.—NOAH MILLESON.

IN answer to FRANK BATCHELOR, about sawing down timber, I would say he must be very green in the business. I have sawed down a great many hundred thousand feet of timber, both pine and oak, and never had but one tree split, I think. F. B. must have used his wedges too freely. I have never found it necessary to use wedges on more than one tree in one hundred. If F. B. would come out here in old Steuben Co., I would show him how to saw down timber with a great saving of time and timber—much better than I can explain on paper, for I am no writer; but twenty years' experience has taught me how to saw down timber.—G. D. ROOD, *Painted Post, N. Y.*

Composting Sorghum Bagasse.—We have made good manure from sorghum bagasse by laying a thick layer of muck (or even loam will answer, but muck or leaves, is best) over the space upon which the compost is to be piled, then a layer of bagasse, then add quicklime in quantity sufficient to incorporate the bagasse thoroughly with it, then a thick layer of muck and so alternating muck, bagasse and lime, covering the whole with muck, decayed wood, chip manure, or even clayey loam. In about four weeks pitch it over, beginning at one side and mixing it thoroughly. It will quickly decompose and make excellent manure. The muck will absorb the gases which escape from the decomposing bagasse, the decomposition being hastened by the quicklime. This answers the question of our Augusta, Ga., correspondent.

Ox-Yokes.—F. H. WINIKER asks some one to give him directions for making ox-yokes for 1, 2 and 3 year old oxen. What should be the length, breadth, etc., to make them fit properly. He also asks for directions for breaking oxen.

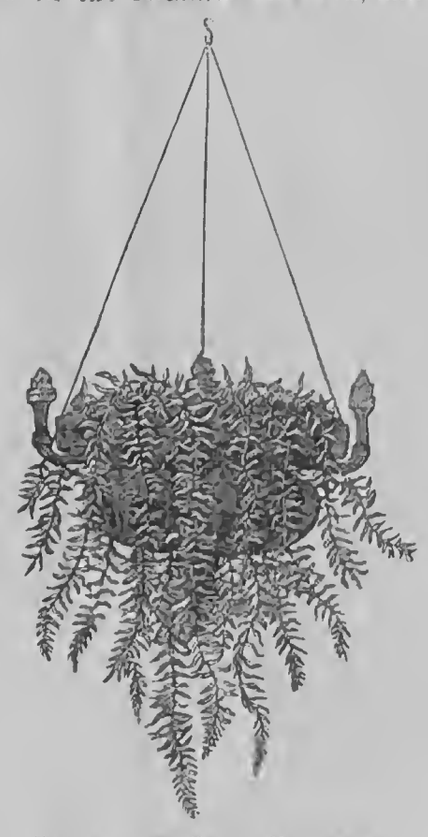
The Vineyard.

THE COMING VINTAGE OF CALIFORNIA.

SOME weeks since it was believed that the late and unusually severe frosts had seriously damaged the grape crop over a large portion of the State, reducing the estimated vintage by thirty to forty per cent. Recent investigation, made by a leading

DINNER-TABLE FLOWER VASE.—[See page 47.]

firm engaged in the wine business in this city, made it almost certain that the vintage—though somewhat reduced by the frosts in particular localities—will be considerably greater than that of 1871, and will probably foot up 8,000,000 gallons, not taking into account the amount of grapes consumed in brandy manufacture, which will be considerable in spite of the burdensome taxes imposed upon the business by the government. With increased facilities for handling the wine, more thorough knowledge of the business, and more complete system in all its details, there is, year by year, a marked improvement in the quality of our wines, and a steady increase in the demand, both at home and abroad, and as a matter of course an increase in the prices realized by the producers. The vintage of 1872 will undoubtedly be the largest yet produced in California, and will bring more than a proportionately large sum of money into the State. The demand for pure California wines is increasing more rapidly in the States of the Mississippi Valley than in those on the Atlantic seaboard, and our



BASKET WITH FERN.—[See page 41.]

wine dealers are enjoying quite a profitable trade with the West.—*San Francisco Bulletin.*

VINEYARD NOTES.

Summer Layering of Grapes.—The Rural World says:—Summer layers are always questionable in view of health and profit. To gain any important point, it should now be done. Although we believe it is paying dearly for the plants, still it may, under circumstances, be necessary. Of course the canes have been selected long ago; the shoots have now pushed; a nice trench is made, with pins to peg down the canes; a wire should be tightly turned between every shoot; this will cause the cane to throw out roots, and more and better furnished plants will be the result. Have a clean, nice, firm trench; lay in the cane with shoots; peg down or lay on rocks; pinch out the point of shoot, and cover thinly but firmly with good soil. What is made in plants, is taken from the fruit or vitality of the parent plant.

Rabbits in Vineyards.—Last Spring I planted out about one hundred grape vines—the greater part of them eight or ten rods from the house. During last Winter they were all cut off by those pests of farmers and gardeners in this section—the rabbits. Will you, or some of your correspondents, please inform me what to do to prevent a a repetition of their depredations.—"RURALIST."

PLANT some sweet corn near your vineyard, and next fall cut it up and leave it in the stack where grown. The rabbits will eat the corn in preference to the grapes, and if you feel disposed to catch them in traps or shoot the rascals, you will know where they are to be found.

Vines near St. Helena, Cal.—St. Helena is about 58 miles from San Francisco—a beautiful little village. Right about it are vineyards which, according to a statement in a recent California paper, contain 682,000 vines ranging from one to ten years old—most of them being over three years. The varieties of grapes best adapted to the locality are named (in the order of excellence) as Johannisberg and Franklin of the Reisling variety; Black Malvoise and Zinfindel for red wine; Muscatel and the varieties of the Chasselas. Catawbas are being planted for wine-making purposes.

Summer Pruning.—GEO. HUSMAN of Missouri says:—"In Summer pruning we take little stock; close pruning in the Winter is bad, but Summer pruning, or what is practiced in its stead, foliage murdering—is an absolute iniquity. Give plenty of scope to the vine; use no unnatural checks, and health, fruitfulness and longevity will be the result."

Material for Tying Vines.—The Rural World says:—"Willow is admirable for first or old wood ties; also, gunny sack thread, rye straw (with grave doubts), the *yucca filamentosa*, seem to do well. Pawpaw and linn bark are excellent, but only adapted to some localities."

The Garden.

GARDENERS' NOTES.

Fruit on Melon Vines.—As to the cantelope variety of melons, cucumbers, squash, and particularly water melon, do the lateral branches of the vines bear the fruit, or is it only the main stem of the vine? Does it keep the vines bearing longer and make the fruit larger and better to cover the main stems of the vines about two feet from the root, so that they may take root again?—AN AGENT, *Hickman, Ky.*

THE vines named produce fruit on the lateral as well as main stem. Where the season is quite extended there is an advantage to be gained by layering the main stem, as its tendency is to extend the bearing season. At the North, where the seasons are short, we find that checking the growth by pinching off the ends of the vines to be an advantage, as it hastens the maturity of the fruit. In your climate, and further South, an opposite plan may be preferable.

Groundsel.—Will some of your many readers be so kind as to inform me what Groundsel is? I have tried to find out without success.—DOLLIE.

IT is an imported weed, the botanical name of which is *Senecio vulgaris*. The name is from the Latin *Senex*, an old man, the pappus succeeding the flowers resembling a beard or hair. The old botanist DE CANDOLLE says that it follows Europeans, and wherever they remain long enough to cultivate the earth, then the Groundsel soon appears.

A Well-Preserved Squash.—I send you a Turban Squash. I have also Hubbard squashes yet perfectly sound. I find no trouble in keeping either the Hubbard or Turban all Winter.—MARK WILSON, *Oil City, Pa., June*, 1872.

THE squash arrived in good condition and sound as when first picked from the vine. The Turban must either be a good keeper or you have an excellent plan for keeping; perhaps both; please give us the particulars for the benefit of our many readers, who would like to know how it is done.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Birds, Cats, Rats and Mice.—*July* 1.—Almost everybody favors the birds and encourage their presence in the garden and on the farm. There are exceptions, however, to this rule—at least some persons make an exception in favor of certain kinds of birds, such as crows, that pull up corn, king-birds, that catch and kill bees, robbins, and other fruit-eating birds; but, taking them altogether, they do us more good than harm. For my own part, I like the mischievous kinds best, and the crow commands my admiration above all others, for he seems to act out his true nature without any make believe of goodness, if there is none in him. But the little sparrows, wrens, and other smaller but more domestic species, who build their nests in the grass and among the shrubbery about our dwellings, are the ones which demand our attention and draw upon our affections. But domestic life in this country would hardly be complete without the cat, and, as is well known, that animal is the greatest enemy the birds have, especially to the little, harmless, inoffensive kinds. We have bird-dogs, deer-hounds, fox-hounds, shepherd-dogs, in fact, breeds that will do a particular kind of work and no other, even to the worthless poodle, which can receive any amount of the ladies' affection without giving any in return. Now, why cannot we have a breed of cats that will hunt rats and mice, and let the birds alone? Here is a chance for some evolutionist to work himself into notoriety and do mankind a favor.

I am decidedly in favor of the birds, as well as a steadfast friend of cats, for I know their value in keeping down the rats and mice, races which appear to have been especially created as food for Chinamen and cats. It will not do to annihilate the cats, unless we wish to be served in the same way by the rats and mice; neither will it do to expect that one will keep these two races from a half dozen barns and still do duty in the house. The truth is we expect too much of our cats and then condemn them for a little recreation among the birds. The patent drug men have undertaken to run opposition to the cats in their rat and mice exterminators, but the thing won't work about dwelling houses, or at least it works too strong on the scent line. A friend is down on cats, and the mice and rats soon found it out, and gave him a surprise party; consequently he was obliged to do something, and very quickly; so he tried one of the patent lightning rat poisons; the result was dead rats under the floor, in the partitions and ceiling—carpenters' and masons' bills repairing damages incurred in getting out the carcasses. Too many cats, rats, mice, or birds are a nuisance, consequently the war of races is well enough as it is, and only those who think they are wise would wish to make a change.

A New Bedding Plant.—*July* 2.—Last Spring Mr. B. K. Bliss gave me a strange looking bulb, or tuber, the name of which he said was *Amorphaphallus Rivre*—a plant of recent introduction into European gardens, and unknown here until the present season. I planted the tuber in a pot, but it did not give any signs of growth until about four weeks since, when a stem fully one inch in diameter appeared, and has continued to grow until the present time. The plant is now about eighteen inches high, with a columnar-shaped stem, crowned with three large leaves, each divided and sub-divided into many ovate somewhat lanceolate leaflets; stem and leaf stalks are of a dark green color, spotted with light gray, the leaflets being a dark, glossy green, without any markings. The plant, as a whole, is decidedly unique, if not what would be called really handsome. It is probably a near relative of our common Indian Turnip, *Arisæma triphyllum*.

A Showy Bed of Begonias.—*July* 3.—Begonias are beautiful ornamental leaf plants, if well grown, and a few of them produce very showy flowers. I have tried them for several years in the open border, as well as in baskets, with very poor success, and this season I concluded not to remove them from the green house, but plunge the pots in sand on one of the side stages. The result is entirely satisfactory, and all the species and varieties are as beautiful at this time as I could wish. They seem to require a high temperature and moist atmosphere to insure a full development of foliage. The old Begonia rex is one of the most showy of the large leaved species, but the smaller and more brilliant colored sorts help to fill up and give a diversified appearance to a group of these very interesting plants. They are suitable for window culture in summer, being seldom attacked by insects.

Extra Fire-Works.—*July* 4.—I do not own to be lacking in patriotism, still I am not partial to fire-crackers and the little pop-gun sort of display usually so common on this day. Besides I never feel exactly safe, in a dry time, with fire thrown here and there about my buildings. On this "glorious 4th of July" I concluded to keep quiet, and let others burn powder and raise a smoke; but I was not to be let alone, for one of my tenement houses caught fire in the afternoon while the family was absent, and I soon had an expensive as well as extensive display in spite of my premeditated design not to have any fireworks on the occasion. With the assistance of near neighbors the fire was confined to the building where it originated, and the jolly patriotism and generosity of the same men and women made John's loss good to him in cash, bedding and clothing. The building was insured; for not to insure a building as soon as finished is a kind of neglect to which I am not addicted; and although I have been paying premiums for twenty years, this is the first loss by fire. It is a great pity that every poor man, as well as those who are in moderate circumstances, who fail to get their lives insured for the benefit of their families, could not be scorched just enough to make them do their duty.

The Horseman.

NOTES FOR HORSEMEN.

Practical Horse Shoeing.—A work on this subject has just been published by D. Appleton & Co., N. Y., prepared by G. Fleming, F.R.G.S., M.A.I., etc. We purposed and did commence to review it at length with a view to giving our readers some of its more important suggestions; but we found that we could not segregate from it profitably, and accordingly abandoned the purpose, and commend it here to the attention of every farmer who reads the Rural New-Yorker. Dr. Fleming says rightly, that the art of farriery in the country has never received a scientific development, but has ever been a mere affair of routine and tradition; and he asserts that the horse's foot is not a crude block of insensitive matter, but a most wonderfully constructed apparatus, possessed of qualities which are not to be found in any other part of the body. The work deals with the anatomy of the foot, analyzes the hoof, treats of the growth of the hoof, of shoeing, preparing the hoof for the shoe, shoeing, including objects to be obtained and pattern of shoe recommended, mode of applying the shoe, rasping, etc., etc. It is a book from which we would gladly make liberal extracts, but deem it better to commend its careful study to every horseman and farrier.

Arab Horses.—When did the so-called "Arab breed" establish itself in the East; from what sources was it originally drawn? In the seventh century the Arabs had but few horses, and those of no great repute. Until within the last hundred years or so, when the *prestige* of Arabian blood began to establish itself, Arab owners were content to trace a pedigree to one of the five animals upon which Mahomet and his four faithful followers fled on the night of the Hegira from Mecca to Medina. Evidently, Arab blood had no great scope in the days of the prophet. Also, when Mahomet attacked the Koreiss, near Mecca, there were but two horses recorded in his whole army; and at the close of that campaign, though in his spoils there are enumerated 40,000 sheep, 24,000 camels, and 24,000 ounces of silver, no horses are recorded in the plunder.—*Land and Water.*

Farcy Remedy.—John McMullin's animal has farcy, and he will give one teaspoonful of copperas once in two days, and use good care in other respects it will cure. If it is of some time standing, double the dose. This I have used, and seen used, in several cases; and I have worked a beast for years after having the disease cured; and I know it to be sure—at least, it has cured three for me.—A Reader, *Cattaraugus Co., N. Y.*

Scientific and Useful.

SCIENTIFIC AND USEFUL NOTES.

To Soften Old Putty.—The best application for softening putty is caustic soda or potash—preferably the latter. To make either soda or potash caustic, dissolve them in water, mix with freshly burned and slaked lime, and after the mixture has settled pour off the clear liquid for use. Putty will be very rapidly softened if kept moist with this liquid. Caustic alkali is also the best, and, in fact, the only thing that will remove paint spots from the glass of windows after they have once become dry. A semi-scientific journal, in a recent issue, advises us to use *oxalic acid* for this purpose, and the recipe has, I observe, been copied far and wide—a remarkable instance of the lack of chemical knowledge that prevails among a certain class of so-called scientific men. Oxalic acid has no effect on paint, though it removes rust spots very effectually. Caustic potash or soda, or even good soft soap, will remove paint. When soft soap is used, mix it with freshly slaked lime.—J. P.

The Siphon Question.—Defective Knowledge of Hydraulics.—Your correspondent A. J., in stating that the reason given by W. H. S. is "too thin," and that a siphon will draw equally well whether the diameter of the ends be equal or not, shows a lack of thorough knowledge of the subject. If the delivery end be always kept under the surface of the water, its relative diameter is of no consequence, but if, from any cause, the level of the water in the receiving pit or vessel should fall below the end of the siphon, then, if the delivery end be too large, air will enter and prevent the working of the instrument. Upon this point A. J. need not raise any question, for we have exhibited the principle, as a lecture-room experiment, for years.—J. P.

Ink for Zinc Labels.—A correspondent of the Country Gentleman recommends the following as an ink for zinc only, that will endure for years, cuts slightly into the metal, has a black color, and is as legible after a dozen years as when newly written: "Take one part verdigris, one part sal-ammoniac, half part lampblack, and ten parts of water; mix well, and keep in a bottle with glass stopper; shake the ink before using it. It will keep any length of time. Write it on the label with a steel pen not too fine pointed. It dries in the course of a minute or two."

Cut-Worms and Cabbage Plants.—E. J. Ireland asks if any of our correspondents can tell him how to prevent cut-worms eating young cabbage plants. He says:—"I have tried putting fine salt around the plant as soon as set, but that does not stop them this year.

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

Dyspepsia Remedy.—I observe information is desired by Mr. D. A. White for a cure for dyspepsia. I have been a sufferer with that harassing complaint for several years, have tried remedies almost innumerable, consulted with the best physicians, spent a great many dollars, and all to no permanent benefit. I would say to Mr. D. A. White and other sufferers from that dreaded disease, if they will follow my directions, although they may think some of them pretty severe, I think at least they will find a permanent benefit, as I have done, and offer a thousand thanks to the writer. My remedy is simple, and every one may have it. It has proved of untold value to me. It is simply this:—Sweet cream or sweet milk—the richer the better; use as often as convenient. Whenever any burning or sour sensation at the stomach appears, drink a half pint of sweet cream or milk and relief is evident. Make free use of it at meals. Total abstinence from the use of tobacco, coffee, strong drink, or anything very sour, must be strictly adhered to. Coffee is the worst of all things for dyspeptics.

I commenced this practice about eight months ago, after all medicines had failed, the disease growing worse all the time, and I am happy to say that I do not suffer as much in two months now as I did in one hour previous to the use of sweet milk. I trust this simple remedy may prove as successful with the thousands of sufferers from that horrid disease as it has with your humble servant, and my desire will be attained. —F. W. R., *Lowell, O.*

Salt Rheum Remedy.—Several years since I was very much afflicted with salt rheum. I procured such roots as dandelion, burdock, red clover, both root and tops, a little blood root, a very little mandrake, sarsaparilla, some black maple leaves and a little prickly ash bark. These were boiled until the strength was extracted, and then the liquor was boiled down so as to be quite a strong sirup. It was then sweetened with loaf sugar, and enough Bourbon whisky added to keep it from turning sour. This taken three times a day, a tablespoonful before each meal, effectually cured me and I have never had salt rheum since. One need not have all the above named ingredients unless convenient; the sarsaparilla and red clover, with burdock and dandelion, would alone make a good sirup.—Farmer's Wife.

To Cure Hoarseness.—Take 2 parts of raw linseed oil, 1 part hemlock oil, 1 part cedar oil, 1 part sassafras oil; put in a bottle with a little alcohol and, shaken well, give at night and morning a tea spoon half full. In case of croup give a tea spoon full every half hour until the child vomits; relief follows immediately. I have tried it and it proved effectual. W. M. M.

The Naturalist.

A PLEA FOR CATS.

Let me take exceptions to the views of your correspondent "S. H. J." of Perryville, O., who advocates the extermination of cats to save the birds. Now, peoples' tastes differ widely. While S. H. J. may like birds and detest cats, some one else may entertain a *penchant* for cats. God made the birds, and made the cats as well, and gave to them their natural disposition to devour birds. This will suggest to S. H. J. that, in the universal fitness of things, possibly the birds were made for the cats—at least, that room was found in the universe for both of them.

"I say, kill the cats," says S. H. J., "and, if necessary, poison the rats and mice, or take some other means to get rid of them beside the common one of keeping, as some do, a half-score of cruel cats." Now, please to consider the fact that in every neighborhood are lawless boys, who go about every Spring in search of birds' nests, which they rob and destroy. Shall we kill the children too? I have been pained many times this season at seeing these cruelties perpetrated by graceless urchins, but the thought of killing them had not occurred to me. It never seemed right to do so—not even to save the birds, or my fruit and melons; the suggestion, however, may be worthy of examination.

Persons who are fond of cats, too—what will you do with them? They will object seriously to having their cats sacrificed to the birds. I have a friend—a woman of rare cultivation, and a great florist, too—who, upon removing to the West from Philadelphia, hailed the event with great joy, because it would afford her an opportunity of becoming the happy proprietor of a "Cattery," as she called it; and sure enough, in a few years, she had 27 highly cultivated cats, all named, and each having a fresh blue ribbon, as occasion demanded. I fancy there would have been war declared when you undertook your work of extermination upon that "Cattery." Wouldn't it be as well to cultivate broader views of life, and conclude to allow the cats and their friends a place on this broad earth, and endeavor to think that even the cats have some good in them to compensate for their existence. There is many a family where sacred cat-reminiscences are cherished and handed down to posterity.

Crown Point, Ind. Mrs. L. G. Bedell.

A Riddle for Naturalists.—Will you give the history and picture of a species of wire-worm that destroys young corn soon after it comes up, eating out the bud; it is most destructive during cool nights in May. Also, the horsefly and yellow-fly?—A Subscriber.

How do you expect any one can answer such inquiries without specimens of the insects referred to. There are several specimens known as wire-worms, also scores of horse-flies and yellow-flies. Such queries are riddles which no one need attempt to solve; and if you cannot afford to send us specimens, we certainly shall not attempt to give the information desired.

Domestic Economy.

COLORS FOR CARPETS.

A VERY pretty stripe for carpets is made by taking two contrasting, or some bright color, and white (we have crimson and white), cutting the rags in pieces five inches long, and sewing the colors alternately. Get the weaver to be a little careful in weaving it and make it into steeples or clouds (I like clouds the best). It is quite pretty woven in just as it comes. I have one stripe in which I tied white rags with stripes of new factory as tightly as possible, leaving a strip of a finger length, without covering, then dyed them dark blue. The blue is permanent and handsome, colored with Prussian blue and alum.

All the rags, whether cotton or woolen, not desirable for other colors, may be colored a dark tan-color by the following recipe:—To five pounds of cloth one pound Japonica, eight ounces bichromate of potash, two tablespoonfuls of alum; dissolve the Japonica and alum in soft water enough to cover the goods; wash the goods in suds and put them in the dye; let them stand two hours at scalding heat, then set them aside till the next morning, with the goods in the dye; dissolve the bichromate of potash in soft water to cover the goods; put them in and let them remain an hour at scalding heat; air them, and wash in soft water suds, and dry.

A nice maroon is produced on gray or brown woolen by dyeing with aniline. The color under it prevents its showing to disadvantage if it does change color. Ours has been in use some time, and is as nice as new.

A reddish color can be dyed on cotton with madder. It is prominent but not very handsome.

A nice color can be made in a bright, sunshiny day by dipping white rags first in a strong solution of copperas and then in a strong lye. If not strong enough, repeat.

I will tell the different colors in our carpets that some people admire. The center of fancy stripe has six threads bright red, two of pink, two of white, six of green, two of gray, four of blue, two of yellow, an inch and a-half stripe of maroon, the same of blue and white clouded, the same width of black, the same of green, then black, then scarlet, then black, then copperas, and a dividing stripe of dark tan-color, five inches wide.

I find a good way to plan a stripe for a carpet is to wind the colors on a stick, changing them until they suit. I want to stripe my carpets to suit *myself*—not have the weaver do it to suit her. Our weavers charge from fifteen to eighteen cents a yard for weaving; the warp costs about the same; and counting work, coloring, etc., we cannot call rag carpets cheap to begin with; but they wear so much longer than others, they are really a great deal cheaper in the end. I consider a nice rag carpet ornamental. LORETTA E. KNAPP.

North Fairfield, Ohio.

ODDS AND ENDS.

To Keep Eggs Through the Summer.—Ten gallons water, five pints slaked lime, five pints coarse salt. Put this brine in a good barrel, removing one head—neither a vinegar, lard or oil barrel will do, a whisky or molasses barrel is best. Place the eggs in the brine, most of them will settle to the bottom and arrange themselves small end down; some will float on the surface, but small end down as the others. Now place the head of the barrel which you had taken out on the surface of the brine, for the purpose of weighting down the eggs which float and also to protect the lime in the mixture from becoming carbonized on the surface and falling in little grains and flakes, which cement themselves to the eggs, giving them a rough and yellow appearance. Eggs packed in this way will keep six months, and I do not know how much longer. Last year's eggs put up in this way brought, about the 1st of December, twenty-eight cents per dozen in Norfolk, Va.; but the merchant who sold them said that such eggs were not very marketable, and advised me to sell in the future fresh, without regard to price. This year I am packing in brine, as before, but when the market is good I take them up, wash, dry and ship. The last sold, June 8th, at seventeen cents, highest Norfolk price. I often see "lined eggs" quoted in New York prices. I would be glad to know if they are eggs kept through the Summer, and the manner of putting up.—W. H. B., *Rich Square, N. C.*

Domestic Inquiries.—A subscriber desires to know the best mode of preserving cider; also, the quickest method of converting cider into vinegar. . . . W. F. CLAUSEN tells us (on page 376, last volume,) *how* to preserve eggs, but does not tell us how *well* they are preserved, or how long they can be kept without danger of spoiling. Will such eggs sell when fresh eggs can be had at moderate prices? What proportion of them spoil in the brine, and how much less per dozen do they sell for than fresh eggs?—SUBSCRIBER. . . . I wish to ask some of the good RURAL cooks how to cook Lima beans—whether they are intended to be used green altogether, or are good when dry. I have always heard that they were the best beans raised, and would like to hear all about preparing them for the table.—FARMER'S WIFE.

Dinner-Table Flower Vases.—(See page 45.) Here we give an engraving of a beautiful center-piece for flowers on a dinner-table. It is London made. We do not know whether it can be obtained in this country or not; certainly some of our glass importers ought to get it, or some of our glass-blowers ought to imitate it. Four little vases surround the large glass globe, which contains clear water. They are made with three and five vases, instead of four. These vases when filled with flowers, are placed at such a hight that they present no interruption to the sight or conversation of the guests. Two or three of these on a long dinner-table are beautiful ornaments; and they require comparatively few flowers to render them ornate in the extreme.

To Make Hard Water Soft.—I saw an inquiry, some time ago, for making hard water soft, and as I have seen no answer to it, I send my way. To a barrel full of water put about two quarts of wood ashes. A sediment will settle to the bottom, leaving the water clear and soft. The ashes can be tied up in a cloth if one is very particular, but the strength will not come out as soon. It is a good way, if it is wanted for washing, to get the water ready Saturday, and by Monday morning it is all ready to use.—FARMER'S WIFE.

Floating Island.—I have a simple and excellent recipe for "floating island" which I think will suit "R." For one quart of milk take two tablespoonfuls of corn starch, the yolks of two eggs, four tablespoonfuls of sugar, a little butter and salt; boil two minutes; turn out in the dish and flavor with two teaspoonfuls of lemon. Beat the whites of the eggs to a stiff froth and lay over the top, then place in the oven a few minutes till browned slightly.—H. E. H., *Highland, Ulster Co., N. Y.*

A Protest Against Black Pepper.—Among the many valuable recipes given in the RURAL NEW-YORKER, I find black pepper is often named as one of the ingredients. Did it ever occur to the minds of our good cooks that pepper is offensive both in taste and odor? I suggest that those who are fond of it put it in or upon whatever they may desire for their *own* eating; it spoils the best dish for me.—R. D. G., *Queen City, Mo.*

Vinegar Pie.—One cup sugar; one-half cup vinegar; boil together a few minutes. Cool and add one egg, one spoonful of flour or a little rolled cracker, and one spoonful of butter. Bake with two crusts.—MRS. A. E. STEPHENSON.

Brown Bread.—Two cups of corn meal, one cup of flour, two cups sour milk, two teaspoonfuls soda, one-half cup molasses, one teaspoonful salt. Steam two hours, then bake one-half hour. Serve hot.

Corn Starch Cake.—One cup butter; 2 do. sugar; 1 do. sweet milk; the whites of six eggs; 2 cups of flour; 1 do. corn starch; 1 teaspoonful cream tartar; ½ teaspoon soda.—K.

Cream Cake.—One cup sugar; 2 eggs; 1 tablespoonful butter; 3 tablespoonfuls sweet milk; 1½ cups flour; 1 teaspoonful soda; 1½ do. cream tartar.—K.

Fritters.—One pint of milk, 4 eggs, and a little salt; flour enough for a stiff batter; drop into hot lard and fry.—L. E. K.

Cream.—One egg; ½ cup sugar; ½ cup sweet milk; ½ cup corn starch; 1½ cups sweet milk.—K.

D. D. T. MOORE, 5 Beekman St., New York

☞ Any Books desired, not named in this List, will be furnished on receipt of price.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages**, is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

D. D. T. MOORE, Publisher.
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

Every breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Pres't. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 323 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2. Address

D. D. T. MOORE, 5 Beekman St., N. Y.

Miscellaneous Advertisements.

SMITH'S

ILLUSTRATED PATTERN BAZAAR,

Is just the kind of a Work upon Fashions and practical help in Dressmaking that every lady *NEEDS*.

It imports styles SIX WEEKS in ADVANCE of COSTUMERS.

☞ "I consider your Bazaar of infinitely more value to me than ALL THE OTHER fashion publications combined."

☞ "Your styles bear ample evidence of being *GENUINE* importations."

☞ "Your *INVENTION* of giving a cloth model with each pattern, to show how to make and put it together, is the *GRANDEST* improvement ever made to render patterns useful to ALL."

The above is the substance of the testimony of thousands that pour into us through the mails.

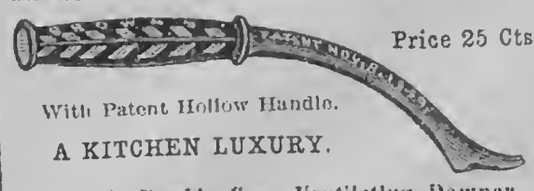
☞ We will BEGIN YOUR SUBSCRIPTION with the PRESENT NUMBER!

Only One Dollar a Year.

Single copy mailed for 25 cents.

A. BURDETTE SMITH, 914 Broadway, N. Y.

BROWN'S "ALWAYS COOL" STOVE LID LIFTER.



Price 25 Cts.

With Patent Hollow Handle.

A KITCHEN LUXURY.

Brown's Double Cone Ventilating Damper.

THE BEST IN USE. PRICE 50 CENTS.
For sale by all Dealers. Manufactured by
G. B. WALBRIDGE, 55 Chambers St., N. Y.

NEEDLES FOR ALL SEWING MACHINES can be obtained at about one-half the usual rates by ordering direct. Singer's, 40 cents per doz.; Wheeler & Wilson, 60 cts.; Howe's, 50 cts.; Grover & Baker, 50 cts., and others in proportion. Inclose the amount and Needles will be returned by first mail. Address

SATURDAY, JULY 20, 1872.

IRRIGATION.

EVERYWHERE we go we see, and almost every mail that comes to us brings, evidences that American farmers, especially in the Eastern States, have yet to learn the importance and profit, if not the absolute necessity, of irrigating their lands, and thus controlling the season and insuring their crops against the disasters liable to follow the long Summer drouths. The time is speedily coming when this will be done. The neighborhood that, or the farmer who, makes the first experiment will be the first to reap the reward.

Take Maine for example. It has, according to the last census, 59,469 farms. Its hay product is put down, in 1870, at 1,053,415 tons—nearly 18 tons per farm. Suppose we say that each of these 98-acre farms average 10 acres of meadow, which we think is too low an estimate, we have 1 8-10 tons of hay per acre, which is probably three-tenths more than it ought to be. Counting ten acres of land in meadow per farm, we have 594,690 acres of meadow in the State. Suppose these grass lands were made to produce one-half ton per acre more than they did in 1870 the increase in the State would be 297,345 tons. Putting the value per ton at $10, we have an aggregate annual increased value of the hay product of the State, without extending the area cultivated, of $2,973,450. Divide this sum among 59,469 farmers, and we have $50 added to the revenue of each farmer annually. Suppose each of these farmers were taxed $50 for irrigation annually for ten years, the increase of the hay crop would pay the enormous sum thus expended, to wit: $29,734,450.

The money thus expended in ten years would not only irrigate most of the meadow lands of Maine, but most if not all of the land cultivated in field crops. Now let us see what a modest estimate will show us in figures as to the results to the farmers in ten years, by increasing these crops alone two per cent. We have no doubt the estimate might safely be put at 10 per cent.; but we will estimate it at two per cent., and those of our readers who think the increase would be greater may easily make their own figures.

In 1870 Maine produced 274,703 bushels of wheat, 2 per cent. of which would be 5,575.86 bus., at $1 per bu	$575 86
Of Rye, 682,730 bus., 2 per cent. 682.30 bu. at $1 per bu	682 30
Of Corn, 1,630,888 bus., 2 per cent. 21,797.76 bus. at 75c. per bu	16,347 75
Of Oats, 2,351,354 bus., 2 per cent. 47,027.08 bus. at 50c. per bu	23,513 54
Of Barley, 658,816 bus., 2 per cent. 13,176.32 bus. at 50c per bu	6,588 16
Of Buckwheat, 466,635 bus., 2 per cent. 9,332. 70 bus. at $1 per bu	9,332 70
Of Potatoes, 7,771,009 bus., 2 per cent. 155,-420.18 bus. at 30c. per bu	46,626 00
Total annual increase in value at above estimate	$108,666 31
In ten years	$1,086,663 10
If the increase were ten per cent. instead of two, as we think it entirely safe to believe it would be, it would amount in ten years to	$5,433,315 50
This amount divided equally among the 59,469 farmers would give to each	$91 36

But it should be remembered we have not taken into account the increase that will be derived from other crops—such as market garden products; the natural increase in the ability to keep, and value of, live stock of all kinds; the milk product; wool, peas and beans, grass and clover seed, hops, flax, etc.—all of which Maine produces. Nor have we taken into account the enhanced value of lands thus rendered more productive; nor the diminished chances of loss from total failure of crops on account of drouth. These are to be considered. For lands quickly double in value when the season can be so controlled as to make a crop certain and the profits of the husbandman sure.

This illustration has been taken at random—that is, we have no especial purpose in selecting Maine. And we want to show the probable result of associated effort. We know that irrigation is not practicable in all, and would not, therefore, be profitable in many, localities; but we do know there are hundreds of neighborhoods in which a score or a hundred farmers might unite and secure water enough to insure each against drouth and add largely to the products of their respective farms as well.

RURAL NOTES AND QUERIES.

The Bar to Agricultural Progress.—A contemporary says:—"Agricultural progress finds its greatest impediment in the difficulty of giving to observed facts their true meaning." To a large extent this is true. But there are too few facts observed. And the observation is not systematic and intelligent. The truth is agriculturists are not taught to nor how to observe. The old humdrum idea that nothing is education that is not derived from books and their interpreters too generally obtains. The teaching should begin by directing observation and giving the true scientific significance to facts. We must have an army of teachers to do this. These teachers must be practical, observing and scientific men. The best teachers we now have are practical men; and they should be called, the coming Winter, to the Agricultural Colleges, to the lecture rooms, and to district school houses to tell what they know, why they know it, how they have learned it, and to point out the way by which those who listen may learn. The qualities needed in these pupils are desire to learn because of the real profit that may be derived from it, and application and persistence in pursuit of knowledge.

An International Postal Union, it is said, is proposed by BISMARCK, to culminate in a meeting at Berlin to discuss these propositions:—1. That all the states of Europe, Russia in Asia, Turkey in Asia, Canada, the United States and Algeria shall form a Postal Union. 2. That throughout this Union there shall be a uniform postal rate for letters of four cents per half ounce. 3. That newspapers, printed matter, patterns, etc., shall be conveyed for two cents per two ounces. 4. That to all countries not included in the Postal Union double the above rates shall be charged. 5. The uniform registration fee for all parts of the world shall be four cents. Commenting upon these propositions, the Farmer's Advocate of Ontario, Canada, says: "We want a BISMARCK in Canada. Only fancy ten cents from Windsor to Detroit—half a mile! Agricultural papers one cent in advance! Often letters between Canada and the U. S. cost between one and two dollars. We have known $2.00 to be paid!"

Why don't Canadians emigrate across the line, then?

Advice to a Boy Who Asks "How to Get Along."—"A Farmer's Son" writes us:—"I wish you would give directions how to get along. I am poor, my parents are poor; I have to work hard, and want to know how other boys do who succeed." The only way we ever found for getting along was to *keep stepping*—that is, don't lose one moment's time! We do not mean to say that a boy should take no recreation; but we do mean to say that no boy should take recreation thoughtlessly. He should always learn something. But this getting along is a very simple matter. It means persistent labor—with hands and head. It means that so long as you can find anything to do you should do it—not blindly and mechanically, but thoughtfully, teaching yourself by experience what is the best thing to do, and how to do it in the quickest and best way. Loafing, lounging, idleness, dreaming, wishing and worrying do not pay. The more a man does, the easier he does it and the more he can do. Just get the steam up, get a good *purpose* in your soul, and then work to accomplish that purpose as if your life depended upon your doing it in the best manner and shortest time. That is the only way we know of to "get along."

The Education of Farmers' Sons is attracting the attention of British Agriculturists. It seems to be dawning upon their minds that education is as profitable to a farmer's as to any other man's son; that the greater the intelligence, the more and better the productions of the soil; that ignorance has more to do with the thraldom of the working classes than any other agency. We are glad to notice this kind of agitation among our British brothers; and we hope the time is speedily coming when our own common school system will be so revised, and the school districts so consolidated, as to enable every child in each mile square of territory to have the aid of intelligent, capable and progressive teachers, in place of the untutored and immature boys and girls who now, as a make-shift, "keep school," in nine-tenths of the school districts of the State, just long enough each year to consume the "public money" which the State appropriates. We need an educational revolution and reform in this country, also.

Sectional Differences and Jealousies in industrial matters should not be allowed to obtain footing among industrial men. We regret to see the controversy now going on in some of the journals relative to the merits and demerits of Allen's American Short-Horn Herd Book. We do not see that any good is likely to come of such discussion. If the book has faults it is not astonishing. But who can or has made a better one in this country? The way to correct the discovered faults, if any, is to call the attention of the author to them, directly, and not enter into a discussion that only breeds acrimony and begets distrust of the motives of the critics. The long-winded stories that some of these garrulous and prolific breeders get off are terrible doses for readers in dog days.

Swindling in Packing Hay for the Southern Market.—A Texas paper thus exposes a practice for which there is no excuse, and which is not creditable to those who practice it, no matter who they are:—"Among the many impositions practiced upon Southern communities by Northern shippers, our attention has been frequently called to the manner of packing hay. The average weight of a bale of hay, for which the consumer is charged 2½ cents a pound, is two hundred and sixty pounds. Of this, the wood used in bailing weighs sixty pounds. Thus, the purchaser is forced to pay 2½ cents per pound for wood, or $1.35 on each bale of hay purchased. This is an outrage upon honesty and fair dealing, and, as such, should meet with an immediate remedy."

Schools for Builders.—A "Young Mechanic" asks if there is any school in this country where a young man can be taught technically in the building trades. We do not know of any—at least not such an one as exists in the Polytechnic University at Stuttgart, Germany, where young men are educated in the building crafts—trained for master builders, constructors of public works, foremen of plasterers, tilers, roofers, joiners, carpenters, etc., etc. In this school instruction is thorough and practical. We need such schools here. If we had them, there would be less time wasted in colleges, fewer men starving in what are called the learned professions, and fewer indolent and ignorant loafers waiting for something to turn up.

Refinement of Disease Following Refinement of Civilization. There seems to be accumulating evidence that the area of disease in the human system is extending—that is, that diseases are increasing, new ailments affecting the organizations of men in proportion as men depart from the more primitive modes of life. The number of nervous diseases are increasing—such as neuralgia, short-sightedness, diseases of the muscles of the eye-balls, etc., etc. These conditions of the modern human, as distinguished from him of fifty years ago, render necessary a new school of physicians, who will make a study of diseased tissues, the lens of the eye, insanity in all its shades, and become enabled to make the deaf hear, the blind see, and to clothe the insane in their right mind.

The Japanese Patent Law.—The wisdom the Japanese exhibit in their policy of studying the laws and customs of the most civilized countries is worthy of attention and commendation. They are adopting and enacting such laws as will stimulate their growth in the industrial arts. They have now a patent law which not only protects their home inventions, but is intended to protect foreign inventions as well. We expect that Japan will yet contribute largely toward the reward of American inventive genius, because American inventors will, to a great extent, occupy the rich field thus thrown open to them.

Chinese Labor.—In answer to R. P. SLOSSON: Chinese labor is not obtained much, if any, cheaper than any other, except by special contract made before JOHN leaves his native place. The demand for good, intelligent, faithful labor is so great, and JOHN CHINAMAN is so faithful that the demand for his services soon teaches him his own value, and he exacts it to the uttermost farthing. He is not anybody's fool, and cannot easily be made a slave. This "Heathen Chinee" can teach most of the Yankees tricks they wot not of.

An Industrial Museum is to be established in connection with the Georgia State College of Agriculture and Mechanic Arts. It is to embrace models of improved agricultural machines, implements, agricultural products, manufactures, minerals, ores, woods, plans and photographs of buildings, etc., etc. This College is located at Athens, Ga., and contributions to the museum are solicited.

The Hop Crop of this State, according to EMMETT WELLS' Circular, is suffering from the depredations of lice. The foreign reports are not favorable. From Wisconsin there are no unfavorable reports. Brewers are buying more freely of old hops, and the past week there has been a marked increase in the demand for 1868s and '69s.

THE SEASON, CROPS, PRICES, ETC.

Upper Sandusky, O., July 6.—Season dry; wheat light; hay crop medium; corn fair; oats good; apples will be a fair crop if the season does not remain too dry.—D. B.

Morgan Station, Pendleton Co., Ky., June 22.—Crops are generally better than expected. Wheat damaged by the cold winter, and will make two-thirds crop; oats, corn and grass look promising; fruit is plenty, except peaches—on low bottom land they have winter-killed.—F. M. R.

Savannah, Butler Co., N. Y., July 1.—We had a very wet Spring and rather cold, especially the month of May. Wheat and oats look exceedingly well, and the prospect is that we shall have a very large yield of small grain. Corn came up well, but was very backward until the warm weather; to-day the prospect is that we shall have a very good crop of corn.—J. W.

Artesia, Lowndes Co., Miss., July 8.—The season has been good, thus far, for corn and cotton; and, as a general thing, crops are fine. We have had plenty of rain until now, but in some parts of the county it is now much needed. Most of the corn and cotton is "laid by." Those of us who have sweet potatoes have them to work again and more vines to set out, from which we get our best seed potatoes.—R. S. S.

RURAL BREVITIES.

A "RURAL READER," Arkadelphia, Ark., asks where he can obtain Guelder fowls.

Y. is informed that we do not know that any coal fields have ever been discovered in New York State.

THE Shakers have purchased a plantation at Shelbyville, Ill., of 640 acres, for which they paid $27,000.

JAMES VICK has seven acres of Phlox, five of Asters, five of Dahlias, four of Zinnias, three of Verbenas and two of Pansies.

A. C. is informed that the best book on croquet that we know of is by MAYNE REID, and can be obtained at this office for 25 cents.

WOOL thieves are operating in Illinois. One farmer lost sixty fleeces, worth $300, stowed in his barn. Better not have the wool in the barn.

B. F. R. is informed that we do not know what the jewels of officers of the Patrons of Husbandry are, never having been inside a lodge.

WE acknowledge the receipt of the Premium List of the Planters', Manufacturers' and Mechanics' Association. Fair to be held at Jackson, Miss., Nov. 11-16.

THE Swedish Colony of Maine have 200 acres in fine grass that two years ago were forest. They will this year produce more than enough to support themselves.

CANADA peas—the common small field pea—are largely purchased by coffee grinders in this city for adulterating coffee—some dealers buying 100 pounds at a time.

THE death of WM. TAFT, Plymouth, Mich., is announced. Mr. TAFT has been known as a prominent agriculturist, orchardist and experimentor, for many years.

THE Cincinnati Industrial Exhibition managers have issued a very handsome list of premiums to be awarded to Manufactures Products and Arts. Fair Sept. 4 to Oct. 4, inclusive.

X. A. WILLARD of the RURAL NEW-YORKER has been engaged to deliver the address at the Chenango Co. Ag. Fair, which is to be held at Norwich, N. Y., Sept. 24-26. The address will be on the last day of the Fair.

HON. JOHN W. HARRIS of Boone county has received the certificate awarding him the premium of $100 for the best conducted farm in the State of Missouri, containing 160 acres or more, offered by the State Board of Agriculture.

WE have received the list of premiums and regulations for the 33d annual Fair of the N. Y. State Ag. Soc., to be held at Elmira Sept. 30, Oct. 4. The attention of those desiring to compete for these prizes is called to the fact that the entry books close August 31.

B. F. GUE has taken the place of WM. DUANE WILSON, as Managing Editor of the Iowa Homestead. Gen. WILSON devotes himself to the discharge of his duties as Secretary of the State Grange Patrons of Husbandry and to correspondence with the Homestead.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

BUSINESS NOTICES.

MUSICAL.

ALL who contemplate studying music, either as an accomplishment or a profession, should send immediately for a Circular of the LYONS MUSICAL ACADEMY—one of the best and most successful institutions of its kind. Address O. S. ADAMS,
Principal, Lyons, Wayne Co., N. Y.

HOW TO OBTAIN A "COLLINS"

Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.

Get Descriptive Pamphlet at 36 Dey St., New York.

"Whitcomb's Remedy cured me of Asthma."

Various Topics.

BLOWING BUBBLES.

ONE of the most harmless and pleasing pastimes of childhood is the blowing of soap bubbles, as herewith presented in the beautiful picture we give this week. Every child who can procure a clay pipe and a dish of soapsuds is familiar with the beautiful creations produced by his breath and the thin film of water which assumes the form of a perfect sphere. The curve is said to be the true line of beauty. The outline of a soap bubble is a perfect curve; it is, therefore, perfectly beautiful. Besides being the aggregate of perfection in form, it takes on all the brilliant and glowing colors of the rainbow—the gold of the buttercup, the green of the emerald, the red of the sunset, the purple of the violet and the blue of heaven! No jewel worn by an emperor or a king is half so handsome. But, alas! like many beautiful things, the bubble is only for a moment—it perishes before it has an age long enough to reckon: it is as frail as fair, and the first adverse breath crumbles its crystal shell into drops of water. So the bubble has become a figure of speech, denoting anything or scheme which is short-lived, puffed up or visionary. Many bubbles in our day have suddenly collapsed, whelming thousands in financial ruin. The *business* of blowing bubbles for a living is decidedly unstable and unprofitable. Many golden bubbles are blown in Wall street; many farmers before now have been humbugged by new-fangled agricultural bubbles. Just now the politicians are blowing a vast number of bubbles, many of which will be pricked with ballots next November.

An "improved soap-bubble" is made by adding a little glycerine to the water. This gives them longer life, which is the end sought. In the picture both of the "coming men" are absorbed in the attempt to successfully float a new bubble.

PERSONAL MAGNETISM.

WE often hear this phrase, but do not often see it defined, and many are apt to suppose it to be an occult power, with which some are especially endowed. Now, there is nothing mysterious in this matter. Every one, in degree corresponding to his intellectual vigor, impresses those he comes in contact with, and draws from them a display of qualities such as he has exhibited. One man meets every one with an open, smiling face, a hearty grasp of the hand, a friendly interest in all that interests the one he meets—to him the world seems mostly made up of friends, and he really has more friends than others. Another meets the world with the idea plainly expressed in his whole deportment—

"I care for nobody, no, not I,
And nobody cares for me."

And he draws that feeling to the surface, and nobody does care for him. A third goes through life, gloomy and doubtful of everybody, as if all the world were intent on cheating him. It is astonishing, the number of rogues that man actually *does* meet. If any doubt that this view of the case is correct, let them try the experiment. Take some day, when you are healthy and happy, and endeavor to impress your state on all you meet; see if nearly all will not seem to be happier for having met you; see if you cannot get accommodations, services, good wishes that you could not have had, had you not caused them to reflect the light of your countenance—made them feel the love you showed. On another day, when you feel sick, or have a "raging tooth," or a loss in business, as before, make every one understand you are uncomfortable or angry, and see how friends get away from you as quickly as possible, how they "cannot accommodate," how everything seems uncomfortable and hateful. Try the two modes on the same men, and see how much personal magnetism you have, and what opposite qualities you will develop. Everybody has this magnetism that has vigor of mind and will, but it may attract good or evil to the surface; so every one may develope love or hate at pleasure. "He that hath friends *must* show himself friendly" or he will soon have no friends. "As in water face answereth to face, so the heart of man to man."

Do not misunderstand here. It is not necessary nor right that you should give up or fail to assert any principle; it is not needed that you smile on sin as on virtue; it is not necessary to be unable to say "No." On the contrary, "speaking the truth *in love*" develops the most powerful form of personal magnetism, for men desire to respect those they like, and will not long accept the influence of one too feeble or too wicked to be trusted.

If, then, you feel disposed to complain that your acquaintances are cold or unfriendly, look within yourself; it is certain the fault is there. Watch your moods, beware of inflicting your sorrow on every one you meet; especially avoid feeling or showing indifference to the annoyances of others. If you watch only yourself, yourself is your world, and instead of reflecting the genial light that beams from friendly eyes, you see only the darkness within. No one can be always genial; but one that steadily tries to be will surely be recognized as a prince among his fellows, and men will speak admiringly of his "personal magnetism."

IF a cause be good, the most violent attacks of its enemies will not injure it so much as an injudicious defense of it by its friends.

ANCIENT MUSIC.

THE Egyptian flute was only a cow's horn with three or four holes in it, and their harp or lyre had only three strings; the Grecian lyre had only seven strings, and was very small, being held in one hand; the Jewish trumpets that made the walls of Jericho fall down, were only ram's horns; they had no other instrumental music but by percussion, of which the greatest boast made was the psaltery, a small triangular harp or lyre with wire string, and struck with an iron nee lle or stick; their sackbut was something like a bagpipe; the timbrel was a tambourine; and the dulcimer was a horizontal harp, with wire strings, and struck with a stick like the psaltery; they had no written music; and had scarcely a vowel in their language; and yet (according to Josephus) had two hundred thousand musicians playing at the dedication of the temple of Solomon.

BLOWING BUBBLES.

GOING OUT OF CHURCH.

AN exchange says:—If instead of the closing anthem, some of the ministers should, at the close of the service, give the orders:—"Attention, worshipers! For hats, dive! For overcoats, go! Jerk, twist, plunge! Make yourselves ridiculous, all!" The effect would hardly be a variation from the present style of going out of church. The singing of the doxology seems to be a signal for a general putting on and adjustment, and when the benediction is about to be pronounced the ruffled congregation look more like jumping out of the windows or uniting in a crushing and crowding race for the doors than listening to the solemn words of the good pastor. At one of our well filled churches on Sunday evening, it was observed that every third man was going through these ridiculous motions while the service was closing, although the sermon had been excellent. Why do not people wait until the proper time to do these things? There is a time for everything, but the time does not always occur during church service.

A POWERFUL DISINFECTANT.

ACCORDING to the Poona Observer, recent experiments made in India have proved that roasted coffee is one of the most powerful disinfectants, not only rendering animal and vegetable effluvia innoxious, but actually destroying them. A room in which meat in an advanced state of decomposition had been kept for some time was instantly deprived of all smell on an open coffee-roaster being carried through it containing a pound of newly roasted coffee. In another room the effluvium occasioned by the clearing out of a cesspool was completely removed within a half minute by the use of three ounces of fresh coffee. The way coffee is used as a disinfectant is by drying the raw bean, then pounding it in a mortar, and afterwards roasting the powder upon a moderately heated iron plate until it assumes a dark hue. The coffee must, however, be pure, as chicory possesses no deodorizing power.

THE JOURNALISTIC QUARTETTE.

IT is but a few years since Clay, Calhoun, Webster and Benton were looked upon as the four great National Statesmen. They are gone. Since then, Bennett, Bryant, Greeley and Raymond were the four acknowledged journalists of the Republic. And now this quartette has been sadly broken in upon by the sudden death of Raymond, some time since, his career half finished, and Bennett, of the Herald, whose remains lie in Greenwood Cemetery. Greeley, too, is temporarily out of journalism, by what may be termed the exigency of politics. The poet of Roslyn, William Cullen Bryant, alone remains at the Post. Rich in years, experience, poetry and politics, he still frequents his old haunts, the only remaining one of the four whose ready pens daily shook the world of thought, and made and unmade men and policies at will.

A BEAUTIFUL SPRING.

A CORRESPONDENT of the Savannah *Republican* writes as follows of the wonderful Wakulla Spring in Florida:—"One of the greatest natural curiosities in the South is the Wakulla Spring, which is the source of a beautiful river of the same name. The Spring is between four and five hundred feet in diameter, and on a bright and calm day, to pass over it in a boat, you feel as though you were suspended in mid-air, the water being so limpid and transparent. At the depth of one hundred and sixty feet, a dime can be distinctly seen as though it were at your feet. On gazing into the depths of this wonderful spring it shows all the prismatic hues of the rainbow, and near its bottom can be seen fish of different varieties, crabs, terrapins, and now and then an alligator."

A STRING OF PEARLS.

SAY less than you think, rather than think only half what you say.

THE modest man will not parade his own excellence lest he should offend.

A SECRET has been defined "as anything made known to every body in a whisper."

MOST of the shadows that cross our path through life are caused by standing in our own light.

VALUE the friendship of him who stands by you in the storm; swarms of insects will surround you in the sunshine.

A WIT once asked a peasant what part he performed in the great drama of life. "I mind my own business," was the reply.

ONE of the saddest things about human nature is, that a man may guide others in the path of life without walking in it himself; that he may be a pilot, and yet a cast-a-way.

THE LESSON OF THE GRASS.

BY MARIE S. LADD.

"O GREEN, and fresh, and ever cheerful grass,
That lines the path I pass—
Less cheerful I, alas—
Why should you look so bright?"
One to me said, who, looking through a glass,
Saw not the world aright.

"The place the GOD of nature gave, I till
According to His will,
Beside this bubbling rill
Where you so often sigh,
In valley low, or on the rounded hill,"
I slowly made reply.

"I creep along the winding river's bank—
The steep and dangerous bank—
Where never flocks have drank;
Yet I, in safety, go,—
Down the rough cliff, and on the margin dank,
All silently I grow;

"And on the highest peak, where man ne'er trod,
From out the icy sod,
Where dwarf shrubs o'er me nod,
I shoot my hardy spears,—
On trackless wastes, forever known to GOD,
At times my leaf appears;

"Yet when his stern and biting frosts are sent
I wither in content—
My glory being spent—
For summer sun and dew,
Warm winds and floods, all in their season sent,
That glory will renew;

And yet, behold, a higher life than mine,
O weary one, is thine!
Why should you so repine
At fortune's brooding face—
Formed in the image of the One Divine,
And favored by His grace!"

I know not how my silent speech he knew,
But to the distant blue
His eyes from me he drew,
Sustained his earnest look—
"I will undaunted still the right pursue,"
Then left the rippling brook.

Our Story-Teller.

THE ENGINEER'S STORY.

BY DE FORREST P. GUMMERSON.

"I NEVER was much at story-telling, stranger—never had any sort of gift that way—but seeing as how you've asked me, right plump out, if I've ever met with any accidents or narrow escapes on this 'ere engin', I'll tell ye how near I come to one once, and just escaped by the skin of my teeth."

The engineer was a brawny, muscular looking man, the perfect picture of health. I had noticed that his engine had an uncommon clean look, and had spent nearly an hour that afternoon in admiring its fine points and plying him with questions. At last I asked him "right plump out," as he said, "if he had ever met with any accidents;" and he made me the reply with which our story opens.

"Ye see, stranger," he went on, "it's mighty skeery business to run one of these 'ere things, 'specially when one does night-work. 'Twont do to only keep one eye open then; you need both, and 'twouldn't be bad if you had another one or two at the same business. I've most always run on this road, and I think I know every crook and curve there is in it. Yes; I believe I almost know how many crooked ties, and ties with knots in, there are. There's a good many *dangersome* places along its line; some that I know of that 'ud make most any man's hair stand on end, unless he'd got used to them."

"I always liked railroadin' just because it was kind o' risky; and I made up my mind that I'd follow that for a living or nothin'. So the first chance I got I went on as fireman, and I stayed at that awhile and then I got to be engineer, and there I stuck.

"Well, about that ere narrow escape. Why, yes; I was kind o' wanderin' off from the main track—always do when the switch is left open!" with a laugh. "It was a sort of gala-day, that was. The Sunday-schools in the place had made up their minds to have a pic-nic somewhere along the line, about half a-mile from the road—'Morris Grove' I think they called it. Well, we got everything in readiness the night before, so as to be ready to start on time. I remember I didn't go home until after twelve, because I wanted to have my engine shine like a spick-span new one.

"Gracious! if you'd a-seen the crowd of youngsters that came down to go on the pic-nic the next morning. Why, I declare! I didn't know there was so many in the world until then. Wasn't married, you see, and didn't have none o' my own; so didn't notice others so much as I do now."

"Then you have a family," I ventured to remark.

"My! I should say so—but you just wait—that's a part of my story! Well, it took a deal more time than we thought it would to get the youngsters aboard, so that it was more than an hour after the time that we should have started before we were really off. I intended to make the best part of the hour good though, by putting on all the speed I could. I knew that the road was clear, and if any extra train had started out, that I had the right of way. I blew the whistle for all aboard, and then the fireman rang the bell as I pulled the throttle, and with one or two great snorts we moved away.

"There was a band of musicians in the car right beh d the tender, and they kept playin' all the e, so it kept one lively, you see. I really did think that the engin' was sort o' inspired by it too, for it really did seem that instead of her ordinary motion, she went dancing along that day.

"Well! we went on and on, through mazes of green trees, and by bikes and hills, and through valleys—that's the way the story writers have it, don't they?—until we were within about three miles of where we intended to stop. I commenced to slacken speed about this time, for a short ways ahead there was a sharp curve, and our orders were always to run slow until we had passed it. We didn't often pay much attention to it, though. I 'spose we had grown so accustomed to it that we didn't think much about it. But this time I did. I thought to myself, 'What a terrible thing it would be to have anything happen to the children on board the train?' I didn't slacken up much, though. You see I knew all the boys would notice it, and if I told them the reason they'd only laugh at me for bein' so careful of the lives of these youngsters, and not of theirs.

"It was straight for more than a mile before you came full upon the curve, and as the day was bright and beautiful, I could see pretty plain almost there. I noticed something jumping about on the track, but thought to myself it was one of the JONES children come down from the house on the hill to see the pic-nickers; and then I noticed that whatever it was, there was something red about it, and it was waved about in the air in a furious manner. Now, stranger, red in a person's hand, and waved in front of our engine means, at all times, *danger*. But these children were in the habit of comin' down to the track a'most every day, and wavin' a handkerchief or some other old rag at us as we passed; so I did not know what to do in this case, and we had now got so near as to enable me to see that it was one of the JONES's, though I thought a bigger one than those I usually saw. Then I resolved to act as if I knew that flag was meant for danger. So I grasped the throttle of my engine and shut off steam as quick as I could. All the while the girl stood on the track and waved the red rag frantically about.

"Well, stranger, we had been goin' a little faster than I had calkelated on, and when we did come to a stop, it was to find that three feet further would have brought us against a huge rock that the heavy rains had washed from its place in the side of the hill, and which was afterwards found to weigh two and a-half tons. Had we not heeded the signal given by that girl, I do not question for one moment the probable fate of all on board that train. For some distance before reaching the curve, and for nearly a mile beyond, the road runs along an embankment, at the bottom of which is a huge bed of rocks; over this embankment, and on these rocks, some of the cars would certainly have been hurled. What the consequences would have been I leave you to imagine."

While a thrill of horror ran through my being, I could not help asking him, "What became of the brave girl who had warned them of their danger?"

Calling to a little fellow that I had noticed at the far end of the platform, playing with a child still smaller than himself, who was closely watched by a woman about twenty-four, I should think, and evidently the child's mother, he said, "Look anything like me?"

"Well, rather!" I replied, for the resemblance was a marked one.

"Well, that ere girl, stranger, is that youngster's mother; and as you think he looks like me, why you can guess the rest, can't ye? But that ain't all of it. You see, it was a mighty fortunate thing, take it all round; and the different churches joined together, and one day they sent a committee to make my wife an offer for her old red sun-bonnet—that's what it was she had in her hand to stop the train with; they wanted to put it in a glass case in the Town Hall, they said, and there it is to this day."

"You sold it to them then?" I said.

"I should think so! Five thousand dollars was better than an old sun-bonnet, eh?"

I could only echo his own words and reply, "I should think so," as I thanked him for his courtesy, and went on my way fully believing that there was such things as "Narrow Escapes" and "Special Providences."

A MUTUAL RUNAWAY.

"YOUR aunt Carlton and cousin Jennie will be here on the next train, Russell," said Mr. Wilder to his nephew. "You had better bring the pony chaise, and bring them from the——"

"Can't. I'm going away myself, sir."

"The— the d——l you are!" responded the old gentleman, pushing his spectacles up over his forehead, and regarding his nephew with an air of surprise and consternation.

"Yes, sir. Charley Hunt invited me out to his place for a few weeks, and I thought that I might as well go now as any time."

"I should say that it was a very strange time to be leaving home. Your aunt and cousin will consider it as a personal affront, sir."

"It is not intended as such, sir. Though to be frank, considering the object of Jennie's visit, I prefer not to see her. And I must say that I think she would have shown more sense of delicacy if she stayed away."

"Your cousin is a very lovely girl, Mr. Impudence, and won't be likely to go begging."

"I don't doubt it in the least. But for all that, she won't suit me for a wife, uncle,"

"How do you know that, you conceited young donkey, when you have never seen her?" inquired the irate old man, bringing his cane down upon the floor with startling emphasis.

"Common sense teaches me that no marriage can be happy that does not spring from mutual love. And on one thing I am resolved, that I will never marry from mercenary motives."

"Nobody wants you to marry the girl unless you like her!" roared Mr. Wilder, his face growing purple with rage and vexation at his nephew's perversity. "All that I ask is that you will stay and see her. And this is a point that I insist upon—yes, sir, I insist upon it!"

"I am sorry to disobey you, uncle, but if I should stay, it would only give rise to conclusions that I am anxious to avoid. But I will tell you what I will do: I will relinquish all claim to the property that you are so anxious should not be divided. As that seems to be the main object, I think that it ought to be satisfactory to all parties."

A few minutes later, Russell passed by the window, valise in hand.

He nodded good-humoredly to his uncle, as he glanced in, who glared after him in speechless rage.

"He shan't have a penny—not a penny!" he growled, as sinking back in his chair he wiped the perspiration from his forehead.

"What's the matter now?" said the gentle voice of his wife Polly, who had just entered the room.

"Matter enough I should say. Russell has gone—actually cleared out, so as not to see his cousin. What do you think of that?"

"I think you will have another attack of the gout, if you get yourself so excited," said the good lady, as she placidly resumed her knitting.

"What's to be done?"

"Nothing, that I can see. If Russell and Jennie had seen each other before they had any notion that you wanted them to marry, ten to one but they would have fallen head and ears in love with each other; but as matters are now, I don't believe it would be of the least use. From what Ellen writes me, I should think Jennie to be as much opposed to it as Russell. She says she can't bear to hear his name mentioned, and that it was as much as she could do to get her consent to come at all when she heard that Russell was at home."

"They are a couple of simpletons," said the old gentleman, testily. "I've got half a mind to make another will, and leave my property to some charitable institution!"

In going to Dighton, whither he was bound, Russell Wilder had to travel part of the way by stage.

There was only one passenger beside himself, for which he was not sorry, the day being very hot and sultry.

The passenger was a lady—there was an air of unmistakable ladyhood about her which told him that. He noticed particularly the dainty gloved hands, and well fitting boots.

Her graceful form indicated that she was both young and pretty, but he could not see her face on account of the envious veil that hid it.

But as soon as she got comfortably settled in the corner, to which Russell assisted her, she threw it back, disclosing a fair, sweet face, lighted by a pair of wonderful bright black eyes, which shot a swift, bewildering glance into his that were so intently regarding her.

The sudden starting of the coach, which sent some of the lady's parcels from the seat to the floor, gave Russell an opportunity of speaking, as he returned them, of which he was not slow to take advantage.

From this they fell easily into conversation, and it was curious how sociable they became.

They talked of the beautiful scenery through which they passed; of the newest books, and latest magazines, some of which Russell had with him.

The lady inwardly thought her companion to be the most entertaining and agreeable man she ever met with. And as for Russell, he often lost the thread of his discourse in admiring the red, dimpled lips, and the pearly teeth they disclosed whenever she spoke or smiled.

Certain it is that his four hours' ride from P—— to Dighton were the shortest four hours he had ever known in his life.

"Where do you want to be left, sir?" inquired the coachman as he entered the village.

"At Mr. Charles Hunt's, Locust Hill. Do you know where it is?" said Russell, putting his head out of the window.

"Certainly, sir. Take you there in a jiffy."

"Why, there's where I'm going!" said the lady, opening her eyes widely. "Nelly—Mr. Hunt's wife is my most particular friend; we used to go to school together."

"And Charley Hunt is my most particular friend, and one of the finest fellows in the world."

"How very odd!"

"How very fortunate!" exclaimed Russell with a meaning glance at his fair companion, which made the rosy cheeks still more rosy. "Might I take the liberty of inquiring——"

But just at this moment the stage stopped in front of the house, on the portico of which stood Mr. and Mrs. Hunt, enjoying the evening air.

In a moment Russell was shaking hands with the former, while his companion rushed eagerly into the arms of the surprised and delighted wife.

"Why, what a happy surprise, Jennie!" she said, after spiriting her visitor off to her own room; "I had given up all idea of seeing you this Summer."

"And I had no idea of being able to come, until just before I started. You see, mamma—my step-mamma, you know—was going to Uncle Wilder's, and she insisted on my going with her, to see that hateful, disagreeable cousin of mine, that they are determined to marry me to. So when mamma was busy packing, I just put on my things and slipped off, leaving a note to tell where I was going. Wasn't that a good joke on them all?"

"I should think it was," said Nellie, with a burst of merriment, far more than the occasion warranted. "When I saw who your companion was, I thought you were out on your wedding tour!"

"No, indeed; never saw the man until he got into the stage at P——. But, really, he is the finest looking man I ever saw, and so agreeable. Who is he?"

"Oh, I'll introduce you when you come down stairs. There's Sarah, wanting to see me about supper. You'll have only time to dress. Mind, and look your prettiest!"

And with a roguish shake of her finger at her friend, Nellie ran away to see about supper.

If Jennie did not "look her prettiest," she certainly looked very lovely as she entered the supper-room, her linen suit exchanged for a fresh, soft muslin, whose simplicity and purity were relieved only by the violet-colored ribbons in the hair and throat.

Russell had also taken great pains with his toilet, as could be seen by the spotless linen and carefully arranged hair.

The pause that followed Jennie's entrance was broken by Mr. Hunt, who, in response to a meaning glance from his wife, said:

"Russell, allow me to introduce to you your cousin Jennie; Miss Carlton, your cousin, Russell Wilder."

The embarrassment which followed the blank astonishment into which this announcement threw the parties, so unexpectedly made known to each other, was quickly dispelled by the turn that was given it by their host and hostess.

"I suppose you'll want to book yourself for the next stage?" said Mr. Hunt slyly to Russell, who had been taken into his friend's confidence.

"And you," said the wife, turning to Jennie, "I don't suppose anything could tempt you to remain, now that you have seen that hateful, disagreeable——"

"Nellie," interrupted Jennie, crimsoning, as she remembered her words.

"Well, I won't then. But you must let me laugh! Just to think of you both running in the same direction, and to the same place!"

The ringing laugh that burst from Nellie's lips was too contagious to be resisted, even by those at whose expense it was raised.

This merriment was followed by a general good feeling, and a pleasanter tea-party never gathered around the social board.

We need hardly say that Russell did not take the stage the next morning, nor did Jennie seem at all disposed to cut short her visit on account of her cousin's unexpected appearance.

When they did go, they went as they came, together.

Mr. Wilder's astonishment was only equaled by his delight, on looking out of the window to see the two walking up the path towards the house, arm in arm, and apparently on the best of terms.

As for Russell and Jennie, they seemed to regard this unexpected meeting as an indication of their "manifest destiny," accepting it as such, much to the joy of their uncle, whose darling wish was accomplished in the marriage of the two, thus made happy in spite of themselves.

MAKING ENEMIES.

SOME men are afraid of making enemies, and this is well. But when this fear amounts to servility, it is not well. As a general thing, the man who has no enemies is a mere drone in the great hive of created intelligence. He is a milk-and-water-man, who contents himself with doing no harm, while it is notorious that he is doing no good. Such men are time-serving, fence-riding go-betweens, who creep after men of position and property, and hypocritically bow to men in humble walks of life. They take no part in public sentiment, and smile and smirk upon all they come in contact with. They usually glide through life undisturbed, and sink into obscure graves,

"Unwept, unhonored and unsung."

Their bones are marrowless, and though their heads are brainless, their lives are useless. It is better far to do some harm occasionally, than never to do any good.—*Lay Preacher.*

GOOD HUMOR.

GOOD humor is the clear blue sky of the soul on which every star of talent will shine more clearly, and the sun of genius encounter no vapors in his passage. It is the most exquisite beauty of a fine face; a redeeming grace in a homely one. It is like green in a landscape, harmonizing in every color, mellowing the light, softening the hues of the dark, or like a lute in a full concert of instruments, a sound not at first discovered by the ear, yet filling up the breaks in the concord with its deep melody.

SOME men are like cats. You may stroke the fur the right way for years, and hear nothing but purring; but accidently tread on the tail, and all memory of former kindness is obliterated.

Sabbath Reading.

GOD KNOWS THE HEART.

BY CARRIE ALTON.

God knows the heart, poor weary one,
So stricken and abased;
He's noted every burning tear,
That down the cheek has chased.
He knows how earnestly you strove
To walk the path of right;
He knows how sweet the tempter sang,
How dark has been the night.

Tho' long the night of grief and shame,
If you but seek his face,
Though men may scoff, and women scorn,
He'll give redeeming grace.
There's none so low He will not stoop
To raise them to His side,
'Tis not the righteous He would seek,
For sinners, Jesus died.

And when the bitter, burning tongue
Of slander sends its dart,
To blast our hopes and blight our lives,
Beneath its stinging smart;
Though all may deem us base, untrue,
That throng life's weary mart,
It gives us joy amid it all
To know; "God knows the heart."

God judges not as others judge:
Though outwardly like snow
Some lives appear to mortal eyes,
When all is dark below,
He knows the tares amid the wheat.
He'll gather them apart;
He looks beneath the outward form—
God knows the pure in heart.

WAITING.

How many sleep the long, last sleep who have waited patiently for the fruition of some cherished plan, for the gratification of some desire, and in which the waiting has proved the life and light through many weary years perhaps! Who can count the waiting hearts at this moment? Hope! that ever blessed little star that shines out in the darkest night and gives the one feeble ray of light, and bids the sorrowing wait yet a little time and "ye shall receive the blessing." That aged mother, borne down with care, who has watched the ever-faithful sun rise and set each day of her allotted time the three score years and ten—is waiting still for her repentant son; has waited long and patiently, these many years, and yet hope burns as high and steadily as in the bosom of the bright blooming maiden who waits for her lover at the garden gate.

"Waiting"—'tis the watchword alike of the young and the old. Years cannot still the warmth it gives the heart. How it inspires all to strive on yet a little longer, and with *ignis-fatuus* like persistency leads one hither and thither; and, when ready to yield up all effort from sheer exhaustion, suddenly appears with a new light in an unlooked-for locality, and now hope burns high again. Surely the waiting heart must have its reward now. But no; it is only a little fuel added to the flame, that it might not be extinguished quite—that it should still have power to hope on, to wait again. Wait yet a little longer, patient heart; soon over the troubled waters ye shall hear the "Peace be still." On the other side you shall meet, to part no more forever, that loved one for whom your faithful watching and waiting seemed so hopeless here. "Blessed is he that heareth me, watching daily at my gates, waiting at the posts of my doors." ELLA SAGE.

PATIENT TOILING.—You are tender-hearted, and you want to be true, and are trying to be, learn these two things from our text:—Never to be discouraged because good things get on so slowly here; and never to fail to do daily that good which lies next to your hand. Do not be in a hurry, but be diligent. Enter into the sublime patience of the Lord. Be charitable in view of it. God can afford to wait, why cannot we—since we have him to fall back upon? Let patience have her perfect work, and bring forth her celestial fruits. Trust God to weave in your little thread into the great web, though the pattern shows it not yet. When God's people are able and willing thus to labor and wait, remember that one day is with the Lord as a thousand years, and a thousand years as one day, the grand harvest of the ages shall come to its reaping, and the day shall broaden itself to a thousand years, and the thousand years shall show themselves as a perfect and finished day!—*George McDonald.*

SOUND SENTIMENTS.

IF you would not have affliction visit you twice, listen at once to what it teaches.

YOU need not tell all the truth, unless to those who have a right to know it all. But let all you tell be the truth.

PRESERVE your conscience always soft and sensitive. If but one sin force its way into that tender part of the soul, and is suffered to dwell there, the road is paved for a thousand more iniquities.

ONE of the resolutions passed by the Methodist General Conference was to the effect that they would resist all means which may be employed to exclude from our common schools the Bible, "which is the charter of our liberties and the inspiration of our civilization."

Ladies' Port-Folio.

A PICTURE PAINTED IN MAY.

BY P. C. E.

PICTURE a farm-house, old and red,
Girt 'round by many a barn and shed,
Sheltered by drooping, willow trees,
The yellow stems set thick with leaves;
Bordered by fields, some brown and bare,
Some with the green of wheat made fair.

A well near by, whose creaking sweep
Hangs over a pool, both cool and deep;
With an ancient poplar near the pail,
That shivers and sighs in its coat of mail,
Touched here and there by a flake of snow,
Blown from some odorous apple blow.

Set in the grass are daffodils,
Red and white daisies, and frim jonquils,
Tulips and primroses, violets blue,
Old-time herbs, rosemary and rue.
A purpling lilac shading the door,
Where stands in the sunshine a girl, aged four.

A wee, little maid, with hair red brown,
And dusky eyes, that look shyly down;
Her soft, round cheeks, sun-touched and bright,
With the flush of young blood's crimson light.
She holds the hand of a lady fair,
Who has eyes like the child, but has yellow hair.

Tender and pure is that woman's face,
Full of beauty and winsome grace;
But the brooding look in her wide, dark eyes,
That tells of a mind grown sweetly wise;
That tells of a heart that is great and true;
Is the *soul* of this picture, I paint for you.

A TALK ON HOME AFFAIRS,

Including the Means and Modes of Housekeepers.

GOING into a neighbor's one morning, I found the wife and mother in tears, her housework all undone, and her children unwashed and uncombed around her. "Mrs. H.," she began, as soon as she could choke back her sobs to speak, "you could not have done me a greater injury than you have in presenting our family with MOORE'S RURAL NEW-YORKER."

"How is this?" I exclaimed, in some surprise.

"It is just this: There are so many women writing of the amount of housework they can do, their bills of fare, their wonderful exploits in working and keeping everything in such perfect order, and doing all their work so precise, that my husband is constantly scolding me whenever he comes into the house, and continually referring me to the smart women of the RURAL, until I am in such despair that I don't care whether I do my work or not, and I hate the very sight of that paper."

I fear this is not the only one who feels discouraged, and while there are those who do not put so dark a face upon the matter, I *know* there are those who feel some indignation (as well as myself) upon the subject. It is utterly impossible for *all* to follow a course marked out by one housekeeper. A wife with a good home, and well-filled purse, can do very different from one who by true economy and much deprivation is helping her hard-laboring husband to secure a home.

The good RURAL is not wholly confined to those with homes and well-filled purses, but it reaches many good and refined people who are struggling hard to secure homes. Mrs. M. N. R.'s bill of fare, which as yet has reached only to Monday's tea, I fear at the end of a month would make a grocery bill which would deepen the furrows of the hard-working husband's face, and cause a sigh of despair as he thought of the many ways for his month's earnings to go. Many of us have but one platter; and we are thankful when we can get a fine roast or steak to put upon it, and do not question its size—for the time may come, perhaps (if we are prudent), when we can have our choice as to sizes and quality.

Any woman of refinement and taste (and most women are so) will endeavor to make her table as inviting as possible, even though she has but salt and potatoes to place thereon. M. N. R. always has clean table-cloths; perhaps her little ones never soil them, else she has a clean one in reserve for each meal, in which case at the end of the week she has twenty-one, with napkins added. These, with the clothing necessarily soiled during the week, must make the washing immense. We think she must be a being created of different material from the rest of us, if she could accomplish this washing, together with all the baking she claims to have done, and the pains-taking, and much cooking of each meal during the day. Some of us may not have a table-cloth for each meal, though our taste and refinement might desire it, if our purses and our single hands could afford and accomplish it. We are most of us fond of flowers for our table, but one pair of hands are not always at liberty to prepare them.

Suppose we arise at four o'clock in the morning (as many of our good housewives do), at the least. We have our beds to shake up for airing, floors to sweep, chickens to feed, flower beds to water and weed (for most poor people love flowers), hair to comb, breakfast to get as early as possible—for the husband cannot be behind time,—children to wash, dress and comb, and many other steps to take, which every good and prudent wife finds to do, before breakfast; and sometimes our one pair of hands cannot accomplish all, and thus some of the little attentions which we love to bestow upon our table and person are neglected, to our own regret. And the good farmer's wife has many things in addition to the above to do. My neighbor's home and surroundings may not be as convenient as mine; thus she cannot accomplish as much as I in consequence. Another neighbor has things far more plenty and handy than I—I cannot equal her, to try my best. Why repine? I do the best I can with my means to do with.

Wives and mothers, do not be discouraged! Our cares and burdens vary; our strength is not equal to our means; tastes and talents differ. Some of us have had wise and good mothers, who have taught us true economy; others have not been so favored. Suppose one neighbor does set her table with a variety of tempting viands, and in the most trim order, her husband may or may not afford it,—if we choose to take our dish of bread and milk, or bread and butter with a dish of fruit, after filling our husband's dinner-basket with a frugal meal, what is the harm? Our bread is sweet and light, our fruit always delicious, and we feel repaid when husband learns to his glad surprise that we have already paid the grocer's bill with the few dollars he left in our keeping to use as we should choose. His face brightens; he wonders how we could do so well with so little, and with a happy smile says, "My dear dear wife, we shall soon have a home, with your prudence and economy." More than this, it gives us more time for mental culture, which is little enough, at best, to those who feel a longing for something more satisfactory and higher than the mere eating, drinking and dressing. It is best each should direct her own household as seems best adapted to her circumstances. Do not try to mark out a path for others, it is so utterly impossible for all to follow therein.

If we discover a better method of doing work, or understand how to cook *well* and with economy, let us impart it to others that they may profit thereby—for if we attempt more than this, we create sorrow, discord and contention. I think we *all* intend to be good economists and prudent wives. MRS. O. F. H.

NELLIE GRANT AND THE QUEEN.

The following letters show how Nellie Grant came to pay a visit to the Queen:

LANGLEY'S HOTEL, May, 1872.

My Dear Lady and Queen:—I am embarrassed at the honor of an official request, given through a high officer (your Lord Chamberlain, I think), to be presented to your Majesty. I should dearly love to see you, that I might tell my mother and father that I have been thus honored. I am but a simple American girl; that I am the President's daughter gives me no claim to your recognition as a sovereign. If, with the kind lady who is acting as my *chaperone*, I might visit you, I should be very glad. Our Secretary of Legation hints at some political significance in this opportunity. I cannot so interpret it, and would not wish to be so received, because it would not be right, as I am nothing in American politics, and I am sure my father would not desire me to appear other than as my simple and very humble self. If, with this explanation, your Majesty will allow me to visit you, I shall be greatly honored and be very proud.

I have written this note of my own motion and because I think it the right thing to do. I am your Majesty's very obedient servant and admirer, NELLIE GRANT.

The following autograph letter was received by Miss Nellie from her Majesty the Queen, and the visit took place at the time indicated, and was very informal and pleasant:

WINDSOR CASTLE.

Miss Nellie Grant:—I have instructed Lady —— to convey to you this note, and we shall receive you as the daughter of your honorable parents without the intervention of our high officers of State. I shall accept your visit as an "American girl," and there shall be no other significance in the fact than your kindly expressed desire to see the lady and not the sovereign. I shall find it pleasant to forget that I am Queen in receiving you to-morrow afternoon at our palace of Windsor. VICTORIA.

GOOD WORDS.

A SINGLE word may disquiet an entire family for a whole day. One surly glance casts a gloom over the household; while a smile, like a gleam of sunshine, may light up the darkest and weariest hours. Like unexpected flowers which spring up along our path, full of freshness, fragrance and beauty, so the kind words, and gentle acts, and sweet dispositions, make glad the homes where peace and blessings dwell. No matter how humble the abode, if it be thus garnished with grace and sweetness, with kindness and smiles, the heart will turn lingeringly toward it from all the tumults of the world, and home, if it be ever so homely, will be the dearest spot beneath the circuit of the sun.

INTERESTING TO THE SEX.

THE ladies of Osage, Iowa, have a Home Husband Club.

ST. PETERSBURG has a prominent female lawyer in one Madame Krietzoff.

A BUFFALO woman has made $2,500 this season from her two-acre strawberry patch.

MAZZINI'S large fortune will be inherited by his grand-niece, who is an art critic on a daily paper at Turin.

BISHOP AMES of the Methodist Church considers the separate education of the sexes a relic of barbarism.

NILSSON is to sing in St. Petersburg and Moscow from November to February. She will receive therefor £8,000,

IF a young lady wishes a young gentleman to kiss her what papers would she mention? No *Spectator*, no *Observer*, but as many *Times* as you please.

Reading for the Young.

A WORD FOR THE CHILDREN.

CHILDREN, make your mother happy,
Make her sing instead of sigh:
For the mournful hour of parting
May be very, very nigh.

Children, make your mother happy:
Many griefs she has to bear;
And she wearies 'neath her burdens—
Can you not those burdens share?

Children, make your mother happy;
Prompt obedience cheers the heart,
While a wilful disobedience
Pierces like a poisoned dart.

Children, make your mother happy;
On her brow the lines of care
Deepen daily—don't you see them?
While your own are smooth and fair.

Children, make your mother happy;
For beneath the coffin-lid
All too soon her face, so saint-like,
Shall for ever more be hid.

Bitter tears and self-upbraidings
Cannot bring her back again;
And remorseful memories
Are a legacy of pain.

Oh, begin to-day, dear children,
Listen when dear mother speaks;
Render quick and sweet obedience;
For your highest good she seeks—

Loves you better than all others—
For your sake herself denies;
She is patient, prayerful, tender,
Gentle, thoughtful, true and wise.

Never, while you live, dear children,
Though you search the rounded earth,
Will you find a friend more faithful
Than the one who gave you birth.

[*Christian Observer.*

STORIES ABOUT PETS.

BY AUNT G.

I HAVE read much about the pets of little RURAL readers. Now, it is all very well to have some things which we love more than others, but does not show a well-balanced mind to bestow all our care and attention on one or two objects to the exclusion of others. Sometimes father and mother, brothers and sisters are neglected, and love and caresses are bestowed upon some object which would be just as well, and perhaps far better, without them. Yes, and we might mention older ones who lavish upon one pet child the love and care for which the other children often pine. I just wish you could all see the withering glance one such spoiled miss casts on her mother when she does anything contrary to her wishes, and the scene does not always close with a glance when they are alone.

Pets are generally allowed so many privileges, and taught so many tricks it is not their nature to do, that they become ungovernable and often do much mischief. I will tell you a few freaks of a pet sheep I once knew. The children had taught him to butt against a coat or hat hung on a stick, to paw in the soft earth, jump a rope, and many other pranks very curious for a sheep; but when he came to dig up choice seeds and plants, and knocked the baby over a few times, it was not quite so funny; and when they led him to the pasture and thought to shut him in with the other sheep, he scaled the fence, went across lots, and was back to the house knocking at the door before they arrived. Then he would follow the wagon as they went to church, and the last time he walked up the steps through the open door, up through the aisle; clump, clump he went till he got in front of the pulpit where the minister had just finished reading the hymn, and there he stopped and uttered a loud "*b-a-a!*" which a waggish fellow called the key-note. One old gentleman tried to lead him out, but he was so strong and obstinate others came to his aid, and they had quite a tussle. But he was never allowed his freedom again, and was seen soon after riding off in a butcher's cart.

Horsemen say they would much rather break a wild colt than one that has been spoiled by petting.

If my story is not already too long, I would like to tell you of some pet chickens we had when little children. The old hen that hatched them was a pet, and we had to take her off the nest and feed her, then listen to hear if the eggs peeped, so often that out of the thirteen eggs she hatched only four chicks, and these we caressed so much, and took them so entirely under our own protection, they followed us wherever we went. The old hen called loudly after them for a few days, but after that gave them up and went off with the other fowls and we had them all to ourselves. This was very funny at first, and we sometimes, I am sorry to say, left the dishes for mother to wash up while we dug worms and bugs for our pets, and at night they were covered with soft wool in a basket. But they missed the hen's warmth and care, and one after another drooped and died, till we had four shingles, with inscriptions written with red chalk, to mark the spot where they were buried, and concluded to let the hen brood her own chickens in future, as we concluded that such pets were very apt to come to an untimely end.

A TRUE HERO.

A BOY about nine years old was bathing one day, when, by some mistake, he got into deep water and began to sink. His elder brother saw him, and ran to save him, but lacking strength or skill, he also sunk to the bottom of the river. As the two drowning brothers rose to the surface for the last time, they saw a third brother, the youngest of the family, running down the bank for the purpose of trying to save them. Then it was that the nine-year-old acted the part of a hero. Struggling as he was with death, he gathered all his strength, and cried to his brother on shore, "Don't come in, or father will lose all his boys at once!"

Noble little fellow! Though dying, he forgot himself, and thought only of his father's grief. He was a genuine hero. His brother obeyed his dying command, and was spared to comfort his father when his two dead sons were taken from the river clasped in each others arms. *Selected.*

DROWNED!—BOYS, BE CAREFUL!

WHEN you go to swim do not take any risks. There are so many sad cases of death of boys by drowning this year that we deem this caution necessary. We have just heard of the death of HARRY STRING of Buchanan, Mich. a bright boy of twelve years, a reader and contributor to the RURAL. So you see he is one of our family. He went with another boy to the river to bathe, and, not being able to swim, got swept beyond his depth, and in a few moments after leaving his loving mother was carried to her lifeless. So went out a bright, promising life. Boys, be cautious when you go into or near water.

CAN our young friends find all the letters of the alphabet in these four lines?

"God gives the grazing ox his meat;
He quickly hears the sheep's low cry;
But man, who tastes his finest wheat,
Should joy to lift his praises high."

News of the Week.

CURRENT TOPICS.

English vs. American Yachts.

It will be remembered that the English yachtsman, Commodore Ashbury, came to this country twice to win back a cup which an American yacht won in English waters from English yachtsmen. He did not succeed; and, after a series of races last year, in which he sustained defeat, and after an exhibition of querulousness and ill humor entirely unworthy of a high-minded gentleman, the New York Yacht Club refused to receive the cups he had presented it to be sailed for by its members, directing the silversmith who had possession of them, to return them to their owner. Thus was Com. Ashbury snubbed. But he is not to be allowed to forget the New York yachtsmen. At Havre, France, the other day, twelve boats were entered for the regatta. Among them the English yachts Guineveve and Livonia and the American yacht Sappho. The Guineveve was withdrawn from the contest, leaving only Ashbury's Livonia to compete with the Sappho of similar class. The American thereupon promptly withdrew from the race, refusing to recognize Ashbury as a competitor; but fifteen minutes after the competing yachts had started, the Sappho started after them, and running to the leeward of the fleet, soon overhauled and passed the Livonia, crossing her bows a mile ahead, and returned to her anchorage after an hour and a half's absence. This was designed as a rebuke—to put it mildly—if not a taunt for the irascible English Commodore. Under the circumstances, it was, perhaps, justifiable, as it certainly was humiliating to the Englishman.

Foreign Processions.

The last year's parade of Orangemen in our streets, and the slaughter which ensued, culminated July 12th in another quiet parade, with no offensive demonstrations. The lesson taught last year by the shooting produced its effect this year, resulting in the absence of the hostile forces. Of course the Orangemen were protected by the police in formidable array. The majesty and power of law sustained them. Now it is urged by some of the metropolitan press that these foreign processions, celebrating purely foreign events, in no wise related to the history of this country, should be prohibited—that this is not the place to foster the passions excited by old feuds—that this is a land where all such animosities should be buried and forgotten. We subscribe to this sentiment, but do not Americans celebrate July 4 in all of the old monarchial countries—even in England, where sensitiveness against us would exist if any where. Would any American like to forego the protection which his flag gives him to freedom of conscience and of action, so long as he does not interfere with the rights of others? Hence we are in favor of peaceable processions, by any class of men; or we would stop all. We are, however, in favor of giving to all men equal protection under the law, just as we would give equal privileges. And we would make the punishment of men who interfere with the rights of others radical and as summary as the circumstances of the case seem to require.

Col. Elmer Ellsworth's Grave.

Ellsworth's Chicago Zouaves are yet remembered for their dash through the country prior to the war. Ellsworth is remembered for having lost his life in pulling down a rebel flag at Alexandria, Va., in 1861. And it will be remembered how he was mourned and how money for a monument to his memory was raised. To show how the waves of time wash footsteps as well as names out of the sand, a correspondent states that Ellsworth's father and mother live in a homely little cottage near Mechanicsville, N. Y.; that the son's grave is on the hill behind the house, monumentless and neglected; that the foundation for a monument was laid by the old father himself, who made the excavation therefor; that the father paid $80 for the burial place; that $800 raised from various sources for the monument is in the hands of those with whom it was deposited, and the ill and aged father cannot get a cent of it with which to honor the memory of his boy who gave his life for his country. While we do not attach much importance to monuments, nor value such celebration of the deeds of men as many do, yet the story of the result of young Ellsworth's ambition for military fame and glory, as told by the foregoing facts, is rather touching. Do the old father and mother think Republics ungrateful?

Banishment of the Jesuits from Germany.

Prince Bismarck having declared war against Jesuitical influences in Germany, has steadily prosecuted his labors, persisted in his endeavors, both with the Emperor and the legislative authorities, driving a nail here, striking a blow there, and weakening the power of these enemies of German Unity—and hence *his* enemies—until now it is officially proclaimed from Berlin that all establishments under the control of the Jesuits must be completely broken up in six months. The ascribed reason for this is the discovery on the part of Bismarck that Rome is doing her best to defeat the unification of Germany under Prussian patronage and control, and that the Jesuits of Germany are the active agents of Rome in this work. Hence Bismarck treats the Jesuits as he would any other enemy of the Imperial Government and plucks up the Upas tree by the roots. Hence there is a new religious war in the land of Luther, which the thoughtful will watch with great interest.

The Result of Arbitration.

Right Hon. Russel Gurney, M. P., who has been in this country engaged in negotiations connected with the direct claims made under the Alabama treaty, on his return, made a speech to his Southampton constituents, in which he expresses the opinion that the Republic is best for Americans, and the Constitutional Monarchy for England. But he said something more important than so profound an opinion. He did not care two pence what the result of the Geneva Arbitration might be, nor whether England had to pay two or three millions, more or less—that was a small matter if both nations felt that justice had been done, and that the questions in dispute had been honorably settled. We regard this the best British expression of sentiment yet uttered in relation to this matter; and it will be wise if Americans foster the same spirit. Let justice be done!

Hazing at West Point.

Nothing can be more wholesome than the action of the Secretary of War, who has issued an order suspending Cadet Scott, a member of the Third Class at West Point, for one year for the offense of "hazing" one of the "plebes." We wish every college in the land would treat young men who cultivate traditional boorishness, in the same way—at least would expel or suspend such person from the privilege of the school. We rejoice that the Military School of the Nation is to cultivate the graces and virtues of manhood, as well as instruction in the art and science of war.

DOMESTIC NEWS.

New York City and Vicinity.

Gen. Dix has declined the Presidency of the Erie Railroad. ..Mrs. Mansfield has testified in the Stokes-Fisk case....Twenty-two car loads of delegates left New York city on the 8th for Baltimore....Johann Strauss has given three concerts at the Academy of Music before immense houses....The workingmen who struck have returned to work under the old system. The Singer sewing machine men, 1,900 in all, have returned ...The funeral of Ex-Judge McCunn took place on the 8th. He was buried in the Catholic faith ...The 7th Regiment has returned after a week's delightful encampment at Saratoga. ...The Standard suspended on the 10th. It was a Grant paper. .Much conflicting medical testimony was given in the Stokes case. Some M. D.'s thought Fisk was killed by opium .P. H. Watson has been elected President of the Erie Railway, and A. S. Diven Vice-President ... Three burglars, who had fled from Holland, surrendered property to the amount of $200,000 to the sheriff on the 9th... B. Gratz Brown has been in town. ..The French band has given a grand concert at the Rink ...The 23d Regt. of Brooklyn is to have an armory to cost $160,000. It will be one of the handsomest in the country ....American Girl beat Goldsmith Maid at the Fleetwood Park on the 9th....There was great enthusiasm in New York over the news from Baltimore. Salutes were fired in various parts of the city, rockets were discharged, and nearly all the newspaper offices run up flags for Greeley ....Work on the Riverside Park is to be continued....Hot weather has continued most of the week, and many cases of sun stroke have been reported....Stokes' lawyers pleaded for manslaughter in the third degree. .The New York Times people have been giving excursions to poor children....The Prussian Band and Madame Peschka-Leutner gave a concert in Brooklyn on the 11th, to an audience of 6,000 or 7,000. .A large number of people were prostrated by the heat on the 11th....On the 12th Mr. Tremain closed his argument for Stokes....The Orange parade on the 12th was entirely peaceful, and attracted no attention. .Mr. Greeley has accepted the Baltimore nomination... Gov. B. Gratz Brown was taken suddenly ill on the 12th, at the Glenham Hotel, and came near dying.... James Whiteman, a porter, has been arrested for stealing $8,000 worth of goods....The strike of the Adams press men has damaged the book trade. The Harpers are said to have established a printing house in London... In the Stokes trial, Judge Ingraham charged the jury on the 13th; he was very severe, and said the verdict must be murder, or manslaughter in the third degree; on the 15th, the jury had been out 68 hours, with no verdict....A delegation of Apaches has visited the city....Strauss sailed on the 13th ... A case of cholera is reported....Horace Greeley has just celebrated his 36th wedding day....The Jury in the trial of Edward S. Stokes for the murder of James Fisk, jr., failed to agree, and were discharged.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

New York, Saturday, July 15, 1872.

The trade of the week past was dull in the Dry Goods line, and in most articles of General Merchandise. There is a fair business doing in Tea and Coffee since the duties were taken off. The stocks which had accumulated in anticipation of the change in the Tariff are unusually heavy.

The Exports of Domestic Produce for the week from the port of New York amounted to $3,965,000, and the exports of Gold and Silver $4,882,000. The collection of American Dividends in July for Foreign account makes a large demand for remittances, and as most of these Dividends are paid in Gold, the shipments follow in the same Coin. Gold has advanced to 114¾ per cent. on the export demand.

Money keeps very easy among the Brokers, and there is a fair amount of the July Dividends going into the new Railroad Bonds. A larger sum would go into U. S. Stocks for transmission to Europe, but for the scarcity of the right classes. The Treasury was unable to buy over half a million U. S. 5-20s for the Sinking Fund last week within the price of Gold. The State Stocks (Southern) are generally dull, since July 1. The South Carolinas hold out slight prospects for future dividends, and the price has fallen back to 28¾ per cent.

The following are the comparative movements of the City Banks for the past fortnight:

	July 6.	July 13.
Capital	$87,151,000	$87,151,000
Loans	286,001,800	285,597,800
Gold and Greenbacks	51,201,100	51,664,100
Deposits	241,774,900	245,508,000
Circulation	27,528,100	27,466,400

PRICE OF STOCKS AND BONDS.

American Gold	114⅛	Rock Island	111⅛
U. S. 6-20's of 1867	115⅝	N. West	73¾
U. S. 6's of 1881	117⅛	Do. Preferred	91
U. S. 10-40s, 5 ₰ cts	112⅝	St. Paul	54
U. S. New Loan	113⅜	Do. Preferred	78
N. Y. Bounty Loan	106⅛	Lake Shore	93⅜
Tennessees	71¾	Ohio and Mississippi	46
Virginias, new	55	Toledo & Wabash	75⅛
Missouri Bonds	94	Erie	53⅜
U. S. Currency 6s	114¾	Union Pacific Stock	37⅝
Central Pacific	102	Adams Express	97
Union do	90⅝	American Express	82
Western Telegraph	75⅛	United States Exp's	88½
Pacific Mail	75¾	Bills on London	109⅜
N. Y. Central Stock	98¾		

The principal changes in the Stock Market since our last report are a decline of 5⅛ per cent. in Erie and an advance of 2 per cent. on Pacific Mail. The U. S. Express Company have declared a Dividend of $2 per share.

PRODUCE AND PROVISIONS.

New York, Monday, July 15, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	1,625,000	Meal, bbls	3,468
Oats, "	410,000	Flour, "	62,000
Wheat, "	196,000	Eggs, "	9,311
Rye, "	—	Cotton, bales	8,100
Barley, "	—	Hops, "	363
Malt, "	2,800	Wool "	3,470
Seed, "	—	Butter, pkgs	12,200
Beans, "	310	Cheese, "	66,300
Meal, bags	2,425	Lard, "	6,300
Peanuts "	1,480	Dried fruits, pkgs	620
Pork, bbls	1,278	Cut Meats "	2,420

Butter.—Hot weather and dull trade continue to give dealers expensive chemical instruction as to how long butter will stand up in quality by the cellar full; and the bill seems likely to become pretty steep before school is out. The attempt to report a brief market with the current resources would only make an indefinite paragraph. The demand is divided between two classes of buyers, those who want a little for consumptive use, and those who want a speculative pile. If the latter purchasers would only take the stock they aim for out of market it would pay holders to let them fill up at the low figures they prefer. But the appearance of shrewd operators in market anxious to operate in soft, though sound, sweet lots, rather puts the question to the seller, "Why should we not carry them ourselves if we must make severe sacrifices?" Consequently only a few sound lines have as yet been received. The willingness of speculators to open trade in the old stock, speaks well for a good many marks of Western that had been condemned during the hot term. For the actual wants of our diminished trade, fresh express parcels only sell with any activity, and for that class only can a steady quotation be given. State butter, except pail, is nominal. The quotations are:—State pails, choice, 28@30c.; other, 22@26c.; State selections, 26@27c.; good to prime firkins, 21@26c.; do. half tubs, 24@25c.; do. Welsh, 23@25c.; other grades of State, 18@22c.; Western Reserve choice, 18@19c.; Western fair to good, 14@16c.; common, 10@14c.; grease butter, 7½@9c.

Beeswax.—There is more Western stock here than needed and low prices are ruling, most sales being made at 29@37c. Southern sells relatively higher, but is somewhat neglected at the moment by shippers; quoted at 33@39c.

Beans and Peas.—There has been very little addition to the supplies of beans, but the market is weak. The demand is small and there is some anxiety to sell marrowfats, which are in full stock for the season. The quotations are, for prime medium, $3.25@3.30; fair do., $2.80; prime marrowfats, $3.55@3.65; fair do., $3.25; prime kidney, $3.40@3.50; fair do. $3; red kidney, $2@3. Peas are neglected; for green, $1.55@1.65; Southern B. E., per two-bushel bag, $2.25@2.50.

Cheese.—Prices have been steadily declining, holders offering their supplies freely, determined to keep the market clear of stock this warm weather. The foreign market has not been in a position to warrant free shipments ordinarily, but shippers have been attracted by the unusually low prices, and have bought all that has been offered. There is scarcely any stock carried over steamer day.

We quote State factory fine at 10@10½c.; good do. 8@9c.; common do. 6c.; skimmed as low as 3c.; State dairy, 9@10c. for prime, fair do., 6c.; Ohio factory 7@9c.

Cotton.—Prices have declined fully one cent with very little business from spinners, and no shipping inquiry. For future delivery latest sales are 23⅝ for Aug.; 22⅜ for Sept.; 20⅝ for Oct. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	19¼	19¼	19⅛	19¼
Good Ordinary	22	22	22⅛	22⅛
Low Middling	23½	23⅜	23⅜	24
Middling	24½	24⅜	24⅝	25
Good Middling	25⅝	25⅛	26	26

Dried Fruits.—The market shows very little trade, with prices unsettled and weak.

We quote cherries at 20c.; raspberries, 30@32c.; blackberries, 11c.; apples, new State, quarters, 9@10c.; extra sliced, 11½@12c.; Southern new, quarters, 8c.; do. fine sliced, 10@11c.; new prime Western, 8@9c.; common Western, 6@8c.; unpeeled peaches, 5@5½c. for quarters; 6@6½c. for halves; peeled peaches, 15@19c. for North Carolina, 13@14c. for Virginia, and 15@18c. for Georgia; plums, State, 27@28c.

Eggs.—Fresh New Jersey and Long Island, and a few carefully candled State and Western, are all the eggs that can be sold. Lots, as they run, are in too uncertain a condition to sell, and heavy losses will follow the shipment of the past fortnight. We quote near prime 20@21c.; State, 18@19c.; extra Western, 16@17c.; freight Western, 14½@15½c.; Canadian, 16½@17c. All loss off.

Fresh Fruits.—There is quite an array of fresh fruit, and the demand is good for all sound stuff. Southern apples are in better order. Still a good many arrive that could be very unmanely thrown away before being put on sale. We quote Southern apples at $3@4 per bbl., $1.25@2 per crate. A few New Jersey boughs brought $1.50@1.50 per bbl. Pears, fancy, per crate, $5@7; other, $1.50@3. Black Caps, per quart, 8@10c.; Antwerps, for 3d, 8@10c; Blackberries, seedling, per quart, 18@20c.; common do., 6@8c.; Whortleberries, per bush., $3.50@4; Currants, 4@7c. for common; 9@11c. for cherry; Watermelons, $30@70 per 100. Rochester cherries, 10@11c. for prime, and 6@9c. for fair.

Flour.—The market is without further important change. Prices of the best grades are, perhaps, a little easier, but prices are considered low; and, notwithstanding, exporters are buying only small lots: still holders are not anxious sellers.

Superfine State	$5 10 @	5 60
Common extra do	6 15 @	6 30
Good to choice do	6 35 @	6 40
Fancy do	6 45 @	7 00
Superfine Michigan, Indiana, Ohio, Iowa	5 10 @	5 65
Extra do	6 00 @	6 30
Choice extra do	6 35 @	7 15
Shipping brands round hoop Ohio	6 20 @	6 50
Trade brands do	6 55 @	8 35
Good to choice white wheat extras	7 20 @	8 75
Fair to very choice extra Minnesota	6 50 @	8 00
Common to fair extra St. Louis	7 00 @	9 00
Good to choice do	9 05 @	11 00
Extra Southern	6 80 @	8 75
Good to choice do	8 80 @	12 00
Rye, common to fine	4 00 @	5 00
Corn meal, Western	3 30 @	3 40

Grain.—A break in the canal will cut off supplies about a week, and in the meantime with a few hurried shipping orders in the market, prices have advanced, especially for corn. We quote wheat at $1.48 @1.51 for No. 2 in store; $1.52@1.53 for No. 1 in store; $1.55@1.58 for winter red Western; $1.63@1.65 for amber Western; $1.65@1.70 for white Western. Rye 77½@78c. for Western. Oats 43@44½ for Western; 44@46 for Ohio. Corn at 58@61 for steamer lots of Western mixed; 62@63 for sailing vessels, do.

Hay and Straw.—The market is a little steadier. Farmers are not shipping quite as freely, as they are busy with some early harvest work.

Shipping hay, $1.15@1.20, retail $1.40@1.60, do. yard, $1.25@1.30, salt 80@85c.@$1, clover 80@90c. Long rye straw $1.10@1.15 short 85@90c., out, 70@75c., wheat 60@65c.

Hops.—Stocks are so light that late prices are easily sustained. The accounts from the growing crops are still favorable for a fair yield.

New Yorks, growth 1871, 22@25; Eastern do., 23@60c.; Western do., 22@30c.; Yearlings do., 70, 10@30c.; Olds do., 7@, 10@15c.; Bavarians, 65@75c.; English, 60@65c.

Provisions.—Mess pork is nominally higher at the close, and a very moderate trade has attended the entire week. July, Aug. and Sept. quoted for speculation at $13.75; prime mess in a small way, cash, $12.75; extra prime $10.25@10.75; beef selling only in small lots for ship use at our old range; beef hams have a renewed demand, and the old stock of Winter cured is working out rapidly at $23@24. Prolonged hot weather has sent cured meats largely into local use, and smoked hams and shoulders are selling very briskly from store. Smoked hams range at 15@17c., the latter for small pic-nic sizes. Smoked shoulders, 7½@8c.; pickled hams scarce and well sold up; Western have sold to arrive at 12½c. and city 13@14c. Lard is quiet but pretty firmly held at 9½@9 7-16c.; city lard dull and down to 8½c.; new Western 8½c. Some operations in Western, seller 12 months quoted 9c. Tallow quiet at 9⅜@9 5-16. Stearine, choice in tcs. 10.

Poultry and Game.—The supply of live is small and prices are firm. A few woodcock are in market and find ready sale at 90c.@$1 ₱ pair. Live Poultry—Spring chickens 75c.@1.12 per pair. Fowls—Jersey, 19@20c.; do. Western, 18@19c. Turkeys—Jersey, 15@16c.; Western, do., 15@16c. Ducks—Jersey, pair, $1.25@1.50.; do. Western, 75c. Geese—Western, $1.50@1.75. English Snipe, per doz., $1.75@2. Wild pigeons, stuffed, per doz., $2@2.50. Woodcock, ₱ pair, 90c.@$1.

Seed.—Grass sell only in a small way. Clover 9½@9½c. for Ohio, 10½@10¾c. for State, 9½@10c. for Indiana and Michigan. Timothy at $3.25@3.50.

Tobacco.—The late advance in prices of seedleaf is steadily sustained. The offerings are not so liberal and there is a confident feeling. The business is still chiefly from exporters. Kentucky leaf is worked off more freely to shippers, and the high grades command relatively better figures. Virginia common to good lugs, 7½@8¾c.; low to medium leaf, 9@10½c.; good to fine, 11@15c.; dark wrappers, 12@15c.; bright, 20@40c.; smokers, 12@17c.

New crop Kentucky.	Light Grades.	Heavy Grades.
Lugs	8¾@ 9 c.	9 @ 9½c.
Common to medium leaf	9¾@10	9¾@10¾
Good do	10¾@11	11 @12½
Fine do	11¾@12¼	13 @14
Selections	13 @11	15 @16
New crop Seedleaf.		
Connecticut and Mass. fillers	14	@16
seconds	26	@35
New York State running lots	10	@13¼
Pennsylvania do medium	12	@14
fair	15	@17
fine	18	@22
Ohio, running lots	10¾@15	
Wisconsin and Western	8¾@10	

Vegetables.—New potatoes are in demand; Southern are rather neglected, as New Jersey and Long Island give the market a good daily supply of better quality. Garden truck is in more varied supply, and includes green corn from the South and Southern New York. Fresh tomatoes are picked too green. Many of the hotels are still using canned, except for slicing.

New potatoes, L. I., bbl., $2.25@2.50; do. Jersey, $2.25@2.50; Southern, $1.50@2. Tomatoes, 75c.@$1; Squash, ₱ bbl., $1.25@2.20, white and yellow. Cucumbers, ₱ crate, $1.25; do. Jersey, ₱ bbl., $8. Green peas, bag, 50@75c. String beans, bag, 75c.@1. Onions, Bermuda, 50c. Turnips, New Jersey, ₱ 100 bchs., $3@5. Cabbages, bbl., $3@7. Green corn, ₱ 100, $1.50. Marrow squash, ₱ 100, $1.50@2.

Whisky.—With moderate offerings prices are better. Western 93c.

Wool.—There is very little business as yet. Further concessions have been made in prices of fleeces, but they are not yet at a point that will warrant a positive manufacturing demand. Fine Ohio offering at 60@65c. Latest sales are at $1.05 for scoured; unwashed at 50c.; Georgia, 53c.; Texas, 30@50c.; full clip California, 70c.; Mestiza pulled, 80c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., July 13, 1872.

THE market at Little Falls for the week ending July 13 was exceedingly dull, with a further decline in prices. The delivery of farm dairies amounted to nearly 900 boxes, and the range in prices was from 9c. to 10c.—the latter figure being top price for fancy lots. The factorymen were present in force, and the offerings were full 10,000 boxes, only 7,000 of which were sold. The drop in prices on factories is about 1c. from the prices of last week. We give quotations of leading transactions as follows:

Little Falls Central	10⅝	Herkimer Co. Central	10¾
Newport Hill	10	Herkimer	10
Curtis	10	Vanhornsville	10⅝
Norway Ass'n	10¼	Christmar	10
H. J. Baker	10	Keys	10
Bates	10¼	Manheim	10⅜
Bethel	10⅜	Manheim Center	10⅜
Brockett & Feter	10⅜	Manheim Turnpike	10½
Brocketts' Bridge	10¾	Minerville	10⅜
Buell	10¼	Newville Ass'n	10⅜
Canajoharie	10¾	Dairy Valley	10
Christmar	10¼	Hazzen clover	9⅜
Countryman	10⅜	Newport	10⅜
Cold Creek	10⅜	Paine's Hollow	10⅜
Crane's Corners	10⅜	Root	10½
Dairy Hill	10⅜	Salisbury	10⅜
Dunkie	10¼	St. Johnsville	10⅜
Empire	10	Top Notch	10⅜
Eatonville	10¼	Warren Center	10
North Fairfield	10⅜	Warren	10
Old Fairfield	10⅜	Ladue	10½
Fairfield Association	10⅝	Palatine Union	10
Frys	10	Mariaville	10¼
Florida	10⅝	Minorville	10¼
Fulton	10¼		

We have advices from abroad for the third week in June. Our London correspondent says that the new American cheese coming to hand is very good and sells as landed. The best grades bring 67@68s.; fine, 60@66s.; second quality, 51@58s. The other descriptions of cheese sell as follows: English Cheddar, 68@74s.; Wiltshire, double, 66@70s.; Scotch, 64@68s.; Cheshire, medium, 56@62s.; fine, 62@70s. Dutch Cheese, Edams, 50@60s.; Gondas, 46@56s.; Derby shape, 46@56s.

In butter, Cannolls sells at 110@112s.; Corks, 120s.; Normandy extra, 111.; Canadian, 50@60s.

The weather in Herkimer, N. Y., is very warm, and farmers are just commencing the hay harvest.

ROCHESTER, July 11.—Flower is quiet, $8.25 for red and amber winter, and $8.75@9 for white. Wheat dull, at $1.60@1.70 for best, $1.45@1.50 for red winter. Corn, 65c. ₱ bushel. Oats, 40@46c. Barley, no sales; contracts have been made for new crop at 80c. for two-rowed and $1 for four-rowed. Wool is quiet, with small sales at 50@55c. for medium, and 58@60c. for coarse. Butter, 20@21c., with fair demand. Cheese, 14@15c. Eggs, 18@19c. Potatoes, new, $1.75@2 per bushel. Green peas, 60@80 ₱ bushel. Black raspberries, 12@13c. ₱ quart; red do., 15@16c. Hops are scarce, at 70@80c. ₱ lb. Hay is scarce for old, at $20@22 ₱ ton.

LIVE STOCK MARKETS.

NEW YORK, July 13, 1872.

THE past has been a hard week for most of the live stock men. The numbers have not been so great, but the week following the Fourth is usually one of the worst of the season. Many people are away, and the very hot weather leads to a lighter diet of fruits and vegetables, now abundant, good and cheap. Another trouble was the difficulty of obtaining ice, owing to the breaking down of the delivery boat. Butchers refused to buy live stock, knowing they could not keep the meat in such a heated term without ice. More money was lost than made in the week just ended. The prospect is rather brighter for the future.

The following are the receipts of live stock shown in comparison with other years:

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	7,858	64	2,517	16,108	30,323
" last week	7,847	159	2,935	24,301	29,027
Corresponding week last year	8,196	18	2,159	29,751	27,720
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—Arrivals are lighter, but a good many cattle are between here and Chicago. Texans come forward freely—1,370 the past week—and they begin to show the effects of good pasturage. Accounts from Kansas give 201,455 as the number of Texan cattle entering that State since the grass started in the Spring. After rather a dull trade for some days, the yards have finally been cleared of all the stale lots, and there is a better feeling. In fact, good cattle have advanced about ½c. ₱ lb. Still, very fair steers sell at 11½@12c.; good to prime, 12¾@12¾c., with extras at 13c. The latest drove of Cherokees, 1,000 lbs. gross weight, sold at 9½c., 56 lbs. per cwt. The hardest lot of native cattle were of the same weight, but of poorer quality, and sold at 9c. on the scales. A good drove of 8 cwt. Kentucky grades sold at 12¾@13. The hot weather and stench arising from imperfectly cleansed slaughter houses is causing some of them to be closed. The abattoir system is the proper one, where more care will naturally be given than single individuals would be likely to bestow. In the one at Communipaw they are introducing a system of "blowers," which are to draw in the foul air, and pass it up a tall chimney, where it is disenfected in its passage. This is working to a charm.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb	12¾ @ 13¼	12¾ @ 13
Good to prime	11¾ @ 12¾	11¾ @ 12
Ordinary to medium	10½ @ 11½	10½ @ 11¾
Lowest grade	8½ @ 10	8 @ 10
Average sales	11¾ @ —	11¾ @ 11¾

Milch Cows.—The improvement noticed last week continues, only there are not cows enough to supply the demand. Dealers have gone to Albany after a supply. We quote them at $40@55 each for poor to below medium, $60@70 for fair to good, and $75 for prime milkers.

Sheep and Lambs.—The supply is much lighter, and both kinds have improved in price. Lambs, especially, have taken quite an advance, fat Jerseys selling at 13c. One lot extra 72 lb. lambs went at 13½c. A whole car thin Kentucky lambs sold at 12½c. Thin Western run down to 8@10c., a car 58 lb. Kentucky selling at 10c., with 47 lb. State at same price. There is a sharp competition for lambs, but these prices are likely to bring them forward and cause a decline again. Sheep are scarcely changed, ranging from 5 to 5¾c., an extra lot occasionally selling at 6¾@7c. A car coarse 85 lb. Ohio sheep sold at 5½c.; a car better sheep, 79 lbs., at 5¾c.; a car good, 93 lbs., 6¼c., and a car choice, 99 lbs., at 7c.

Hogs.—After a dull market and lower price, on account of the difficulty of getting ice, the market is now on the improve, dressed selling at 6¾@6¾c. Heavy hogs went as low as 5¼c. on Wednesday. No trade in live hogs.

Veal Calves.—The only change in calves is a quicker demand for fat milk veals, several lots selling at 9¼c., and single choice calves at 10c. A whole car load prime Pennsylvania, 110 lbs., sold at 9¾c. Fair State veals are worth 8½@9c. Grass and fed calves do not improve. A lot weighing 190 lbs. sold at 3c. Something pretty good might reach 5c.

LATEST.—Monday, July 15, 4 P. M.—Beeves.—Arrivals to-day, 167 cars at Communipaw, 127 at 100th St., and 40 at Weehawken, making 5,271 for sale. Quality better, trade slow, and prices ¼@½c. lower. Few cattle exceeded 12c. Texans went from 9@11c., some of them being extra fat.

Sheep and Lambs.—Arrivals for to-day's market, 8 car loads at Communipaw, 9 at 48th St., and 5 at 40th St., making 5,005 on sale. Sheep are sustained in price, but lambs are ½@1c. lower, prime lots selling at 11½@12c., and poor at 8@9c.

Hogs.—Receipts to-day, Sunday included, 36 car loads at Communipaw and 24 at 40th St., making 6,574 Market firm at 5¾@6c. for dressed.

REED & BARTON,
MANUFACTURERS OF FINE
ELECTRO-PLATED TABLE-WARE.

This illustration represents a new design of Swinging Water-Set manufactured by Reed & Barton.

The swinging stand enables the person using to pour water from the Pitcher without being compelled to lift it.

The Pitcher is made with one of their patent seamless linings; the Goblets and Bowl are lined with gold, and are finished in the "frosted" style of finish which is so popular, and so appropriate for a Water-Set.

Reed & Barton manufacture all their Ware of a very fine white and pure alloy, and plate them heavily with pure silver.

The product of their works embraces every variety of Table-Ware, such as

TEA, DINNER AND WATER SETS, CAKE BASKETS, FRUIT STANDS, ICE PITCHERS, &c.

They pay especial attention to the manufacture of Spoons and Forks, which they manufacture of a very fine quality of nickel silver, and plate with pure silver.

They also manufacture the alloys of which their goods are made, thus having the whole process, from first to last, under their own supervision.

They are the oldest manufacturers of this class of goods in the United States, their Factories having been established in Taunton, Mass., in 1824.

SALESROOMS, AT THE FACTORIES, and 2 MAIDEN LANE, NEW YORK.

CINCINNATI
NATIONAL INDUSTRIAL EXPOSITION.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

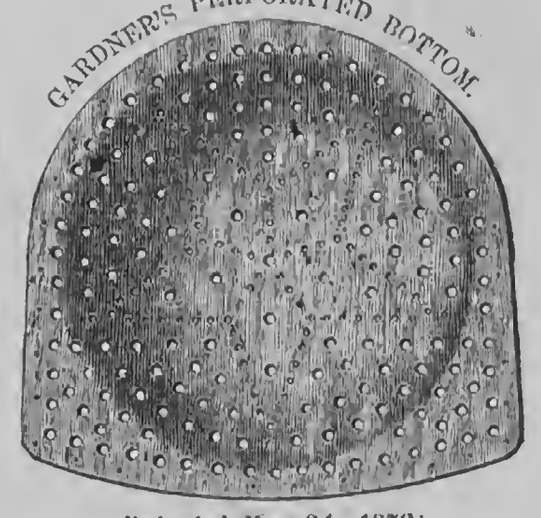
GARDNER'S PERFORATED BOTTOM.



Patented May 21, 1872.

GREAT IMPROVEMENT IN
CHAIR SEATS.

Various have been the efforts of men to produce a seat which should be comfortable, light, comely, durable, and also admit of universal application. The degrees of success have been as varied as the efforts; but within the last year the long-sought was revealed to an observing, practical genius, and is hereby offered to the public, in full confidence of its instant appreciation.

The seat is composed of three layers of veneer (boards as thin as a knife blade), the grain of each lying in an opposite direction to its neighbor, all glued firmly together in a slightly dishing form, adapted to the person. The entire thickness slightly exceeds one-sixth of an inch. We thus have moderate cost, little weight, neatness, great beauty if desired, and a lasting quality which, in usual service, may properly be called eternal. *While it is especially adapted to resisting chairs by any one who can nail down a carpet*, it is coming rapidly into use for the better class of chairs for sumptuous apartments. The slightest observation will convince the most skeptical of its unequaled merits.

BANKING HOUSE OF JAY COOKE & CO.,

20 WALL STREET, NEW YORK.

We continue to sell at par, adding accrued interest, the First Mortgage Gold Bonds of the Northern Pacific Railroad Company. On the completion of this season's contracts, there will be FIVE HUNDRED AND SEVENTEEN miles of the main line of the Road in operation, uniting Lake Superior with the Missouri River, and securing the large traffic of the Northwest. This amount of Road also entitles the Company to Ten Million Four Hundred Thousand Acres of Land, located in Central Minnesota, Eastern Dakota, and in the Columbia Valley on the Pacific Coast. The bonds are secured by a first mortgage on the Road, its Traffic and Franchise, and on the entire Land Grant received from the Government. The rate of interest is Seven and Three-Tenths Gold, equivalent to about Eight and a Quarter per cent. in currency. Believing the security to be ample and the rate of interest satisfactory, we recommend these bonds as a desirable investment. Holders of U. S. 5-20s and high-priced corporate securities may materially increase both their principal and their interest income by exchanging for Northern Pacifics.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:
It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.
It is free from mud and dust, and is noiseless.
It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.
Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.
Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA-WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:
California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY,
ST. LOUIS, MO., 28th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe, Roofing for sale.

SHEEP SHEARING IN NEW SOUTH WALES—(See Next Page).

MODE OF SHEEP WASHING IN NEW SOUTH WALES—(See Next Page).

Sheep Husbandry.

NEW SOUTH WALES.

Sheep Washing and Shearing.

AMERICAN shepherds are interested in knowing what is doing, and how it is done, in countries that have heretofore, and do now to some extent, compete with them in the wool markets of the world. The accompanying engravings show the arrangements for, and process of, sheep washing and shearing at the establishment of Messrs. CLIVE, HAMILTON & TRAILL, Colaroy, New South Wales. The following is the explanation of the sheep-washing picture:—*a* is a 20-horse power engine, working a 16-inch Appold pump, *b*, which raises water from the river alongside, discharging about 3,000 gallons per minute into spouting tank *c*, (half of which is cut off in the drawing to show the work behind). The tank is of iron, 4 ft. deep, furnished with spout 4 ft. long, 6 in. deep, terminating in an opening 3 ft. long and 3-16 or ¼ in. wide, the width being regulated by screws. Through this aperture the water, under the pressure of 8 ft. 6 in., rushes with great force; *e e e* is an iron tub in which the "spouter" stands while holding the sheep under the spout; *f* is an inclined plane, up which the sheep walk after emerging from the water, passing on to large battened yards, 150 ft. by 100 ft., where they remain till partially dry. These yards are not shown in the drawing; *g* is another 10-horse power engine, used for cutting firewood at the circular saw bench *h*; and to furnish steam to heat water in the soaking tank *i*, and the ten square tanks *k*, ranged along either side of the soaking tank.

To each of these tanks is fitted a branch steam pipe *m*, communicating with the main steam pipe *n n*, leading from the boilers of both engines, *a* and *g*, so that both are available for heating water, of which a very large quantity, varying from 7,000 to 10,000 gallons, is required for a single day's work; *o o o* are water pipes leading from the spouting tank *c*, to supply the square tanks *k*, the soap tubs *p* and *q*, and spare water tub *r*. The soap tubs are also fitted with steam pipes, for the purpose of boiling their contents; *s* is donkey-engine placed over a well, from whence, driven by a continuation of steam pipes from both boilers, it draws water for showering, through a flexible hose, the dirty sheep in receiving yard *t*, for transmission through the pipe *n*, of water to drinking troughs for the washed sheep in the battened yards, filling up the Appold pump by branch pipes, which is often necessary, and for various other purposes.

If the reader has had patience to work out the foregoing explanation, he will be prepared to follow the process of washing. The receiving yards having been filled with sheep, the water in, and the tanks brought up to the required temperature by means of the steam pipes, and the soaking tank charged with the prescribed proportion of dissolved soap, etc., the pump is set to work to fill the spouting tank and reservoirs underneath into which the spouts discharge. The portcullis gate *w* is then lifted, and from eight to ten sheep are sent down the inclined chute *x*, into the soaking tank, when they are manipulated by men on either side, and allowed to swim for four or five minutes. Hence they pass on to the draining stage *y*, again down a short incline to the stage *z*, from thence, lastly, they are handed to the spouters. By these they are rolled and turned under the knife-like jet of water for two minutes, when they swim out to the inclined landing stage as white as snow.

When the water in the soaking tank becomes overcharged with dirt, by a simple arrangement it can be emptied and refilled with clean hot water from the square tank, in which a constant supply is kept up, in eight or ten minutes. From 1,200 to 2,000 sheep are washed daily.

SHEEP FOR COMBING WOOL.

UNDER the above head I noticed in the RURAL NEW-YORKER some time since, the question was asked by J. W. H., Pikeville, Tenn., what is the best cross, or kind for growing a good kind of combing wool; and whether such sheep will thrive in large flocks. Seeing no answer to the interogatory of J. W. H., I shall venture, in a very brief way, to give my opinion in regard to the above questions.

In the first place, had I the old fashioned Dutch sheep, Cheviot, or any of the ordinary coarse wools and wished to raise lambs for market, I should cross them with a pure bred Leicester ram. I believe that cross not only gives you larger lambs than you can otherwise get, but they fatten at an early age; and should a person wish to raise a flock from this cross he would get a good quality of combing wool; for if your ram is pure bred, his get will most of them be similar to himself; but the next cross would quite likely take back on both sides, and the consequence would be that you would have an uneven and not very desirable flock. For the above reason I should prefer the pure bred Leicesters. I have kept a few of them for a few years and I know that they are easy keepers—very quiet in their habits, which enables them to take on fat rapidly, while a wild, shy breed would keep more lean; and I do not hesitate to say that for beauty and symmetry they are not surpassed by any breed. They shear a third more wool than the Cheviot, with the same keep; their wool is long, with a beautiful luster and a great deal finer and softer, and will command from fifteen to twenty cents more per pound.

I cannot speak of them as mutton sheep from experience, never having butchered any; but it is claimed that they will dress from thirty to fifty pounds the quarter at maturity, when well fattened.

In December, 1869, I went to Canada and purchased a few of the Leicester sheep; while there there was a fair at Galt, and a drover named OLIVER was purchasing his Christmas drove for New York. I saw four old ewes, older than the owner wished to breed from, that he had fed up to the week before Christmas. When put upon the scales their average weight was 395 pounds. A friend told me that five or six three-year old wethers had been weighed before I arrived, and their average weight was 325 pounds; so you see that although they are small-boned and short-legged, they are monsters when put upon the scales.

In reply to the inquiry whether they will thrive if kept in large flocks I do not believe it makes as much difference in the size of the flock as in the place where they are kept. For instance, put 50 or 75 sheep of any breed in a building or under a shed that will keep them from the storms of Winter, and give them plenty of air, and they will do better, in my opinion, than a small flock of ten or fifteen shut up close where they are deprived of pure air. Give any animal pure air and steady, wholesome food, and the numbers will not matter much, in my opinion. When in Canada I noticed flocks of from twenty to sixty sheep, and some perhaps larger, of the Leicester breed, and all looked well.

I should not, in my preference for the Leicester, omit mentioning the other two combing breeds—the Cotswolds and Lincolns. They are similar to each other; both are coarser boned than the Leicester, and larger—require better care and feed, shear a trifle more wool of a coarser grade and inferior quality, worth less by the pound, and all things considered, are not as profitable sheep for the farmer as my favorite Leicesters.

It is claimed by the Cotswolds men that their wool is a trifle longer than the Leicester, but I can see no need of that, for I pulled some wool out of one of my lambs at ten months old that measures twelve inches in length; if you hesitate to believe it, ask the Editor of the RURAL, who has the sample I mentioned.—A. A. M., *Garrattsville, Otsego Co., N. Y.*

Dairy Husbandry.

MILK FEVER.

THE recent loss of a valuable cow—one of the best of the herd—on account of "milk fever" prompts us to give warning to dairymen who have cows "coming in milk" during hot weather, that the trouble may be avoided. We hear of quite a number of cows lost in June from this disease, and all these losses, probably—including our own—have come from neglecting to take precautionary measures in the diet of the cows for some weeks previous to the time of parturition. "Milk fever," "dropping after calving," or more properly "Puerperal fever," is described by YOUATT as primarily an inflammation of the womb or of the peritoneum, but it afterwards assumes an intensity of character truly specific. Cows in high condition are most subject to an attack of puerperal fever. Their excess of condition, or state of plethora, disposes them to affections of an inflammatory character at all times, and more particularly when the constitution labors under the excitement accompanying parturition. Milk fever happens to cows that are very fat, and particularly to those that calve far on the season in hot weather.

Puerperal fever sometimes appears as early as two hours after parturition; if four or five days have passed, the animal may generally be considered as safe; yet a fortnight has elapsed between the calving and the fever. YOUATT very clearly describes the early symptoms:—"The animal is restless, shifting her feet, pawing, and she heaves laboriously at the flanks. The muzzle is dry and hot, the mouth open, and the tongue protruded; the countenance is wild, and the eyes staring. She wanders about, mournfully lowing; she becomes irritable; she butts at a stranger, and sometimes even at the herdsman. Delirium follows; she grates her teeth, foams at the mouth, throws her head violently about, and not unfrequently breaks her horns. The udder becomes enlarged and hot and tender at the very commencement of the disease. This is always to be regarded as a suspicious circumstance in a cow at that time; and if this swelling and inflammation be accompanied, as they almost uniformly are, by a partial or total suspension of the milk, that which is about to happen is plain enough."

In our own case the cow was attacked a few hours after calving, and although a veterinary surgeon was immediately called and was within an hour and a-half upon the spot, the animal in twelve hours thereafter died. The treatment was that usually recommended—bleeding and physic, with medicine to allay the fever. In addition, cold water was applied about the udder and upon the belly and sides of the animal in the region of the udder, while frequent attempts were made to draw the milk, only a little of which from time to time could be obtained.

The cow, previous to "coming in" was a very strong and healthy animal, and was in high condition. Now in this instance (the only case of milk fever occurring in our herd for the last twenty years) we neglected to separate the animal from the other cows and put her upon spare diet. Our usual treatment of cows calving in hot weather is to keep them—for three or four weeks previous to calving—in the yard by themselves, letting them have a roomy, well ventilated stable in the day time to shield from the hot sun, and feeding sparingly of green, succulent food. A bit of dry hay to nibble at in the day time and a moderate allowance of pasturage at night, the object being to keep down the accumulation of fat or high condition. Wherever this treatment has been carried out, not only in our own herd, but in that of others coming under our observation, not a single case of milk fever has occurred. On the other hand when the cows have been allowed to run at pasture, particularly during the "flush of feed," and when no care is taken to keep them out of the hot sun, frequent and very serious losses have obtained. And in nearly all the cases where animals have been attacked with milk fever in hot weather, death has resulted.

The truth is, this disease is so violent and rapid in its course that the animals are for the most part past recovery before the farmer is aware of the attack, or attempts to afford relief. The weather promises to be excessively warm for some weeks to come, and dairymen who have cows that are to calve during the grass season, should take early means to avoid the occurrence of milk fever; for in this disease the adage is most true that "an ounce of prevention is worth a pound of cure."

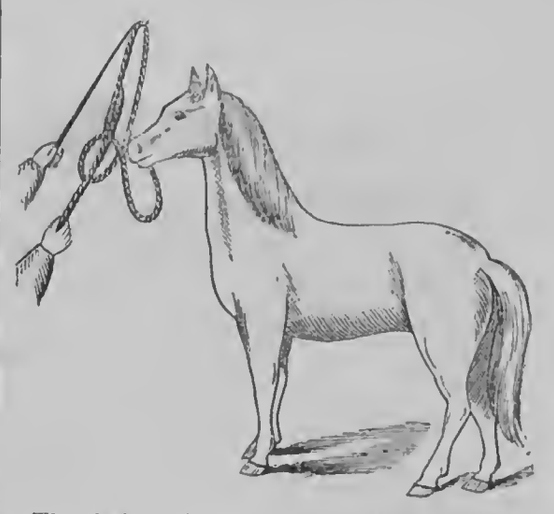
DAIRY NOTES.

Sunday Cheese Making.—"A Way out of a Grievous Burthen" is the title of an article in the RURAL of May 25th, it having been written by some one with an evident desire to do some practical good. Thinking a little experience might strengthen the faith of some, and, perhaps, aid in ending the abomination, I would say that I am running a factory of my own for the second season, and receiving the milk of between two and three hundred cows; that I cool the Saturday evening and Sunday morning's milk to between 50 and 60 degrees, in the common cheese vat, soon after arrival. Monday morning my alarm strikes, and one hand commences the manufacture of the milk early enough so that the patrons can have the whey to take home. We like the practice well, and think most manufacturers can do the same. — F. M. WHITING, *Copenhagen, N. Y.*

The Horseman.

TO HALTER A WILD COLT.

MASTER JAMES W. STONINGTON writes: "I have a colt that has never been haltered, so wild that when in the stable I cannot get my hands on it. Is there not some way by which skilled horsemen do such things? If so, I wish they would tell me how." For Master JAMES' benefit we give an illustration showing how we have seen it done many times. Take a light pole, ten or twelve feet long, or as long as you can handle to advantage, drive two nails into it about eight inches apart, the first about an inch from the end of the pole, with the heads bent a little outward from each other. Then take a common rope halter with a running noose, pull the part which slips through the noose back about two feet and hang the part that goes over the head upon the pole between the nails, keeping hold of the hitching part, which must be as long as the pole.



The halter is now so spread and hung upon the stick as to be easily put on to the head. If the colt is not excited or frightened as you extend the halter towards him, he will reach out his nose to smell and examine it; and while he is thus gratifying his curiosity you can bring the slack part under his jaw and raise the pole high enough to bring the halter over and back of the ears, when, by turning the stick half way round, the halter will drop from it upon the head. This will frighted the colt a little and cause him to run from you; but this will cause the slack part passing back of the jaw to be tightened, and the colt will thus be secured.

TO TREAT BALKY HORSES.

PERMIT me to give you my method of handling balky horses, which is not as severe as some remedies which I have noticed in the RURAL NEW-YORKER, but, I doubt not, more effectual. It is not natural for the horse to balk; his driver teaches it to him by ill usage and overtaxing his strength. Spirited and nervous horses are generally the ones whose education is thus spoiled. Now, harness him beside a sturdy, true one; see that his harness fits well, so as not to chafe and gall him; drive quietly and kindly. Load so that your good horse can start the load. When you see he is going to stop, do it yourself; let them stand a few moments, and start again. Keep quiet and calm. Practice him a short time, gradually increase your load, and under no circumstances whip nor kick nor speak loud nor swear at him; for swearing is abominable to a well-bred horse. Always be kind and calm. Speak gently, and caress and pet him when you are handling him, and in a short time he will reward you by drawing true and well, and appear to take a pleasure to do what you require of him. Let the same person, if possible, handle him until cured of the habit. Such horses invariably require kind treatment. H. W. LINN.

Vernon Co., Mo.

NOTES FOR HORSEMEN.

Mule with Cough.—J. E. H. asks a remedy for a mule that has a short, dry cough; has had it for a about two months. If the cause is worms (as it may be) JENNINGS recommends giving one of the following powders for three successive nights: of calomel, three drams; of tartar emetic, one dram; mix and divide into three powders. Twenty-four hours after give a ball made of Barbadoes aloes, six drams; pulverized ginger, two drams, and pulverized gentian root, one dram. If the cough arises from irritation of the larynx or upper part of the throat, a few applications of mustard may relieve it.

Field Crops.

THE MODEL POTATO.

THE above is the title of a book which is claimed to be "an exposition of the proper cultivation of the potato, the causes of its diseases or rotting, the remedy therefor," etc.; by JOHN MCLAURIN, M. D.; edited with annotations by R. T. TRALL, M. D., and published by SAMUEL R. WELLS, New York. The pretentiousness of this work calls for more than the brief notice usually given to books of the kind. The author and editor are men quite eminent in their profession, but in passing out of this, and endeavoring to instruct the agriculturist in regard to the physiological character, as well as the best method of cultivating the potato, they have exhibited a wonderful ignorance of the subject.

It is quite evident that it is becoming popular for certain professional gentleman, who have been spoiled by a little praise for what they have said or done in one field of science or literature to think they are especially qualified to instruct the masses upon almost any subject which may happen to attract their attention; hence we find theologians and politicians talking learnedly of farming, and M. D's. trying to apply their imperfect knowledge of animal physiology to the vegetable creation. That they make a most lamentable failure, and show their ignorance, is evident to every man with common sense.

The work before us opens with a twenty-one page advertisement of the editor's method of treating his patients, and a laudation of his own greatness as a physician, with scarcely an allusion to the contents of the following pages. All this talk about self may be true; but, placed in this position, it is nothing less than disgusting egotism.

The opening chapter of the work is divided into fourteen sections or propositions. The first five contain nothing worthy of particular attention, the author merely stating what he intends to show in the following pages as well as his opinion in regard to the potato rot. On pages 25 and 26 we find the following:—"Vegetables and animals possess organs and properties in common, and are subject to the same laws of organization and reproduction. To this statement the potato is no exception. True the potato is more simple in its structure and less complicated in its functions than an animal. Vegetables have all the vital qualities and instincts of animals. They lack sensibility and mentality."

Where the author finds such strong resemblance between the mode of reproduction in plants and animals we are not informed, for instances illustrative of the fact are not named. It is true that some authors have undertaken to show that because plants are, in a majority of instances, reproduced from seed, the resemblance to the animal kingdom is quite clear and conspicuous. But it requires a powerful imagination to see the similarity even in the case of seeds; but when we look a step further and note the bud divisions, growing as suckers from roots or subterranean stems, or the prostrate branch throwing out buds, leaves, roots and stems from almost every cell, we get far away from the higher orders of animals, and the "same laws of organization and reproduction" are not apparent. If the tails of our cows should happen to take root in the soil, the same as the canes of the Black Rasperry, Weeping Willow and hundreds of other plants, we might see a similarity in mode of reproduction; but they do not. But our author explains the difference between the animal and vegetable thus:—"A potato differs from an animal and from some vegetables and from some other roots in the fact that by death it transmits life, *the entire tuber being the source of life;* and unless this life be transmitted integrally, the progeny will be devitalized, ultimating, in connection with causes, in debility, disease and decay."

Herein we find one of the grand theories of our author in regard to the cause and cure of potato-rot. Cutting up the tubers for planting has been the cause; now if we plant our potatoes whole we will prevent it. This is not a new theory by a long ways, and those who have practiced planting whole potatoes for scores of years in succession did not lose by the disease any more than other people. But let us examine our would-be vegetable physiologist's statement a little more minutely. The italics in the above paragraph are his, and we conclude that he looks upon a potato tuber as one seed, and does not know that it is only an enlarged stem covered with buds, each of which is an individual plant, capable of reproducing its kind the same as the buds upon a tree; and there is no more reason why we should plant a whole potato for the purpose of propagation, than that we should plant a whole ear of corn, head of wheat, or an entire grape vine, instead of one seed or one bud. Seeds and buds are analogous productions, the germ of each requiring but a very minute quantity of organized matter to produce a root, or roots, of sufficient size to draw substance from the earth. If we plant a potato entire, only a small proportion of the buds germinate, the others, being smothered, decay, and are far more likely to cause disease than if only a smaller number were crowded into the same space. It is passing strange that men will, at this late day, decry the division of plants as a method of propagation; for it is not only natural, but the experience of all ages has shown that it is not a source or cause of deterioration. There are hundreds and thousands of plants that multiply in this manner without the aid of man; and we have every reason to believe that the same varieties of plants exist to-day as good as they did five or ten thousand years ago; and it is well known that varieties are only perpetuated by bud division. Plants are compound, and each cell, as well as bud, is capable under proper conditions of becoming a separate individual plant, with all the vitality and functions of its parent. Seeds are only buds thrown off by the parent plant, in order to facilitate a more rapid and widespread dissemination; and there is not a particle of evidence in the whole history of agriculture and horticulture to show that the propagation of plants by buds tends to produce disease or deterioration of species and varieties more than propagation by seeds.

But the author of our "Model Potato" appears not to be exactly satisfied in his own mind that planting pieces of the potato has done all the mischief; therefore, he begins his second chapter with this caption:—"Error I. Bad Seed.—Although the potato disease is perfectly curable, yet no kind of potatoes will attain large size, or continue productive, if unrenewed from the plum or seed ball for more than twenty years, and some sorts will not thrive without such renewal for more than half that length of time." Then our author talks about this renewal from seed being a physiological law which cannot be disregarded without fearful consequences. What will our farmers say to this twenty years' limitation of some of our old standard sorts, that have stood the test of a half century or more—like the Pink Eye, Neshannock, Irish Cups, and Merino, which we remember of picking up ourselves full twice twenty years ago. It is true that disease has attacked these varieties as well as others; and new sorts have come in and driven them out of cultivation in some localities; but deterioration in consequence of age is not one of the causes of scarcity.

"Error No. 2.—Mixing together for seed potatoes any and every kind of good, bad, old, young, indiscriminately, affects the crop as deleteriously as a similar process would the breeding of animals." Is it possible that our author believes that potatoes mix in the hill, and that an Early Rose would not remain as pure, and grow as vigorously, by the side of a Peach Blow as when planted alone? This appears to be his idea, or he would not have referred to the breeding of animals; but potatoes do not mix in this way any more than animals do by feeding or sleeping together. A diseased animal or potato may impart the virus to others; but this has nothing to do with the breeding of either. We have breeds of animals which it may be advisable to keep pure; but breeds of potatoes are not as yet established, and a man will find himself somewhat disappointed if he expects to raise Early Rose potatoes from seed.

"Vivisection."—This is put down as Error No. 3, and is the same as noticed on page 26, viz:—Cutting of the seed, which is claimed to be the cause of the potato disease. We will quote only one paragraph for the purpose of showing how absurdly a man can talk about a thing of which he knows nothing:—"The sundering of the bud from the body of the tuber, under the impression that such mutilated fragments will produce healthy and vigorous *fruit*, is most fallacious and absurd, and has no parallel among the many blunders of agriculturists. This unnatural severance by division dissipates the vital forces of the *seed* and debility of offspring is the inevitable consequence." A potato tuber is not a *fruit*, neither is it a *seed*, but, as we have already stated, an enlargement of a subterraneous stem upon the surface, of which there are more or less buds of the same character and functions as those to be found upon the stems and branches above ground. A leaf or a portion of the stem will produce roots and tubers exactly like those found beneath the surface of the soil. So far as there being "no parallel among the many blunders of agriculturists" to this cutting and gouging out the buds from the potato as a method of propagation, our learned doctor must be wofully ignorant of farming and gardening. Agriculturists actually divide the roots of rhubarb in order to perpetuate any particular variety; and the acres of horseradish cultivated about New York and other cities is propagated in the same manner. But it is unnecessary to specify instances of the kind, for they are familiar to every man who is not so blind that he won't see the truth and the facts. Budding, grafting, layering, and all the different methods of propagating plants from cuttings of leaf, stem, branches and roots, come under the same laws, and are parallel instances of bud propagation of plants.

The remaining portion of this book is no better than that from which we have made these few extracts; but we have said enough to show what two learned men of Gotham can write about a subject of which they are profoundly ignorant.

The Herdsman.

BONE MEAL AND ABORTIVE COWS.

I FIND in RURAL NEW-YORKER of June 15th, the following:—"One of my neighbors has brought in a quantity of 'pure bone dust' to sell and feed to cows to prevent (as he claims) abortion." I am the neighbor referred to by my neighbor P. G. NORTHRUP. I cannot tell how my neighbor N. ever got into his head an idea concerning this very interesting subject (as coming from me) so untruthful, and at the same time so uncalled for in barely asking your opinion. It is due to the public and to myself to say that neither in my public lectures nor my private talks have I offered such an opinion. As to me personally I could have allowed the matter to rest; but the public should not be misled by such barefaced *mistakes*.

I have been in the habit for several years of using large quantities of bone fertilizers on my farm, and on this account I suppose the bone tillings were sent to me to sell to dairymen who were willing to test the article. My cows are not troubled with abortion, but some of them, and all my young stock, eat it greedily. From August until cows come in, I think they should have it if they will eat it.

In reply to your article which appeared in the RURAL of March 23, I gave my views in part concerning the cause or causes of abortion, directed to the RURAL, which I intended should be published; it has not been. It is to be regretted that the Commissioners have not reached the solution of the difficulty. I believe that by thorough investigation in regard to management, feed, drink, etc., of the dairies that have aborted, correct conclusions in regard to its cause might be easily reached. I do not believe, with your chemists, that one cow will abort because one beside her in the stable has done so; but having taken the same kind of food, or drank at the same stagnant pool or mud hole, she aborts from the same cause, and sometimes very soon after, or at the same time. I am using my spare time mostly in looking into the subjects connected with my calling as a farmer, and, of course, am looking around me for information. SYLVESTER WHEAT.

Del. Co., N. Y.

COWS SLABBERING AND GIVING BLOODY MILK.

I HAVE a clover patch, and my father one adjoining mine; father's has been grazed all the Spring; mine only since the first of June. Both patches have plenty of ripe seed, and neither has been cut. Stock turned on my clover are not the least affected; those turned on father's seem to suffer extremely for about twelve hours, and slabber very much. Why is it? and what is the antidote? The milk from father's cows that have been on his clover all the Spring, after it has had time to settle, deposits a large quantity of blood often at the bottom of the pans. What causes it?—R. S. SMITH, *Lowndes Co., Miss.*

IT is not probable that the clover has anything to do with the illness of your father's cows. It is more probable that it is some plant or weed growing in his pasture—what, we cannot conjecture, of course. Be assured it is not the clover nor clover seed. The cause of the bloody milk is probably to be found in the fact that one or more of the cows has the garget. See the numerous garget remedies heretofore published in the RURAL NEW-YORKER. Set the milk of each cow separate until you find which one or ones give the bloody milk, and treat that one or them accordingly.

Industrial Topics.

HOW GYPSUM ACTS UPON SOILS.

THIS is a question that has been much discussed. The latest discussion of it we have noticed is by the Boston Journal of Chemistry which says:—"The exact way in which gypsum produces its fertilizing effects is not well understood, although it is understood that the chemical changes or transformations which occur when it is brought in contact with soils are not of a fixed character. Upon the conditions which exist, as regards the presence of vegetable matter and moisture, depend the changes that take place. We have proved by actual experiment that gypsum is capable of absorbing ammonia from the air and also from decomposing vegetable matter, being thereby changed into hydrosulphide of ammonium; and this again may be changed into carbonate of ammonia by absorption of carbonic acid from the air. These changes take place when gypsum is brought in contact with moisture and vegetable matter. Whatever other decompositions may take place under different circumstances, this must be regarded as the most important, as from it plants are supplied with food of the highest value.

From these ascertained facts we should infer that plaster must prove highly serviceable to moist, mossy hills, and also to meadows not too wet, and this has proved correct so far as our observations extend. Often we have found that the *north* side of a hill will be greatly benefitted by plaster, while upon the southern exposure it has no perceptible effect. This is due to the fact that the northern slope is cooler, or oftener in shade, and has more moisture, and a larger amount of partially decayed vegetation, to aid in the promotion of those chemical changes to which we have alluded.

"It is certain that it does not matter so much what may be the nature of the soil to which we may apply plaster, as external agencies are principally concerned in fitting it for plant food.

While the question as to how plaster acts in all cases as a fertilizer cannot be regarded as fixedly *settled*, yet we have certain facts to guide us in its application which are of the highest importance. With what we know, it would be absurd for a farmer to apply the agent to a dry silicious plain, or to a hot, impoverished hill; and also it would be unwise to sow it upon a meadow which is covered by water six months in the year. It must also be observed that the season has much to do with the effects of plaster.

FROM NEBRASKA.

NEBRASKA, Agriculturally, Horticulturally, and Pomologically, has her "best foot foremost" this season. The past Winter was remarkably severe in many respects, and yet the crops, generally, and fruit prospects, were never so promising. Apples, pears, peaches, plums, apricots and grapes are in great abundance. Our Legislature has been very liberal in providing for our State Horticultural Society, as well as the State Board of Agriculture, and the "infant State" will appear before some of you Eastern Pomological Societies, this Fall, with fruits from the "Great American Desert."

Fall wheat, put in late and carelessly, suffered badly last Winter. The more tender varieties of fruits were badly injured. By this misfortune, however, we learn what varieties are most reliable, and in future planting "govern ourselves accordingly."

Nebraska "Arbor Day," April 10th, accomplished great good for us. Over one million trees were planted on that day. One farmer planted *thirty-three thousand*, another 21,000, another 21,000, and so on down. One lad, but eleven years old, walked three miles, gathered and planted 800 young cottonwood trees. Remember this was only one day's work, and was really but "a drop in the bucket" as to our tree planting in Nebraska this Spring. We have had more rain than I have known for sixteen years past, and hence the surroundings for tree growing has been most propitious. The hitherto "timberless prairies of the West" are not destined to remain so.

Our State Board of Agriculture, and State Horticultural Society, hold their Fair and Fruit Exhibition, jointly, at Lincoln, the Capital, on September 3, 4, 5 and 6 next. All railroads leading to our State agree to give greatly reduced rates of fare on that occasion. "Come and see us."

Brownville, Neb. ROBT. W. FURNAS.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Ruralizing on Snake Hill.—*July 7.*—I presume that almost every one who has passed out of New York on the Erie Railroad has noticed a high bluff or hill to the left of the track about one mile from Bergen Tunnel. This hill is surrounded by what are known as the Newark Meadows, which are nothing more than a deposit of black mud covered with sedge grasses, wild rice, cat-tails and other similar plants which are indigenous to the salt marshes of the Atlantic coast. Snake Hill is an immense pile of rocks which were probably standing in their present form long before the Hackensack and Passaic rivers had filled up the surrounding bay with mud. It is certainly quite evident that this bald point of rock was in ages past a sort of haven for the drift-wood which came down from the northwest freighted with stray seeds, plants and insects; for upon this hill, comprising probably not more than one hundred acres, can be found a greater number of species of plants than upon any other spot of the same size in America. It has been celebrated for the richness of its flora ever since MICHAUX and PURSH, some sixty or seventy years ago, botanized among these rocks: and, in fact, it is to this day a sort of Mecca for botanists who may want to ruralize about New York city. It has not only been a rich field for botanists in days gone by, but entomologists have picked up many a rare specimen, the ancestors of which probably floated down from the Ohio valley upon some old log or other kind of drift material.

The county poor house was located here a few years since, and the tramp of hundreds of paupers is not only frightening away the birds and insects, but crushing out many of the rare plants. The naturalist, however, is always loth to give up a good hunting ground, even if choice specimens are rarely found; for hope still lures him to the spot where treasures were once to be obtained. It must have been either a hope of gathering a few more rarities, or a desire to please me, that caused Mr. J. AKHURST, the well known Taxidermist and Entomologist of Brooklyn, to accept of an invitation to join me in spending a day at Snake Hill, N. J. For the past thirty years he has visited this spot several times annually, and what he does not know about the birds and insects of this pile of rocks, would not be of any great loss to mankind.

Now, an old hunter of insects who is well acquainted with the ground and habits of the game, is just as valuable a companion as a well informed hunter of any other game, and I found my guide to-day an expert in his line. When we started across the meadows this morning, I arranged my sweep-net, boxes and bottles for immediate action, allowing my guide to give directions, as he had swept the ground many times and had caught plenty of the game likely to be found in this place. That he was familiar with the insects to be found in these salt marshes I was soon made aware from the contents of my net as it passed over and among certain weeds and grasses.

Chelymorpha cribraria, FABR, *Deloyala* and *Coptoclycia* of various species literally swarmed along the banks of the ditches. These insects sometimes attack the potato, but their natural feeding ground is our low, brackish meadows near the sea coast. As we approached the high grounds I caught several Buprestians, which had evidently left the woods to feed upon the flowers of the weeds and sedges; *Taphrocerus gracilis*, LEC., were quite abundant. The wild roses at the base of the hill furnished us several specimens of *Strangalia*, among them *S. velutina*, OLIV., and *S. luteicornis*, FABR. To give the names of all the insects caught to-day would require too much space, even in a Ruralist's Diary; but I must not omit to mention that magnificent and rare beetle, the *Clytus speciosus*, SAY., or Beautiful Clytus. The larva of this beetle feeds upon the sugar maple, often doing considerable damage to these trees. The beetle appears in this vicinity in July, usually during the first few days of the month; but further North I have known it to be taken in August.

Currant Worms.—*July 8.*—For several years the currant bushes in Central New York have been infested with worms, the larva of a species of saw-fly known as *Nematus vesicosus*. KLUG; but they have not appeared in this vicinity until the present season. I have only found five specimens in my own garden; but as they are abundant in the neighborhood, I must expect to fight next year for my currants. This imported pest has destroyed many thousands of currant bushes during the past fifteen years, and is still at work, although it might be annihilated in one season, if everybody who has currant bushes attacked would destroy those in their own gardens, and not leave such work to some more enterprising neighbor. It is for the want of concerted action among farmers and gardeners that we are indebted to the wholesale destruction of plants and fruits. Of course, we shall need more entomological knowledge disseminated among the masses before they can work together understandingly; but this, I fear, will never be, so long as our common schools and colleges are controlled by theoretical visionaries, instead of practical men, who love this world for the good therein.

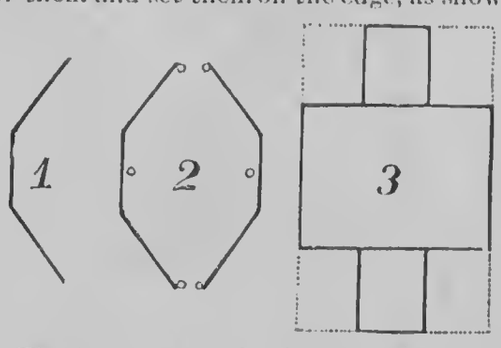
Planting Late Cabbages.—*July 9.*—There are always more or less vacant places in the garden which answer very well for late cabbages. I sowed a quantity of seed several weeks ago, and the plants are now large enough to set out. We have frequent showers of late, consequently it has been a good time for transplanting cabbages, cauliflowers and similar plants. A dozen cabbage heads will more than supply my family during the Winter, but the vacant places may as well be occupied with this vegetable, and my workmen and cattle will not object to a few hundred crisp heads next Winter, if there is no other market to which I can profitably send them. There is no danger of having too much of any good vegetable in Winter; and a cabbage head is far better than a kick to make a cow gentle and allow you to milk her in cold weather. I have had the handling of animals all my life, but never yet owned one that would not come to me with pleasure instead of going the other way with fear. Cabbages, beets, carrots and turnips are excellent medicine for vicious animals, and it is not too late even now to plant for use next Winter.

The First Cicada.—*July 10.*—This evening the first harvest fly of the season (*Cicada prainosa*, SAY,) appeared near my office, and trilled forth his harsh, unmusical note. This fly, often called the locust, does not usually appear until the last of this month, or first of August; and to hear one thus early in the season is quite a rare occurrence. Mr. CHAS. V. RILEY has accumulated a vast amount of data in regard to the appearance of the seventeen year and thirteen year cicadas (locusts) but there is much yet to be learned about the different annual species. California, and other parts of the Pacific coast furnish us with some interesting species and varieties of these harvest flies.

Rural Architecture.

A RUSTIC ARBOR.

We last year had a quantity of old crockery crates which were much in the way; and as we were in want of a trellis for vines concluded to utilize them, and succeeded so well that we thought the idea might be of use to others. We first selected three of the same size and cut off the ends of two of them and set them on the edge, as shown



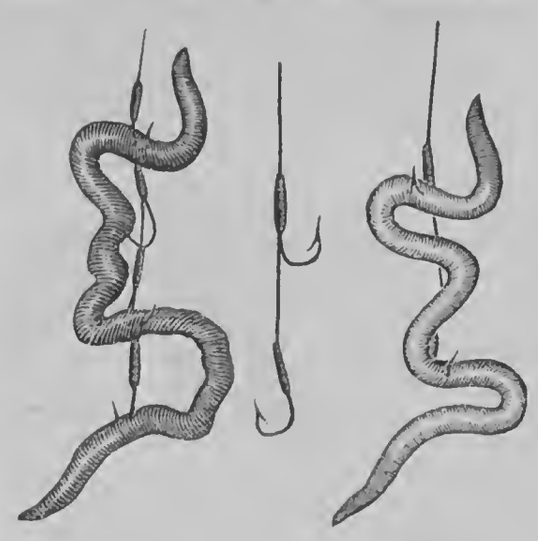
in Fig. 1, the two facing inwards and at the ends about two feet apart, so as to leave a passage, driving three stakes to each, as represented in Fig. 2, securing the crates to the stakes with nails. Then we cut down the corners of the third one and partly straightening it (see Fig. 3) placed it on the top and nailed it firmly, making a bevel or French roof over the whole. The corners of the top were then filled in, with willows interwoven, which completed the whole and made a very respectable arbor, six-sided, and about six feet by eight. We planted *Cobea scandens* around the outside, which covered it completely and bloomed profusely. The whole was much admired by all who saw it. It is strong and durable, being this season, to all appearances, as sound and good as ever. D. C. MCGRAW.

Riverside Gardens, Binghamton, N. Y.

The Sportsman.

TWO-HOOK TROUT-WORM TACKLE.

OUR sporting readers will be glad of the following suggestions made by the author of the modern Practical Angler. He gives (and we give herewith) Mr. STEWART'S tackle, composed of four small hooks, with which he (STEWART) says he could catch larger fish, but fewer in number, than with the single hook. One reason why the 4-hook tackle



4-Hook tackle baited. 2-Hook tackle baited and unbaited.

was not a success is said to be the impossibility of properly concealing so large a number of hooks in a single worm. Then again time was wasted in getting so large a number of hooks out of the fish's mouth when landed. But the advantages are that the worm is more quickly baited than with the single hook; that it lived much longer; that it presented a more natural appearance to the fish, and that owing to the superior penetrating tendency of small over large hooks, much fewer fish escaped after being once hooked, while it became possible to use the finest gut, which could not be safely done with large, heavy hooks.

The author above alluded to, after experiment with STEWART'S 4-hook tackle has devised a tackle similar in principle but different in detail, which combines, he claims, the foregoing advantages without the disadvantages. We give illustrations herewith of his device—the 2-hook tackle, baited and unbaited. He uses a trifle larger hook, thicker in the wire, varying the size of the hooks, &c, slightly, according to the size of the stream or of the worms.

He claims the following advantages for the 2-hook over the 4-hook tackle:—1. It is baited in less than half the time. 2. The worm lives much longer. 3. Its appearance is much more natural and lively. 4. The hooks are comparatively unseen. 5. They are disgorged in half the time. He claims also that there is little difference in the killing powers—if any, it is in favor of the 2-hook tackle. It is also more easily made. In baiting, he puts the upper hook quite through the worm laterally, about half an inch below the head, just above the knot and the second hook similarly about an inch below it, according to the size of the worm, as shown in the engraving.

He adds:—"It will be found that the worm, especially when unscoured, is very apt to wriggle itself off the hooks, or into pieces, and the most effectual remedy for this inconvenience, and one which a very little practice will make easy, is to put the two hooks through the worm as quickly as possible and then drop the worm instantly into the water; the cold partially numbs it, and prevents it twisting off."

He thinks this kind of tackle will be found as useful for all kinds of worm fishing as for trout. The trace should consist of about two yards of finely stained gut, one or two shot, according to the depth and rapidity of the stream, being placed on the line fourteen inches above the hooks. The object of this is to weight the bait so as to bring it close to, or touching, the bottom without checking or sticking fast; but in broad, shallow water no sinkers at all will be found necessary.

For bait, any well scoured worms which are not much smaller nor larger than represented in the cut will do; but for worm fishing for trout, and most other species of fresh water fish, he prefers the brandling or dung-hill worm, it probably being best because of its peculiar pungent smell and red color.

The Vineyard.

AMERICAN GRAPE VINES IN FRANCE.

CHAS V. RILEY, State Entomologist of Missouri, writes to the Rural World as follows:—Our grape vines are at last beginning to be appreciated in Europe. One of my correspondents, L. LALIMAN, of Bordeaux, who has cultivated with commendable zeal many of our American varieties, is not only getting his reward in the possession of some which resist the ravages of the dreaded root-louse (*Phylloxera vastatrix*) better than any of the European varieties, but in the production of a superior wine. In a late letter he writes:

"The wines which I obtain from certain American varieties age very rapidly, and I may tell you that the Jacques [I do not know this variety], the Lenoir, the Clinton and the Long [known to us as the Cunningham], mixed together, give me a wine much superior to those I get from our own French varieties. The Delaware, also, mixed with the Taylor, makes a very agreeable wine."

In an article written by him last April* he further says:—"Certain vines of the *cordifolia* [*riparia*] species make a very good wine, and certain hybrids, as well as some varieties of *æstivalis*, produce wines so like our own that we shall find it to our advantage to cultivate them, not only from an alcoholic stand-point, but for an abundance, color and taste which will astonish those who are acquainted with the *labrusca* only. * * * The Americans have made such rapid strides in horticulture of late that, we repeat, they have entirely changed the character of their vineyards. Certain grape growers have succeeded, by hybridization, in so improving their wild vines that their grapes to-day equal our best products of the kind."

This is not bad for a foreigner! And when we reflect that such of our varieties as have been found to resist the *Phylloxera* here will be in demand there for grafting purposes, we may hope that our trans-Atlantic brethren will finally get to understand that we *can* grow good grapes.

It is to be regretted that more caution is not taken by those who write upon the subject of the *Phylloxera*. I lately noticed in one of the monthly reports from the Department of Agriculture the statement that varieties of *labrusca* are freest from the attacks of the louse; whereas *labrusca*, as a species, suffers most. Such careless statements mislead, and may account for the fact that the varieties imported by the French minister have been mostly of this species.

* Reponse a la Soc. Linneenne.

ABOUT GRAPES IN KENTUCKY.

Two years ago we had a wet spell in June of about a week, and the grapes rotted with me for several days. Last year they rotted awhile in dry weather. This year the weather has been very dry, but the rotting season lasted about two weeks. It did not amount to any thing serious. Part of the bunches on a vine, occasionally, would rot considerably.

Present prospects:—Concord, (the main crop) vines full, of fair bunches, doing well. Rotted a little. Hartfords, a good crop; sound, healthy grape and vine. Ives seedling, a fine sight. Perfectly healthy, full of large bunches, a few begining to change color. Dracut Amber, full of fine bunches; all sound. Norton's Virginia, full of fine bunches. No disease; grapes good. Diana, well filled, almost entirely free from rot this year. Delaware, slow but sure. Entirely healthy, leaves well after the vines are well established. Creveling, good but scattering. Rogers No 15, fine and healthy generally. Nos. 4 and 19 good, but rot some. Rebecca, good but slow. Iona, good grape but not healthy. Clinton, better this year than common. Catawba and Isabella, rather healthier than usual; rot some. Perkins, fine, perfectly healthy. Altogether, prospects good for good crop with me. R. D. S.

Henderson Co., Ky., July 12.

Lycoming Grape.—This is the name of a Grape known locally in the neighborhood of Williamsport, Pa. The fruit is described as a large bunch, broad shouldered; berries oval, like Isabellas and nearly as large, but light pink in color. A pale wine made from them is very agreeable in flavor. The canes are distinct in their manner of growth; grayer in color than the common; they are close jointed, and the buds are round and prominent, looking as if of foreign origin, but the vines have proved quite hardy.

Floricultural.

MARANTAS.

MARANTAS are becoming favorite foliage plants. Their leaves are beautiful. They require a moist, warm atmosphere, and hence are not adapted to rooms nor conservatories, except for a short time. Latterly, several very beautiful species have been introduced. *Maranta Veitchii* is a very striking one, the leaves being purple underneath and deep green above, with yellow markings near the midrib. Fig. 1 is an illustration of an interesting variety of it. Fig. 2 illustrates *Maranta fasciata*, a very handsome species. Its green leaves, banded with white from the midrib to each margin, characterize it as peculiarly suitable for the decoration of vases. Fig. 3 illustrates *Maranta rosco-picta*, noticeable for its rosy midrib, and for similarly colored bands upon the leaf, a little way from the margin. Those who have greenhouses will appreciate these plants. It is unfortunate that they cannot be grown in conservatories; but, grown in vases, as shown, they can be transferred safely to the conservatory or drawing-room on special occasions.

FLORICULTURAL NOTES.

Molasses or Hydrochloric acid for Flowers.—E. S. G., Philadelphia, Pa. writes the Scientific American the following note. If our readers choose to try the experiment we advise that it first be tried on some plant they are willing to lose. Here is the note:—"Several years ago I became passionately fond of flowers, and I purchased a great many. I gave them all the attention I could possibly spare, and watched over them anxiously for a long time; but I found to my disappointment that before several weeks had passed, they all suddenly assumed a poor and dying appearance.

"I changed the earth, enlarged the pots, and did everything imaginable, but they did not seem to improve at all. About this time, I removed the earth around the roots of a favorite geranium, and pouring molasses (the unrefined will serve the purpose well) around the roots, I covered it up with earth, and waited patiently for a change. You would have really been surprised to have seen the great improvement in the flowers. I tried several others with the same result. If any one thinks that molasses is too expensive to be used for such a purpose, I would assure him that hydrochloric acid answers equally as well. It should be diluted in water (say one ounce of the acid to three or four quarts of water), and the flowers should be washed with it at the usual time. If these simple facts are of any value to lovers of flowers, I trust this will be made public."

Euonymus and Wistaria.—Please give the names of the flowers inclosed, in your valuable paper. No. 1 is a wild vine, called here "Virgin Bower," with purplish flowers. No. 2, a shrub, has white flowers and red berries, very pretty.—SOUTHERN GIRL.

No. 1 is the American Wistaria (*Wisteria frutescens*) a beautiful climbing shrub, extensively cultivated by Northern as well as Southern nurserymen and dealers in plants. No. 2 is the American Burning Bush, or Strawberry Tree (*Euonymus Americanus.*) The flowers are small, much nearer a green than white. There are several species of the Euonymus which are cultivated for their beautiful scarlet berries, which appear in autumn.

Kansas Plant for Name.—Inclosed find bud, blossom and leaf of a plant found growing wild upon our prairies. The leaves all grow from the ground; one straight seed-stalk grows up from the middle of them, and has twenty-five or more such blossoms ranged closely together around top of stalk, blossoms open a few at a time, commencing at bottom; color delicate straw. The appearance of plant is tropical; style magnificent. Please tell me, through the RURAL, the name.—J. M. COPELAND, *Waco, Kansas.*

THE plant was rotten and past recognition when received. Carefully press leaves and flowers between paper, and when dry send us another specimen.

Esther Pradel Rose.—Are you acquainted with a rose, or other flower, bearing the name *Hester Prodal* or *Proadal*, or something like it? If so, please give a description of it in the RURAL NEW-YORKER. My wife bought a rose from a dealer in flowers, a short time since; the label was lost, but finding one near where the rose stood, he thought that, probably, the name on that label might be the proper one. I have made inquiry of other dealers and cultivators of flowers, who do not seem to know anything about this name for a flower.—L. R., *Reading, Pa.*

THERE is a beautiful Tea Rose known as Esther Pradel. It is of medium size, full, double, and of a fine chamois yellow color, changing to salmon.

The Erythrina Crus-galli, a native of Brazil, is extensively cultivated as an ornamental plant in the Northern States, and we presume at the South; at least it should be, for we have few more showy exotics, the

FIG. 3.

flowers being a bright crimson, approaching scarlet. The exotic species grow to quite a large shrub if kept in a green-house during the winter and carefully planted out in summer.

Variegated Mint.—Inclosed find leaves of a plant, which please name for me. Does it blossom?—P. E., *Grand Isle.*

VARIEGATED Mint (*Mentha variegata*). Yes, it sometimes blossoms, but the flowers are small and inconspicuous.

Arboricultural.

POINTS IN ORCHARD CULTURE.

D. B. WEIR, Lacon, Ill., writes the Prairie Farmer that he wishes to prove the following points:—That ninety-nine per cent. of all the pruning that has been done to fruit trees in the West, has done more injury to the trees and to their crops of fruit, than good.

1. That a fruit tree, if its head be started low, where nature indicates, requires none, and should have no pruning or thinning out whatever, until it has at least fifteen summer's growth, except it be a shortening in of overgrown shoots.

2. That an apple tree so grown, with a low head, and no thinning out of its head, will produce from four to twenty times as much fruit, and better fruit than one having equal chance, but with its head started at the regulation hight of from four to six feet from the ground, and I can see no reason why it will not continue to do so for forty or fifty years.

3. That a standard pear tree without any naked branches whatever, but clothed with branches from the ground up, and kept in regular pyramidal form, is worth from four to one hundred times as much for fruit—and that is what I plant them for—health, longevity, and beauty, as one with its head started at any distance above eighteen inches from the ground.

4. That *blight cannot kill*, and will not seriously injure such a tree.

5. That a pear tree properly grown needs no pruning whatever.

6. That nearly all the orchards in the West have been greatly injured, and very many of them utterly ruined, by the outrageous system of pruning—ruining, rather—so generally practiced.

7. That no sub-branch should ever be taken from near the base of a main branch for any reason whatever; that no branch or twig should ever be cut from the inside of the head of a tree, as is often done with the expectation of letting in light and air, but which in fact shuts them out.

8. That apple trees two years from root-graft, and pear trees one year from bud, or two years from root-graft, will make bearing orchards sooner than trees of any older age, and vastly better orchards in every way than trees will of four to six years of age.

9. That many of our most profitable apples, such as Wagner, Primate, Red June, Summer Pearmain, Early Harvest, Summer Pennock, Rawles' Janet, &c., have fallen into disrepute merely from planting trees of these varieties with too high heads. For instance, a Summer Pearmain tree will produce from four to twenty times as much fruit, larger sized, better flavored, and higher colored fruit, if its head is started within one foot of the ground and never pruned any whatever, than one will with its head started four feet from the ground, though it may have the continued care of the most scientific (?) tree pruner in the land.

10. That what are known as our poorest Western soils are plenty rich enough for fruit trees of all kinds, without manure, and if they are properly cultivated, instead of becoming poorer, they will grow richer.

11. That the Kittatinny blackberry is a paying fruit to plant.

12. That the Miner and Wild Goose plums are among the most profitable of fruits, are practically Curculio proof, very hardy, and enormous bearers.

13. That the Philadelphia raspberry—genuine, of course—is the best of all.

14. That there can be no fault found with pear trees grown on lateral roots of the European Mountain Ash.

15. That trees so grown are *better* than trees grown in any other way.

16. That I have produced more apples from trees of the same age and varieties, than *any person in the West.*

17. Also the same of pears.

18. That what are called first class apple and pear trees, are really third to tenth class for all practical purposes, except to sell—and, sell their buyers!

FIG. 1.

FIG. 2.

All of these points, and many more of equal importance, I obligate myself to prove *conclusively* to all who will visit my fruit farm, during the present summer and fall, free of charge, *pro bono publico.*

ARBORICULTURAL NOTES.

A Minnesota Apple Tree Story.—The Winona, Minn., Herald tells this story:—"In 1858 Mr. JOHN HART, of Rolling-stone Valley, was invited by a friend to take a glass of beer. Instead he took two apples. One was eaten by his wife; the other by himself. The seeds of both were saved and planted; eight grew. Five healthy, vigorous trees were produced, which have borne freely for several years past. At the Minneapolis Fair last Fall he received $50 in premiums on the apples grown on these trees. At the time the seeds were planted the growing of fruit in Minnesota was an unsettled question."

Pomological.

POMOLOGICAL GOSSIP.

The Western Triumph Blackberry.—Three years ago we saw advertised in a Western paper a new blackberry under the above name, and we ordered a dozen plants which came duly to hand, with a modest bill for the same, amounting to $5, which we promptly paid. The plants were set out and made a vigorous growth, producing a fair quantity of fruit last year, which we thought was of very good flavor, but were not up to the standard for size. The past winter was quite a severe one on all the small fruits, the blackberry not excepted; but our Western Triumph plants passed through uninjured, and are at this time more heavily loaded with fruit than any other sort in our collection. The berries are also large, and so deliciously rich and sweet that to add sugar would be superfluous. The ladies of our household pronounce this new blackberry a "Triumph," especially the dyspeptic portion, who have to deny themselves of the privilege of eating sugar upon fruits of all kinds. If our Western people can succeed as well with this variety as we have, there is no need of sending East for Kittatinny, Wilson and Lawton Blackberry plants.

Seedling Strawberries of greater or less merit were exhibited to us in our office by ELBERT H. BOGART, Roslyn, L. I. One of them has been grown six or seven years, but constantly in a single locality. The others are not as old. All are promising; but none of them have yet been put upon the market, nor have they been sufficiently tested on different soils and climates to establish their value, compared with other well-known varieties. Mr. BOGART appears to be an enthusiast in this branch of horticulture, having exhibited sixty-two seedlings at the recent Queens Co. Show, taking the first premiums for the six heaviest berries (all his own seedlings), for the three best new varieties, and for the best seedling. None of these have been named or numbered.

The Charles Downing Strawberry is winning its way in the West, so far as we hear, just as it has in the East. J. L. BUDD, Shellsburg, Iowa, says:—"We surely need a strawberry for home use with less acid in it than the Wilson, at the same time retaining, as far as possible, the hardy habit and productiveness of the latter. So far as my experience and observation go, the Charles Downing is just about the berry we have been looking for. It is of large size, moderately firm, of most excellent flavor, plants vigorous and hardy, about as productive as the Wilson, and the strength of the plant is such that the berries are held up from the dirt much better than with the Wilson."

Pears for the Plains.—Dr. William M. Howsley, of Kansas, names the following as varieties of pears best suited to the region from the Mississippi to the Rocky Mountains, and between the latitudes of 36 and 41° north:—Of standards, first in every respect, the Bartlett; second, the Flemish Beauty; third, the Belle Lucrative; fourth, Buffum; fifth, Lawrence; sixth, Winter Nelis. On quince roots or dwarfs:—First, Beurre d' Anjou; Second, Beurre Diel; third, Duchess de Angouleme; fourth, Easter Beurre; fifth, Louise Bonne de Jersey; sixth, Vicar of Winkfield; seventh, White Doyenne.

Strawberries for Forcing in England.—The Cottage Gardener says:—"The favorite sorts for forcing are Keens' Seedling, Princess Alice Maude, and British Queen; but there are others well worthy of attention, as Ingram's Prince of Wales, which for productiveness and certainty of setting beats all. Trollope's Victoria is a good bearer under heat, where very early fruit is required, Cuthill's Black Prince and the Scarlets should be grown."

The Naturalist.

LOP-EARED RABBITS.

SOME one has inquired in the RURAL NEW-YORKER how to keep and breed these rabbits, which are among the most beautiful of varieties. Their mild, dark eyes, hardy constitutions, and excellent habits—as they never denude trees of their bark when they can get anything else to eat—grow fast, and fine table epicurean qualities make them desirable. They will live and do well for the Summer, Spring and Fall on grasses and weeds alone, though they are more fleshy with some grain, of which oats and buckwheat are the best for them.

My advice is, for a few, to put them in a plot of grass fenced off by light picket frames, so that they can run at pleasure over any convenient space. Say, for eight or ten, a space twenty feet by thirty. I have seen that number kept in much less space. Make the pickets three feet high, and nail to two rails ten or fourteen feet long; put a board eight inches wide on the ground, and fasten the pickets on this, and they will not dig under the fence. Such a picket is light and movable.

For a kennel, take a dry-goods box two feet wide by three or four feet long; take off the cover of the box; fasten in it a box about ten inches wide and sixteen long. In the little box make a hole five inches in diameter. Fasten the small box so that this hole is out of sight, and a little hard for the rabbits to get into; fill it with soft hay. This small box is for the brood chamber. Now turn the large box upside down, with the little box inside. Make a hole six inches in diameter into the large box, so that, when frightened, the rabbits can easily run into it. Just inside this last hole put a board, so that the passage is crooked. This gives a sense of security to the rabbits. You can put the boxes either inside or outside of your picketed space of grass, but make the entrance easy, but a little crooked and concealed, and with lids to open both boxes.

Let me say that on no account must you put rabbits of this breed in the sunshine. Nothing kills them sooner than a hot sunshine. Yet from October 1st to May 20th put them so that they can lie in the sunshine when they please. In all the summer months let them have no sunshine at all—*always shade.*

Again. Bear in mind that all males fight all other males; and all females fight all other females, and therefore separate them accordingly. No one who has not seen them fight, has any idea how fierce they often are. They kick, jump over each other and cut each other with clips of their teeth; tear their ears and scatter fur, in anger, when the spectator thinks it is play often.

Let me say that they are very peculiar in their care of their young. The little rabits are born very feeble and blind. The mother rabbit begins about the fifteenth day after conception to dig a hole in the ground. She digs usually three or four feet slantingly in the earth, and makes a chamber at the end of it. Often she stops the month of the hole so that it looks as if no hole was there to the careless observer. About the twenty-third to twenty-fifth day she carries in large mouthfuls of grass. She is often singularly in earnest about this, with a fretful grunting noise. Then she apparently cares nothing for her house for a few days. The twenty-eighth to the thirtieth day she suddenly commences to pull out great mouthfuls of her fur from her abdomen and back and sides, and carries it, with a sort of fretful noise, into her hole. She may drop her brood in a few hours, or repeat this fur-pulling a day or two. She has from four to eleven little mites of young. You will find them in the center of the grass she has in her hole, and in a wad of her own fur. She usually stops her hole tight, or nearly so, with earth. And you may as well try and catch a weasel asleep as try and catch her showing any attention to her young. She lets you know that is none of your business. She says, by her actions, she and her young shall die before she will own to you any idea that she cares for them. Yet she is very motherly in her own way. That is, she takes all the care necessary for them, and that is remarkably little. By watching her closely you will see that she hastily digs her hole open, runs in, paws open quickly the nest of fur and stands over them. The little pets are feeble as can be, in all except the power to lift their heads and nurse, yet but an instant; when off the mother goes, unconcernedly, leaving them wrapped in the pulled fur.

So careless is she apparently that a lady of my acquaintance was deceived once. Said she, "There's a lop-eared rabbit that dug a hole in the garden. I watched her; saw her pull her fur, as you said she would. One day I went out to her hole. She looked so sad; Did not attempt to move; sat so sad by it. At last she slowly filled up the mouth of her hole, packing in the earth with her feet, and seemed so disconsolate as she buried up her young. She closed it up perfectly tight, sat down a picture of grief over her little ones in their cradle grave. I have fed and petted her ever since. There she sits hour after hour a picture of melancholy, over that closed tomb she has made for them."

A few days after I dug this sad grave open and found six nice, lively young rabbits in a warm bed of fur, as unconcerned as if they had not been buried and unearthed every few hours by the quiet, sober mother.

A few days after birth the young open their eyes; then the mother lessens the covering of fur, and leaves the hole in the earth partially open. At last they emerge and begin to eat, just as if old hands at clipping weeds and grass. All this while, careless as the mother seems, she has a terrible sense of fighting underneath her placid actions. Woe to the cat or rat or skunk, or other animal, that comes near to molest them. Sometimes she even clips a square piece of your pants out, and even a bit of skin with it, by her scissors of teeth; yet not often.

Such are the habits of these rabbits in their holes when let alone, and such is their habit too in the boxes, I have described. The only use then, of the boxes is that by them nature is imitated and provided for. I might figure and describe a neat roofed kennel, with upper and lower stories, and make it quite ornamental, but it is not absolutely requisite.

It is essential to observe that you let the mother rabbit alone, and have her way. Many I have known have shut up rabbits and let the broods of young starve. Others never get any, because they do not provide places for them. So I advise, if the hole is dug, let the rabbit see to it in its own way. If she uses the boxes, as she generally will, then all you have to do is give her free access to them, and let her be. Give warm milk twice a day to a nursing animal. They want, and usually will take, no kind of drink at any other period. They are fond of apples, will winter well on raw potatoes, with a few oats. As the males of this breed do not devour the young, no precaution is necessary on this point. A hole six inches square under a barn, wood shed or other building, the nest all tight, is often sought as kennel and brood place. The fur of the brown kinds has been used for rude imitation mink furs. Such is my reply to the inquiry in the RURAL. It is my habit to write, not old clap-trap traditional sayings, but nature as I see it. I have ever had the amplest success with my few Lop-Eared rabbits. Of course the large raisers, of hundreds and thousands a year, have houses and cages, keep fires all winter, and do other things to multiply them. But with me they endure cold and any heat but hot sunshine, and only multiply but too fast.

Ithaca, N. Y. S. T. PARKER, M. D.

NOTES FOR NATURALISTS.

To Keep Off the Red-Tail Hawk.—If he troubles young turkeys, insert a hole in the opposite sides of a small looking-glass, into each of which insert a string; tie these around the wings of the mother, close to her body, so that the glass will be on her back; the Red-Tail Hawk will not come near it. This is where turkeys roam at large. If he visits your poultry yard, suspend a piece of bright tin in the air, so that the wind will sway it about; the first time it reflects the rays of the sun in his face, he will bid you a long adieu.

What will frighten away the Blue-Tail or Hen Hawk? An answer to the above would be worth ten times the yearly subscription to the RURAL NEW-YORKER.—SUBSCRIBER.

Worms on Apple Trees.—The worms sent by S. J. JOHNSON, and found upon his apple trees, were all dried up when received, and we could not tell anything about them. Send fresh live specimens to your own State Entomologist, Dr. LE BARON, Geneva, Illinois, who will probably be able to give you the desired information.

Naming Birds from Descriptions.—D. D. STONE is informed that we cannot name birds from descriptions—we must have specimens; then we will try.

Scientific and Useful.

THE SIPHON QUESTION.

I READ in the RURAL NEW-YORKER of June 15, page 395, of a siphon stopping, the correspondent wishing some information in regard to starting it. I want to ask the subscriber how he succeeded in starting water in the first place; why not try the old method if he has not invented something new? I have had some experience in siphons for the last eighteen months, and as a matter of course, had some trouble and loss of appetite. I would like some information, and shall look for an answer through the RURAL, from some one who has had more experience in water works. I will give, in the first place, a description of the well, distance the water is to be carried, rise, fall, etc. I raise the water in the well 12 feet, carry it 50 rods, and have a fall of 50 feet. I tried the plan of ganging the faucet to draw a sufficient quantity of water to supply my stock. In about four days it stopped running. I tried again with the same result. Being possessed of some "Young America," I tried the plan of letting it run a full head at times when water was needed and then stopping short; had no more trouble at that outlet. Last Fall I laid the balance of pipe to my barn, 110 rods, with a rise of 40 feet from the first outlet, making in all 160 rods. Now is where the trouble comes, as before. I let it run a full head when water is required, and find the same difficulty as when letting a small stream run at the first outlet all the time. I am fully satisfied there is no leak in the pipe. The more water I draw the sooner air collects and cuts off the column. I then put in the well, attached to the pipe, a force-pump with which to force the air out, and succeeded in part. I have to use the pump about ten minutes twice per week when using considerable water; once a week will do when not using much. I am of the opinion that air collects in the highest point in the pipe when water is running. My pipe is three-quarter inch gas pipe. Will a larger or smaller one answer better?

I hope to hear from some one who is more of a water-witch than I am or expect to be.

Churchville, N. Y. H. S. S.

FOUL CISTERN WATER.

INQUIRY has been made for the cure of bad water. Barrels, tanks and other reservoirs in the tops of houses are more apt to smell foully in warm weather than in cooler situations; yet such is not an absolute rule. Some persons never have unpleasant rain water. A cistern in the ground or a cellar that is never above 58° F. ought never to ferment the ammonia or rain water impurities; and if properly cleaned, ought never to be smelling badly. Let me here say, *causes often exist of impurity that are not suspected.* Thus I knew a cool cistern, often cleaned, to be foul in odor. The causes lay, as at last discovered, in the fact that *a boy after dark* urinated often by side of the tin pipe that conveyed water from the roof to the cistern. A servant girl empties slops over a covered cistern. A tobacco user fouls the roof, and that fouls the cistern. A dog or cat does the same thing; a drain empties a part of its contents, unknown to the cistern owner, near it. So there are scores of unseen and unsuspected causes of filth, all of which may foul the water of a cistern, either on one's own or a neighbor's premises, and thus a cistern be foul, unhealthy, and the cause be difficult to discover. Then search for the cause; try the thermometer; test the water by chemicals. If no cause can be found, then build a brick cavity, holding three or four barrels, cement it all except a soft brick tile or two between the cistern and this reservoir. Let no water go into the cistern except through the reservoirs, which clean often. Thus you get filtered water. I have two cisterns—neither are ever foul. One was, for a year once, by one of the filthy causes named above. S.

INFLUENCE OF THE MOON.

I NOTICE a communication in the RURAL NEW-YORKER of June 22, from a Canada correspondent, in relation to the influence exerted by the moon on timber. I would like very much for him to explain the cause of the effects of which he speaks. I don't believe he, or my other man, can explain it on scientific principles. I have always been skeptical on this subject, and expect to remain so until it can be more fully explained. Some people go so far as to say that there is a certain day in the month of August, on which, if an ax be struck into a living, healthy tree, it (the tree) will immediately wither and die. This fatal day is in dog days, so they say, and also when the moon is "right"—that is, when waning, I suppose. Some people are afraid to put a roof on a building in the light of the moon, for fear the shingles will draw; and will not plant roots of any kind in the light of the moon, as they say they go too much to the top, and do not grow so well under ground—all of which, I think, is simply ridiculous.

When the subject shall have been thoroughly investigated, which, it is to be hoped, will be done at no distant day, I think they will find that they will not be obliged to go to the moon to find the cause for an effect visible in the world. It is my opinion that the investigation of this subject will richly repay the time and labor it involves, if scientific minds would search out the true causes of the phenomena ascribed to the moon. It cannot be denied that the public need light on this important subject. If it should be proven that the moonites are correct in their theories, then there are thousands of unbelievers who sadly need the light of truth to guide them in all of their operations, from the building of a house to the sowing of a turnip seed. I have been thus plain and out-spoken in expressing my views in order that it may elicit, from pens more able than mine, a full discussion of the subject. J. O. R.

Washington Co., Va.

Pisciculture.

NEWARK VALLEY TROUT PONDS.

THESE ponds are at some future day to become famous. Situated at Newark, in one of the most beautiful and picturesque of valleys, itself a perfect fairy-land of beauty, how can it be otherwise? The Southern Central Railroad runs directly through this valley from Owego to Auburn. Newark is ten miles North of Owego, and fifty-eight South of Auburn.

In April, 1869, Messrs. WARING & DAVIDGE commenced the work of excavation for these ponds, and by the 20th of June of the same year had finished thirteen ponds containing over thirteen thousand hogsheads of water.

These ponds are of a variety of shapes. Many of them contain beautiful islands, and are so arranged that the fish can be separated at any time, keeping those of a size together, as well as a sufficient number for the capacity of each pond. About the 20th of June these ponds were first stocked with fish. The attempt proved a perfect success. From the four hundred trout then placed therein, there have grown countless thousands. About the 1st of November the fish commence to spawn, and continue until about the 1st of January. The eggs are gathered from time to time during this season—which by the way must be done with great care, as removing them from the water destroys their vitality—and carried into the hatching-house. In this house are some ten troughs—or runways—running the same as the stream which forms the outlet of the ponds. These runways are divided into compartments about two feet square. Into these are put a bed of gravel, and over this bed the water flows at an average depth of two inches. On this bed of gravel are placed the eggs. Each compartment is designed to hold sixteen hundred. At the end of seventy days the eggs are hatched, and the young trout may be seen disporting about in the clear water.

When they are sufficiently old to bear the change, they are removed to some of the ponds, where they need no further care; the insects to be found there affording them an ample supply of food.

Of the sixteen hundred eggs placed in each of these compartments, the average number hatched is about one thousand.

The grounds comprise, in their breadth and length, about eight acres, and are very tastefully laid out—everything for the convenience of those who visit the place is to be found. The present year the improvements are many. The proprietors of these ponds opened them to the public on June 6th. To those who are interested in trout raising, these ponds offer the greatest attraction. Not only does the great beauty of the place appeal to the eye, but the everywhere apparent care that is taken to insure the success of the raising of these finny beauties.

M. WARING, to whom this work is a labor of love, is a gentleman, courteous and refined, and cheerfully gives all the information in regard to his experiment that one could desire. To those who may wish to visit this place, I can assure them that they will be amply repaid for the time and expense, and leave the grounds with a feeling of regret that so much of the beautiful is not theirs for all time.

DE FOREST P. GIMMERSON.

Berkshire, N. Y.

Domestic Economy.

ABOUT THAT BILL OF FARE.

DEAR RURAL:—You and the readers of the RURAL may think, perhaps, I was frightened out of writing that bill of fare I commenced, there was so much sharp shooting by "Constant Reader" and Mrs. W. F. T. But that was not the case. I am not easily frightened; circumstances beyond my control prevented my writing. I thought, however, in justice to myself, I would explain. "Constant Reader" thinks I could not have done so much in so short a time; she says she "hardly credits the statement." Well, I am sorry she thinks so small a thing, or even anything, worth my lying about. We will have charity; perhaps she judges from her own capabilities.

I did not expect to write a bill of fare to suit the circumstances or *industry* of everybody; that would be impossible in one bill of fare. About that fruit cake:—I can make a good sized cake and bake it in two hours; and it will be good, too; and while it is baking prepare other things for the oven. I did do it, and can again do everything I said I did; and so can any one with any energy.

"Constant Reader" thinks I have not much idea of economy to let my cooking accumulate until Monday. I thought I explained that. My girl had just left; had she remained, it would have been just as convenient to have baked on Monday as any day, as I do my own baking generally and she does the general housework. I did not speak of washing; I did not think it necessary. One would not be obliged to commence the bill of fare on Monday, but on any other day. I hire a woman to come and wash and have a wash-room, so that washing does not interfere with my cooking. Some, I know, hire their washing out, and others wash when there is nothing left clean for them to wear; so you can plainly see how difficult it would be to suit all.

About those little waists. I happen not to have any one in my family but those who can button their own waists; but could, I think, dress two or three; and if there were more, there ought to be difference enough in their ages for one to dress the others.

I do not understand what Mrs. W. F. T. means by living so far *East* where the little responsibilities do not trouble. I did not know there was a place on the face of the earth where people did not have children. Now, if she will please inform us where that place is, she will oblige very much, as some of my neighbors are very anxious to move there. I shall not, for I like it here. As for setting the table, it is just as easy to set the table in order as to pitch things on, if one will only try it. Another thing, I go to church and eat, Sundays, but I cook on Saturday so as not to have much to do on Sunday. I don't think it necessary to turn the house upside down because it is Sunday. When I get home from church I put away my things where they belong and take my book and sit down. I *do* live in town, have no milk to skim nor churning to do; but I have lived on a farm and know all about it. I managed, when I lived on a farm, to put the table cloth on straight and get a decent meal, too. If I had not time, I would keep the table set.

Suppose "Constant Reader" or Mrs. W. F. T. give us a bill of fare. M. N. R.

Union Springs, N. Y.

ODDS AND ENDS.

Mutton Kidneys.—I see Mrs. MUZZY asks how to cook these. Tell her I have cooked them in this way, and call them good:—Fry gently in a little good butter, a dozen slices of bread of uniform shape, trimmed free from crust, cut half an inch thick and about two and a-half inches wide and from three to four inches in length; lift them out and keep them hot. Split quite asunder six fine, fresh kidneys, after having freed them from the skin and fat; season them with fine salt and Cayenne pepper; arrange them evenly in a clean frying-pan and pour some clarified butter over them. Fry them over a somewhat brisk fire; dish each half upon one of the slices of bread; make a sauce in the pan as for veal cutlets, but use gravy for it instead of water, should it be at hand; add a little wine or catsup; pour it round the bread and serve the kidneys in this shape at once. I learned how to cook them in this way in England where I first ate them.—MARY J. PLIMPTON.

Paper Moth.—Will some one of your readers inform a subscriber how to exterminate the paper moth, or silver fish? I had two of my rooms recently papered, one with oak and the other with gilt paper with plain ground. The former is being rapidly destroyed, while the latter is untouched. Now why is this? Is there anything in the composition of the oak paper to which they are attracted? Please give us an early answer. I have heard that the oil of cloves if applied is a remedy; but I am not acquainted with the mode of application.—W.

Who will reply?

Potato Fry.—To JOSH H. BROWN.—Slice (thin) cold boiled potatoes into a pan; cover them with good milk; add salt and pepper as soon as the milk boils; hash them (while cooking), adding a little butter. If Mr. BROWN takes off his hat for the above it will be to my mother; and if he doesn't take off his hat, no potato fry will bring it off—W. H. S.

Salad.—To MARY P. R.—Beat one egg to a froth; add one teaspoonful of mustard; one-quarter of salt; one-eighth of pepper; two tablespoonfuls of sugar; half a cup of cream; one quarter of a cup of vinegar; pour over the salad.—W. H. S.

Muffins.—To Mrs. A. E. S.—Of Taylor's cream yeast two heaping teaspoonfulls; one quart of flour; add a little salt and enough milk to make a good stiff batter; bake (on griddle) in rings.—W. H. S.

The Literary World.

NEW PUBLICATIONS.

That Convention. By F. G. W. et al. Illustrated by FRANK BEARD. New York: T. C. Welch & Co.

"THAT Convention" has reference to the Cincinnati Convention, and is a volume of 75 pages, full of broad and sly humor, with shafts of wit directed against all sorts of politicians. The book is laughable, readable, and one of the most humorous the campaign has thus far brought out. MARK TWAIN and P. V. NASHY contribute readable articles. Honest HORACE GREELEY comes in for his share of attention. The pictures are well drawn, and exceedingly numerous.

Paul of Tarsus.—By A Graduate. Boston: Roberts Brothers.

Who "a graduate" is does not matter, so long as he has given to the world a good book. In his attempt to sketch the times and gospel of the Apostle of the Gentiles, he is conceded to have succeeded very well. So long as the teachings of Paul have so great an influence in Christian nations, we can hardly read too much of him, his times, and his system of religion.

Sailing on the Nile.—By LAURENT LOCARTE. Boston: Roberts Brothers.

A VERY readable, sprightly, smoothly-written book, translated from the French. The author gives us pleasant pictures, mingled with a quiet philosophy, which are familiar to the travel-reading public, but which in his hands have a new charm, as if fresh from some clever artist. For pleasant Summer reading, we think it delightful.

Music and Morals. By Rev. H. R. HOWEIS, A. M. New York: Harper & Bros.

A READABLE work, which treats of the philosophy of music, having much to say of morality; which gives many pleasant biographical sketches from Ambrose to Handel; has chapters on musical instruments, and music in London. Every lover of music will be glad to add this work to his library.

The Complete Phonographer.—By JAMES E. MUNSON. New York: Harper & Bros.

THIS is a well-known standard work, an exposition of phonography, with its application to all branches of reporting. Mr. Munson is an official reporter in one of the courts in New York, and knows whereof he writes. We suppose a better book on this subject hardly exists.

Baumbach's New Collection of Sacred Music. Boston: Oliver Ditson & Co.

A VERY handsome collection of good music, adapted specially for the Episcopal Church, though it contains, also, much that will be welcome in any church, as well as in the home circle. The fine taste and harmonic accuracy of the author are too well known to need extended notice.

Appleton's Railway and Steam Navigation Guide for July. New York: D. Appleton & Co.

A FULL and complete account of the lines of travel in the United States, with time-tables. It has a list of the watering places.

Jubilee Days.—Boston: J. R. Osgood & Co., 1872.

DURING the great musical Jubilee in Boston the enterprising house of OSGOOD & Co. published a daily illustrated paper devoted to the event, full of original engravings by HOPPIN. This paper acquired a good deal of celebrity at the time, was sprightly, full of jokes, etc. The various issues have been bound in book-form, and make a very agreeable and artistic *souvenir* of the greatest musical event of the age.

Crossing the Atlantic.—Illustrated by AUGUSTUS HOPPIN. Boston: James R. Osgood & Co.

A VOLUME of twenty-four very clever sketches, representing the incidents of a voyage at sea—the whole forming a delightful picture-story, worth half a dozen novels which might be named.

Who Shall be Victor! By ELIZA A. DUPUY. Philadelphia: T. B. Peterson & Brothers.

A SEQUEL to the story of the "Cancelled Will." It is not stuffed with incident, but flows along smoothly enough, and clears up some mysteries left unexplained in the first volume.

MUSIC RECEIVED.

FROM HENRY S. MACKIE, 82 State street, Rochester, N. Y., "Little Sunflower," song, words and music by I. G. Withers; "I am the Brother of Josephine," by the same author; "The Comet of the West," song, arranged by J. M. Moslow; "Jesus, Lover of my Soul," quartette, with solos for soprano, alto and tenor, by Dr. J. M. Munger. The latter piece deserves to be popular, and the others perhaps will be if a community can be found who like negro songs without either pathos or wit, their places being supplied by an obligato break-down.

Address all orders to

D. D. T. MOORE, 5 Beekman St., New York

☞ Any Books desired, not named in this List, will be furnished on receipt of price.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential Journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **516 Large Octavo Pages,** is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price, $2. Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

ALLEN'S AMERICAN CATTLE: Their History, Breeding and Management.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Pres. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada, on receipt of reduced price, $2. Address

MOORE'S RURAL NEW-YORKER.

SATURDAY, JULY 27, 1872.

WHAT CAUSES HARD TIMES.

R. M. P. writes:—"I am a farmer and know that the times are 'hard,' and would like to see some theory in the RURAL NEW-YORKER as to the cause of hard times. Cannot you give us one?" Yes, certainly. It is easy enough to construct a theory; it is not always easy to prove that it is a correct one. We have one, nevertheless, which we think self-evident. Here it is:

1. Too many spend money and too few earn it.

2. Too much money is spent wastefully and uselessly, and too little saved and made productive and accumulative by those who need it.

3. We buy too much abroad that we ought to produce at home.

4. We buy too much that we cannot and do not pay for cash down—too much of what we buy being what we do not actually need.

5. We are too wasteful, know too little how to economise and have too little disposition to do so.

6. We are too speculative, unscrupulous and actually dishonest in our efforts to make money.

7. Too many of us prefer idleness to industry, and too few of us know how to work and derive pleasure and profit from our labor.

8. We spend too much time learning what is not useful, and too little informing ourselves upon the best methods of promoting our material prosperity.

9. We know too much of politics, spend too much time and money as politicians, and know too little about political economy and the science of a stable and economical, successful public policy.

10. Our actions are governed too much by passion, prejudice and partisan feeling, and not enough by a broad, intelligent, liberal and patriotic conception of the duties which American citizenship involves.

11. We are too superficial and impatient, and lack the clear purpose and persistent, patient application necessary to permanent success.

12. We depend too much upon our "sharpness," and "cuteness," and readiness to take advantage of circumstances, and not enough upon earnest, honest labor.

13. We talk and read too much, and think and act too little.

14. We spread ourselves over too great a surface, and thus fail to dig deep enough in one place for the nuggets that will surely enrich us.

15. We lack in that higher morality which frowns down venality and elevates and encourages purity of life, probity of conduct, and a scrupulous regard for a good and honorable name.

16. We do not teach our children that they must, nor how to, earn their own living, and are too willing to commit them to a life of easy unscrupulousness, depending on their skill as make-shifts rather than upon their solid acquirements as men and women.

17. We roll about too much like stones that gather no moss, enriching carrying corporations and speculating capitalists, and defrauding ourselves of the substantial profits of our own industry.

18. We are devotees of show rather than substance, and pay homage to the glitter of a "success" which is but a robe covering filth, rottenness and corruption, social, commercial and political.

19. We build too many churches and cultivate the Christian virtues and spirit too little; we have too many schools and too few real teachers; we have too many false theories and too few true ones; we are too undivided in certain directions and not enough so in others; we adhere too closely to what we ought to depart from, and refuse to take hold of that to which we ought to cling.

20. In short, we are too much what we ought not, and not enough what we ought to be!

Is our theory satisfactory?

THE SEASON, CROPS, PRICES, ETC.

A Look Over the Country.

HAVING recently made a tour of the country from the Southwest, by way of Ohio, Western New York, Canada, Vermont and Eastern New York, to the city, I can make up a fair positive and relative record of the condition of crops in that range of country.

In Tennessee, Kentucky, Southern Indiana, and Southwestern Ohio, the Summer crops are only moderate in quantity in the best fields, and short on the dryest lands. The lack of rains has operated against the wheat and grass crop, which will fall considerably below a fair average full crop of favorable seasons. The quality of the wheat berry is good, which will in part compensate for the lack of quantity. The corn crop of the same region promises well, though it was put in late.

In the region of Northern Indiana, and along the south shore of Lake Erie, in Ohio, Pennsylvania and New York, there are full crops of wheat, oats, corn, potatoes and grass, with abundant promise of the staple orchard fruits, particularly of apples and peaches. Upon the hard clay lands of Western New York the field crops are not heavy, and the same is true of that part of Canada bordering on the north shore of Lake Ontario and the river St. Lawrence, until within a short distance of Montreal, where crops look very fair for that boreal clime.

The state of Vermont is rejoicing all over in its abundant productions of grass crops and nearly all other of its field staples. The hay crop of Vermont and New Hampshire is immense, following two years of drouth with plentiful rains, which held up just in time for a good hay season.

In all the dairy region of Vermont the farmers are following the lead of those in Ohio—letting go of sheep and taking up cows. The making of butter is a great business in Northern Vermont, and the reputation of this butter in the market is first class, and still advancing. Cheese making is still a large item in the dairy system of Vermont, and many cheese factories have been established, but the best dairy farms are not near enough together to render the factory system as economical as it is in the dairy regions of Ohio and Central New York.

The labor system of Vermont is greatly changed from what I knew it in time past. From twenty to forty years ago Canadian laborers swarmed into Vermont at the beginning of haying time, and were a tough, slow and faithful set of people, working at low wages. Of late years more of the Canadian laborers find profitable employment in farming at home, while large numbers of those who come to the States steer for the manufacturing towns of Massachusetts, where the work is not so hard and the pay is better.

Many of the floating laborers of Canada were enlisted as substitutes in our late war, and I have heard it estimated that fifteen thousand of these were killed or disabled in the armies of the Union. Now, good farm labor is scarce and dear in that region; ordinary farm hands command from $25 to $30 a month, for a season of eight months. The general use of modern labor-saving implements on the farm enables the Yankee farmer to get through his work, notwithstanding the scarcity of laborers.

Upon taking a view of the whole country, I should say there is, and will be, a fair average yield of our staple productions this year; what is lacking in one place will be supplied from another, and the stores of the country will be ample for all our needs. S. D. H.

Alma City, Wasca Co., Minn., June 29.—Fine growing time. Wheat, oats and barley never looked better. Corn backward, but coming on fast; grass never better; potatoes good; potato beetles very scarce; have been destroyed by parasites.—D. P.

Salem, Dent Co., Mo., July 7.—Corn looks well; oats good; wheat about half a crop; potatoes and other vegetables look well; fruit of all kinds plenty; grapes and peaches better than common; wheat worth $1.15; corn, 50c.; oats, 40c.; bacon from 4 to 7c per lb.—C. W. H.

Harlem Springs, Carroll Co., O., July 16.—Wheat about half a crop; oats tolerably good; grass very light; corn good but late, owing to the late Spring and the cut worms. Some fields were entirely destroyed by them and had to be replanted. Potatoes good; peaches an entire failure; apples plenty. Markets dull; very little stock changing hands of the farmers; the buyers appear to be waiting for a decline in prices. Farmers don't appear to see it.—A. B. L.

Pughtown, Chester Co., Pa., July 8.—Since last Fall little rain or snow has fallen. The Spring and Summer have been very dry; hay one-fourth crop; wheat three-quarters, being thin on the ground with large heads well filled, and short straw—all harvested. Corn middling early; potatoes poor; cherries abundant; apples fair crop; pears not so full; oats short. Wheat $2; corn $80c.; oats 55c.; butter $25c.; eggs 21c.—R. W. H.

Sewickley, Allegheny Co., Pa., July 16.—Last two weeks of June and first week of July very hot and dry, with a few light showers; second week of July rather hot and wet, with rain almost every day or night. Hay is not an average crop; winter grain very small crop; oats look good; corn promises well and is growing fast. Potatoes look good, Early Rose worth 75 cents per bush.; small fruit plenty and cheap; apples and pears promise a very large and good crop. The Colorado Potato beetle made its first appearance in this neighborhood in June.—M.

Newark, Rock Co., Wis., July 8.—We had a cold, dry, backward Spring until the middle of June, then it changed to very warm. All streams, springs and wells are low; some springs and streams are dry that never were known to be dry. Crops are doing fine on the lowest kind of land. We have had frequently showers of rain so that crops have not suffered much, but have grown very fast. All crops are at least two weeks later than last year. Wheat promises to be an average crop. Oats and barley good; very little rye sowed last fall; crop light; corn is later than usual; hay light; clover, badly winter-killed; some pieces of potatoes very fine; potato bug very troublesome. Wheat, $1.10; corn, 37c.; oats, 31c.; butter, 12½c.; eggs, 10c.; cows, no sale; horses, from $100 to $150; farm labor, $18 to $25 per month; wool, 35 to 40 cents per lb.; hogs, $3.50 per cwt.; buyers bid on tobacco 6 and 7 cents per lb.; not much sold.—H. C.

RURAL NOTES AND QUERIES.

War Department Signal Office. A circular from the Chief Signal Officer of the War Department gives us the gratifying intelligence that the last Congress enlarged the powers of the Weather Signal Bureau, making appropriations for expenses of storm signals announcing the approach and force of storms throughout the United States, for the benefit of commerce and agriculture, and authorizing the Secretary of War to provide such stations, reports and signals as may be found necessary for the benefit of Agriculture and Commerce. This circular asks for suggestions and recommendations to enable the perfection of the system now established, and to make it more useful to those varied interests for whose benefit it is designed. Any suggestions of this character, addressed to "The Chief Signal Officer of the Armory, Washington, D. C.," and marked "Official Business," will not only be transmitted free of postage, but will receive the attention and consideration of the officers of this branch of the public service.

About Printing Paper,—"Honor to Whom Honor," &c.—The good and uniform quality of paper upon which the RURAL NEW-YORKER has been printed for some years past has attracted the attention of publishers in various parts of the country, and we not infrequently receive letters asking who furnishes us, the price, etc. The information desired has generally been imparted by letter, but to save correspondence—and at the same time render an act of justice to an honorable and always fair-dealing and reliable firm—we will now say that the RURAL NEW-YORKER is supplied with paper by Messrs. JESSUP & MOORE, a long-established and highly reputable Philadelphia and New York house of superior means and facilities, and, moreover, one that never disappoints its customers by failing to fulfill its engagements. During the past thirty years we have dealt with many paper manufacturers and dealers, but never with a firm so invariably prompt and accommodating as that of Messrs. JESSUP & MOORE. Hence we confidently refer our Cincinnati contemporary (whose letter is now before us), and all other inquirers on the subject of printing paper, to the above-named firm, which may be addressed at either No. 128 William Street, New York, or Philadelphia, Pa.

Why Do British Agriculturists Thrive.—Alderman MECHI of England states a truth which is well understood by people who do not blindly follow the teachings of commercial men whose interests are most largely subserved by free trade. He says: It is precisely because British farmers have their customers—the British manufacturers—almost at their doors, and that other corn producing countries have *not* any manufacturers, that British agriculture is rich and thriving."

The New Canada Patent Law, which goes into effect September 1, provides that *all* inventors may obtain patents in the Dominion upon the same terms as residents; but the patent is invalid if it has been granted in any other country for a period longer than one year prior to filing the application in Canada; and the inventor must also select a domicile in Canada where the Patent Office may correspond with him or the solicitor presenting his application.

RURAL BREVITIES.

C. O. H. can obtain what she asks for by addressing ALEX. HUDNUT 218 Broadway N. Y.

P. QUINCY, Branch Co., Mich., is informed that we do not know of any such drill as he describes.

M. B. PRINCE. We have forwarded your request to Farmer Garrulous, who will doubtless espond.

GEO. V. NORTON, Turin, N. Y., is informed that we will insert his advertisement when he sends us $3.00.

THE Aldine for August is a magnificent specimen of illustrative and typographical art as well as literary excellence.

I. G. F., Paris, Texas, is informed that in our judgment "the best form of horse rake to rake up corn stalks into winnows," is the old wooden revolving horse rake.

THE Horticulturist announces the consolidation of the Western Pomologist and Gardener with itself, MARK MILLER conducting the Western Department of the consolidated.

A CORRESPONDENT asks, "Who is OSSIAN?" He is said to have been a Celtic warrior-poet who lived in the third century, and is reported to have been the son of FINGAL or FINN MACCUMHAILL.

SAM BREWER should read what has been said about condensing milk in "Willard's Practical Dairy Husbandry" and in previous issues of this paper. There is no recipe we can give that will be found available for his use.

A. B. MELINDY is informed that we cannot tell him where he can get the California wheat mentioned in RURAL NEW-YORKER, July 6, but if he will write to T. HART HYATT, San Francisco, Cal., we think he can learn where it may be obtained.

"WESTERN MOUNTAIN GIRL" is informed that Eureka is derived from the Greek verb *Heurrin*, to find. The root is *Heur* (present infinitive *Heuriskein*). The meaning of Heureka is "I have found." When HIERO was king of Syracuse, he suspected the silversmiths had adulterated his crown. He called upon the philosopher, ARCHIMEDES to determine the facts, and he exclaimed "Heureka!" The word is written Eureka in English, the accented letter, H, being dropped.

INDUSTRIAL SOCIETIES.

The Washington Co., Oregon, Fair is to commence Oct. 14.

The Oregon State Fair is to commence Sept. 30, and continue six days.

The Pataskala, O., Ag'l Soc. will hold its 13th Fair near Pataskala, Sept. 18-20.—G. N. ROWLING, *Sec.*

The Ohio Horticultural Society holds its Summer meeting for the inspection of vineyards and orchards at Chillicothe, August 7th and 8th.

The American Association for the Advancement of Science is to hold its next meeting at Dubuque, Ia., commencing Wednesday, Aug. 21.

The Michigan State Pomological Soc. holds its next meeting at South Haven, about the second week in August—or whenever peaches are in condition to eat.

The Nebraska State Hort. Soc. holds its fourth semi-annual meeting at Nebraska City, Aug. 6, for the purpose of discussing the merits of early fruits, and attending to other business.—ROB'T W. FURNAS, *Sec.*

The New York State Poultry Society held a semi-annual meeting July 9. A special meeting of the Society is to be held at Elmira, Wednesday, Oct. 2, when the time and place of holding the next Exhibition will be determined. Notice was given of an amendment to the constitution providing that members may vote at the annual election by proxy.

Premium Lists Received.—Premium list of Delaware Co., Iowa, Ag. Soc; fair at Manchester, Sept. 24-26. Of the Kansas State Board of Agriculture; fair at Topeka, Sept. 16-20. Of the Cherokee Co., Ga., Fair Association; fair at Rome, Oct. 8-11. Of the Portage Co., O. Ag. Soc.; fair at Ravenna, Sept. 25-27.

Doylestown, Pa., Ag. and Mech. Institute.—Officers elect: *Pres.*—Dr. ISAIAH MICHENER, Curversville, Bucks Co. *Vice-Pres'ts*—Col. Isaiah James, New Britain; William Stuckert, Warrington. *Treas.*—Dr. D. P. James, Doylestown. *Cor. Sec.*—Nathan C. Janney, Doylestown. *Rec. Sec.* Eastburn Reeder, New Hope. The next annual exhibition will be held at Doylestown, October 1st-4th.

The Farmers' Conference Club of West Jersey, is the name of an organization effected by the union of "The Progressive Farmers' Club" of Mt. Laurel, "The Farmers' Club" of Woodbury, the "Farmers' Mutual Benefit Association" of Camden Co., and the "Burlington Co. Farmers' Club," for the purpose of holding joint quarterly meetings and discussions. The respective Clubs, named above, retain their distinct organizations, and hold their regular meetings separately; but they unite for quarterly meetings, and have elected SAMUEL A. DOBBINS of Mt. Holly President.

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119 121 Nassau St., New York.

BUSINESS NOTICES.

HOW TO OBTAIN A "COLLINS"

Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.

Get Descriptive Pamphlet at 36 Dey St., New York.

Brilliancy of Complexion.—For its preservation Burnett's Kalliston is guaranteed.

Social Topics.

YESTERDAY.

I was blind till yesterday
When Alonzo came to me;
Noblest, truest, best of men,
I can only see since then.

Blind, and doubly blind with tears
I have lived a thousand years
Since the time he came to me,
Yet 'twas only yesterday.

Tell me, ye of longer sight,
Was the world as fair and bright,
Ere this love of mine, so kind,
Kissed me till I was not blind.

Did the twilight use to close
Like the shutting of a rose?
And the daybreak shine with dew
As if earth were made anew?

Did the moon's white grace invite
Companies of stars at night?
And the noontide lie abroad
Like the great broad smile of God.

Life was like a volume shut,
All the beauteous leaves uncut,
Till Alonzo came to me—
Came and kissed me, and I see.

[*Alice Cary.*

THE GLEANERS.

All over the broad and fruitful surface of the United States the farmer is to-day gathering his crops of grass, wheat and other grains. The hill-sides and valleys are golden with the ripening harvest; the voice of peace and plenty is everywhere heard in the land, and forty millions of people will soon be giving thanks for stuffed corn cribs and bursting barns. This favored land is never afflicted with successive seasons of drouth, like Persia, with famine, like Ireland, nor is it overcrowded with human beings like England. It is the home and storehouse for all the poor and oppressed of the world. We do not gather our wheat after the manner of the primitive simplicity represented in the beautiful picture we give this week; our fields being so vast it is necessary to use the best machinery, and our women having work of greater importance to look to than gleaning. Every mother may sit under her own vine and fig tree, however, as this one does, playing with her child, who reaches for the apple as he reclines on a bunch of wheat beneath the shade of trees. This delightful scene brings to mind the joys and comforts of a rural life, than which there is none more conducive to health, intelligence, independence, virtue and happiness. Our picture of the Gleaners tells its own story, of a happy mother and healthy child. It is beautiful, suggestive, and cannot fail to please.

SAVING MONEY.

There is, perhaps, no one in this world more to be pitied than the poor man—the man who has got into the habit of saving until he saves from sheer delight in seeing his wealth increase, and of counting every dollar of expenditure as though its loss was something that could never be repaired. Yet it is the duty of every poor man to save something. The possession of a few dollars often makes all the difference between happiness and misery, and no man, especially with a family dependent upon him, can be truly independent unless he has a few dollars reserved for the time of need. While extreme carefulness as to the expenditure of money will make a rich man poor, a wise economy will almost as certainly make a poor man rich, or at least make him, to a considerable extent, independent of the caprices of employers and of the common vicissitudes of life. Nothing is more important to the poor man than the habit of saving something; but his little hoard will soon begin to grow at a rate which will surprise and gratify him. Every workingman ought to have an account in some savings bank, and should add to it every week during which he has full employment, even if the addition is but a dollar at a time. If he does this he will soon find the dollars growing into tens, and these tens into hundreds, and in a little time will be in possession of a sum which is constantly yielding an addition to his income, which secures him a reserve fund whenever one is needed, and which will enable him to do many things which, without a little money, he would be powerless to do.—*Pittsburg Post.*

Let amusements fill up the chinks of your existence, not the great spaces thereof. Let your pleasures be taken as Daniel took his prayers—with his windows open; pleasures which need not cause a single blush on an ingenuous cheek. —*Parker.*

DON'T BE TOO SENSITIVE.

Here is a short article we find floating around on the unknown sea of journalism that many men should paste in their hats and ladies on their bonnets, if room can be found on "the little duck of a thing." These people, liable to quick emotions with sense but not reason, showing their nature in their countenance, and often marring repose and friendship by unwarranted suspicion, are found in all our cities. Let them read and profit by this:

"There are some people, yes, many people, always looking out for slights. They cannot carry on the daily intercourse of the family without some offence is designated. They are as touchy as hair triggers. If they meet an acquaintance on the street who happens to be preoccupied with business, they attribute his abstraction in some mode personal to themselves, and take umbrage accordingly. They lay on others the fact of their irritability. A fit of indigestion makes them see impertinence in every one they come in contact with. Innocent persons, who never dreamed of giving offense, are astonished to find some unfortunate word or momentary taciturnity mistaken for an insult. To say the least, the habit is unfortunate. It is far wiser to take the more charitable view of our fellow-beings, and not suppose a slight is intended unless the neglect is open and direct. After all, too, life takes its hues in a great degree from the color of our mind. If we are frank and generous, the world treats us kindly. If, on the contrary, we are suspicious, men learn to be cold and cautious to us. Let a person get the reputation of being touchy, and everybody is under more or less constraint, and in this way the chance of an imaginary offense is vastly increased."

THE GLEANERS.

A STRING OF PEARLS.

Quarrels would not last long if the fault was only on one side.

Spare that you may spend; fast that you may feast; labor that you may live; and run that you may rest.

Disdain not your inferior, though poor; since he may possibly be much your superior in wisdom, and the noble endowments of the mind.

A maxim is the exact and noble expression of an important and indisputable truth. Sound maxims are the germs of good; strongly imprinted in the memory, they nourish the will.

Our Story-Teller.

THE LITTLE SAVOYARD.

A TRUE STORY OF STREET LIFE IN PARIS.

It was the twelfth night after Christmas—an evening celebrated in England, France and Germany by fetes and entertainments, in which the children bear a prominent part.

I must ask the reader to accompany me to an elegant mansion in the aristocratic Boulevard of Malesherbes, in the city of Paris. It was easy to see that something was going on inside, for it was brilliantly illuminated, and from time to time elegantly-dressed figures were indistinctly seen through the openings of the curtains.

It was a Twelfth Night festival. The saloon was fairly ablaze with light. Multitudes of children, dressed with taste, moved about gracefully in childish dances, or eagerly partook of the bon-bons, which on that occasion are always liberally supplied. Among them moved elegant ladies, most of them being parents of the children present, who with smiles watched the enjoyments of the little ones.

At last came the grand ceremony of the evening. This was the cutting of the Twelfth Night cake, which was of mammoth proportions, and of which each guest was entitled to a share. The cutting of the cake was watched with interest, and the pieces were drawn by lot. Just before this was done, however, the Countess de Charny said to the hostess:

"Will you gratify me in a little caprice?"

"Certainly," said the hostess, complacently.

"It is this:—I wish my portion of the cake to be given to the poorest little boy we can find in the street."

The French are always fond of novelty, and this "caprice" struck the hostess as promising a pleasant variety.

"It is a good thought," she said. I will at once dispatch Antoine on your errand."

Antoine was at hand, his services being liable to be called upon at any moment. He shrugged his shoulders as the message was given him, and thought there was no accounting for the caprices of fine ladies. But of course it was not for him to remonstrate, and he went out to execute his errand. Reaching the street, he looked around him, hoping he might not have to go far

in the cold, for it was one of the coldest nights of the Winter.

"Ah, there's a little vagabond, luckily! Now to capture him."

The boy referred to was a rugged little Savoyard, of ten years old, apparently, who was standing opposite, with his little violin under his arm. He had been about the streets all day, playing wherever he could get listeners. From some places he had been driven with abuse, for his instrument was far from being a superior one, and poor little Carlo was only a passable player. The poor fellow had suffered not only a little with cold, for his clothes were thin and by no means sufficient for the season; and he had had nothing to eat since the crust of bread which was given him in the morning by the speculator who had brought him with several others, to Paris, and now lived on their earnings, doling them out the smallest allowance of food that would keep soul and body together.

After wandering about the whole day, little Carlo had strayed into the Boulevard des Malesherbes, and had paused in front of the beautiful mansion where the festival was going on. He could see indistinctly the forms of the children who were participating in the entertainment, and it is quite likely that the poor little fellow felt a sorrowful envy of those whose lot was so much brighter than his. His gaze was so intent that he did not notice the appearance of the servant until Antoine, having crossed the street, laid his hand on his shoulder. Carlo started in alarm, and tried to tear himself from the servant's grasp.

"Not so fast, little chap," said Antoine, "I want you."

"I didn't do any harm," said the Savoyard, trembling; for he supposed Antoine's intentions were unfriendly.

"Who said you did? I only said that I wanted you."

The little Savoyard looked at him distrustfully. He had met with so little kindness in his life that he regarded strangers as enemies rather than as friends.

"You are to come with me into yonder mansion," said Antoine.

"Where the lights are?" asked the ragged boy, in surprise.

"Yes. Come, hurry along. I don't want to stay out here in the cold."

"But why am I to go up there?" asked Carlo, puzzled.

"You will know when you get there. All I can tell you is that my mistress wants you."

"Perhaps I am wanted to play on my violin," thought the boy; and with this idea he followed the servant to the entrance of the mansion.

A moment later he was ushered into the brilliant saloon, blazing with lights. He looked around him, dazzled, and nearly blinded by the glare. There was a chorus of ejaculations, and the young gentlemen and ladies gathered around the timid little Savoyard, who stood bewildered in the midst of the magnificence.

In the midst of it the Countess of Charny, whose caprice had been the cause of his appearance, advanced towards the little boy, and gently removed his tattered cap.

"Ah, he is indeed pretty," she said, as his chestnut hair fell in a natural wave over a fine brow, which seemed white in comparison with his sunburnt cheeks.

His eyes were a bright hazel, his features were exquisitely turned, only thin from want of sufficient food. In spite of his rags, it was easy to see that he was gifted with beauty.

"Countess, you will soil your gloves," said a guest, as she took the little boy by the hand and led him forward into the center of the saloon.

"Then I can buy another pair," she said, indifferently. "It is I who sent for you," she said to Carlo. "I will tell you what to do."

The drawing commenced. The little Savoyard followed the directions of the Countess, and his share of cake was handed him.

"Whoever finds the ring in his slice shall be king of the party," said the hostess, in explanation; or if a young lady she shall be queen. The king or queen has the right to select one of the opposite sex to share the honors of royalty."

"May I eat it, madam?" asked the Savoyard, with a longing glance at the cake he held in his hand.

"Yes, my child; but have a care not to swallow the ring, if it should be within."

All the children were eagerly examining the slices, in the hope of finding the ring, which was the prize of the evening.

In the midst of it, the little Savoyard drew the glittering circlet from the cake, saying to the Countess, "I have it, madam."

"The king! The king! The little Savoyard is king?" shouted the children.

"You are the king of the festival," said the hostess, advancing and leading forward Carlo, who seemed bewildered by the enthusiasm.

It was a strange scene—the little ragamuffin in the center of the saloon, surrounded by elegantly dressed children, over whom he was called to exercise sovereignty. The children enjoyed it better than if one of themselves had been chosen.

"A queen! A queen! He must name a queen!" shouted all.

"Look around you," said the hostess. "It is for you to choose a queen from those present."

The little Savoyard looked around him a moment, and then went back to the Countess de Charny.

"I want you to be queen," he said.

"But," said the Countess, "it is the custom to choose a young girl."

"I want you to be queen," he persisted.

"Why do you choose me?" she asked.

"Because you are kind to me," said Carlo. "Besides, you look like my mother."

"Like your mother? Is she living?"

"I don't know, madame; but I have her picture."

"Show it to me," said the Countess, who seemed to be moved by a strange interest.

Carlo drew from under his ragged vest a small locket suspended by a plain white string. The picture, though stained and discolored, presented the face of a beautiful young lady of twenty. No sooner did the Countess cast her eye upon it than she uttered a cry of joy, and threw her arms around the astonished boy.

"My boy! my boy!—my own little Victor! Are you again restored to me?"

All the guests gazed in astonishment at this unexpected tableau. The Countess, quickly recovering herself, said, while an expression of joy irradiated her sweet face:—"The picture is mine, as you can perhaps discover by examining it. Eight years ago I was journeying in the northern part of Italy with my husband and my little Victor, then four years of age, when he suddenly disappeared from me. We had no doubt that he was stolen, and offered a large reward for his recovery, but without success. From that day I have mourned for him as for one whom I never expected to see in this world. It is doubtless Providence who by such strange means has restored him to me."

"Are you my mother, then?" asked Carlo.

"Yes, my child," and again the mother clasped the boy, ragged and dirty though he was, to her bosom."

This time he returned her caress.

"Then I shall not be hungry any more?" he said.

"No, my poor child."

"Let him tell us his story," demanded the children.

So, seated on a chair in their midst, the little Savoyard told his story in answer to the many questions that were poured in upon him. As far back as he could remember, he wandered about with his little violin, in Italy at first, but for the last two years in Paris, where he had suffered every discomfit and privation. He was in the charge of an Italian named Giacomo Bartoni, who professed to take care of him, and to whom his violin belonged.

"We will send for him to-morrow," said the Countess. "I must buy the violin of him as a memorial of the years of terrible privation through which you have passed."

That night the little Savoyard, who was accustomed to sleep on a bed of straw, rested his weary limbs on a bed of down, in the beautiful mansion of the Countess de Charny. The next morning he was arrayed in a suit of elegant boy's clothing, in which he looked transformed. Scarcely was the metamorphosis complete, than his Italian master, who had been summoned, made his appearance, and bowing almost to the ground, was admitted into the presence of the Countess.

"Do you recognize this young gentleman?" asked the Countess, pointing to Carlo, who now looked like a little prince.

"No, madam."

"Yet you ought to know him well. It is the little Savoyard, Carlo."

Giacomo was overwhelmed with astonishment.

"But I do not understand," he said.

The explanation was briefly made. The Italian was paid a munificent sum for the violin, which is now the only link that unites the little Count Victor with the little Savoyard of former years. He is now at a military school, and bids fair to maintain by his talents the distinction of the illustrious family to which he belongs.

THE POT OF GOLD.

LIEUT. CALDERWOOD was at his sister's house on a visit, during his two weeks' furlough. He was sitting with her one evening in the parlor, while her two children were studying their lessons at the table in the back room.

"So Paul is a lazy scholar, eh?" said the lieutenant, lowering his voice.

"No, not at all. He is diligent enough, provided his studies suit his fancy. But what are they? If you look over his shoulder now, you'll find him poring over some Book of Dreams, or the History of Capt. Kyd and his treasures, instead of his school books. The boy is deranged on the subject of growing rich suddenly, at some bold master-stroke. I wish you would talk to him. You are supreme with him just now. It may be you could ridicule him out of his absurdity; I cannot."

"But ought he to be ridiculed?"

"James!"

"Well, call Clara in, and I'll go talk to him a while."

Mrs. Forbes beckoned her little girl to her, and the lieutenant sauntered into the back room, and, I am sorry to say, lighted a cigar.

"Well, Paul, my boy, hard at it? What's the book? Latin or algebra?"

Paul colored a little. "Oh, I can run over my lessons in the morning. They're so horribly dull. I'm reading now."

"Head of your classes, I hope, aren't you?"

Paul laughed. "No, indeed, near the other end. Well, the truth is," throwing down his book, and leaning over confidentially, "I've got it into my head to make money. Mother has hard work to get along with Clara and me."

"I know, Paul," said the lieutenant, gravely.

"Now, what good does this scanning of dead languages and poring over cube roots do? How much meat will that put in the pot?"

"How do you propose to help your mother?"

"Well, sir," whispered Paul, eagerly, for this was his first listener, "if I had a large sum of money that I could get all at once, without any delay—a large sum, then, afterward I could make a scholar or what I pleased of myself."

The lieutenant drew the book Paul had been reading toward him. "Revelations by Clairvoyance and Spiritualism, Regarding Hidden Treasures." Paul watched him keenly as he read the title, but not the vestige of a smile lifted over the lieutenant's face.

"I'll tell you candidly, uncle, about it," hitching his chair nearer. "Fred Parker came from Jersey, near where Kyd buried his treasure. You know the place?"

"Not precisely; do you?"

"Not the exact spot, but it is near Burlington. Kyd buried the chest, and then called on his men to know who would stand guard over it for a hundred years. So one fellow stepped out and stood firm till Kyd shot him through the heart. So they buried him standing over the chest, with his drawn sword in his hand. You've heard the incident?"

"Yes, but——"

"How will I find the place? Well"—Paul began to fidget a little, turning over the leaves of the book.

"Perhaps you will laugh at me, uncle, but I don't see why you should. The ancients called in the aid of oracles and dreams. They knew how to read coming events in the flight of birds, or by the entrails of beasts. If we cannot do so, too, it seems to me it is because we have lost the power, not because the signs are not there to read. The wisest men have not been ashamed to be superstitious. It is only fools who think there is nothing in the world but what they can see and handle."

"I quite agree with you in regard to the fools, Paul."

Paul, who had been defiant hitherto, blushed with pleasure. "I don't know," he continued, "what credit to give to spiritual mediums. Fact is, I've run after them till I'm about tired. They've got all my last two quarters' allowance, and so I've had to go without new clothes this Winter. But if I could succeed! If I could only find the pot or chest! Just think! It would make mother easy for life!"

"Very true," said his uncle.

They were both silent for awhile, the lieutenant smoking, and Paul turning over the leaves of his book with feverish haste, glancing up now and then, furtively, at his uncle.

"What first put this matter in your head, Paul?"

"I don't know. We really need money so often. And then Fred Parker told his stories of Kyd's treasures, and I see these clairvoyant advertisements in the paper every day——"

"As to those mediums," said Lieut. Calderwood, thoughtfully, "my opinion is that they will take your money and you will get no information in return. I have never had any intercourse with them, for I have no belief in their ability to tell you anything you do not already know yourself. A friend of mine, Capt. Johns, told me of a woman—a fortune-teller—whom he consulted here as to his future life, who made some remarkable predictions—very remarkable indeed. She sketched out his whole career for him."

"Who was she? Where is she to be found?" cried Paul, forgetting to ask whether the prophecies proved true or not—and they were most ridiculously absurd and untrue.

"At No. 81 Poplar street," said his uncle, after several moments' hesitation. "She was to be consulted only at night. But that was several years ago."

"I'll go and see her to-morrow night," said Paul. He was more nervous and unsettled than usual that evening, and sat looking in the fire for a long time.

"The boy is ruined," sighed his mother. "Nothing will ever restore him to common sense or usefulness."

"It is a long day until sunset," said her brother, quoting his favorite proverb.

The next night Paul put on his overcoat just after supper, and his last dollar in his pocket. His uncle had not been at home during the afternoon. Paul kissed his mother good-by once or twice.

"Where are you going, my son?"

"To make our fortune," he said, gaily, as he ran out.

No. 81 Poplar street was soon found. Beside it was a narrow, dark entry, lighted by a red lamp, which gave out a ghostly and murderous light. Paul went up the winding stairs and found at the top a door with a placard, on which was printed with a common pen—

"MADAME D'AUBREY, SEERESS."

Paul tapped. No answer. He tapped again.

"Enter!" said a hoarse voice.

He pushed the door open, and went in. The room was bare of furniture, except another red lamp, which shed its bloody glare over the gray walls, and a black, antique chair, in which sat a tall, gaunt woman. She was robed in a loose, falling habit of black from head to foot. Her face, of which Paul could see little but the chin, which was deathly pale. Now and then he caught a glimpse of a pair of keen eyes, which he thought were both fierce and threatening.

She did not bow nor rise. He remained standing before her. The very assumption of authority which this implied impressed and awed Paul.

"I came to consult you," he stammered.

The black-covered head nodded. "It is unnecessary for you to explain yourself further. Your name is Paul Forbes. You desire to know by what means you may obtain a certain treasure."

Paul was terrified. The other mediums that he had consulted had never told him actual facts.

"When do you hold a seance?"

"Now," in a hoarse, grating voice. "I need no trumpery tables, or cards, or machinery. Do you ask whether I can see into futurity? You have a scar on your shoulder beneath your clothes, and an unhealed wound below your knee. If I can tell you about these things that other eyes cannot see, you can afford to trust me for the truth of whatever else I may say. Ask what you will, and I will answer."

"How am I to obtain the treasure?" said Paul, trying to speak boldly.

"How should I know what treasure you mean? But pause." The figure moved her hand slowly to her forehead, muttered for a few moments, then took it slowly down, and looked piercingly at the terrified Paul.

"The pot of gold waits for you, enough to give you fortune and power. Here are the directions by which you are to obtain it." She placed a small slip of paper in his hand.

"On these conditions," she said, in a hollow whisper, "that you solve the mystery of this paper alone. You are to receive no assistance in reading it; if you do all is lost. Begone! you are answered."

Paul placed his money in her outstretched hand and went stumbling down the stairs under the red lamp.

The next morning by daybreak he was knocking at the door of his uncle's chamber.

"What is this?" showing him a paper full of figures, lines and diagrams. "Don't read it to me. Only tell me what sort of a puzzle it is."

The lieutenant raised himself on his elbow, smothering a yawn. "It seems to me a mathematical puzzle, Paul; the description of some locality, I think. I won't interpret it to you. It would need a good topographical engineer to do that. Where did you pick it up?"

Paul mumbled out something, and disappeared.

A week after the lieutenant returned to his regiment. He noticed Paul busy every night with his mathematics, and his slate and pencil. The dream book was laid on the shelf.

Several months after, Mrs. Forbes, writing to her brother, said:

"I have something to tell you of Paul which I know will please you. Much to my surprise, he took the first prize in mathematics at school last term. Finding prize-taking agreeable, I presume, he has devoted himself to all his studies with renewed assiduity. But mathematics appear to be a passion with the boy. He told me that he designed studying topographical engineering, the very profession I would have chosen for him. I cannot tell you how thankful I am for his sudden change."

The lieutenant laughed, but made no other sign.

He heard from his sister but at long intervals, as he was stationed on the frontier, but every letter brought accounts of Paul's incessant, steady labor in the one direction.

Whether the hope of the treasure still urged him on, or whether he found that mathematics were his proper work, and that for which his talents and real tastes best fitted him, we cannot say. But it is certain at the end of three years he was ready to enter the highest class in Practical Surveying of the Polytechnic College.

A year later, Lieut. Childerwood was seated in the door of his tent, where two or three strangers dashed up, and a stout, bearded, bright-eyed young fellow jumped off his horse, caught him by the shoulders, shook him, laughed, and ended by kissing him like a girl.

"Paul Forbes! Bless you, boy! How did you come here?"

Paul jumped to his feet, turned red, and then burst into a shout of laughter.

"You were the seeress? I know you were?"

The lieutenant nodded. "Do you begrudge the dollar for his prophecy?" he said. "As I look back now, I don't quite approve of my manner of teaching you your lesson, but you have shown yourself a better scholar than I feared.

"Been appointed assistant surveyor of this Territory, sir; attached to the exploration party under Gen. Hay. I can't tell you all now, only that I have the position for ten years, at a fine salary; and mother and Clara are snug and happy as they never were before. What do you think of that, Uncle Jem?"

Uncle Jem wrung his hand. "Think? Why, that you must have worked hard to achieve so much, Paul."

"Yes, yes, it took hard work!" nodding. "It's queer, too, what trifles will drive a fellow on a road, eh?"

Several months after, the lieutenant came upon Paul, one day, who was looking at a bit of yellow paper covered with figures and lines.

"Do you know," said he, looking up, "there's a puzzle that took me years to work out? I did it just before I left home, and I found the answer to it—nothing."

The lieutenant paused, smiled. "Hard, healthful study, a good profession and a good income will not serve for a pot of gold, then, Paul?" he said, with a shrewd twinkling in his eye.

BE always frank and true; spurn every sort of affection and disguise. Have the courage to confess your ignorance and awkwardness. Confide your faults and follies to but few.

Ladies' Port-Folio.

HER SMILES ARE ALL FOR ME.

BY FANNY M. BARTON.

SOME have smiles more winning,
Some have brows more fair,
Than my blue-eyed darling
With her soft brown hair.
But from all beguiling
Her pure heart is free,
And I'm happy, knowing
Her smiles are all for me.
Dear smiles—tender smiles,
From deceiving free;
Better far than beauty's wiles,
And only worn for me.

Some have witching beauty,
Some have gold and gems;
But her love is richer
Than monarch's diadems.
If in halls of splendor
Gayer smiles there be,
Still I'm happy, knowing
Her smiles are all for me.
Dear smiles—tender smiles,
From deceiving free;
Better far than beauty's wiles,
And only worn for me.

Down the lengthening vista
Of the coming years,
We shall walk together,
Sharing smiles and tears;
E'en life's cloudy weather
Flushed with hope will be,
While I'm happy, knowing
Her smiles are all for me.
Dear smiles—tender smiles,
From deceiving free;
Better far than beauty's wiles,
And only worn for me.

HIGH EDUCATION FOR WOMEN.

THE word education comes from a Latin word signifying to lead out of; therefore the term itself implies a leading out of ourselves into the vast expanse of knowledge. There have been many theories held in regard to this momentous question, and scarcely two persons agree on it, for nearly all attempt to set up a standard to which each individual woman should conform. This never can be, for the All-wise one has given to each of his daughters tastes and peculiarities which fit her to perform her separate mission in life.

It was formerly asked whether a lady should be educated at all, and surely we find the answer to this at once, by considering the mental power with which she is endowed. Is this power of comprehension given for no purpose? And again we find the answer in the word of GOD, when we contemplate the parable of the talents, where we are commanded to make the best possible use of our natural gifts.

It would be wise for every one to train her mind as far as her capacities will allow; for a high education will not unfit her for home duties, but rather refine her tastes, and fit her to be the companion of a learned consort; and a little knowledge of science will aid her in domestic economy.

On the other hand, if a woman's mind be so entirely given to learning that she cannot attend to her proper duties as daughter, wife or sister, then it is injurious, and makes an unwomanised woman, which surely is much worse than an unmanly man. When a lady finds herself, for the sake of learning, forgetting these sacred callings, she should by all means turn from the temptation as soon as possible; for, if each woman could see, as in a mirror, the ideal of what her life was intended to be on earth, it would not be a pedantic, learned "other man," as it were, throwing aside all those duties of kindness and comforting, which she owes to her fellow-creatures

But *good* education does not consist in only training the mind. In each individual there is a three-fold nature, namely, the body, the mind and the soul, and to make up a perfect whole these three should be properly trained or educated, (*i. e.*, drawn or led out). The body, in order to be kept in good health, should have frequent exercise and plenty of air, and be taught gracefulness and neatness; for without exercise we become weak, useless and helpless, and the mind also becomes debilitated and inactive. Every lady should be a model of neatness; if this were the case many petty troubles would be spared, and it is the small cares that make up the chief burden of life. The mind requires bending, and a guiding spirit to lead it into the proper channel, for if left to itself it will seldom, if ever, find the right one.

But of what use will be all the training and nurturing of body and mind, if with all our gettings we get not the true understanding; if the soul has not found the true refuge and resting place; if we lie not down in the green pastures, and if we drink not of the water of everlasting life? HARRY.

St. Mary's, Ontario.

HEIRESSES AND OLD MAIDS.

A WRITER in London Society thus talks:—Speaking of heiresses and heiress-hunters, I must say that beyond all comparison, some of the best and brightest women I have known have been heiresses—but with an important qualification. They are heiresses who have never been married. They have been clever enough to avoid all the arts and crafts of the heiress-hunter. Perhaps they have been a great deal too clever. They have been so anxious to escape a simulated affection that they have lost a true. They have imputed, or have been persuaded to impute motives, where none existed. In early life they have allowed themselves to be governed too much by "a little hoard of maxims preaching down a daughter's heart." They have never allowed themselves to fall in love with the tutor, after the magnificent precedents of the Shirley of Charlotte Bronte, and the Lady Geraldine of Mrs. Browning. Perhaps they have so awed good men by their riches that they have never had the chance of mating with an equal mind, and any other chance they have righteously despised.

I think myself that the old maids are, at least, as good as the matrons, and the heiresses are the pleasantest variety of old maids. You see, they are old maids by their own free will. They have not married for the mere sake of getting settled, as is the case with so many women. Their sweetness is not of that acidulated kind which is the generic flavor of spinsters. Frequently they have a singularly wide and generous range of sympathies. To give and to forgive seems the very air they draw. They have more culture than most women have, the result of larger means and greater leisure, and very frequently they are fond of friends and society, largely indulging elevated tastes. They will give you sympathy, appreciation, allowance, when perhaps none others will; and every clergyman knows where the stream of bounty will run umplest and least stained by selfish motives.

Now and then you hear that such a one is married. People lift up their eyes and their hands. It almost seems as if nature were avenging a life of common sense by an act of tremendous absurdity. But I don't see why they should not. An immortal spirit never grows old. I know a brilliant old lady of seventy who is younger in heart and mind than most girls of seventeen. When Louis XIV. asked a very old woman at what age women ceased to love, he was told that he must ask some one older than herself. Of one thing you may be quite sure—that this sort of heiress never marries a heiress-hunter.

WOMEN AS INVENTORS.

MRS. MARY R. W. "would like to be informed of the number and value of inventions made by women, if there *are* any, and if none, *why* none." The general ignorance of mechanics among women is probably the greatest drawback to their inventive spirit. Mrs. M. E. J. GAGE, in a small work on "Woman as Inventor," claims the following women to be the inventors of the following inventions:—"CATHARINE LITTLEFIELD GREENE (widow of Gen. GREENE of Revolutionary memory) of the Cotton Gin; PAMPHILIA of the Island of Cos, of silk gauze; Miss BETSEY METCALF of Providence, R. I., of sloop building in 1798; BARBARY UTEMAN of Ainmaberg, Saxony, of pillow lace, which includes Point, Valenciennes, Chantilly, Lisle, etc. ISABELLA and ALEXANDER CUNIO of Ravenna, Italy, twin brother and sister, of wood-engraving; a French woman, of the manikin; a Massachusetts woman, of the deep sea telescope; with reference to more modern inventions relative to domestic use, as the lifting machine, patent sifters, improved stove chambers, etc." Women are naturally ingenious—*all* genius is *natural* for that matter—but the enterprise of men makes haste to utilize that genius, patent the result, and pocket the money.

FANNY FERN ON DOLLY VARDENS, ETC.

FANNY FERN has her say about the prevailing style. Listen to her:

When I say that the street dress of the majority of respectable women of New York to-day is disgusting, I but feebly express my emotions. I say the respectable women, and yet, save to them who know them to be such, their appearance leaves a wide margin for doubt. The clown at the circus wears not a more parti-colored costume; in fact, his has the advantage of being sufficiently "taut," to use a nautical phrase, not to interfere with locomotion; while theirs—what with disgusting humps upon their backs, and big rosettes upon their shoulders, and loops, and folds, and buttons and clasps, and bows upon their skirts, and striped satin petticoats, all too short to hide their clumsy ankles—and more colors and shades of colors heaped upon one poor little fashion-ridden body than ever was gathered in one rainbow—and all this worn without regard to temperature, or time, or place—I say this presents a spectacle which is too disheartening to be comical. One cannot smile at the young girls who are one day—Heaven help them!—to be wives and mothers.

POPPING THE QUESTION.

SHE plucked it for the cherished youth,
A rosebud brightly glowing,
A tender pledge of love and truth—
'Twas one of Eden's growing!
And as with rival blush all over—
Herself a rose—the rosebud she bestows,
"Am I not worthy, too," soft sighed her lover,
"To have the rose herself who gave the rose?"

A YOUNG lady who has been greatly annoyed by a lot of young simpletons who stop under her window at night to sing "If ever I cease to love," wishes us to say, if they will cease that foolishness, come in and talk "business," they will confer a favor.

Reading for the Young.

THE BOY THAT LAUGHS.

I KNOW a funny little boy,
The happiest ever born;
His face is like a beam of joy,
Although his clothes are torn.

I saw him tumble on his nose,
And waited for a groan;
But how he laughed! Do you suppose
He struck his funny bone?

There's sunshine in each word he speaks,
His laugh is something grand;
Its ripples overrun his cheeks,
Like waves on snowy sand.

He laughs the moment he awakes,
And till the day is done;
The school-room for a joke he takes,
His lessons are but fun.

No matter how the day may go,
You cannot make him cry;
He's worth a dozen boys I know,
Who pout, and mope, and sigh.

LETTERS TO YOUNG RURALISTS.—IX.

FROM COUSIN JOHNNIE.

I AM sorry the printer made a mistake in my last letter. Instead of "WILLIE'S trial *is* sent him by a loving Father," he made me say "it *may be* sent him." As though there could be a doubt of it! Well, I must try and write more plainly in future, so that there shall be no more mistakes. I am much gratified that Wild Flower and IDA A. S. like Cousin JOHNNIE'S letters so well. Neither of them need be ashamed of their first letters to the RURAL. I sympathize with IDA in her great loss, and am pleased to see how she is trying, as far as possible, to make up their loss to her father and little sisters. I do not wonder Wild Flower's father longs for a milder climate; but I fear if he went as far South as North Carolina, he would find it almost too much of a change. Her Band of Hope is a novelty to me. Why is it so called, and what is its origin? NELLIE R's description of her home is very graphic. We shall be glad to hear the "lots more" she has in reserve for us. C. B. E. tells us, "Iowa is the finest country in the world." This seems to me rather a broad assertion, but I have no right to contradict it since I have never seen any other country than America, and he doubtless has. HARRY HECTOR forgets WILD ROSE is not a *wild* Indian, and therefore may not find a "string of beads" irresistible. However, if she is perfectly willing to tell her name, we shall all be glad to hear it. If not, we shall be quite satisfied to know her under the sweet name she has already given us.

Some of my little cousins, I know, will feel grieved, as I did, at having our pets called, by S. H. J., in the RURAL of June 15th, in an article entitled "Birds and Cats," "howling, hideous, feline pests!" He denounced cats as "cruel," for killing birds, when every one knows the cat is the natural enemy of birds, and that it is a Divinely implanted instinct that prompts it to seek their lives. If it is cruel for cats to kill birds, then it must be equally cruel for them to kill mice, or for any animal to kill another. But there is no cruelty in the question. That is a moral act, and of moral action the lower creatures are incapable. I can, however, give S. H. J. an example of cruelty. A short time ago, my sister's little pet kitten, which she loved almost as much as a human being, was playing in the yard, when some boys who were passing set their dog upon it, and in a few moments it lay gasping and dying in my sister's hands! The dog had only acted from instinct; who could blame him? but the boys, even S. H. J., I think, will acknowledge, exhibited an instance of the most wanton cruelty. If the number of cats *must* be diminished in order to protect the birds, let them, before their eyes are yet open and they scarcely know what life is, be drowned. It is a painless death, as persons resuscitated after drowning assure us. Instead of this, however, people allow whole families of kittens to exist and grow for weeks and months, and then cruelly carry them off and drop them on the roadside to starve, or become the victims of still further cruelty! I have dwelt longer on this painful subject than I intended, so must bid my little cousins good-by, with the promise of a more interesting letter next time.

A LETTER TO THE CHILDREN.

BY AUNT EDITH.

DEAR CHILDREN:—Always try to keep well, as this is much easier than getting well after becoming sick, besides saving the labor and worry of caring for you while sick.

Remember what older people tell you who regard your interest and are anxious to see you well and happy. Many children contract severe colds and cause themselves much suffering by handling snow with bare hands, making snowballs and throwing them (or stones) where they may do harm. This is an unhealthy habit which would be better for all children to abandon.

Choose such plays as are healthful and innocent. Often with your plays you may mingle some miniature work that will teach each other and make each other more useful as you become older.

I have read of a small boy who, while others around him were idle, whittled out a miniature sled that attracted a man's attention and admiration sufficient to gain for him a good place and steady work.

Steady employment makes steady and useful men and women, and if the compensation seems small, if economy is added it secures a good living.

To secure steady employment, one must be trusty and do work well in the absence of employers. Be careful of the tools with which you are furnished to work, be saving of your employer's products, and avoid all bad habits. Remember, children, to take care of your health, learn to do things well, and avoid bad habits.

A GOOD RULE.

'TIS well to walk with a cheerful heart,
Wherever our fortunes call,
With a friendly glance, an open hand,
And a gentle word for all.

Since life is a thorny and difficult path,
Where toil is the portion of man,
We all should endeavor, while passing along,
To make it as smooth as we can.

The Puzzler.

ILLUSTRATED REBUS.

☞ Answer in two weeks.

PUZZLE.—No. 2.

I HAVE a trunk with two lids, two caps, two musical instruments, two established measures, and a great number of articles a carpenter cannot dispense with. Then I have always about me two fine fish and a great number of smaller ones, two lofty trees, fine flowers, and the fruit of an indigenous plant; two playful animals and a number of smaller and less tame breed; a fine sting, some whips without handles, some weapons of warfare and a number of weathercocks; the steps of a hotel, the House of Commons on the eve of a division, two students or scholars, and some Spanish grandees to wait upon me. What am I? L. I.

☞ Answer in two weeks.

MISCELLANEOUS ENIGMA.—No. 2.

I AM composed of 14 letters:
My 8, 2, 12, 6, 14 is one of the United States.
My 10, 4, 9, 5, 13 is much used on ships.
My 1, 12, 6, 14 is a beverage.
My 3, 11, 5, 6, 14 is to look bright.
My 7, 9, 4 is much used all over the world.
My whole is the name of an article that should be in every house. W. F. C.

☞ Answer in two weeks.

ANAGRAM.—No. 2.

Memreerh lwie dna rbae ni ndim,
A stenotan dufrle si bdar ot nfdi;
Utb henw uoy fnid neo dkin dna ruet,
Henaeg ton hte ldo neo rfo hte wne.

☞ Answer in two weeks. LEWIE.

PUZZLER ANSWERS.—July 13.

ILLUSTRATED REBUS No. 2.—There will be a great overturning and uprising in Europe.

MISCELLANEOUS ENIGMA No. 1.—"Give me liberty or give me death."

ACROSTICAL ENIGMA No. 1.—Perfect bilateral symmetry.

Answer to Aunt Phebe's Anagrams of Dogs.—1, King Charles; 2, Blood-hound; 3, Newfoundland; 4, Mastiff; 5, Grey-hound; 6, Bull Dog; 7, Fox-hound; 8, Beagle; 9, Pointer; 10, Terrier; 11, Poodle; 12, Setter; 13, Spaniel.

News of the Week.

CURRENT TOPICS.

Trial by Jury.

WE announced the simple fact last week that the jury, in the case of Edward S. Stokes, for the murder of James Fisk, Jr., failed to agree and were discharged. This result surprised no one who had watched thoughfully the reports of the tedious trial. To us there seems no doubt whatever that when Stokes shot Fisk he meant to kill him; and that he had no provocation for shooting because of any personal demonstration Fisk made at the time; in other words, we do not believe Fisk drew, or attempted to draw, a revolver, even if he had one about him. But it is not improbable that Stokes feared attack: that his knowledge of the power and disposition of the man with whom he had to deal made him constantly fearful for his personal safety. And it was this fear and the knowledge that Fisk had procured an indictment against him, that prepared him to do the murderous deed he avows he did do. In the light of these facts the trial by jury demands notice. The law enacted by the last Legislature, with reference to jurors, has relieved the jury system in this city of its farcical features somewhat. But still men are not tried in all cases by their peers. Again, all men have not judicial minds. And with us it is a grave question whether trial by jury for capital offenses of this character is not a mistake; whether it is not better that such offenses should be tried before, and decided by, a bench of three or five judges men with trained minds, purity of character, knowledge of law, and capable of weighing all the points of law and evidence with intelligence, and who have a full appreciation of the grave responsibilities devolving upon them. No citizen would fail to feel more secure in person and property if he knew that the punishment of the guilty and the administration of justice was vested in such men. This we think a matter worthy of the most thoughtful attention of our readers.

The Indian Policy.

WE have had a visit from chiefs of the Apaches—a tribe of villainous Lo's that are responsible for a reputation for skillful thieving, pillaging and murdering, despite the efforts of peace-making commissioners and the paternal policy of the Government. One plank of our Reform Platform, published first December 16, 1871, and again July 5, 1872, was: "An Indian Policy which will recognize the Indians as citizens and treat them as such"—in other words, a policy which will give to every Indian a homestead of 80 or 160 acres upon the same terms that the public lands are distributed to actual white settlers, and with precisely the same tenure; that holds him responsible to the same laws and gives him the same privileges as white men; that gives him no more annuities, but compels him to earn his own livelihood without infringing upon the rights or property of others. Any other Indian policy will fail—unless it be a policy of extermination, to which we are utterly opposed, except so far as it may be necessary to protect those who live under and respect the law.

Catacazy vs. Fish.

IT will be remembered that the Russian Minister Catacazy had a falling out with Secretary of State Hamilton Fish, last year, the latter threatening to send Catacazy his passport if the Russian Government did not recall him. He was recalled, and when he got to Russia left for Paris, having been entirely relieved (at his own request, he now says) from official responsibilities. He has ventured into print in defense of himself against Secretary Fish. He addresses a pamphlet and documents to Chief Justice Salmon P. Chase. Now we do not know anything about Catacazy, personally, but his statement certainly has coherence, consistency, and leaves Secretary Fish (accepting Catacazy's version as true) in a position not flattering to his discrimination, honor and dignity. All this trouble is attributed by Catacazy to the unscrupulous intrigues of the prosecutors of the Widow Perkins' claims against the Russian Government, which Catacazy had been instructed to examine, with a view to arbitration if found to have any basis; but which, in the opinion of Catacazy (and of Cassius M. Clay, whose letter to that effect Catacazy publishes), had no foundation whatever. The prosecutors of these claims comprise a stock company, and men in high official position in the Government are reputed to hold stock. At any rate, Catacazy very clearly shows that they have had the ear of Hamilton Fish, who has been influenced to act in accordance with threats, made directly to Catacazy, to drive him out of the country if he did not defer to these claims. This whole matter has a bad look for our own officials, from the Catacazy standpoint. We shall see whether the State Department can, or will, give it a different coloring.

Stanley, the New York Herald Correspondent, and Dr. Livingstone.

IT is exceedingly amusing to read the comments made in the English papers upon the announcement that the New York Herald correspondent has penetrated Africa, found Dr. Livingstone, and is now on his way back to England with letters from the "Great Explorer." The accounts published, as coming from the pen of Stanley, of his adventures and the meeting with Livingstone, are not swallowed, "neck and tail," by the bulk of the English press; and indeed in this country doubts crop out, and men prefer to see credentials from Livingstone that the Herald's special has actually taken him by the hand, bidden him be of and given him good cheer, and left the valorous explorer to pursue his explorations after receiving his grateful benediction for the effort made to find him either in the body or out of it. We shall soon know how much "bunkum" there is in Stanley's stories; for it is announced (July 18) that he has sailed for England from Port Said, accompanied by a son of Livingstone.

Charles Francis Adams at Geneva.

THE manner in which the indirect claims of this Government, presented to the Geneva Arbitrators, were disposed of is said to have been inspired by, and assented to, by Charles Francis Adams. The London Times pays him this tribute: "The true benefactor of both countries—the man who has rescued the United States from the discredit of having caused a failure of the arbitration—is undoubtedly Mr. Adams. It is to his courage and straightforwardness that the declaration of the Arbitrators must be attributed. That declaration has been made individually and collectively, and Mr. Adams has, therefore, not scrupled to condemn the principle of the claims which the Executive Government of his country had sanctioned. In such conduct we recognize the highest patriotism."

About Pekin, China.

IT is not easy to get correct notions concerning matters in the Celestial Empire, if we are to believe the statements recently made before the Geographical Society of Paris, respecting Pekin, by Dr. Martin. He asserts that its population has never been equal to that represented by European authors, and that it has decreased under the present dynasty. It fluctuates between 800,000 and 900,000, though an exact census has never been taken. The majority of its population are Tartars and Chinese. There are not 200 Europeans there. Mahomedans number 30,000 to 35,000. The city is poorly maintained and insufficiently supplied with water; drains poorly constructed and the air filled with miasma; the narrow and tortuous streets in the heated seasons are filled with suffocating smoke, and during the rainy season are little rivers of mud. The only drinking water is from wells which is often not drinkable because of the soil through which it passes. Diseases there, both epidemic and endemic, produce excessive mortality, especially among children. Every morning vehicles go round to take away the little coffins which the parents place at the doors of their dwellings. This is the Celestial picture Dr. Martin gives us.

A Great American City.

THE last annual Message of the Mayor of New York contains some facts relative to the metropolis which are of general interest. The city contains 22 square miles, with a resident population of 1,000,000. It has a water front of 24 miles, 300 miles of paved streets, and 100 miles of unpaved streets. There are 2,000 public men, and 500 firemen, who cost the city 8,000,000 a year. Three thousand men are employed each day upon the public works. The city locked after 81,486 criminals last year, and relieved the distress of 195,331 poor and sick folks. There are 50,000 children in the private schools of various denominations. Judges and Court attaches cost $250,000. The average attendance in the public schools is 103,243. The city has 37 engine companies. The Museum of Natural History in the Park is frequently visited by 10,000 people a day. In 1871 there were 21,552 patients treated at the hospitals. The number of infants received at the asylums was 5,178. The number who found employment at the Labor Bureau was 43,058. The amount spent for buildings in 1871 was $2,000,000. There are 20,000 tenement houses in the city.

DOMESTIC NEWS.

New York City and Vicinity.

OWING to a storm, Madame Lenluer had a very small audience on the 15th for her first concert ... The weather has continued intensely disagreeable and hot ... Mayor Hall has made his annual message. SEMI-BUSINESS PARAGRAPHS.

The United States Watch Co., (Giles, Wales & Co.,) Marion, N. J., have just brought out and applied to their celebrated timekeepers a novel dust excluder, extremely simple and tasty, and being fastened by an eccentric screw is easily put on or removed. A perfect protection against dust or dirt getting inside the movement, and possessing the advantage over all other contrivances of the kind, of completely closing the aperture round the barrel equally as well as the balance of the space between the plates, and at the same time is so protected by lips resting on the edges of the plates, above and below, that it cannot interfere with the barrel by being pressed on to it by a tight-fitting case.

Loveliness on the Increase.—A marked increase of female loveliness is the eye-delighting result of the immense popularity which Hagan's Magnolia Balm has obtained among the ladies of America. Complexions radiant with snowy purity and tinged with the roseate hue of health are commonly met with whenever it is used.

Facts for the Ladies.—Mrs. M. C. Wheeler, Wolcottville, Ct., has used a Wheeler & Wilson Lock-Stitch Machine constantly since 1858 in family sewing, with no expense for repairs and only two needles broken. See the new Improvements and Woods' Lock-Stitch Ripper.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Saturday, July 22, 1872.

SINCE our last report the Custom House Tables of the Foreign Commerce at the Port of New York, for the recent Fiscal Year (ending June 30, 1872), have been published. The summary, as compared with the previous year, is as follows:

	1871-72. June 30.	1870-71. June 30.
Goods imported	$413,624,778	$308,729,495
Goods marketed	320,598,552	331,979,681
Customs on do	117,900,891	141,121,282
Produce exported	215,720,972	213,306,021
Foreign re-exports	10,332,801	9,410,845
Specie exported	50,125,823	82,905,497
Specie imported	2,381,134	9,443,173

The difference between the gross importations and the importations actually marketed at New York is $47,000,000, which accumulated in Bond, chiefly near the close of the year, to await the lower Tariff and the free entry of Tea and Coffee. The accumulation in Bond the previous year was less than $17,000,000.

During the week past trade has been generally quiet. The Export demand for Produce continues fair, but owing to difficulties in Canal navigation the receipts of Grain, &c., have been comparatively light.

There is a light business doing in Wall Street, and while this makes a dull demand for Money, the Banks are accumulating Deposits from the country, and are lenders of Money on call to the Brokers at 4@5 per cent., and on short time paper at 5@6 per cent.

The French Government have brought out a loan of $600,000,000 (or £120,000,000 sterling) in Europe, to pay off the German Indemnity, and as part of this Loan is negotiated in London, the rate of Interest at the Bank of England has been advanced to 3½ per cent., to correspond with the withdrawal of Gold for the Continent. The vaults of the Bank will soon be replenished from this country, as they were in May and June.

In our own market Gold is ⅛@¼ per cent. dearer, but all efforts to get up an excited speculation on the export demand have proved of little profit to the movers of the speculation in the Gold Room.

Stock prices were almost stationary most of the week, and the amount of business doing on the Exchange is at the Summer minimum. Yet at the very close the signs were favorable for some increase of speculation and higher figures.

PRICES OF STOCKS AND BONDS.

American Gold	114¼	N. Y. Central	98
U. S. 6s of 1881	118	Rock Island	111⅜
U. S. 5-20's of 1865	115⅛	Lake Shore	92⅜

Western Telegraph	75½	Bills on London	109½

PRODUCE AND PROVISIONS.

NEW YORK, Monday, July 22, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	180,800	Meal, bbls	2,730
Oats, "	292,000	Flour, "	45,300
Wheat, "	161,900	Eggs, "	6,660
Rye, "	—	Cotton, bales	2,315
Barley, "	—	Hops, "	176
Malt, "	5,760	Wool "	2,490
Seed, "	—	Butter, pkgs	12,120
Beans, "	34	Cheese, "	72,550
Meal, bags	975	Lard, "	5,468
Peanuts "	305	Dried fruits, pkgs	9
Pork, bbls	472	Cut Meats "	3,950

Beans and Peas.—Sales are still very light and made with difficulty. Buyers have a slight advantage in both mediums and marrowfats, but stocks are so small that important concessions are offered. The quotations are, for prime medium, $3.25@3.50; fair do., $2.80; prime marrowfats, $3.50@3.65; fair do., $3.25; prime kidney, $3.40@3.50; fair do. $3; red kidney, $2@3. Peas are neglected; for green, $1.55@1.65; Southern B. E., per two-bushel bag, $2.25@2.50.

Beeswax.—The arrivals of Western have been fair and low prices are necessary to work off the accumulated supplies. Western selling at 35@35½c.; Southern at 36@37c.

Butter.—There are no specially new features in the butter market. Hot weather has continued to act adversely upon qualities, and trade has remained inactive. At the close the weather is more favorable, and it is likely that buyers will be brought out in consequence. Prices are very unsettled for Western, owing to the poor condition of late arrivals, and small retailing parcels must be in as fine order as the circumstances permit to bring 18c. Parcels below fine in quality are offered freely at 11@13c. in lines. State butter is nominal; pails still about supplying the trade that will pay above Western quotations. The quotations are:—State pails, choice, 28@30c.; other, 22@26c., State selections, 23@27c.; good to prime firkins, 21@26c.; do. half tubs, 24@26c.; do. Welsh, 23@25c.; other grades of State, 18@22c.; Western Reserve choice, 16@18c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.

Cheese.—The cable quotes an advance in Liverpool, and notwithstanding the shipments from this market have been the largest of the season, shippers are anxious to buy at the current prices, and are securing large lines to arrive. Prices have advanced a fraction and closed firm. The home trade is a little better, the stock coming in good condition comparatively. We quote State factory fine at 11¼c.; good do. 10@11c.; common do. 8c.; skimmed as low as 3c.; State dairy, 10@10½c. for prime, fair do., 8@9c.; Ohio factory 9¾@10c.

Cotton.—The market is much lower and weak. The stock here is liberal, with some anxiety to realize. The future delivery latest sales on basis of low middling are at 21c. for August; 20 9-16c. for September; 19¾c. for October; 19c. for November; 18¾c. for December.

We quote for prompt delivery:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	17¼	17½	17⅝	17¾
Good Ordinary	19⅛	19⅜	20	20
Low Middling	21⅛	21½	21⅝	21⅝
Middling	22¾	22½	22⅝	22¾
Good Middling	23⅛	23⅜	23⅝	23¾

Dried Fruits—Sell slowly, with prices generally weak.

We quote cherries at 20c.; raspberries, 30@32c.; blackberries, 11c.; apples, new State, quarters, 8@9½c.; extra sliced, 11½@12c.; Southern new, quarters, 6@7c.; do. fine sliced, 11c.; new prime Western, 7½@8½c.; common Western, 6@8c.; unpeeled peaches, 5@5½c. for quarters; 6@8½c for halves; peeled peaches, 17@18c. for North Carolina, 13@14c. for Virginia, and 15@16c. for Georgia; plums, State, 27@28c.; a few new raspberries 25c., and do. blackberries offered at 8c.

Eggs.—The warm weather is against a sale for Western, a good many lots are still going to the dumping ground; buyers are afraid to work in even the best marks. State take most attention. We quote near prices 20@21c.; State, 18@19c., extra Western, 18@17c.; freight Western, 14½@15½c.; Canadian, 16½@17c. All loss off.

Flour.—Trade is dull, but prices are held firmly. The arrivals are very light for the season, and advices from Lake ports speak of decreasing shipments forward. Super and extra Minnesotas are scarce and could be placed promptly at the quotations. The scarcity of freight-room and the high rates cut off all shipping demand.

Superfine State	$5 30	@	5 75
Common extra do	5 80	@	5 70
Good to choice do	5 45	@	6 50
Fancy do	6 55	@	7 25
Superfine Michigan, Indiana, Ohio, Iowa	5 30	@	5 75
Extra do	6 10	@	6 40
Choice extra do	6 45	@	7 30
Shipping brands round hoop Ohio	6 40	@	6 70
Trade brands do	6 75	@	8 40
Good to choice white wheat extras	7 20	@	8 75
Fair to very choice extra Minnesota	7 00	@	8 75
Common to fair extra St. Louis	7 10	@	9 00
Good to choice do	9 05	@	10 75
Extra Southern	6 85	@	8 80
Good to choice do	8 85	@	12 00
Rye, common to fine	4 10	@	5 00
Corn meal, Brandywine	4 85	@	4 85

Fresh Fruits.—There is a strong promise of an oversupply of early apples, and though the stock daily shows improvement, sellers are making rapid reductions, in order to keep them moving. Southern, per bbl., quote at $1.25@2.00; New Jersey, $1.50@2.50. Good-looking pears are in fair supply; a few fancy being $7@8.50 per bbl.; Bell, $5@6; Small Sugar, $2@2.50. Antwerps do not sell quickly, and prices are decidedly lower, selling at 4@7c. for 3ds. Black Caps scarce, and not wanted at 6@8c. per quart. Blackberries are abundant, and begin to sell. Selling range at 10@17c. per qt.; the higher price for early sales, common, 6@9c. per qt. Peaches arrive regularly, but are very variable in character. Poor to good, $1.50@4 per crate; $6@8 for fancy. Cherries are still quotable at 3@6c. for poor to fair, and 8@11c. for best. Whortleberries, $2.50@3.25 per bushel. Currants, 4@6c. for common, and 8@13c. for cherry. Watermelons range at $30@75 for Southern. Norfolk nutmegs, $3.50@4.00. This year Southern shippers are more successful in sending saleable nutmegs. Peanuts show at $1.30@2.00 per bushel for Norfolk, and $1.00@2.00 for Wilmington.

Grain.—Spring grades of wheat are plenty and lower. Winter is the seller's favor with light supplies. There is some shipping demand with but few orders closed out on account of the scarcity of freight room. We quote No. 2 in store, $1.45@1.50; No. 1 in store, $1.4@1.53; winter red Western, $1.60@1.65; amber Western, $1.70@1.75; white Western, $1.65@1.80. Rye is steadily held at 74c. for Western in store. Oats are coming in freely and prices are lower. Sales at 43@43½c. for Western afloat; 41@46c. for Ohio, and 43 for State. Corn is rather weak. Large supplies are expected here this week from the break. The business from shippers has been checked to some extent by the high rates of ocean freights, but there are a good many orders on the market, and in the event of a fair supply of freight room, a satisfactory business would follow. We quote at 57@59c. for steamer lots of Western mixed; 60@61 for sailing vessels, do.

Hay and Straw.—The market is declining under increasing arrivals of new. Sales at $1 for old shipping; $1.20@1.15 for retail qualities; salt, $1; clover, 80@90c. The best qualities of new sell at from $1@1.15. Straw at $1.05@1.10 for long rye, 85@90c. for short rye; 75@80c. for oat.

Hops.—Sales are small with prices firm. Stocks are very light.

New Yorks, growth 1871, 22@65; Eastern do., 22@60c.; Western do., 22@30c.; Yearlings do., '70, 10@30c.; Olds do., '69, 10@15c.; Bavarians, 65@75c.; English, 60@65c.

Poultry and Game.—Live fowls are doing better. Chickens are tending lower. Woodcock are in good supply. Prime only will bring 75c. per pair. Live Poultry—Spring chickens 75c.@1.12 per pair, ₰ lb, 23@30c. Fowls—Jersey, 22@23c.; do. Western, 21@22c. Turkeys—Jersey, 18@20c.; Western, do., 18@20c. Roosters per lb., 12@13. Ducks—Jersey, pair, $1.25@1.50.; Western, 75c. Geese—Western, $1.50@1.75.

Provisions.—There is very little interest taken in pork by either buyers or sellers, and the few transactions have been at $13.70 for this month and Aug. 1st. At the close this quotation is the bid. There has been a fair jobbing trade at $13.62½@13.81, the highest price for fresh inspected. Extra prime has sold to a fair extent, at $10½@11; prime mess at $12.50. Beef has only sold for ship use at the old ranges. We quote plain mess, bbls., $8@10; extra mess, do., $10@12; prime mess, tcs., $12@11; India mess, do., $17@20. For cut meats, pickled or smoked, the market is very buoyant, following the advance in hogs. We quote city smoked hams, 15@17c.; city smoked shoulders, 8½@9c.; pickled bellies, boxed, 7@7½c.; do. loose, 7@7½c.; pickled hams, Western, 13@14c.; do. city, 14@15½c.; Western hams, in tight tcs., 12@13c., according to brand; pickled shoulders, 8½@9c.; shoulders in dry salt, boxed, 5½@5½c.; fresh hams, 13½@13½c. Bacon is favored with large orders, which keep prices firm, but freight room is scarce and but little is moving. Long clear, 7½@7½c., the latter for heavy city; short rib, 7½c. for city heavy, and 7½c. for Western; short clear, 8½@8½c.; old Cumberlands have sold at 7c. Tallow is in fair demand for home use at 9c. for prime Western and 9½c. for city. Stearine has sold at 10½c. for spot, and 10½c. to arrive. Market now rather weak, as buyers have supplied themselves pretty liberally. Lard is lower, with a good demand for future months. Sales on Saturday about 4,000 lbs. at 9½c. for July, Sept. and August deliveries. City quoted 8½c.; new Western selling on spot at 8½c.

Seed.—Grasses are quiet. Clover 9½@9½c. for Ohio, 10½@10½c. for State, 9½@10c. for Indiana and Michigan. Timothy at $3.25@3.50.

Tobacco.—There is a good business in Kentucky leaf from the home trade, at free figures. Seedleaf is worked up close to the arrivals, with prices high. Virginia common to good logs, 7½@8½c.; low to medium leaf, 9@10½c.; good to fine, 11@15c.; dark wrappers, 12@14c.; bright, 20@40c.; smokers, 12@17c.

New crop Kentucky.	Light Grades.	Heavy Grades.
Lugs	8½@9 c.	9 @ 9½c.
Common to medium leaf	9½@10	9½@10½
Good do	10½@11	11 @12½
Fine do	11½@12½	13 @14
Selections	13 @14	15 @16
New crop Seedleaf.		
Connecticut and Mass. fillers		14 @16
seconds		26 @35
New York State running lots		10 @13½
Pennsylvania do medium		12 @14
fair		15 @17
fine		18 @22
Ohio, running lots		10½@15
Wisconsin and Western		8½@10

Vegetables.—Potatoes are abundant and large consumers can buy at the inside rate. Northern tomatoes now push Norfolks one side. Marrow squash is arriving from all points, but not wanted at this season. Bermuda onions are nearly worthless, Southern filling the demand more attractively. Green peas are out for market use.

New potatoes, L. I., bbl., $2@2.25; do. Jersey, $2@2.25 Southern, $1.@2. Tomatoes, $1.25@4.50; Squash, ₰ bbl., $1.25@2.20, white and yellow. Cucumbers, ₰ 100, 50c. Green peas, bag, 50@75c. String beans, bag, 75c.@$1. Onions, Bermuda, 50c. Turnips, ₰ bbl., $2.25. Cabbages, bbl., $5@7. Green corn, ₰ 100, 62c.@$1.50. Marrow squash, ₰ bbl., $1.50 for Southern and $2.25 for Northern. Southern onions, ₰ bbl., $2.25@2.50.

Whisky.—Is quiet at 93c. for Western.

Wool.—There is more inquiry for fine foreign, and the prices bid come close to the views of holders generally. The position of the market for the new clip is unchanged. Prices at the West are held too high for dealers here, and very little has been done in the new clip. Sales at 55c. for medium unwashed fleeces; 54c. for Michigan; 50@53c. for Georgia. Scoured, 75c.@$1.06; lamb's pulled, 60c.; super and extra pulled, 60@75c.; Texas, 45@50c.

LIVE STOCK MARKETS.

NEW YORK, July 20, 1872.

THERE is a good deal of excitement just now regarding the slaughtering of stock and rendering lard and tallow. To such a state has the opposition been carried that injunctions have been served upon some of the establishments, and threats are made that the places will be demolished if operations are not stopped. This nets against the live stock trade, and some of the dealers and slaughterers have stopped operations, while others are casting about for a change of location. It is quite time that legalized action were had, upon both sides of the river, and abattoirs built where the parties will be protected in a legitimate business. As now carried on, there is a great deal of uncertainty about the whole thing.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	7,716	101	2,375	22,659	28,311
" last week	7,858	51	2,517	16,108	30,323
Corresponding week last year	7,135	71	3,180	28,585	26,792
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—With just about the receipts of the previous week, and nothing of special interest outside the ordinary course of trade, the market remains quite uniform, with no lack and no surplus of stock. The quality has been quite uneven, some of the Texans evidently coming through without halting in the States to gain flesh. One lot which cost $30 per head in Chicago, was sold here at $35, or less than 8c. per lb. They were a hard lot. Good Texans reached 9¼c., with thin natives at 10@11c., most of the stock selling at 11@12c. Just at close there is a firm tone, everything selling off clean and prices are rather higher than the final sales last Monday, when a few lots were left over; but not as high as they were this day week. The weather was hot and unfavorable for trade nearly all week. Comparatively few cattle exceeded 12c., though the very best went at 13c. on the scales, but at an allowance of weights rather favoring the butcher.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₰ lb	12½ @ 13	12¾ @ 13¼
Good to prime	11½ @ 12¼	11¾ @ 12½
Ordinary to medium	10 @ 11¼	10½ @ 11½
Lowest grade	8 @ 9¾	8¾ @ 10
Average sales	11¾ @ —	11¾ @ —

Milch Cows.—The little spurt of last week is all over, and cows sell bad again, milkmen and peddlers having filled up. It is slow work now to sell a car load of cows, and concessions of $3@5 ₰ head have to be made. As it is, there is a good deal of difficulty in keeping the pens clear. Prices vary from $35@50 for poor to medium, and $55@75 for fair to prime milkers.

Veal Calves.—There is a good demand, which uses up the calves as fast as they come forward. Prices are fully sustained, quite a good many of the finest selling at 9¾@9¾c., with extra veals still higher. One large lot of Bucks Co. was sold at 9¾c. right through. Grass calves are doing better. They sell at 10@5c. ₰ lb., several lots, by the head, going at $9.50@10.50.

Sheep and Lambs.—With quite an increase in arrivals, there is scarcely any change in sheep, while lambs have declined 1c. ₰ lb. We call the latter 11@12c. for good to choice Jersey and State, and 8@11c. for Western, some fat Canadas selling at 11½c. They are increasing in numbers while sheep decrease. Quotations of sheep are 5@6c. for poor to fair, 6¼@6½c. for good to prime, and very few extras 7c. A whole car of 83 lb. C. sheep was sold at 6½c., while two cars State 77 lbs. went at 6¾c., and a car 61 lb. Canada lambs at 11¾c. Some ordinary State lambs of 50 lbs. were sold at 10c.

Hogs—Are falling off in numbers and improving in prices in a corresponding ratio. The greatest trouble about slaughtering is in the hog department, people insisting that it is a nuisance to keep a large lot of hogs together, besides the stench of the scalding tubs and rendering vats. Prices of city dressed have reached 6@6¾c. and the market closes firm.

LATEST.—Monday, July 22, 4 P. M.—Beeves.—Arrivals to-day, 111 cars at Communipaw, 137 at 100th St., and 30 at Weekawken, making 5,029 for sale. The weather was cool and fine, and butchers took hold in earnest, clearing the yards at ¼c. advance, paying 13½c. for the best selections. Some good Cherokees sold at 12c.

Hogs.—Receipts to-day, Sunday included, 26 car loads at Communipaw and 23 at 40th St., making 5,565. The market closed strong at 6@6¼c.

Sheep and Lambs.—Arrivals for to-day's market, 10 car loads at Communipaw, 18 at 38th St., and 11 at 40th St., making 2,000 on sale. This large number caused a slow market, and prices were a little off, especially for lambs, very few going above 11c. Choice sheep still sell at 6¾@7c.

SPECIAL NOTICES.

RUPTURE CAN BE CURED

without suffering. ELASTIC TRUSSES are superseding all others. Before buying Metal Trusses or Supporters, send for a descriptive circular to the ELASTIC TRUSS CO., No. 683 Broadway, New York.

New Advertisements.

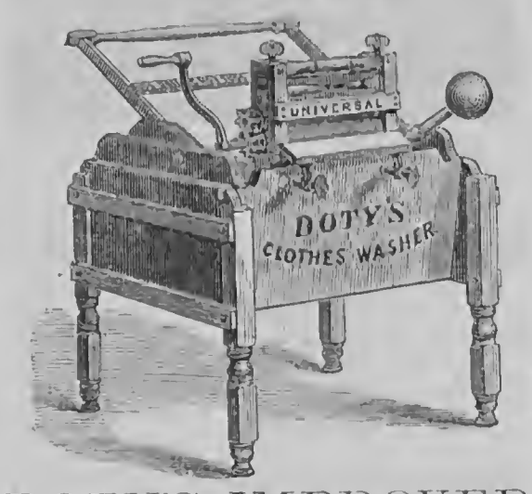
GWYNNE & DAY,
16 Wall St., New York.

THE BEST IS CHEAPEST.



DOTY'S IMPROVED

CLOTHES WASHER,

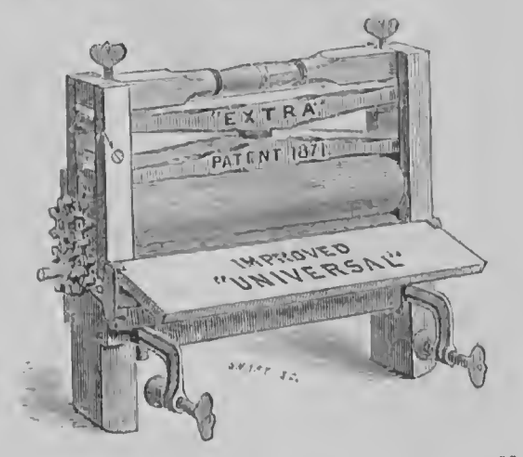
WITH THE

METROPOLITAN BALANCE WEIGHT,

This machine will wash clothes well and thoroughly, much faster and easier than can be done by hand, and with far *less wear to the garments.*

What is Said about It.

"You cannot do a better thing for your wife on a washing-day than to provide her a Doty Washer and a Universal Wringer. It will keep aches from her back and arms, wrinkles from her forehead, and roughness from her hands. It will do the work of a hired woman, and save your linen from being scrubbed out and her temper from being chafed out."—*N. Y. Weekly Tribune.*



Why the Universal is Superior to all other Wringers.

It has **ROWELL'S PATENT DOUBLE COGS.**

It has the **PATENT STOP,** which keeps the Cogs from disconnecting.

It has the **MALLEABLE IRON FOLDING CLAMP.**

It has the **FOLDING APRON,** or Guide.

It has **Two PRESSURE SCREWS,** which give double the capacity for pressure.

Sold by the House Furnishing and Hardware Trade generally.

METROPOLITAN WASHING MACHINE CO.,

R C. Browning, President, 32 Cortlandt St., New York.

The Wheat Field of America!

Healthful Climate, Free Homes, Good Markets.

THE NORTHERN PACIFIC RAILROAD offers for sale its **Lands in Central and Western Minnesota,** embracing: 1. The best of Wheat Land; 2. Excellent Timber for the Mill, the Farm and the Fire; 3. Rich Prairie Pasturage and Natural Meadow, watered by clear Lakes and running streams in a Healthful Climate, *where Fever and Ague is unknown.*

Grain can be shipped hence by lake to market as cheaply as from Eastern Iowa or Central Illinois. Cars now run through these Lands from Lake Superior to Dakota. Price of land close to track $4 to $8 per acre; further away, $2.50 to $4. **Seven Years' Credit;** Warranted Deeds; Northern Pacific **7-30 Bonds,** now selling at par, received for land at $1.10. No other unoccupied Lands present such advantages to settlers.

SOLDIERS under the New Law (March, 1872) get 160 acres FREE, near the railroad, by one and two years' residence.

TRANSPORTATION AT REDUCED RATES furnished from all principal points East to purchasers of Railroad Lands, and to Settlers on Government Homesteads. Purchasers, their wives and children **carried free** over the Northern Pacific Road. Now is the time for Settlers and Colonies to get Railroad Lands and Government Homesteads close to the track.

Send for **Pamphlet** containing full information; map and copy of New Homestead Law. Address LAND DEPARTMENT, NORTHERN PACIFIC RAILROAD, ST. PAUL, MINN., OR 120 BROADWAY, NEW YORK.

BUILDING PAPER

FOR SHEATHING, PLASTERING, ROOFING, DEAFENING AND CARPET LINING.

GREAT IMPROVEMENT IN
CHAIR SEATS.

Various have been the efforts of men to produce a seat which should be comfortable, light, comely, durable, and also admit of universal application. The degrees of success have been as varied as the effort; but within the last year the long-sought was revealed to an observing, practical genius, and is hereby offered to the public, in full confidence of its instant appreciation.
The seat is composed of three layers of veneer (boards as thin as a knife blade), the grain of each lying in an opposite direction to its neighbor, all glued firmly together in a slightly dishing form, adapted to the person. The entire thickness slightly exceeds one-sixth of an inch. We thus have moderate cost, little weight, neatness, great beauty if desired, and a lasting quality which, in usual service, may properly be called eternal. *While it is especially adapted to reseating chairs by any one who can nail down a carpet*, it is coming rapidly into use for the better class of chairs for sumptuous apartments. The slightest observation will convince the most skeptical of its unguided merits.

AGENTS WANTED FOR

HISTORY OF THE GREAT FIRES

In CHICAGO and the WEST.

By Rev. E. J. GOODSPEED, D. D., of Chicago. The record of a proud city overtaken by sudden and awful calamity, of towns destroyed by the wasting element, of forests burned, of homes and farms desolated, of men of wealth made beggars, of families separated. Abounds with thrilling incidents of marvelous escapes, etc., and is the only complete History of these great events. 680 8vo. pages; 50 Engravings; price $2.50; outfit, $1. Secure the best territory at once. 70,000 already sold. The profits go to relieve the sufferers. Address H. S. GOODSPEED & CO., 37 Park Row, New York, or J. W. Goodspeed, Chicago, St. Louis, Cincinnati, or New Orleans.

MR. SWELTER'S ATTEMPTS TO KEEP COOL.

He adopts a light and airy costume, but it is objected to by Mrs. S., and he has to abandon it

He invents a Patent Revolving Fan, but the exertion of operating it is too great.

He tries another, worked by small-boy power—Not reliable.

Finally settles down to a (n) ice arrangement, simple and effectual.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

CONTRACTS TAKEN!

Rights for Sale.

AGENTS WANTED.

"EAGAN'S COMPOSITION."

(Patented March 5, 1867.)

Used in laying streets, roadways, sidewalks, in lining cellars, cisterns, vats, and in the manufacture of sewers and sewer-pipe, water-pipe, drain-pipe, gas-pipe, roofing and architectural ornaments.

STREETS.

Eagan's Improved Macadam pavement for streets is destined to take the place of all other forms of pavement, for the reasons, viz:

It is cheaper, more durable, more easily and perfectly repaired. Is impervious to water, and no atmospheric change will affect it.

It is free from mud and dust, and is noiseless.

It is smooth without being slippery, and has sufficient elasticity to make it the easiest pavement known for animals to travel over.

DURABILITY.

The reason a Macadam road does not last longer is because the stones are loose and rub and grind upon each other—dust and mud is the result. Eagan's Composition holds the rocks firmly together, thus completely remedying this evil, and confining the wear of the road to its surface.

SIDEWALKS.

Eagan's Composition is peculiarly adapted for sidewalks and lawn walks, private roadways, gutters, etc. It can be made into blocks and laid in squares or diamond form, or made one continuous sheet, covering arched work more perfectly than the largest flagstone, and at one-fourth the expense.

Walks made of it have a smooth, hard and even surface, pleasant to walk upon, always clean and free of ice, and of as great durability as if made of the best flagstone. Sidewalks made under Eagan's patent cost but little if any more than if made of plank, and are as durable as rock.

ROOFING,

Made of this composition, is far superior to the common felt roofs that are made of gravel, felt, coal-tar and pitch. The latter is liable to run in warm climates and to crack in cold. By the peculiar chemical combinations in this composition both of these objections are obviated, and a roof produced equal to slate, at a cost of about one-third as much per square.

CELLAR BOTTOMS AND SIDES,

Lined with this composition, from one to two inches thick, keep perfectly dry and warm in winter and cool in summer, and are rat and vermin proof.

FLOORS.

Floors made of it may be painted any color; and are as pleasant to tread upon as if made of wood.

CISTERNS AND VATS.

Eagan's Composition is impervious to water and insoluble in acids, making it just the thing for lining vats in breweries and manufactories of most kinds. It is equally well adapted for cisterns, much better than the best hydraulic cements, and not subject to decay from any cause.

PIPING.

Piping made of Eagan's Composition has been in use for five years in San Francisco, Cal., where it was first invented. It has given entire satisfaction, almost entirely superseding all other kinds of piping for sewers or drains. It is easily and cheaply made, and has the advantage of being made at any place without a great outlay of money for machinery, tools, buildings or materials.

Pipes can be made of any required size, are cheaper, and will sustain a greater external or internal pressure than any other kind of cement pipe.

CEMENT.

As a cement it is acknowledged, by scientific men who have examined it, to be the strongest known. A wall built of brick or stone, and this cement used as a mortar, would be perfectly solid as if made of a solid rock.

SEA WALLS.

Sea walls can be built with this material in combination with broken rock, more rapidly and cheaper than in any other way.

DIPLOMAS.

First premiums have been awarded to Eagan's Composition from the following Fairs:

California State Fair, at Sacramento, Cal., 1868.
Mechanics' Institute Fair, San Francisco, 1868.
Sonoma County Fair, at Petaluma, Cal., 1869.
St. Louis Agricultural and Mechanical Fair, at St. Louis, 1869.
New Jersey State Fair, 1870.
It has been exhibited at no other Fairs.

RECOMMENDATIONS.

OFFICE OF UNION RAILROAD COMPANY,
ST. LOUIS, Mo., 28th March, 1871.

This specimen of Pacific Concrete, (Eagan's Patent,) was taken from the Union Street Railroad of St. Louis, Mo., where it has been in use since December, 1869. Since that date the teams of the railroad have passed over that portion of the track where the concrete is used, 300 *times each day*, while that same portion of the track is constantly used by other teams and vehicles of the city. This pavement has received no repairs whatever, and shows but little wear after constant use for sixteen months (now 22 months). In summer it is free from dust, and in winter brings with it no inconvenience from snow and ice. The Macadamizing at either end of this block of concrete is renewed three times each year, is soft and wet when much water is used, and in all probability will require such renewing for several years to come before the concrete needs repairing. The block of Pacific Concrete in the track of the Union Railroad has given entire satisfaction. WM. STORK, Sup't.

This Company will take contracts in any city of the United States to make Macadamized Pavements, and will guarantee them to last twenty years, and keep them in repair for a small percentage. Will also supply orders for Drain, Sewer, Water and Gas Pipe. Roofing for sale.

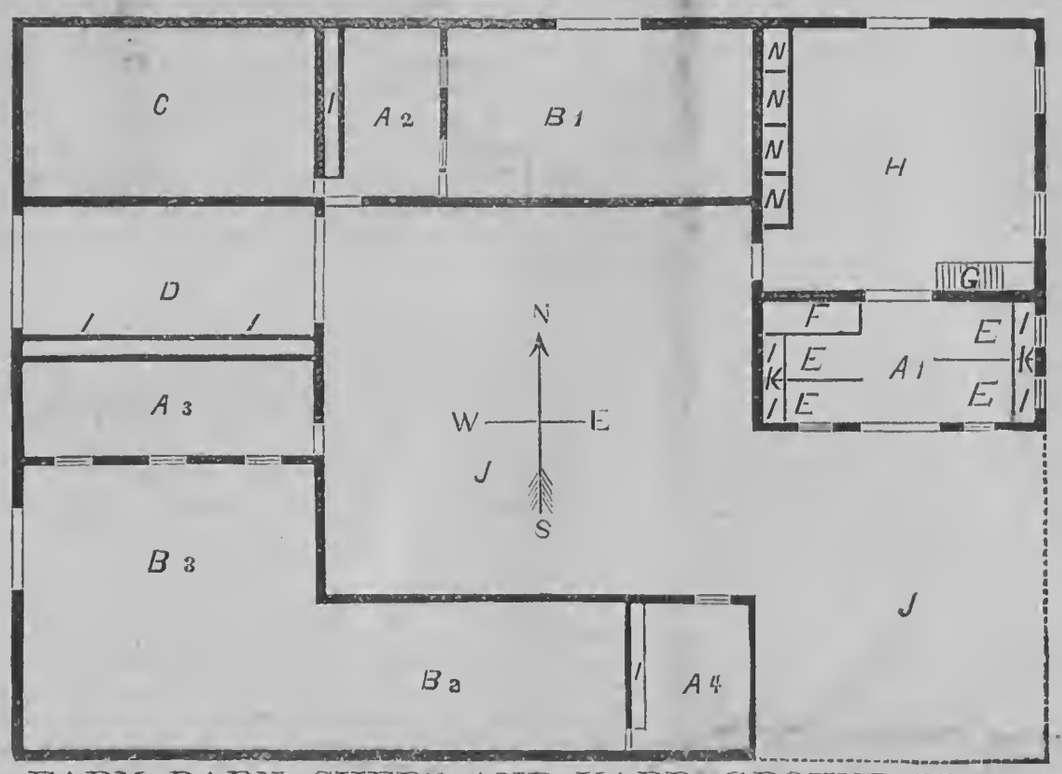
Rural Architecture.

FARM BARN AND SHEDS.

ADRIAN L. CLAIRANCE, Friendship, N. Y., sends us the accompanying plan of a farm barn and sheds. A 1, stable, 14 by 26; A 2, stable, 12 by 17; A 3, stable, 11 by 30; A 4, stable, 12 by 15; B 1, shed, 17 by 28; B 2, shed, 15 by 28; B 3, shed, 30 by 30; C, bay; D, threshing floor; E, E, E, E, stalls, the two in the east being each 7 by 10, and those on the west being 5 by 10; F, harness-room, 4 by 9; G, Stairs and feed room; H, wagon room; I, I, I, I, I, I, I, mangers; J, J, yards; K. K, racks; , doors; , windows; N, N, N, N, grain bins. These buildings, sheds and yards inclose a space 96 by 72 feet.



FARM BARN, SHEDS AND YARD—GROUND PLAN.

TO MAKE A CHEAP CELLAR BOTTOM.

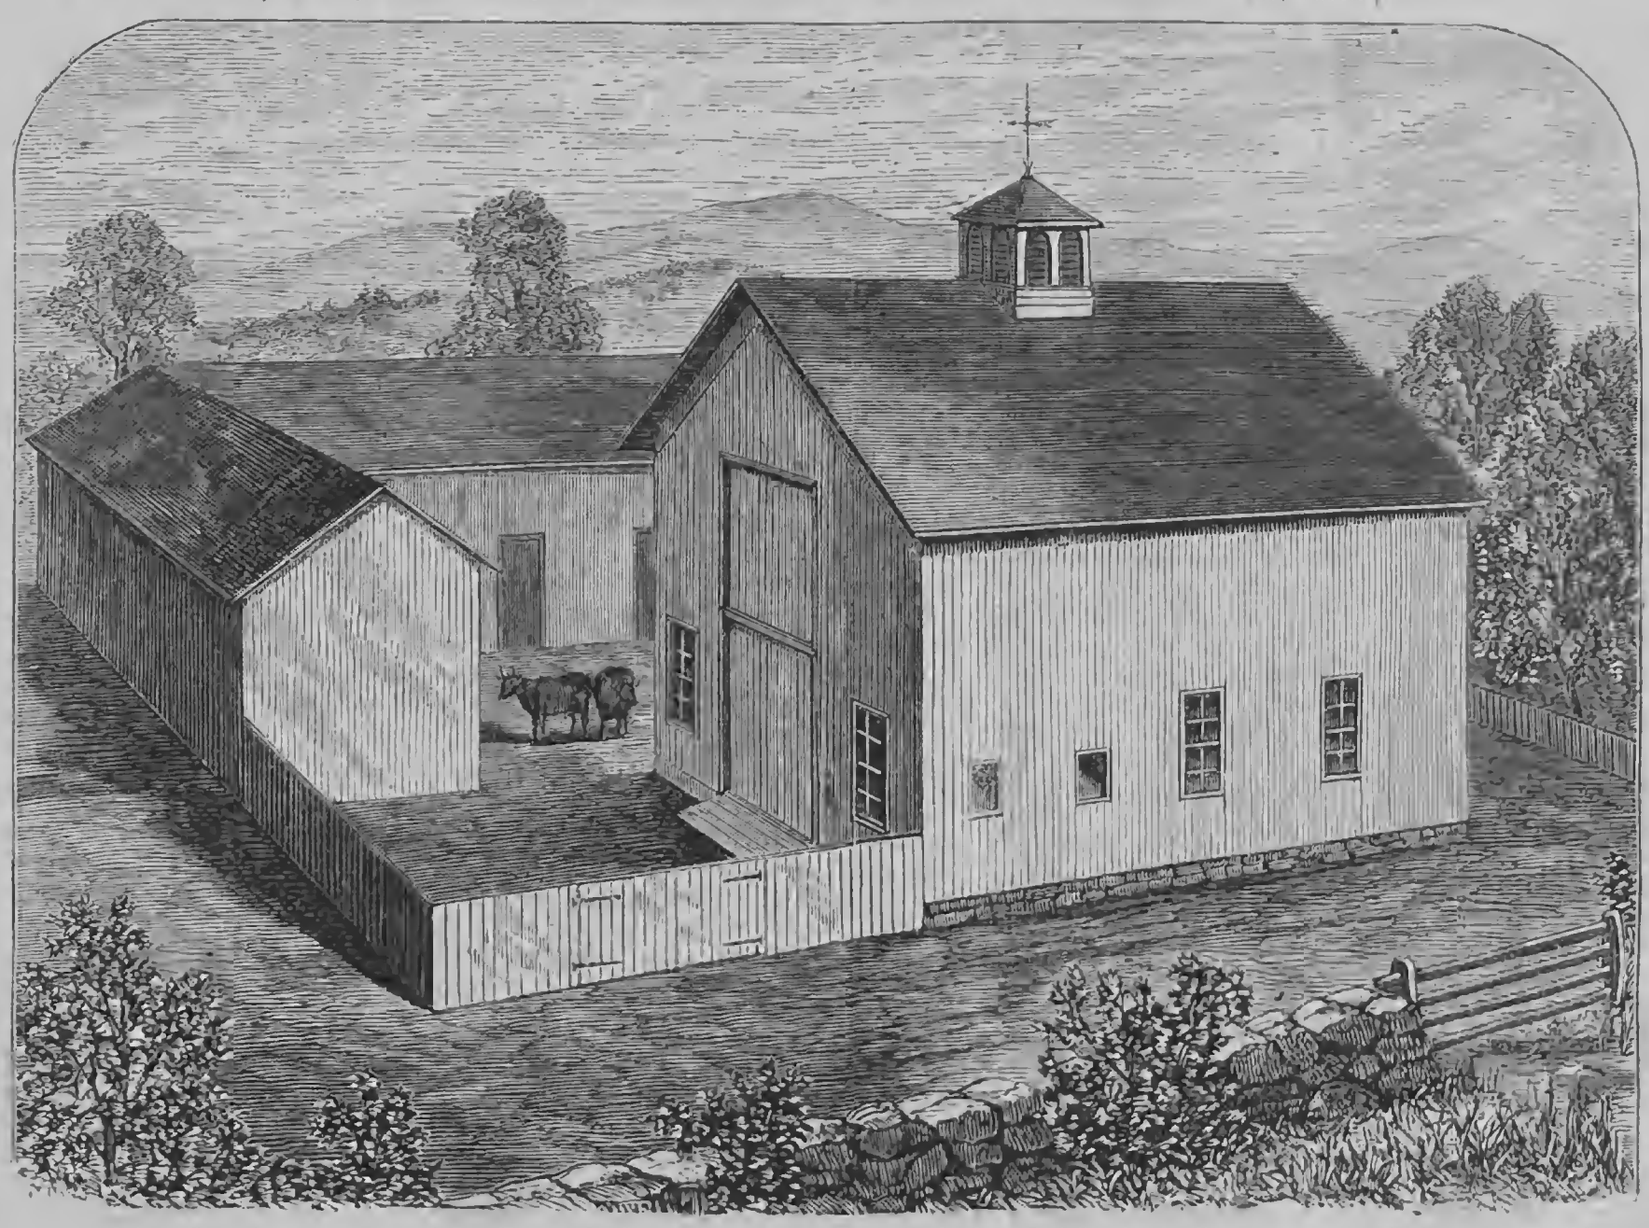
THE Industrial Monthly gives the following directions:

In sections of the country where there is an abundance of cobble-stones, collect a few loads of them about four or five inches in diameter, grade the bottom of the cellar, lay the cobbles in rows, and ram them down one-third their thickness into the ground, so that they will not rock nor be sunk below the line of the rows by any heavy superincumbent pressure, such as the weight of a hogshead of molasses or tierce of vinegar. The bottom of the cellar should be graded so that the outside will be at least two inches lower than the middle. A mistake sometimes occurs by grading the cellar bottom in such a manner that the center will be two or three inches lower than the outside. When this is the case, should water enter from the outside, it will flow directly towards the middle. A straight-edged board should be placed frequently on each row of stones as they are being rammed so that the upper sides may be in a line with each other. After the stones are laid and well rammed down, place a few boards on the pavement to walk on; then make a grouting of clean sand and water lime, or Rosendale cement, and pour it on the stones until all the interstices are filled. As soon as the grouting has set, spread a layer of good cement mortar 1 inch thick over the top of the pavement, and trowel the surface off smoothly. In order to spread the mortar true and even on the surface, lay an inch board one foot from the wall, on the surface of the pavement, stand on the board, and fill the space with mortar even with the top of the board; after which, move the board one foot, fill the space with mortar, and trowel it off smoothly. Such a floor will cost less than a board floor, and will endure as long as the superstructure is kept in repair.

A floor made in the foregoing manner on the ground in the basement of a barn, a piggery, or a stable, would be rat-proof, and would be found cheaper and more serviceable than a plank floor. The work should be done in the former part of the growing season, so that the cement may have sufficient time to become dry and hard before cold weather.

HOW TO BUILD BRICK CHIMNEY TOPS.

THE Industrial Monthly says:—All the brickwork above the superstructure, whether the building is stone, brick, or wood, should be made with cement mortar, which will absorb much less water than mortar made of caustic lime and sand. The bricks for a chimney-top should be soaked in water for a few minutes, so that they will not extract the water from the mortar. In order to have mortar become very hard, it must dry slowly. By laying up wet bricks, the mortar will set slowly, dry slowly, and eventually become almost as hard as the bricks. Every brick chimney should be covered at the top with a copestone, with an arched top, or with bricks placed over the flues, like the rafter of a building, for the purpose of turning off the water which would go down the inside, be absorbed by the bricks, and, in some instances, soak through and wet the paper or kalsomining on the inside. A chimney-top laid up with good cement mortar, and covered with a copestone or chimney-arch, will stand the influences of the weather for more than a hundred years without any repairs.



FARM BARN, SHEDS AND YARD—ELEVATION.

FOUNDATION WALLS.

I WISH to build a barn on the east side of a ridge. The bank is clay and not very wet. May I ask some of your readers having experience, if the bank should be dug straight down or slanting a little. I want to build a wall some eighteen feet high. It is to be built of field stone. How thick should the wall be, and how much slant do I need? Will it be best to commence at the bottom with mortar, or fill the trench up with stones, dry, for a drain? Do your readers know (and will they tell what they know) anything about concrete walls. I believe that is what they are called. They are laid up dry, a foot at a time, then filled with thin mortar, composed of one part water lime and five or six parts sand, mad so thin that it will fill all the crevices. Are such walls durable? What are their cost compared to walls laid in lime mortar? I shall be obliged for any experience or suggestions. B. H. B.

HINTS FOR BUILDERS.

THE Building News says:—1. Never allow pervious drains in pervious soils. 2. Never allow a cesspool or drain near a well. 3. Never select gravel as a building site if well drained clay can be obtained. 4. Never allow drinking water to be drawn from a cistern supplying a water-closet. 5. Never allow waste-pipes to be inserted into water-closet traps. 6. Never allow rain-water to run to the ground if it be required above. 7. Never allow water to stand in exposed pipes in frost. 8. Never allow pipes to be

fixed so that they will not empty themselves. 9. Never ventilate except by pipes; inlets and outlets being equal. 10. Never use glazed earthenware pipes for upward flues. 11. Never allow chandeliers to be the exclusive light merely because it has been customary.

CEMENT MORTAR FOR BRICK DWELLINGS.

WALLS laid with mortar made of loam and lime, in the outer courses of walls, wash with every rain and compel housekeepers to wash their windows, for a remedy the following is recommended:—lay the outer courses of bricks in cement mortar made of clean sand, good lime, and Rosendale cement. Where it has been the practice to use one bushel of good lime, let half that quantity be employed with a half-bushel of cement. For example, let three bushels of clean sand, not loam, be mingled with half a bushel of good lime and half a bushel of cement. Such a proportion of materials will make a mortar for laying bricks that will endure for more than fifty years. If such mortar is prepared as it should be, only as fast as the masons use it, the material between the bricks will soon become about as hard as limestone; and driving storms will wash out no more sand and lime than can be dislodged from good bricks.

NOTES FOR BUILDERS.

Concerning Shingles.—Rived shingles of clear pine are the best, not only because of the durability of the stuff in and of itself, but because the smooth cut of the drawing knife leaves the least possible roughness upon the surface for decay to take hold of. Next to these come rived spruce and hemlock, which being far from as durable, may be placed near the peak of the roof, while the pine shingles are placed lower down, where the greater quantity of water passing over requires greater resistance to wear. Sawed shingles have a rough surface, which holds water and causes rot; but if these were planed by machinery and treated with some antiseptic substance, their durability might be doubled. Shingles made from steamed oak blocks, cut by a power machine, have an excellent shape at first, and last well, the albumen of the wood being coagulated by the steam, but soon curl up when exposed to the sun on a roof, and are both unsightly and leaky. The durability of even poor shingles can be much increased by covering with whitewash tinted gray by the addition of ashes.—J. A. W.

Stakes in the Bedell Mansion.—Thousands of your readers have doubtless observed that the beautiful residence of F. S. BEEELL of Crown Point, Indiana, displayed in your issue of June 15, "lacks one thing"—that is, *stakes*. We see no nursery or children's room. The house is roomy, convenient, grand, but it lacks the "stake in the community," a room full of children, if not "to the manor born," next of kin or other kind. Inside the semicircle near the house I should put two *stakes*, several *bridges* and one *arch*, such as pertain to to croquet, cricket or base ball; such stakes as these are not only interesting and attractive, but they serve, with the help of neighbors, to dispel the solemn stillness which must pervade a splendid residence in which a baby's cry would be a luxury. Thousands of the LORD'S poor, of good blood and brains, are suffering for just such homes. What a grand place to rear a President, Senator or Governor for 1910, in opposition, it may be, to the young, gold-spooned, silver-cupped COLFAX! Who knows!—R. C., *Burlington Co., N. J.*

To Remove Paint from Stone—NOLAN JOSEPHS is informed, common washing soda, dissolved in boiling water and applied hot, is recommended. We have never used it, but one who has recommends it from experience, asserting that three pounds of soda to a gallon of water, laid on the paint with a common paint brush softened the paint in a short time so that it was easily removed with a stiff scrubbing-brush; afterward, on adding a few ounces of potash to the solution, he found the paint softened more readily than with soda only.

Architectural Inquiries.—R. T. MILLER, Bureau Co., Ill., wants to build a corn-crib that will hold 12,000 bushels of corn, and asks some corn-grower of experience to furnish a plan and elevation through our columns.

Sheep Husbandry.

KANSAS SHEEP HUSBANDRY.

THE RURAL NEW-YORKER being standard authority among wool growers, I am induced to send a few items concerning the pursuit in this region, which seems especially well adapted to the habits of sheep. The sheep business is below par in eastern Kansas. Zealous to get rich quickly, inexperienced men have bought cheap, and oftentimes diseased flocks, in Michigan, Illinois and other States east of Kansas, and huddled them through in over-crowded cars, or driven them, with unnatural speed, overland to Kansas. They have sought the most luxuriant growth of grass for a pasture field, and have commenced putting up prairie hay in August or September, and have continued to cut hay until after the grass was spoiled by frost. Flocks have entered upon the winter in poor condition, resulting from the change of feed and from being exposed to dampness by the dews and rains which are held in the rank grass of their new pasture fields. The prairie hay is something to which they are quite unaccustomed and, when fed alone to sheep, it almost invariably induces constipation of the bowels. The sheep begin to fall away, the flock diminishes, and as spring approaches the excited owner begins to feed corn freely. This over-feed completes the work; and Kansas, in consequence, is unanimously voted a humbug on the sheep business.

There are profitable flocks of sheep in Kansas, but they are treated in something like the following manner:—1. Diseased sheep are sold, or separated from the flock, and treated for the disease. 2. Instead of being permitted to range at will, feeding upon the coarse herbage and rank grass, they are close herded or confined in limited pastures, so that they will feed the grass close, keeping fresh feed constantly under foot. Their range thus dries out quickly after a rain or heavy dews, and they are much less liable to foot rot and other diseases. 3. Their winter feed consists of early cut hay, varied with well cured corn fodder, oats in the sheaf, shelled corn, and an occasional nibble at Winter rye, blue grass, timothy or root crops. The ewes and feeble ones of the flock are protected from Fall and Winter rains by cheap sheds, and the flock is constantly under the eye of a watchful and interested man. That sheep husbandry can be made very successful in the vicinity of Hutchinson does not admit of a doubt.

Our altitude is so great—fifteen hundred feet above the ocean—that the atmosphere is dry and peculiarly adapted to the constitution of the sheep. The soil is also of that character which retains sufficient moisture for successful cultivation, and yet is never muddy. Our constant running and gravel-bottom streams afford a ready supply of pure water. The grass of large tracts of land in this vicinity, especially south of the Arkansas River, is almost entirely of that nutritious variety known as buffalo grass. It cures on the ground, and in mid-winter is preferred instead of hay, by stock of all kinds. In Colorado and New Mexico sheep of all kinds are successfully raised upon this grass, never using any other feed.

It is not necessary to purchase land here (although it is well to take a homestead), but any sheep owner who is now losing money by keeping sheep on land worth from $30 to $100 per acre, can bring his flock here and produce wool almost without expense, except the attention of a herdsman.

A *corral*, or yard, should be built in which to keep the flocks at night. A small amount of feed, say equivalent to one hundred pounds of good hay per head, should be provided for the few stormy days when stock ought not to be required to forage for themselves. Some sort of a windbreak, such as a sheltering bluff or the south side of a high fence, will be desirable for the entire flock, and a cheap shelter for the ewes will complete the outfit for a first-class Southwestern Kansas sheep farm.

CLINTON C. HUTCHINSON.
Hutchinson, Reno Co., Kan.

NOTES AND QUERIES.

Pennsylvania Fleeces.—A correspondent sends us the weights of fleeces from pure bred Spanish Merino sheep, shorn May 28 to 31, 1872, inclusive. These sheep were the property of JOHN S. GOE, near Brownsville, Pa., and were shorn and weighed in the presence of LEWIS COPE, GIBSON BINS, ROBERT ELLIOTT, of Red Lion, Pa., and of WM. FORSYTH and JACOB WOOLF, Brownsville, Pa. The weights as furnished are as follows: Ram No. 459, 30 lbs. 6 oz., unwashed; ram No. 458, 21 lbs. 8 oz., unwashed; ram No. 459, 18 lbs., 9 oz., unwashed; ram No. 460, 21 lbs., 10 oz., unwashed; ram No. 394, 15 lbs., 14 oz., washed; ram No. 420, 15 lbs., 9 oz., washed; one ewe, 23 lbs., 6 oz., unwashed; one ewe, 20 lbs., 3 oz., unwashed; 3 ewes, 19 lbs., 1 oz., to 19 lbs., 4 oz., inclusive; 5 ewes, 18 lbs. to 18 lbs., 9 oz., inclusive; 6 ewes, 19 lbs. to 19 lbs., 12 oz., inclusive; 4 ewes, 16 lbs. to 16 lbs., 12 oz., inclusive; 5 ewes, 15 lbs., 1 oz., to 15 lbs., 13 oz., inclusive; 18 ewes, 14 lbs. to 14 lbs., 10 oz., inclusive; 18 awes, 13 lbs., 1 oz., to 13 lbs., 15 oz., inclusive; 20 ewes, 12 lbs. to 12 lbs., 15 oz., inclusive; 30 ewes, 11 lbs., 1 oz., to 11 lbs., 13 oz., inclusive; 18 ewes, 10 lbs. to 10 lbs., 15 oz., inclusive.

Sheep for Tennessee.—"What kind of a ram ought I to get to cross on my native ewes, where the sheep have to travel over a large extent of territory to get their living, subject to ticks and flies in warm weather?" So we are asked. A noted sheep farmer near Frankfort, Ky., has made a profitable and hardy sheep for that region by crossing middle wooled and Leicesters with the hardy natives. We have seen Merino sheep doing excellently well in Tennessee and Georgia; but in all improved sheep husbandry in the South, there must be the vital pre-requisite of cultivated grasses for pasturage. No civilized sheep can live on sedge and red-brush.

The Swine-Yard.

TO PREVENT SOWS FROM DEVOURING THEIR YOUNG.

THE Monthly Report of the Department of Agriculture contains the following:—It is well known that sows not unfrequently attack and devour their own young; or if prevented from this, will not let down their milk, so that the young pigs necessarily die for want of nourishment. When this state of things is not caused by a diseased condition of the uterus, it is said that the sow can be brought to terms by pouring a mixture of ten to twenty grains of spirits of camphor with one to three of tincture of opium, into the ear. The sow will immediately lie down on the side of the ear to which the application was made, and remain quiet for several hours in this position without interfering with her pigs; and on recovery from the stupor will have lost her irritability in regard to them. The experiment has been tried in Germany hundreds of times, according to one of the agricultural journals, without any injurious effects. It is also said that the eating of pigs by the parent sow can be readily prevented by rubbing them all over with brandy, and making the same application about the nose of the sow herself.

PIG-PEN PAPERS.

Clover for Hogs.—An Ohio hog raiser advocates the system of pasturing on clover during the summer. He presents, as the advantage of this plan, the statement that an acre of ground in clover will pasture five hogs four months, and that it will take the corn from half an acre to feed them the same time. The cultivation of the corn he counts equal to the rest of the other half acre. He further claims that hogs pastured on clover are in far better condition than if fed on corn, as they are better framed, healthier, and eat better, and also states that the land is enriched by the clover pasturing.

Protrusion of the Rectum.—I have several young pigs whose rectums protrude badly. What can I do as a remedy? They have diarrhea badly.—P. R. SUSHIP.

WASH the part with warm water, rub on a little laudanum, and gently press the part back, pushing up the finger a short distance. Three to five drops of laudanum may be given a sucking pig.

When to Wean Pigs.—A "Young Agriculturist" asks the best time to wean pigs. When from seven to twelve weeks old. It depends somewhat on the condition of the sow (and the pigs also) whether the weaning should occur at an earlier or later date. We have taken pigs from sows when six weeks old.

Field Crops.

GUANO AND FIELD CROPS.

THE New England States have, for the past two years, suffered so severely from drouth that during the Winter of '71 and '72 hay, in many places, could not be had at any price. Cattle were sold off in large numbers at low prices, and the country is now alike short of stock and provender. The hay crop in some localities is certainly much better than the two preceding years, yet far from what it has been or should be. In many places the farmers are awaiting the coming in again (as they term it) of grass without the application of seed. This, to me, seems a new idea—that old and worn out meadows will again re-stock themselves merely by the application of a little surface dressing; and it is very little they get, as a load of manure is made to cover a large space, and quite thinly.

The fact is, farmers are not making enough manure to enrich their farms, and those who are disposed to put their fields in condition, even to raise grass, must resort to fertilizers of some kind, among which none is so good as Peruvian guano when incorporated with the soil by thorough harrowing, and immediately preceding the sowing of the seed. This is the only thing to give us a good start; but as our lands are usually hilly and stony, it takes much time after plowing up a field to get it in condition for the mowing machine, without some new patent is brought out that will adjust itself to run over them.

In top dressing my experience has taught me that much of the valuable properties of manures or fertilizers are lost by evaporation, as the surface is generally so hard that they cannot penetrate. In a field of corn, sown for fodder in 1871, I realized their value and could scarce credit its rapid growth; when cutting it sixty days after sowing I found it from eight to ten feet in hight. The field was at once sown to rye, and the effects of the guano were readily discovered in that also, being remarkably tall and well filled and ready to cut many days in advance of other fields sown earlier.

On the 12th of June, 1872, I prepared two acres, putting on one ton of guano, giving a thorough harrowing and sowing Western corn at the rate of three bushels to the acre broadcast, and harrowing both ways to cover the seed. The result is very gratifying, the corn now being from four to six feet in hight, and growing rapidly.

Little is written or said about guano by parties who have used it, and it would be well if those experimenting with it would report results. I made diligent inquiry last year for some work that would give information how it could be used, and I could not find in your city anything that referred to it at length. In my opinion, guano, as I have applied it, is one of the cheapest and most valuable of fertilizers; but as a surface dressing I consider it hazardous, if not dangerous, unless applied in a liquid form; and then it must be well diluted. A trial on my lawn has convinced me of this fact. PETER BIRKEY.
Litchfield Co., Conn., July 20.

FIELD NOTES AND QUERIES.

When to Cut Grass.—Mr. TIMOTHY ANGLIN, Lexington, Ky., says:—Grass cut a little before blossoming will produce more milk than when in blossom, and the cows prefer it. And in this stage I think it contains more sugar, which is an essential element in the formation of good milk. For the stock, I prefer it a little harder—say, two-thirds in blossom, as there is a great shrinkage when so green; when it gets too hard, it becomes woody and fibrous, and is more difficult to digest, and takes more time to masticate and extract its nutritious qualities. The animal has more labor to perform, consequently.

Manure for Oats on Sandy Soil.—J. A. K., New Orleans, La., asks what kind of manure is best for oats on sandy land. The oats are to be sown this fall to be turned under next Spring. Any coarse barn-yard or stable manure, or muck, or vegetable mold. Spread it on the surface and plow in (not deep) just before sowing. Perhaps nothing is better than swamp muck where the object is strong growth for plowing under.

Cultivation of Potatoes.—Will "G. H. B., Schodack, N. Y.," (page 10, vol. 27, of RURAL,) please give a statement of work, both team and hand, on any certain number of acres of potatoes grown by his process of culture, and oblige—A POTATO GROWER, *Belle Isle, N. Y.*

Dairy Husbandry.

AN OUTLET FOR FOR WESTERN CHEESE.

THE Western Farmer, referring to the proposed action of the Wisconsin Dairymen's Association in regard to sending cheese direct to England, quotes from the Lake Mills (Wis.) Union, in which the movement is strongly advocated. According to the Union, Wisconsin people are making more cheese than ever and without an adequate provision for a corresponding outlet. It says:—"We must find some market that will take our cheese, and that, too, in quantities great or small. Chicago or Milwaukee cannot do it. The burden is too large, simply for the reason that dealers in those cities have no commercial relations with great foreign markets. The wheat, flour, pork or lard merchants of the West are equal to the occasion, and years ago learned the important lesson that if they wished to handle these products they must provide an outlet for all that came, and open commercial relations with every available market throughout the world. Matters seem to have arrived at that state when the dairymen of Wisconsin must look out for themselves and endeavor to accomplish by their own enterprise and energy the result of a more substantial, reliable and remunerative cheese market. We believe the shipment of cheese from Wisconsin direct to London to be highly feasible, and, providing our dairymen will make the right kind of cheese, we see no reason why it will not prove profitable. One good effect it will certainly have, viz:—that of relieving, to a certain extent, the pressure on the home market."

We do not think this sound advice. Wisconsin and Northern Illinois should rather seek to open up new home markets at the West and Southwest, than look to a foreign market for an outlet for their cheese. The cost of transporting cheese from Wisconsin to the seaboard is a serious objection to a foreign trade, and in addition, the length of time the cheese is in transit by rail increases the hazzard, since in hot weather there is liability of overheating the goods and injuring flavor, while in cold weather there is danger from freezing. New York and other Eastern States can supply all the cheese needed in European markets, or, at least, all that can be profitably disposed of. Then again, more or less New York cheese, every year, is shipped West. It would, therefore, be poor economy to pay to the railroads in freight what would help make up a decent profit to the producer if the cheese was supplied near home. The dairymen and cheese dealers of America are greatly in fault in neglecting home wants and home trade while seeking an outlet for their goods in Europe. We think it would pay Wisconsin dairymen to organize and raise a fund sufficient to employ a good business agent, who should be kept traveling and taking orders for cheese in all the leading cities and villages of the West or Southwest. Such an organization of the factories in all the dairy States could be made a success.

The time has come when dairymen must take this matter in their own hands, in the same way that all our city wholesale merchants do. They send out their agents and runners, and in this way sales are effected and profits realized. It is our home markets which should be supplied, and our home trade which should be developed. Half the villages of the States are unprovided with cheese, and no effort is made to introduce it by home dealers. At the East they prefer to get the goods off their hands as quickly as possible by shipping abroad, and realizing their commissions or profits on sales. The consequence is that goods often go below their value from an oversupply or glut of the foreign trade, especially during Summer. In England, the whole country is mapped out, and every village and hamlet has its large or small cheese stores. The large dealers and brokers in the cities have their regular line of customers from the country, and thus the cheese is kept moving.

In the United States there are a large number of towns and villages where it is extremely difficult to get a pound of good cheese from one end of the year to the other. The grocers do not get in the way of handling this class of goods, and most of them do not know where a first-rate article can be obtained, and so there is no inducement or effort to establish a trade. Now if the factories would send out a good business agent to look through the various villages of the country and induce persons to take orders, even if they started with small quantities, a large home trade would soon grow up, consuming our whole product, thereby benefiting the people at large and making it profitable to the producers. Surprising as it may seem, yet it is nevertheless the fact at Little Falls, the largest country cheese market in America, it is very difficult to get good cheese at any of the stores of the place. The reason is that all the good cheese is shipped abroad and such cheese as are imperfect or defective in texture or flavor and will not do to be shipped, are thrust upon the local trade, and thus those who desire a first-class article are forced to go to the factories or engage a cheese from the farm dairies. Hence consumption at home is not promoted. The complaint of people who travel much is that in country towns they cannot find good cheese, and often none at all. We are persuaded that the relief which dairymen are seeking in an outlet for their goods, must come from promoting home consumption. And the factories must take the matter in hand, and work up markets for their goods precisely like other corporations or business firms. It will not do to depend upon a few produce dealers in New York, Chicago, Milwaukee and other cities.

Let a half dozen or more factories unite and pay the expenses of an agent who will look to their interests in opening new markets and in making such sales as shall be satisfactory at home and not become dependent upon a foreign market.

We are told that a large trade in cheese could be inaugurated with China if our commercial men would turn their attention in that direction. If there be an opening there, it would be worth while for some of our leading cheese merchants to make themselves acquainted with the prospects of such a trade.

DISEASED MILK.

THE question of diseased milk is of very great importance, whether considered in a sanitary point of view, or in respect to the influence which such milk has in injuring the quality and flavor of the products manufactured from it. Dairymen, generally, we think, are not fully aware of the harm which is likely to follow from using the milk of diseased or unhealthy cows.

In a recent number of the British Medical Journal an account is given of an infant affected with a bad eruption, which made its appearance on his face, body and extremities in large, circular patches of a bright rose color; his hands, feet, face and abdomen swelled, and altogether he had the appearance of one poisoned by mussels or other fish. The eruption afterward extended to his scalp and became almost livid, lasting several days. Now in this case, it was stated, the infant had been brought up principally on cow's milk and the nurse-maid had always been sent to see the milk drawn, and always from the same cow. The physician, puzzled to account for the disease, went to the cow-barn and found that the cow—although in every other respect a fine animal enough—was suffering most unmistakably from the foot-and-mouth disease. Another child of the same age, fed with the same milk, had also suffered from a pustular eruption on the head and face.

The milkman took the matter very coolly, informing the physician that the disease was largely prevailing in other cow barns, and the Journal calls attention to the fact and says it is quite time that these places are officially inspected and milkmen prohibited from selling the milk of diseased cows.

Mr. J. MULLER of Waddingsveen, South Holland, in a communication to the London Milk Journal gives an account of the spoiling of a vat of milk (the day's yield from eighty cows) simply on account of mingling with it the milk of one cow. The milk would not coagulate properly and commenced emitting a very noxious smell, and for fear of spoiling the good milk standing near in the other vats the chute was opened and the whole contents of vat discharged into the ditch. In this case, the milk of the eighty cows came from one patron and was put into a vat by itself, so that the cause of the trouble was easily traced in the dairy to the particular cow. Numerous cases similar to the above could be given showing the bad influence of diseased milk, and we are convinced the trouble is much more frequent than is commonly supposed. Dairymen who have "foot-rot" prevailing in their herds, or who have ailing cows, not unfrequently mingle the bad and good milk of the herd together without thinking that any harm is to come from it. At the factories it is often quite difficult to trace bad milk to its source, because the milk of a neighborhood or of several patrons being massed together, and there being such a great variety of causes likely to affect it injuriously, it is not easy to trace existing troubles to the true cause. So with sickness and disease, the cause is not unfrequently attributed to the wrong source, and the fact that milk is generally considered one of the most healthy articles of food is very likely to lead one to pass over any influence that might come from it, when possibly the trouble originated therefrom.

We are now in the midst of hot weather, when diseased milk, from its rapid decomposition, accumulates its power, wonderfully, for doing harm. Dairymen, therefore, cannot be too careful in keeping bad or diseased milk from the good, and on no account to allow such diseased milk to go to the factory or into consumption. The milk from a bruised udder often works great mischief when careless or thoughtless milkers dump it into the can along with that which is good. Some people wonder at the difficulties of cheese making, and think that experienced cheese makers should be able to overcome all troubles in the handling of milk; but if we could know of all the bad milk received at the factory—bad milk resulting from diseased cows, from bruised and broken udders, from sore teats, from cows suffering with "foul in the foot," or from sores and ulcers on various parts of the body—we should then begin to realize how difficult it is to manufacture a uniform "fancy" product from milk which is often poisoned, more or less, in this manner.

KEEPING BUTTER FOR LONG PERIODS.

IN last year's RURAL NEW-YORKER—Sept. 30th—we gave an illustration of a new method of packing butter to keep for long periods. It is the invention of CHARLES H. WHITE of White's Station, Michigan, and consists in putting the butter in a sack fitted to a peculiarly shaped tub and so arranged that when the packing is completed and the tub turned so as to rest on the large end the butter will drop down an inch or so, leaving a clear space between the tub and butter. Strong brine is now poured through a hole in the small end of the tub, to fill this space completely. The brine floats the butter and wholly surrounds it, excluding the air. The orifice is then closed up and the butter set away in a cool place. The invention seemed to us to have very great merit, and we determined to test it practically. Mr. WHITE, therefore, in September last, furnished us a tub of butter, which arrived during very hot weather, which we considered favorable for a thorough test, especially as it had stood in the express office a couple of days, exposed to the sun before we were notified of its arrival. The tub was then taken and set aside in the cellar, where it remained until July 13th, 1872, when it was opened. The most of the brine had evaporated, but we found the butter sound and apparently in as good order as when first packed—ten months and a-half previous.

From this test we are inclined to think that with proper attention from time to time in supplying brine as it evaporates, butter may be kept two years or more in good order by this method. If all tub butter sent to market were put up in this way, the risk of handling would be vastly lessened; and for family use, when the butter is not needed for immediate consumption, the plan of packing is to be highly recommended.

Another important feature in these packages is that the butter may be lifted by the sack entirely out of the tub, the end of the sack turned down and the butter cut in desirable shape for the table. The cutting of buttter being taken off as desired, the sack with that which remains is lifted back into the tub and thus treated alternately until the whole is consumed. In the old way of packing it is quite difficult to cut the butter from the tub in good shape for the table. It is not unfrequently in ragged and unsightly lumps, but with the White package the cuttings may be made very neat and shapely.

DAIRY PRODUCTS VERSUS BEEF FOR FOOD.—Mr. X. A. WILLARD, in his address before the annual meeting of the Vermont Dairymen's Association, argued in favor of the superior economy of cheese and milk for food, as compared with beef. A good cow in twelve years would produce 4,500 pounds of cheese, while three good steers, four years old, would not usually give more than one thousand pounds of beef each.

The Horseman.

HORSE DISTEMPER.

I WISH to get a little information with regard to a horse's diet that has a bad cough. I have a good work-horse that coughs very bad and runs at the nose; he coughs when he is feeding and when he is on the road, both. I want to know if his feed should be wet or not? I have fed him wet hay, and cut hay with oats wet; also ground feed wet. I have given him Condition Powders, but to no good purpose.—J. V. T., *Sharon, Mercer Co., Pa.*

WE suspect your horse has distemper. Whether he has or not, if he has a cough the hay should be wet, if hay is fed. Roots would be better. Corn meal is healing, and bran mash and oat-meal is better. The following on the treatment of horse distemper by Prof. DIEMER, a Western veterinary surgeon, may prove serviceable to you and others:

"The treatment of a common case of distemper is very simple, and requires internal medicines only, when the fever is high, the mucous membrane much reddened and the respiration difficult. In all other cases, but especially as soon as the cough has become loose and easy, the discharge from the nostrils thick, and the abscesses have been opened, a merely hygienic and dietetical treatment is quite sufficient. Respecting these, we have to avoid any exposure of the patient to wet and cold, have to keep, as much as possible, a uniform temperature in the stable and to give easily digestible food, such as bran mashes, malt, boiled oats, carrots, and, if it can be had, young grass and other green provender.

"If there is considerable swelling beneath the jaw or in the throat, the horse should not be allowed to eat from the ground—consequently he should not be kept in the pasture—for that most likely will increase the swelling. Food and water—the latter in the cold season a little warmed—must be put into the manger, within easy reach of the animal. The application of a good fly blister on the swelling beneath the jaw, that is, between the two branches of the lower jaw bone, hastens considerably the ripening of the abscess, which should be lanced at its lowest point and, if possible, near the center, as soon as the presence of matter can be detected. Steam baths and all that kind of nonsense incommode the patient and do a great deal more harm than they can do good.

"If internal medicines are required, a dose of tartar emetic, two scruples sal ammoniac, two drams with a little licorice root powder, anise seed powder and marshmallow root powder, either mixed with a little water or made into pills, may be given to a full grown horse three times a day, till the respiration has become less difficult, the cough easier and the discharge from the nostrils thick."

A HORSE PALACE CAR.

THE owner of the famous trotting mares, Goldsmith Maid and Lucy, has contrived a palace car for their use while traveling by rail, in the racing season. In outside appearance the car is not unlike an ordinary passenger car, with the exception of the number of windows on the sides, of which there are six on either side, each with wire screen upon the inside. Upon entering the car you step into a small outer apartment, in which are a luxurious lounge and other articles of furniture for the attendants.

Opening a door upon one side, you enter the main portion of the car, devoted to the horses and the ordinary track appurtenances. Here are four stalls—two at either end—and running lengthwise of the car.

The sides of each of these stalls are thickly padded with hair, covered with enameled cloth. The stall partitions are movable and can be taken out and placed across the rear end of the stalls, thus forming, when desired, a roomy box stall. Overhead are strapped, in separate pieces, the sulkies, all carefully guarded from being scratched or marred in transportation. The center of the car is devoted to trunks, chests, hay, etc. At either end of the car, on the roof, are tanks, each capable of holding eighty gallons of water.

Underneath the center of the car is a capacious box with doors, in which is carried the platform upon which the mares pass in and out of the car. The car is furnished with the most improved passenger car trucks as adopted by the Pennsylvania Railroad; also with the Westinghouse air brake. The car is also provided with marble wash-bowls, closets, and in fact everything necessary for the comfort of the Queens of the Turf and their attendants. The entire length of the car is fifty feet, and of the usual width of passenger cars. This car takes the mares to California.

The Vineyard.

TO PREVENT GRAPE ROT.

A. P. WYLIE writes the following communication to the Reporter of Chester, S. C. It will interest and may profit vineyardists:—"I wish to call the attention of the public to a remedy which although not at all fully tested, promises to be of immense importance to the public. In the year 1871 I desired to impregnate the Herbemont Grape, also the Bland Madeira and Foreign, No. 1, a very large October grape, with the Pollen from Peter Wylie, No. 1, so as to produce a hybrid or cross progeny. Knowing that both the Herbemont, Bland and Madeira hybrid No. 1, would surely shoot all rot as they had been invariably doing in that locality, I concluded to keep the hybridized bunches covered with paper bags, putting a small pinch of sulphur in each bag and keeping the bags on from the time they bloomed until they ripened; to my surprise not a berry rotted, when every other branch on those vines rotted, leaving scarcely a berry.

"When Mr. Ravenel, of Aiken, visited me in the fall of 1871, I called his attention to the remarkable fact. Although the experiment had been tried only on a very small scale, still I determined to give it a further trial this Summer. Unfortunately I was absent from home until the latter part of June, so that I did not get but a few put on before the 1st of July. I am satisfied that it will more certainly succeed when put on at the earliest period. I ordered from Howlet Brothers, 204 Fulton street, New York, 2,000 bags from eight to ten inches long and about six wide; a few blue ones, but mostly white. I have put on over a thousand bags after either blowing the bunch over with a sulphur bellows, or dropping a small quantity of sulphur into each bag, then drawing the bags over the bunches and pinning them with one or two small pins around the stem, so as to keep out rain, birds and insects. So far the experiment is entirely successful, not a rotten berry to be seen, except on one vine which was rotting badly at the time they were put on.

"The plan is simple and cheap; half grown children can easily do it, and one person could put on 1,000 easily a day. It is getting too late for the experiment for the South, but it could still readily be done at the North. Pins are much more convenient than paste. By cultivating grapes on elevated beds or ridges twenty feet apart, with deep water furrows between the rows to secure drainage, using the sulphur bellows when they first start in leaf, and applying bags at the time of blooming in conjunction with the soil and modes adopted by good cultivators, I believe that there is a hope for the foreign grape to succeed without glass. There is no danger of rain wetting off the bags which Howlet can supply."

CALIFORNIA WINES.

IT is conceded by California growers that their wines contain an excess of spirit. California grapes are said at the time of vintage to contain 20 to 30 per cent. of sugar. A Vintner in the Rural Press says in response to the assertion that California wines contain 15 to 20 per cent. of alcohol: Every intelligent vintner knows that two per cent. of sugar will produce, when well fermented, one per cent. of alcohol; our grapes at the time of the vintage contain from 20 to 30 per cent of sugar.

If the must (grape juice) contains twenty per cent. of sugar, the fermentation will be completed in from four to six days, the wine will then be dry, and contain ten per cent. of alcohol; if it contains twenty-four per cent., the fermentation will last a little longer, and then the wine, when dry, will contain twelve per cent. of spirit.

If the must contains thirty per cent. of sugar, the fermentation will be very active until twelve or thirteen per cent. of alcohol has been eliminated, when the fermentation will stop, and from four to six per cent. of sugar will remain in the wine, there being enough alcohol present to preserve the remaining sugar, and prevent further fermentation.

According to this, no wine containing fifteen per cent. of alcohol can be made through the natural process of fermentation, much less any containing twenty per cent.

I have no doubt, you can find wines with the percentage of alcohol you mention, but they are all fortified by the addition of a certain amount of spirit, and consequently, not the pure and simple result of natural fermentation.

French and German dry wines vary from nine to eleven per cent. of alcohol; under nine they will not stand shipment; anything above eleven per cent. is fortified, and belongs to the stronger kinds, such as port, sherry, madeira, etc.

Water cannot be used to reduce wines, not even before fermentation; it is true, water reduces the percentage of alcohol, but water and sugar are not the only elements necessary to make a good wine; nature alone produces and elaborates all these elements through the process of growth and ripening of the grapes. I have tried introducing water with the various kinds of grapes. The only way to make a good light wine, is to pick the grapes before they are too ripe, this will insure a prompt fermentation, and

THE LONTAR PALM.

produce a light and well-flavored wine, not at all *heady*, as I am ready to prove to you if you will take the trouble to call on me and sample the contents of my cellars.

SECOND FERMENTATION OF WINE.

WILL you please inform me if there is any scientific reason for wine working the succeeding season after it is made, when grapes are in blossom. Or has the blossoming of grapes anything to do with it.—W. L. D., *Clyde, N. Y.*

THE blossoming of the grape has nothing whatever to do with the usual slight second or Spring fermentation of wine. We know that it is an old and quite prevalent notion that there is some sort of secret connection between the vines from which grapes were gathered and the vine in the cask just as a great many persons believe that the mystical figures in the front of an old almanac, represent certain influences which the moon has over the animal and vegetable world.

A slight second fermentation of wine usually takes place the following Spring after it is made as the weather becomes warm. It is nothing more than the Autumn fermentation which was not quite completed before the cold weather came on, revived by an increase of temperature. It must not be supposed that because wines are stored in a deep, cool wine cellar, that the warm air of Spring does not reach them, as it would be very difficult for a man to enter a cellar and not have air pass in at the same time.

Rust on Grapes.—No one should thin grapes without the head being securely wrapped with a clean handkerchief, to keep the hair from coming in contact with the berries. As for fingering or handling, by all means avoid it; a tapering piece of wood about the thickness of a penholder will suffice to hold or turn the bunch about in any required direction. In thinning Grapes it is astonishing the difference produced on them by different operators.—THOMAS J. CAPARN,

THE foregoing is an important suggestion, and explains what has puzzled many gardeners—why their grapes rust in the grapery.

Arboricultural.

THE LONTAR PALM.

THIS palm (*Livistona subglobosa*), J. CRONCHER says, is worthy of being set in an isolated position, where its noble head of leaves can be seen to advantage. Its foliage resembles that of *L. chinensis*, but is compacter, and the plant itself is not quite so hardy as that kind. Its stem is corrugated and very regular in size. As will be seen, the head forms nearly a globe. The leaves are used in Java, where it grows naturally, for basket-making, for thatching, and for hat-making. When they are intended for thatch, or for making fences, a use to which they are sometimes put, they are placed flat on the ground in layers, often with weight upon them to assist in flattening them. The thatch formed of them does not last, it is said, longer than two years, nor is it so handsome as that made from plaited cocoanut leaves. The selection of a few fine-looking palms such as this, giving them room so as to fully develop their beauty, is better by far, especially in private establishments, than having quantities crammed in a mass. This plant may be classed with those that will grow in the warm end of a conservatory. It acquires only a moderate size, and is easily cultivated.

CLOVER AND APPLE TREES.

RACHEL WILKINSON asks if clover is injurious to apple trees that have come into bearing. No, provided the first crop ripening is cut and hauled over the roots of the trees as a mulch, and the second crop is not cut at all, nor fed, except by sheep or pigs—that is, it should not be removed from the orchard. We know extensive orchards treated in this way, and the result is quite equal, so far as profit goes, to that derived from the most careful cultivation.

Industrial Topics.

FARMER GARRULOUS TALKS.

DEAR RURAL:—You have sent me the request of one of your subscribers that I should redeem my promise, made last April in the RURAL NEW-YORKER, to tell

What Made John a Model Hired Man.

I am going to do it, although with the various farm duties which have devolved upon me since then, it had almost gone out of my memory. But I assure you I've not forgotten JOHN. This very day, I being absent, he has saved me a month's wages by taking the responsibility of taking the hands out of the hay field to dig for water in a springy place that had never before been dry. Three hours labor by three men secured an abundant flow of pure water, and my cows are saved from thirst and my butter account from demoralization.

How JOHN became such a model was in this wise:—He came to me uncouth, rough, with a feeling that every employer's hand was against him and his hand should, therefore, be kept in a defensive position against every employer. I first began by making him feel that *he* was a man, and gave him to understand that I recognized that fact. Whereas he had been accustomed to going into farmers' kitchens and eating alone, without regard to cleanliness, I said: "JOHN, I want you to sit at the table with me, because I want to talk with you about farm matters; but you must go there clean. I cannot have a boor at the table with my children. Here is a coat which you are to wear in the house; here are slippers to replace soiled boots; face, hands, finger nails must be clean and hair combed. Take time, as I do, to attend to these matters. Once at the table, do as the rest of the family do. Don't do as you always have, but try to observe the formalities of civilized life in every minute particular."

Don't you see what a lift I gave JOHN at the outset? I recognized his capacity to be taught; yet I made him feel that he needed to learn. He learned to listen—only to speak when spoken to. He felt that he was placed in a position in which his honor and manhood were recognized, and he guarded both. Then, when we went into the field, he was taught, *by example* first, to do whatever he saw needed to be done, and to keep his eyes open, that he might see. He was taught how to see; and he early learned to take the required time to do what he did, well; but he was taught not to waste time doing it, for he was patiently shown how I wanted it done.

The trouble is that employers cry out, "Stupidity!" and find fault with a man who does not exercise the same judgment they themselves exercise. They forget that every person must receive a practical education before he can do the right thing at the right time and in the right way. I never upbraided JOHN if he did not do things right. I simply quietly, and without any impatience in tone or manner, told and showed him the right way, and *gave him the reason why* it was the right way to do. He never forgot it; and when he did the right thing, I was always sure to recognize it by commendation. That stimulated him to think before acting, if, perchance, he ever had to act upon his own responsibility; and he was more careful to observe how I did things, and listen to my directions, with the hope of meriting such commendation.

In all the minutiæ of farm duties he was *taught*, by precept and example, his duty. I did not exact of him more hours of labor than I would have been willing to give. If I wanted extra labor done, I gave him extra pay. If I saw he was ill, or, by unusual effort, in a condition in which he ought not to work, I did not wait for him to say so, but recognized the fact and relieved him. He has been as much under my care as my own boy. I have treated him, so far as labor is concerned, with the same consideration. Do you suppose it has not paid tenfold? Of course it has! Does he want to to leave me? No, sir!—at least he says not. Why, I'll do as every good merchant or banker would do by an equally faithful employee—I'll take him into partnership first. He believes, is made to believe, and knows, that my interests are his—that he is a partner now.

He recognizes my right to manage my own affairs in my own way and the sacred individuality of every member of the family. Why? Because he realizes that his individuality is recognized. He is only held responsible for his actions so long as he acts for his employer. When he acts for himself no questions are asked. No one asks him who he gets a letter from, where he has been, or what he has been doing if away for a holiday. "Have you enjoyed yourself, JOHN?" is the extent of the questioning in regard to his acts on such days; or, "have you good news, JOHN?" if he receives and reads a letter in our presence.

If you say, Mr. Editor, that I am trying to prove JOHN a Model Hired Man by proving myself a Model Employer, and therefore accuse me of ostentatious egotism, I reply, that I long ago learned by experience that the character, disposition and capacity of the men who came to me for employment, depended almost wholly upon, and was reflected by the character, disposition, capacity and habits of their former employers. A long experience, together with the reading of axioms, has taught me that if a man would govern others well he must first learn to govern himself; that if he wants others to deal honorably with himself he must deal honorably by them; that if he wants an unbroken colt to draw he must teach him how; that if he wants his interests looked after, he must not only look after them himself, but must make it an object to others to aid him; that if he wants his work done in a model manner, he must first know how to do it himself, and then patiently teach those whom he employs how it should be done. That is the way to secure Model Hired Men.

FARMER GARRULOUS.

Floricultural.

SOWING THE SEED OF ROSES.

THE rose shears will soon be in constant operation, cutting off every faded flower. May I ask that the hand may be stayed when about to snip off those which are likely to produce seed? The endless variations of color and shape of the flowers, the manner which those seedlings reproduce the traits of the parent, at one time the leaf, at an other time the flower, will in 'uce an interest in the work which will amply repay the annoyance of seeing a few seed-pods scattered about among the flowers throughout the summer. The seedlings will not, I promise, produce all double flowers—but even a briar, with blossoms as large again as those of the dog-rose, having a color equal to that of Count Cavour, would not, I imagine, be despised; then there would be yellow briars and briars of every shade of color. But they do not all come briars, even if the seed are taken from roses worked on that stock. A good proportion come roses, with an increased vigor, although deficient of the quality to bring them up to the standard of the parent as to form. The color will be found somewhat after that of the parent, although yellow kinds often produce seedlings that bear pink blooms, with leaves like those of the parent; but the blooms are larger and of a deeper color than those of the common briar. Those who do this find they have plenty of stocks to work favorite varieties upon; besides the pleasure of having one's own seedlings, and a chance of raising, now and then, something good.—*Henry Mills.*

BRACKETS FOR PLANTS.

SOME plants look so well against the wall of a greenhouse or conservatory that it is a wonder brackets are not in more general use than they are. It is not necessary that they should be so elaborate as that which supports the fine-leaved Begonia in the accompanying engraving; this is of course a matter to be determined according to individual taste and means. For growing plants in, the least ornamental form is just as good as any other. The simplest kind of bracket that I ever saw was a flower-pot with one side flattened, and having a hole near the top of the flat side, so that it might hang upon a nail in the wall. Some years ago I remember seeing a collection of Ferns grow against the wall of a greenhouse in these flat-sided pots, which were hanging thickly all over the wall; and the effect of the drooping fronds, which in many instances quite hid the pots, was exceedingly pretty. I see no reason why Mesembryanthemums should not be grown in such pots, by which means the wall of a conservatory might be covered with their blooms; and those who would like to see ribbon beds executed upon a wall, might be able with this genus alone to produce some curious effects. Wall gardening, in short, is a subject to which, as yet, little attention has been paid; but if well carried out it would doubtless be productive of the very best results.—W. T. *in Garden.*

FLORICULTURAL NOTES.

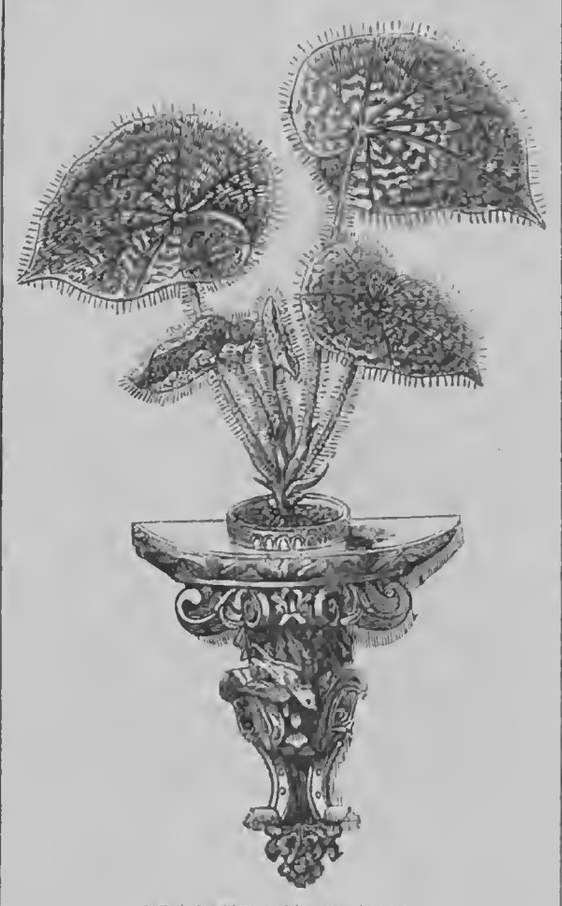
A Floral Ornament for the Drawing-Room.—Last August a lady friend of mine gathered a handful of the world-renowned flowers of forget-me-not, *Myosotis palustris*, and to preserve them as long a period as possible they were put in a large soup-plate filled with rain-water. The flowers were placed near the window, so as to enjoy the advantages resulting from an abundance of light and air, and the water was replenished when needful. In a surprisingly short space of time—three weeks, I believe—white thread-like roots were emitted from the portion of the flower-stalks in the water, and they ultimately formed a thick network over the plate. The flowers remained quite fresh, excepting a few of the most advanced when gathered, and, as soon as the roots began to run in the water, the buds began to expand, to take the place of those which faded, and up to the middle of November the bouquet—if it may be so called—was a dense mass of flowers, and a more beautiful or chaste ornament for the indoor apartment cannot be imagined.—*Thomas W. Trussler, in "Gardeners' Magazine."*

Floricultural Queries.—1. Are Petunias raised from seed, perennials? 2. What kind of soil is best for Cactus? 3. I have a small plant which resembles sheep sorrel, with small, bulbous roots; can you tell me its name? 4. Can you give me the name of the inclosed leaf?—SUBSCRIBER, *Aurora, N. Y.*

1. Petunias are cultivated as garden annuals, but by striking cuttings during Summer, and placing them in a warm greenhouse in Winter, varieties may be preserved and the plants will be perennial. Petunias are in their native country, (South America) perennials, but under cultivation are usually treated as annuals except when it is desirable to preserve and perpetuate some choice variety. 2. A rather heavy sandy loam, with an intermixture of sandy peat thoroughly decomposed, and adding a little pure silver sand. If the loam used is of a poor quality, a little very old cow manure may be added. The compost should be at least six months old before used in order to produce the best results. 3. We cannot give you the specific name, but it is probably an *Oxalis*, which is only the generic name for sorrel, derived from *Oxys*, acid or sour. 4. *Crassula lactea*, a near relative of the common Live-for-ever, (*Sedum Telephium.*)

Plant for Name.—I inclose you for name the leaf of a plant growing back of a stone house in our town. It puts out in Spring and dies down in Fall. Some of the leaves measure two feet in diameter. We cannot account for its appearance here, neither have we been able to find out its name.—N. G., *Warrenton, Ga.*

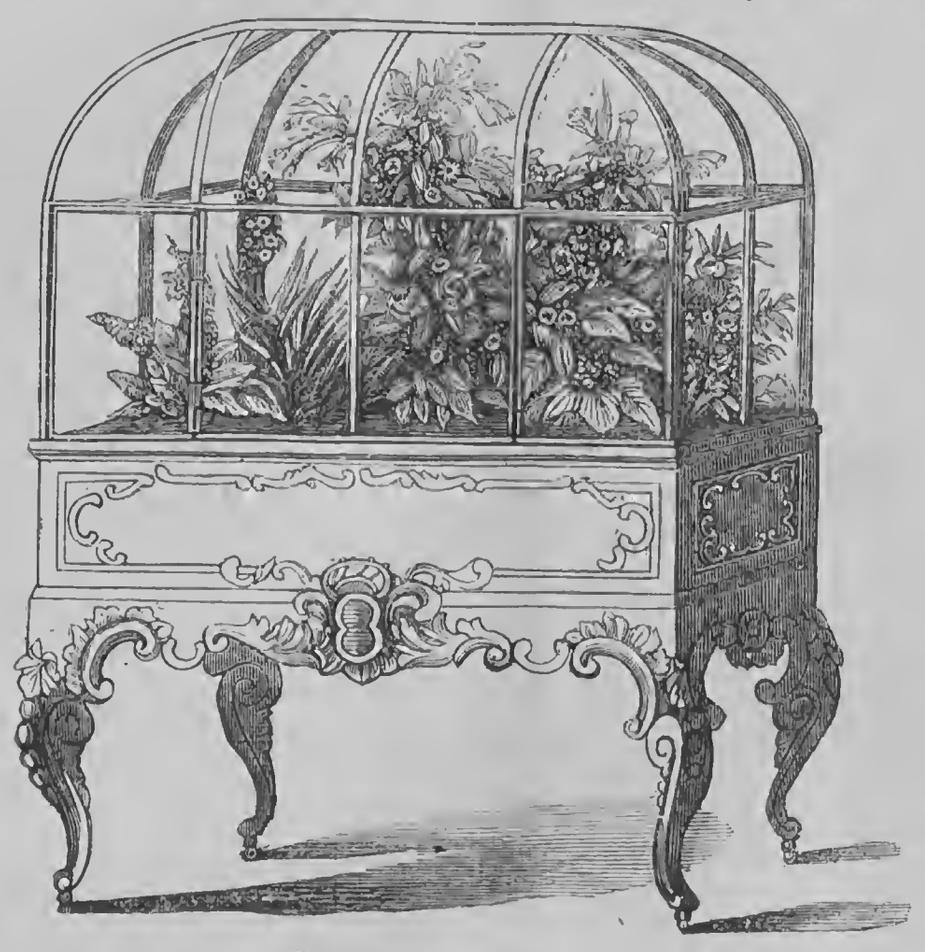
WE cannot name the plant from such a meager description; and the two very small leaves inclosed are not much better as an aid in determining a species. Send us flowers and leaves at the same time, and we will endeavor to give you its name.



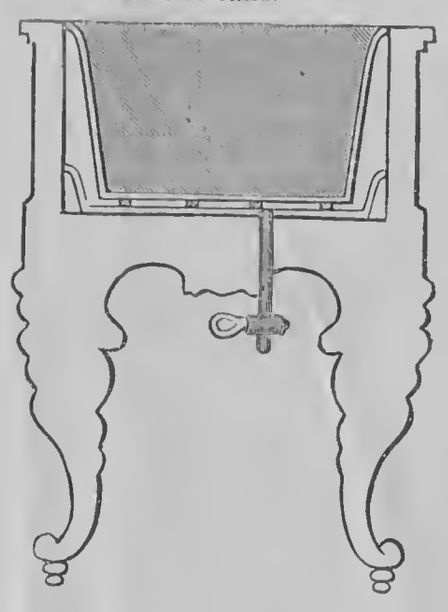
BRACKET FOR PLANTS.

Ink Plant.—An attempt is being made to acclimatize in Europe the new Grenada *Coriaria thymifolia*, or ink plant. The sap which flows from this plant is called chauchi; it is reddish at first, but afterwards becomes intensely black. This ink can be used without any preparation, and does not injure steel pens as much as ordinary ink, while at the same time it is more enduring.

Plant Case.—We find there is an increasing demand for plant cases for home ornamentation. We give herewith a pretty design for one, with a sectional view showing internal arrangement, which needs no explanation in order to enable any carpenter to make one. There is nothing more ornamental in a living-room or drawing-room than one of these plant cases filled with carefully selected plants. We shall give hints as to the filling and management thereof from time to time.



PLANT CASE.



SECTION OF A PLANT CASE.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Marketing Berries.—*July* 15.—Contrary to the expectations of growers in the early part of the season, there has been a pretty good crop of berries of all kinds. The price also has been moderate, neither very high nor low, barely enough to bring the producer a fair profit. I have sold my crop thus far to local markets in the smaller cities and villages in the suburbs of New York, and think I obtained better prices than if sent where there was greater competition. I do not, however, believe that my berry crop will pay me any more profit per acre than ordinary farm crops, counting cost of plants and culture for one or two years before any returns are received; but there is another side to this question which, I fear, many persons overlook, and it is this: by cultivating such fruits we have an opportunity of giving employment to many women and children who could not obtain as much money for this labor in any other way. Poor men upon whom we must depend for labor on the farm usually have wives and children, and it is not only a charity but justice that we should give them a chance to aid their husbands and parents in the struggle to obtain a subsistence. Several little boys and girls, not more than ten or twelve years old, have earned enough in picking berries for me during the past few weeks, to purchase themselves a good outfit of winter clothing, and they could not have earned this money as easily elsewhere. The strife also, which is engendered, where children are paid so much per basket for picking, tends to make them work rapidly and become industrious, and the habit thus formed will be very likely to remain through life. So long as we are obliged to employ laborers on our farms, it behooves us to encourage the most industrious class, and early training of the children will have much to do in bringing about the desired result. Farmers should not only endeavor to give employment for laborers in Summer and Winter, but try to find some light, but profitable work for their children. A few acres of berries near any large village will generally pay a small profit, besides furnishing just the employment which most children would delight in. As a general rule, boys and girls that are brought up on a farm are not sufficiently encouraged in what they do; besides the tasks given them require an expenditure of physical power far beyond what can be spared and still retain the natural elasticity of youth; and the results are seen in the thousands who leave the farm as soon as they can get away. There is far too much talk in books and elsewhere about children's duty to their parents, which is a humbug and a swindle, and has made more bad men and women than any other supposed to be sapient theory ever advanced. Selfishness is born in the human mind quite early; therefore it is well to teach a child to love you for the sake of being loved in return, and to work, not because it is his or her duty, but to assist themselves and gain a certain reward.

Destroying Weeds.—*July* 16.—For the past three weeks the weather has been very warm, with frequent showers; the consequences are an abundant growth of weeds, especially that pest of the garden, Purslane (*Portulaca oleracea*), which will withstand almost as much hoeing as Live-forever. There is only two methods which I have found to be certain death to weeds in time of frequent showers; one is to hoe up or cut loose with a cultivator and then rake into large heaps, or plow under, as in either case they are sure to rot. A good cultivator answers very well in very dry weather, but the plow is my favorite implement, not only for destroying weeds but also for keeping the soil loose and mellow. A first-rate cultivator is an implement not yet introduced, and it is strange that the inventive genius of the age has not as yet been able to give us an implement that will not only pulverize the surface soil but cut up any weed that happens to be in the way. For all soils free from stone we want a cultivator with sharp steel teeth, and these must not be made stationary, but have a rapid, horizontal motion, like the knife of a mower or reaper. Of course a cultivator of this kind will have to be mounted on wheels in order to obtain the necessary power to move the knives. I have tried the various kinds of stationary knives attached to cultivators, and while they may answer the purpose in stiff, clayey soils, they are worthless in light, sandy or loamy. Who will give us an implement in the cultivator form that will not dodge a weed as big as a man's finger, besides being so light as not to require a very large and powerful horse to draw it for half a day without being completely exhausted? If any of our inventors wish to try their skill in this direction, I beg of them to remember that the whole of these United States are neither a clay bed or stone heap, therefore give us something that is adapted to the light soils of the East as well as the vast prairies of the West.

Digging Early Potatoes.—*July* 17.—My Early Rose potatoes are ripe, and if I leave them in the ground during the hot, dry weather of August, they will be more or less injured, either from the high temperature of the soil or, if rains occur, a partial second growth may injure the quality of the tubers. Taking all the circumstances into consideration, I think it is best to dig them and spread in the coolest cellar I have, admitting all the air possible without light. From several years experience with the Early Rose, I have found it one of the very best potatoes for use in Spring as well as Fall and Winter; but, like all the very early sorts, more difficult to keep through the latter part of Summer than in Winter, although no loss need occur, provided the tubers are carefully harvested when ripe and stored in a dry, cool place.

Entomological.

POTATO BEETLES IN MICHIGAN.

I SEE in the RURAL NEW-YORKER an occasional mention of the "potato beetle," and various modes for his easy extermination, such as Paris green, lime, plaster, sulphate of iron (which I have not tried), fowls eating them, &c., &c. Now, we live in a buggy country just at this time, and we have found that "*eternal vigilance*" is the price of potatoes. We have tried all, or nearly all, of the remedies of the day, such as Paris green, kerosene, camphene, nitro-glycerine, and everything else that ends with *e*, even to fire and brimstone, and we can't get rid of this intolerable nuisance. Nuisance! You don't know what I mean when I say "nuisance." Take the seventeen-year-locusts (*Cicada*) and multiply them by all the plagues of Egypt, and how vague would be the idea to call the product a *nuisance*. Yet you have it in this Colorado potato bug. When they reach the Empire State, if you find that I have not told you the truth, then please let me know. I have heard that they have already crossed the line and entered the Dominion. If that be true, VICTORIA'S peaceful subjects will sigh in vain for the palmy days of Fenianism.

"They tell us" that the potato bug will leave the country in a year or two more, as he is *traveling East*. He may be traveling East, but you will find that when he comes he has come to stay permanently. He starts up in the Spring, lays aside his "faded coat" of yellow, and goes to work destroying everything in the shape of a potato vine, then starts on his journey, and when Winter overtakes him drops into the ground and is ready for his next year's vandalism. I tried the chicken experiment by cooping an old hen with twenty-four chickens in the middle of half an acre of Early Rose. At first the chickens seemed to like the sport of picking off the young bugs; but they soon got sick of them, and resolved to die scratching for worms rather than swallow another one of the loathsome creatures. I released the old hen, and the way she deserted her family and went for my garden, led me to believe that her experience among the bugs had either rendered her partially insane or totally depraved. Happy the man whose chickens will eat potato bugs.—J. B. T., *Collins, Mich., July*, 1872.

SEVENTEEN-YEAR CICADA.

I INCLOSE two twigs, cut respectively from quince and pear, showing the work of the seventeen-year locust. All of my young fruit trees are more or less damaged in this way—many of them bearing fruit for the first time. Now, I wish to know whether I shall cut off all such branches as are injured in this way now, or will it answer as well to cut them after the leaf has fallen? Will the eggs that are deposited in the wood hatch this season; if so, how do the worms descend to the ground? Many of the branches are cut off entirely, or so near that they will fall during the first strong wind.—J. MULLEN, *Lexington, Ky.*

THE seventeen-year locusts, or *Cicadas*, always do more or less damage to young fruit trees if any are in the vicinity; but it is some consolation to know that the appearance of this insect is not very frequent. If the twigs containing eggs were all cut off and burned, many thousands of those pests would be destroyed; but there are very few persons who will take upon themselves this very light, but really beneficial, task. The eggs hatch in five or six weeks after being deposited in the branch, and the larvæ drop to the ground, this being the most natural and rapid method of making the descent, where they start on another seventeen years' cruise under ground. We believe that there is also, in some localities, a thirteen as well as a seventeen year brood of *Cicadas*, besides two broods of either species may sometimes overlap, thereby giving what would seem to be a 7, 8, or 9 year brood, which would not be so in fact.

APPLE TREE BORERS.

BARRY, in the late edition of his Fruit Garden, says:

"The apple tree borer is a very troublesome insect in some sections of the country. In Western New York we have never met with it, but in two or three instances, in very old, neglected orchards, that had stood for twenty years in grass. The beetle is striped, brown and white, and is about three-fourths of an inch long. It deposits its eggs in June, in the bark of the trees, near the ground. Here the larva is hatched, becoming a whitish grub, which saws its way into the tree, perforating it in all directions, sometimes completely girdling it.

"The most effectual method to destroy them is to insert the end of a wire into their burrow and kill them. The same means are taken to guard against them as against the peach tree grub, viz., placing a mound of ashes around the base of the trunk in the spring, and allowing it to remain until after the season in which the beetles deposit their eggs. It prevents them from reaching the soft bark at the surface of the ground, the place usually selected."

ENTOMOLOGICAL NOTES.

The Cecropia Moth.—Inclosed find a large moth which is new to us. We would like to know its name and something of its habits. This specimen, when first caught, measured six inches across its wings.—DANIEL PIERCE, *Alma City, Minn.*

THE moth is the *Attacus Cecropia*, LINN, and is very common in the Atlantic States. The female moth lays her eggs in June and July, and they hatch in a few days. The worms at first are black, but change color at each moult; at last become green, with red and yellow tubercles. The full grown larva is about four inches long, and anything but an inviting object to timid nerves. It feeds upon the leaves of various shrubs, but is particularly fond of the apple leaf; and sometimes they are so numerous in nurseries as to do considerable damage to the young trees. When the worm has attained maturity, it spins quite a large cocoon, fastened lengthwise to some convenient twig, where it remains through the Winter, there being but one brood each year. In gardens, the currant bush is usually selected by the worm upon which to spin its cocoon. We seldom fail to find more or less when pruning our currants in Autumn or Winter. We preserved quite a number of the cocoons last Fall, placing them in our library, where they have produced some fine moths this Spring.

Colorado Potato Beetle.—Herewith I send you a box containing a sprig of a potato vine with three bugs on it. Are they the genuine Colorado potato bug? Have heard of their appearance in only one place in this locality. They will eat potato vines right lively. Any information in regard to them through RURAL NEW-YORKER will be thankfully received.—A. W. FERRIN, *Little Valley, N. Y.*

YES; the larva sent in the box are those of the ten-liner, or Colorado potato beetle, (*Doryphora ten-lineata*). This pest appears to be more destructive in its larva state than when in the perfect or beetle form; but it keeps pretty busy in both. We regret to learn of its approach, but expect it in the suburbs of New York City by another season.

Cure for Currant Worm.—The currant worms were stripping the leaves from my bushes in a very lively manner, not long ago, when I took fresh lime and sifted over the bushes, fairly whitening them. I have not seen any worms since, and the bushes do not seem any worse for the application. I put on ashes last year, but think lime the most effectual. The worms were rather small, brown ones like what we call a measuring worm, and perhaps were not the dreaded currant worm, but they were destructive.—B. C. D.

Scientific and Useful.

SCIENTIFIC AND USEFUL NOTES.

A Heat Measurer.—W. P. R. is correct and his friend is wrong. There is a German invention by which the heat of the hottest furnace is said to be measured. It is based on the principle that the resistance of pure metals to the electric current increases with the temperature in a very simple ratio. A platinum wire of known resistance is coiled around a cylinder of fine clay and covered with a tube of the same material. The tube is connected with a Daniell's battery of two cells, and with a resistance measurer, and placed in the furnace whose temperature is to be ascertained. Then can be read off the indications of temperature on the graduated resistance measure. We know of no similar device in this country.

Useful and Scientific Inquiries.—GASTERPOD asks some one to tell how shells are fastened to frames and boxes, what kind of wax or glue is used and how made. . . . J. W. F. asks the best mode to cure and tan lamb skins with wool on . . . . Y. asks if there is a "mineral rod" that is of use in discovering coal mines.

Farm Economy.

ASHES, LEACHED AND UNLEACHED.

THE Boston Journal of Chemistry gives the following, which will answer several questions asked by correspondents of the RURAL NEW-YORKER:—Inquiries are frequently made regarding the comparative value of leached and unleached ashes; and in order to answer them, let us consider the nature, or chemical constituents of the two heaps as we find them at the soap-boiler's. In one bin are the dry, fresh wood ashes; in another, the wet, lixiviated mass, as thrown from the leach tubs. If the former are like the ashes produced in our own dwelling, by burning in the open fireplace, oak, pine, hickory, birch, and maple woods, a bushel will weigh about fifty pounds, six and three-fourth pounds of which are soluble in warm water. Of the soluble constituents, there are a little more than four and one-half pounds of potash and soda, the remainder being the sulphuric, muriatic, and carbonic acids with which the alkalies are combined. Forty-three pounds are *insoluble* in water, and consist of

Carbonate of lime	32 lbs.
Phosphate of lime	3 lbs.
Carbonate of magnesia	4 lbs.
Silicate of lime	3 lbs.
Oxides of iron and manganese	1 lb.

"It is the work of the soap-boiler to remove from ashes what is soluble in water, which is accomplished in the leach tub, and this is all the change they undergo in his establishment. The ashes go in dry, holding the soluble and insoluble substances; they come out wet, deprived of six and three-fourth pounds of potash and soda. It should be stated, however, that about one pound of quick-lime is added to each bushel of ashes in the leach, to render the lye caustic. This adds one pound more of lime to the insoluble residuum, or the leached ashes, making it weigh, if it was free from water, forty-four pounds. In leaching, the ashes do not change much in bulk, but they are largely increased in weight from the contained water.

"Now, what is the commercial value of the ashes before and after they pass through the soap-maker's hands? In the dry state the

	Cents.
Four and one-half pounds of potash and soda are worth 6 cents a pound	27
Other soluble constituents	3
Thirty-two pounds carbonate of lime	3
Three pounds phosphate of lime	6
Three pounds silicate	0
Iron and manganese	0
	39

"This estimate, which is a fair one, gives a value per bushel of thirty-nine cents; that is, the substances found in a bushel of good sound wood ashes are worth, in the market, that sum, at the present time. By leaching the ashes, thirty cents of the commercial value is removed and converted into soap; this leaves nine cents as the value of the constituents of a bushel of leached ashes. The silicate of lime, and the metals, practically, have no market value and are not considered.

"What is the agricultural value of the two forms of fertilizers? The ashes holding all their normal constituents, are worth more applied to soils than for other uses when separated, dollars and cents being considered. A bushel, judiciously employed, will return, in most seasons, sixty or seventy cents' worth of products the first year. The potash and soda, combined as they are in ashes, in the form of carbonates, sulphates, and silicates, are in precisely the right condition to be readily assimilated, and also to aid in rendering assimilable, many important constituents of the soil.

"The leached ashes also are worth more than nine cents a bushel. Relatively they are worth more for soil employment than the unleached, regard being had to the commercial value of the substances when separated. A good honest bushel of moist, leached ashes will give returns the first year of the value of fifteen or twenty cents; and owing to the peculiar decomposing influence upon the insoluble constituents of the silicates, etc., remaining in the mass, their influence extends outside of themselves, and continues for a long time. A pound of phosphate of lime found in ashes is worth more than a pound of bone dust, as it is in a condition to be readily taken up by plants. The carbonate of lime is worth more than chalk or the same agent in other forms, inasmuch as it has once passed through plant structures.

The estimates here presented are only rough ones, but they are sufficiently exact to serve as a guide in learning the value of leached and unleached wood ashes. We have experimented considerably with ashes in both forms, upon soils of various kinds, and what we have here stated is the result of our own practical experience.

CIDER MAKING.

THE season is close at hand when cider making will commence. We find on file a deferred communication from a gentleman of experience, which contains suggestions of practical value. It is as follows:

G. R. D. objects to grating mills, for the reason that they cut the seeds, which give an unpleasant flavor to the cider. The structure of an apple is mostly made up of an aggregation of very minute cells, which contain the juice. To break these cells, to facilitate the separation of the juice, we have in common use three mechanical means—crushing, grinding and grating. The grating mill, from its simplicity of construction, has come into general use, though most cider makers prefer the operation of crushing mills. In cutting through pomace, after the heaviest pressure of an ordinary press has been fully applied, if a piece of apple uncrushed by the mill is cut through, it will still be sound, and hold its juices regardless of the pressure, which has only been effective on the crushed and more yielding substance surrounding it. By the grating process, are there not many small parts that pass the mill with their cells unbroken? If so, do these unbroken cells wholly yield up their juice under the press? If the grater can operate so perfectly as to break all the cells, the substance of the apple must necessarily be so cut up that, under pressure, many particles of it will run out with the juice, in defiance of the most careful straining.

Mr. COX, a cider maker of New Jersey, who wrote in 1816, says:—"Toughness, dryness, a fibrous flesh, and astringency are all good qualities in a cider apple." Of the HERVE'S Virginia crab he says:—"In the crib no straw is necessary, the pomace being sufficiently fibrous and tough to prevent its passage through the slats with the severest pressure; the juice is white, and clear as spirit from a still, without any mixture of pulp." From the above, it appears that toughness and a fibrous flesh are only valuable in resisting the pulping process, which pertains in a great degree to the grating principle of reducing apples, and also to the grinding principle, as often seen in the case of soft apples in a crushing mill that does not feed freely.

It is obvious that the cellular structure cannot be completely broken without some degree of pulping, even by the crushing process, as under gradual pressure the apple being flattened, its parts must move somewhat on each other in being extended to larger superficial dimensions; but the crushing principle is attended with the least pulping possible, theoretically, and in practice has the sanction of the best cider makers. Cox says:—"If the juice of an apple be extracted without bruising the fruit, it will be found thin and defective in richness, compared to the juice of the same apple extracted after it has been some time exposed in a bruised state to the influence of the air and light; it then becomes deeply tinged, less fluid and very rich; in the former state it apparently contained but little sugar; in the latter, a great quantity, much of which has probably been generated since the fruit became bruised; though it may be difficult to explain satisfactorily, the means by which this effect was produced. The component parts of sugar are known to be vital air, inflammable air, and charcoal; the two latter substances are evidently component parts of the apple; and it is probable that during the process of grinding they may absorb and combine with a portion of the vital air of the atmosphere."

Place an apple between two iron plates and apply pressure sufficient to reduce it to the thickness of the seeds and its cellular substance will be extended laterally over and around the oval seeds, in yielding to the compression until sufficiently compact to sustain the pressure of the plates without breaking or even flattening the seeds, which have a more firm and unyielding structure. This example shows the least pulping attainable in a crushing mill, and exhibits the completely broken condition of the cellular substance compressed to nearly or quite the density of the seeds—the juice is at once liberated from every broken cell, and every particle of it, with the perfectly lacerated cellular structure, is instantly free to imbibe oxygen from the air; and if the quantity of sugar is thus increased, the operation of reducing apples for the press is of much importance in cider making. JAMES WEED.

Muscatine, Iowa.

Hygienic Information.

CHOLERAIC DIARRHOEA.

PROF JOHNSON of Kings College Hospital has published lectures on this subject in which opinions are advanced that controvert many popular ideas. In the collapse he sees not exhaustion but poisoned blood. Diarrhœa is by nature, set up to eliminate this poison, which in the bad epidemics has a virulence in its action equal to the venom of the cobra snake. The rule heretofore has been to quiet the irritation and stop the diarrhœa by opiates, astringents, and aromatics. This he naturally considers a fatal practice, especially if the case is a bad one, as thereby the poison is detained instead of allowing it to pass off. No such attempt should be made to stop the irritation as long as the poison is in the system. Recovery may be favored by dilution through copious drinking of water, cold or tepid, toast-water, barley-water, or weak tea; or recovery may be accelerated by sweeping out the alimentary canal with castor-oil or rhubarb. Whether in cholera times or not, people are altogether too ready, by the remedies known to every family, to check diarrhœa. The hint is given plainly enough that something, perhaps indigestible food, is offending the system and must be got rid of. To stop this effort of nature is to make matters worse, and perhaps greatly injure the patient in some cases. Professor JOHNSON notes that cholera is born of filth, which is introduced through food, air, or water; and he urges that the most important consideration is to prevent the disease by purifying air and water. Certainly the success of the New York Board of Health in warding off the disease, at the last epidemic, by most thorough sanitary regulations, and the disinfection of every hint of filth, was an excellent demonstration that prevention is the one great thing to be sought.

TAKING COLD IN WARM WEATHER.

MANY people think there is no danger of taking cold when the weather is very warm, and expose themselves in various ways when overheated, fatigued, or sweaty. This is an erroneous idea — destructive to life and health. When the system is fatigued with exercise, overheated or sweating, great caution is necessary to guard against taking cold. Some people say they never take cold, and have no fear of taking cold. But are they never ill in some form? O yes; but they do not cough, and conclude they do not take cold.

Colds do not affect all people alike. All do not cough that have been exposed to cold; but the insensible perspiration cannot be suddenly checked without injury to people and animals. Hence it is dangerous to drink cold drinks when one sits down to rest, though if exercise is continued, they may be partaken of in small quantities with benefit. The systems of men and animals that exercise must not be rapidly but gradually cooled.

Horses ought not to be watered when about to stop exercise, either in warm or cold weather. This practice subjects them to disease and often destroys their lives.

More than twenty-five years since, I read in "Cutter's Physiology" that when people were warm with exercise, or from other cause, they ought to throw something over their shoulders on sitting down to rest. An observance of this rule has, I am satisfied, saved me much sickness. If men would put on a coat when resting, or after work at night, it would save them many bad feelings, sickness, and sometimes death.

HATTIE HOPEFUL.

POISONOUS HAIR DYES.

WITH but few exceptions, all the concoctions sold for the purpose of "restoring" the color of the hair, contain the salt of lead, a deadly poison, highly injurious to the health, when applied to the scalp or other portions of the body, even in minute quantities. Prof. Chas. F. Chandler, of Columbia College, N. Y., has examined a variety of these preparations; and in each fluid ounce of the following popular articles, finds lead as follows:

Clark's Distilled Restorative for the Hair, 0.11; Chevalier's Life for the Hair, 1.02; Circassian Hair Rejuvenator, 2.71; Ayers's Hair Vigor, 2.89; Prof. Wood's Hair Restorative, 3.08; O'Brian's Hair Restorer America; Gray's celebrated Hair Restorative, 3.29; Phalon's Vitalia, 4.69; Ring's Vegetable Ambrosia, 5.00; Mrs. S. A. Allen's World's Hair Restorer, 5.57; L. Knittel's Indian Hair Tonique, 6.29; Hall's Vegetable Sicilian Hair Renewer, 7.13; Dr. Tebbett's Physiological Hair Regenerator, 7.44; Martha Washington Hair Restorative, 9.80; Singer's Hair Restorative, 10.39.

Domestic Economy.

ODDS AND ENDS.

Sauer Krant from Summer Cabbage.—Having made, in my earlier days, many barrels of sauer krant from Summer cabbage, I can confidently say to W. M. that he can also make it in the months of July and August, and that it will keep as well as that made in the Fall months, provided he uses caution in keeping out all partly decayed leaves or anything approaching to it, in cutting. Salt a little more freely, and pack in sound and air tight barrels. After filling the barrel, or keg, the head must be well fitted in again, and weak brine used to fill the place of that which has escaped in re-heading the barrel. My plan was to set the barrel on one head, and, having an inch hole in the other, cover the entire surface to the rim and allow it gradually to fill in, taking sometimes several days. When no more will be taken, bung tightly and set in a moderately cool place.—PHILIP BIRKEY, *Litchfield Co., Conn.*

To Cook Lima Beans.—Gather as soon as the pods commence turning yellow, shell, and boil in water with a little salt, until they are tender, which will be about one hour, then draw off all the water, and, if you have sweet cream, put enough in to make a gravy, a little salt, and some flour from the dredging box. If not cream, use milk, into which, when hot, stir some butter and flour which have been rubbed together until they form a perfectly smooth mass. For Winter use the beans should be shelled and dried at about the same age as for cooking in Summer. For cooking when dried, they should be soaked over night, the water drained off in the morning, and then cooked in the same manner as when green; and if you have some nicely dried sweet corn, you can have a dish of succotash that ought to satisfy the most fastidious epicure. —M. A. A., *Geneva, N. Y.*

Recipe for Making Whisky Pickles.—Take one gallon of whisky and three of water. Put into a tub or cask as you pick them, the cucumbers; put them in the pickle and cover with a cloth which will have to be washed every few days, as often as the mold gathers on it. That is the way I did, and had splendid pickles. You must use pure whisky.—AN OLD SUBSCRIBER.

To Take out Iron Rust.—In answer to the question, "What will take out iron rust?" Oxalic acid will take rust or any other stain out of white goods. Dissolve a small quantity in boiling water, and dip the spots in. Get the acid at the drug store. I know what I write, for I have tried it.—RACHEL WILKINSON.

Domestic Inquiries.—A correspondent asks "how to clean kid and silk gloves so as to give them a new appearance; also, how to clean soiled kid, morocco and lasting shoes." . . . . DOLLIE wants to know how to make potato cake.

To Clean a Zinc Box that is tainted, R. is advised to scour it with sand and buttermilk. Carbolic acid or washing with carbolic soap will disinfect it.

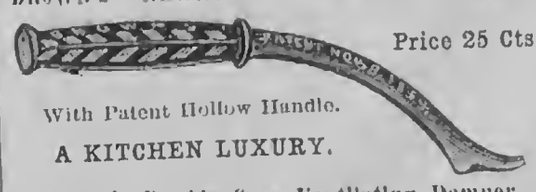
JAMES A. WHITNEY,
Solicitor of Patents, Expert and Engineer,

Offers his services to Inventors in securing Patents at moderate rates and in the shortest possible time. Address, for full information, at 128 Broadway (Room 11), New York City.

CARHART'S PULVERIZING CULTIVATOR has more practical points than any cultivator in use, and is indispensable as a farm implement. Price, $20. C. H. BRADLEY & SON, Manufacturers, Syracuse, N. Y.

TACKS and **NAILS** of every variety, in packages TO SUIT, sent to any address by AMERICAN TACK CO., *Manufacturers*, 117 Chambers St., N. Y.

BROWN'S "ALWAYS COOL" STOVE LID LIFTER.



Price 25 Cts.

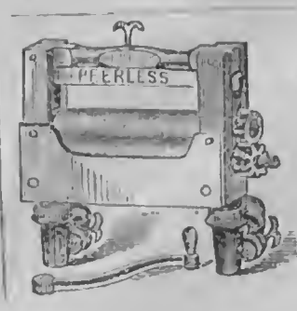
With Patent Hollow Handle.

A KITCHEN LUXURY.

Brown's Double Cone Ventilating Damper.

THE BEST IN USE. PRICE 50 CENTS.
For sale by all Dealers. Manufactured by
C. B. WALBRIDGE, 55 Chambers St., N. Y.

IMPROVED FOOT LATHES, With Slide-Rest and Fittings. Just the thing for the Artisan or Amateur Turner.
Also, HAND PLANES.
"Many readers of this paper have one of them." Selling in all parts of the country, Canada, Cuba, Europe, &c.
Send for descriptive Catalogue.
N. H. BALDWIN, Laconia, N. H.



PEERLESS WRINGER.
BEST MADE.
MOULTON ROLL.
Sold Everywhere.
Made by
Queen City Wringer Co.
CINCINNATI, OHIO.

POLITICS AND POTATOES.

WHY this alliterative heading? What have politics to do with potatoes, or *vice versa*? Very much! Witness:—A correspondent, whom we will call JOHN BROWN, because he does not want his name mentioned, writes:—"Potatoes have escaped the bugs, and look finely; and Wisconsin is going to cast its vote for ULYSSES S. GRANT and HENRY WILSON in November." Another correspondent from another State, whom we will call JOHN JONES, writes:—"Potatoes—especially the early varieties have suffered from the bugs; the later varieties will make a good crop, and 'Honest old HORACE' will be the next President." We might continue to quote from the letters of correspondents to prove how plain it is to us that there is, in the minds of the American people, a close connection between Politics and Potatoes.

We agree that there is, too! It is proper to say, however, that we know many of the BROWN and JONES families who think as the two JOHNS do whom we have quoted. We admire them for their honesty, honor them for their sagacity, and yet do not know who among them are prophets. Of one thing we are sure—that the potato crop is more certain in its promise than any political prophecy we have seen or heard; and that there is analogy between the relations of the beetles to the potato crop and of the politicians to the results of the election. Where the beetles are the thickest the crop is most uncertain or most certain to fail. Where politicians are thickest, truth is most obscure, and the bewildermen; they cause mikos prophecies unreliable.

Returning to the text, however, let the reader remember that there are forty millions of mouths, more or less, in this country to be fed with this most estimable esculent, the potato; and that if each one of these mouths consumes one quarter of a pound of potato per day, it will require ten millions of pounds of potatoes per day to supply them; or 3,650,000,000 pounds or 60,833,333 bushels per year to satisfy the potato demand of the American people. And yet, in 1870 this country is reported to have produced, of Irish and sweet potatoes combined, 165,047,297 bushels or 9,902,837,820 pounds, thus supplying to each of the forty millions of mouths 247½ lbs. of potatoes per year, or a fraction over seven-tenths of a pound per person per day. Now put all the efforts of all the politicians throughout the Presidential canvass together—we mean the physical and mental effort together with the time and money spent and wasted, and it would more than supply, if properly directed, each person in the country with the seven-tenths of a pound of potato per day; in other words, counting potatoes to be worth fifty cents per bushel, the country would be richer at the end of the Presidential canvass without politicians than it will be with them and potatoes by the nice little sum of $82,523,648.50; and, with the facilities the press affords for the dissemination of truth, it would be quite as well off politically, far better off morally, and the people would begin the year 1873 with a far larger capital of faith in each other and in the future of the country.

RURAL NOTES AND QUERIES.

Patrons of Husbandry and Newspaper Advertisements.—One of the Granges of the Patrons of Husbandry in Iowa is undertaking the work of reform by adopting the following preamble and resolution:

Whereas, One of the most serious causes of complaint the farmer has is the misrepresentations presented to him in advertisements; therefore

Resolved, That we as a Grange will give our support and influence to such newspapers and periodicals as will admit no advertisements to their columns, unless satisfied of the good character of the advertiser and his ability to perform all he may promise.

We recognize the right of any man or class of men to adopt and act upon such a resolution as that given above. But the paper which attempts the task of mending the ideas of such men will have a good time of it. Suppose, for example, Mr. J. A. FREEMAN, the Secretary of the Grange adopting the foregoing resolution, should send us an advertisement of Chester White pigs, or of Brahma fowls. We do not know Mr. J. A. FREEMAN—never heard of him before; don't know whether he has got a pig, or a fowl, nor whether he knows a Chester White from a Berkshire, or a Brahma from a Bantam. If we were to attempt to please the Patrons he represents, we should be compelled to write to some one of them for information; and even then, not knowing any of them, we would not know whether their information was correct or not. Our only alternative would be to send an agent, in whom we could trust, to Iowa to see if Mr. J. A. FREEMAN really owned a pig or a fowl, and was able to supply the demand that might be made upon him in case we inserted his advertisement. Then we should have to investigate his character also. Meantime poor FREEMAN is waiting for us to insert his advertisement, and those who desire to purchase pigs or fowls may have purchased elsewhere. This is a fair sample of what these Patrons of Husbandry (and of newspapers?) require publishers to do in order that they, in their stupidity, may be protected. In other words, they do not desire to make the effort or exercise the judgment and discretion common among good business men, but require newspaper publishers to shoulder the burthen of protecting them. Then suppose that the Agent we send out to see the pigs reports favorably, we insert Mr. FREEMAN'S advertisement, JIM JONES sends for a pig, is disappointed in it, and writes us blowing us up because our agent's and JIM JONES' judgment differs! Then of course he, as an honest Patron, drops our paper at once! Hadn't these Iowa Patrons better acquire a little common sense as a means of salvation from the dishonesty there is in this benighted world.

Dakota.—Col. W. WILNOR ROBERTS, Chief Engineer of the Northern Pacific Railroad, has just completed a careful examination of the line of the road across Dakota, from the Red River to the Missouri, a distance of 200 miles. He found splendid grass lands all the way, and thinks farming, especially wheat-growing, will be very successful. The "Mauraises Terres" and alkaline plains of the maps have not been found on the route. Good springs were found in several places, and the railroad contractors get good water anywhere by digging eight or ten feet. A good part of the route is over rolling prairie, where there is fine pasturage but no trees. The streams however are fringed with timber, and the banks of the Missouri are very heavily wooded. The soil is shown in the railroad cuttings to be rich and deep, the underlying strata in several cuttings proving to be gravel, which insures natural drainage and immunity from danger of fever and ague. The located lines are a succession of tangents connected by easy curves, the first tangent west of Red River being 52 miles long. The grades are generally very light, the levels long and frequent, and the difficulties and consequent cost of construction much less than was supposed. Track is now going down at the rate of two miles per day, and there is no doubt of the completion of the road to the crossing of the Missouri river in October next. The telegraph will be finished to that point by the 1st of August.

Master of Agriculture.—The University of Missouri, which embraces the State Agricultural College, has an honorary degree entitled "Master of Agriculture," which it has conferred upon a gentleman whom the Rural World calls "one of the best farmers in the State"—Hon. J. W. HARRIS, Rocheport, Mo.,—who has also received the $100 prize offered by the State Board of Agriculture for the best cultivated farm in the State. We rather like this new degree. An equally significant compliment is conveyed with it to that of LL.D. conferred recently upon the two presidential candidates. We had rather be M. A. than A. M. We do not value titles and degrees much; but this action of the Missouri University is so much in accord with the spirit of Farmer Garrulous' article in the RURAL of April 20, page 258, that we must commend it.

The World's Fair, at Vienna, Austria, will open May 1, 1873, and close October 31. The Eastern nations have already applied for large space. It is desired that the mechanics and inventors of the United States should be creditably represented. Congress has made no money appropriation to defray the expenses attending the collection of American manufactures nor of the Commissioners appointed, hence the cost of transportation of articles for exhibition must be liquidated by exhibitors—the Austrian Government having made arrangements with steamboat lines (and expects to do so with railways) for large rebates of freight rates. Gen. T. B. VAN BUREN has been appointed United States Commissioner, and has an office at No. 5 Chambers St., N. Y. City, where exhibitors should apply at once and have assigned them space and exhibition permits. Articles must be addressed "To the Director-General of the World's Fair, at Vienna, 1873."

Special Journalists.—An editor of a special journal, recently suspended for want of support, thinks that agricultural papers, as a rule, on the ground of common courtesy, ought not to admit to their columns articles purely horticultural, and that horticultural journals should not admit articles pertaining directly to the farm, so that the farmer might be compelled to support two journals (or a dozen) instead of one. This broad-minded horticulturist probably grows apples and peaches; why should he not, "on the ground of common courtesy," stop growing peaches and let his neighbor monopolize the market! He would have the man who sells linen goods refuse to sell silk goods, and *vice versa*. The grocer should confine himself to one line of goods, and fifty grocers should be supported where one is! We do not wonder that the paper suspended that had so liberal and comprehensive a genius to edit it!

The Iowa State Agricultural College is reported prosperous. During the term which closed July 10, two hundred and fifty students, sixty-five of whom were ladies, received instruction. Ten more applications for admission next term are on file and accepted.

THE SEASON, CROPS, PRICES, ETC.

The Department of Agriculture Report for July indicates an increase of 3 per cent. in the corn crop; an average wheat crop in the Winter wheat regions, and above an average in the Sping wheat regions, with grain of superior quality. The cotton crops present a higher average condition than any previous reports, except those of 1868. The oat crop, as a whole, is above the average in condition. In rye there is an average reduction of acreage, but full average, or more, in condition. The barley crop, as a whole, is not far from average in condition and area. The same may be said of Irish potatoes. Sweet potatoes range from 15 per cent. below to 15 per cent. above average of acreage, with a general condition considerably below average. Pasturage is above average in the New England States, except Massachusetts and Rhode Island. None of the Middle States show average, except New York. The South Atlantic States are below average; the Gulf States, except Florida, are above. The other States about equalize each other. Clover shows a general average condition, while Timothy is below average condition, except in the States immediately west of the Mississippi, which range from average to 7 per cent above. The apple crop in the New England, Middle, and Western States is almost uniformly above average. Some of the Southern States show depreciation, but the general crop promises to be above average considerably. Peaches in New England (except Massachusetts, New York, New Jersey, North Carolina, Texas, Arkansas, Illinois, Iowa, Missouri, Kansas, and Nebraska, are above average; in the other States from which reports are made, below average. Grapes in New England, New York, New Jersey, Pennsylvania, Florida, Michigan, Wisconsin, Iowa, Minnesota, and California range from 2 to 20 per cent. below average; in the other States, from average to 14 per cent. above.

Westport, Conn., July 24.—The weather for nearly all this month has been unusually hot, some days the thermometer reaching 100° in the shade. The crops generally are looking fair; early potatoes some blasted—that is, a good share of the tops are dead, or the next thing to it; about two weeks ago they looked well; some of the leaves began to turn yellow, and in a few days they looked as though a fire had been across them and scorched the leaves; the tops held green for a few days, and now a good share of them are as dead as they ever will be. Our crop, as far as dug, yields perhaps 150 bushels per acre, one-third of the measure being small ones; ground manured well. Corn is looking well, but is rather backward. The hay crop may be a trifle better than last year, but not much, the Winter having killed out the clover a great deal. There is considerable grass to cut yet, and it is injured very much by standing so long. Of oats there is a good growth of straw, but a great many of them lay flat on the ground; they are not all cut yet. Rye is a fair crop. Onions are looking well, but are nearly overrun with purslane and other weeds; some have been so full of weeds that they have been given up. Almost everything in the shape of an apple tree is literally loaded, even to breaking down, and there will be many a tree spoiled if some of the apples are not shaken off. Late potatoes are looking very well, but the ground is rather dry for them. Currants were a good crop; raspberries about one-third crop; strawberries about one-half crop. Grapes are looking well. Eggs, 28c.; butter, 30@35c.; corn, 75c.; oats, 60c.; potatoes, 90c.—A. N.

Holland, Ottawa County, Mich., July 23.—Hay was a good crop and was secured in good condition. Wheat is mostly harvested; bearded varieties have turned out fair, while other varieties are generally a moderate crop, being both rusted and eaten by the weevil. Corn is suffering from dry weather and so are oats. Hay is $10 per ton, wheat $1.35, flour $9 per bbl., oats 40c.; early potatoes are half a crop, being damaged by Colorado beetles, as well as by drouth; potatoes are $1.60 per bushel, with a falling market. Trade is dull and money is very scarce, being held by a few, and loaned at extravagant rates of interest. This county is well settled, but is subject to drouths, and the population suffer much from malarial fevers. Fruit in abundance is raised. Peaches promise a good yield. Apples a moderate yield. The opening of numerous railroads tends to keep up the price of real estate, which would otherwise certainly decline, having been held at fabulous prices. The settlers are mostly Hollanders.—FARMER.

Round Plains, Ont., July 15.—Very dry and warm. Spring crops considerably hurt with drouth. Farmers just done haying and beginning to harvest. Winter wheat damaged a good deal by the hard Winter. Fruit abundant, except peaches, of which there are very few. The wool clip mostly sold at from $55@60. Potato beetles have made their appearance, but not in great numbers.—W. W. P.

Gadsen, Tenn., July 17.—We have the best crops here this year (so old farmers say) that we have ever had, with the exception of 1855. Corn is in condition to roast; cotton never better; peaches and apples plenty; farm hands get from $18@22.50 per month.—W. A. W.

The Crops of Great Britain, according to advices received to July 15, are generally excellent. There is little or nothing complained of in this respect that will affect the prosperity of the British agriculturist.

The Tobacco Crop of Connecticut is reported very uneven, some of it having been set as many as four times. Some of the planting was as late as July 10.

RURAL BREVITIES.

THE Western Ruralist has been removed from Jefferson City, Mo., to St. Louis.

WE cannot tell our correspondent at Arkadelphia, Ark., where Sultan fowls can be purchased.

THE Secretary of the Interior has authorized the withdrawal from agricultural entry of all mineral lands.

THE subscriber at Germantown, O., will probably be able to obtain what he seeks by addressing E. G. STORKE, Auburn, N. Y.

THE proposed cattle show under the auspices of the Massachusetts Society for the Promotion of Agriculture, has been given up.

BENJ. W. STAUFFER is informed that we do not know the address of Dr. G. ROBINSON; he had better address the Scientific American, N. Y. City.

VERMONT has thirteen Granges of Patrons of Husbandry, and others are being organized. A provisional organization of a State Grange has been effected.

IF C. V. S. WILSON will turn to page 279, RURAL NEW-YORKER, April 27, 1872, he will find the information he asks for concerning Castor Oil Bean culture.

R. P. Y. is informed that there is a Missouri Agricultural College at Columbia, Mo., DANIEL READ, LL. D., President. The Fall term commences September 16.

WE are glad to notice evidences that our old friend GEO. VASEY, recently appointed Botanist of the Department of Agriculture, is hard at work *pro bono publico*.

NELSON E. PRESTON asks the address of the manufacturers of Hodge's Patent Reversible Plow, and suggests that they ought to advertise. We do not know their address.

SOLON ROBINSON, once the Agricultural Editor of the New York Tribune, now resident of Florida, was recently married to Miss MARY JOHNSON, once his amanuensis, later his housekeeper.

SOLON W. PETERS is informed that, by Act of Congress, June 6, 1872, all stamp duties heretofore imposed, except the two cents on bank checks, drafts or orders, are repealed—the act to take effect October 1, 1872.

WE see it stated that the Agricultural Department has been sending to Missouri, among other "rare" seeds, that of the Canada Thistle. Is the object to encourage the substitution of thistle-down for feather beds and hair matrasses?

PUBLISHER'S SPECIAL NOTICES.

Now is the Time to Form Clubs for Vol. XXVI., which commenced July 6th. Clubs for the volume may be made up at half the rates per year, and Free Copies or Premiums allowed in proportion. Clubs for either a volume (six months) or year are in order,—or part may be for six months and part for a year. Club papers sent to different offices, if desired.

The Rural New-Yorker is sold by News Dealers generally throughout the United States and Canada at Six Cents. The Trade is supplied by the AMERICAN NEWS CO., 119-121 Nassau St., New York.

BUSINESS NOTICES.

HOW TO OBTAIN A "COLLINS"
Solid *Cast* Cast-Steel Plow for $5. For particulars, address COLLINS & CO., 212 Water St., N. Y.

THE WAKEFIELD EARTH CLOSET.

Burnett's Cocoaine gives new life to the hair.

The Naturalist.

THE FLYING SQUIRREL.

Pteromys Magnificus.

HEREWITH we present an engraving illustrating the first flying squirrel of this kind (according to Mr. TEGETMEIER) ever seen alive in Europe. We are not aware that this species was ever seen in this country. Every country boy has seen our common flying squirrel (*Pteromys volucella*, GMELIN), but this *P. magnificus* was caught in the Himalayan Mountains, was first described by Mr. B. H. HODGSON, in the Journal of the "Royal Asiatic Society of Bengal," Vol. 5, 1836, under the name of *Sciuropterus magnificus*; but the animal had been known to Mr. HODGSON many years before. This authority gives its habitat as the central and northern regions of Nepaul, and the following is his description, which we quote *in extenso*:

"Above, intense chestnut (the fruit), below and the shoulders, golden red; tail paler than the body above, and tipped black, a black zone round the eyes, and another embracing the moustachios; chin pale, with a black, triangular spot; nude parts of skin fleshy white; tail, cylindrico-depressed, and considerably longer than the animal.

"Parachute large, enveloping 6 inches of the tail; length of the animal, 16 inches; of the tail, 22 inches; weight, 3¼ pounds.

"Sexes essentially similar in color. In old animals the chestnut color tipped hoary, and in the young black-tipped. In all, the tail beyond the limits of the parachute is paler than the superior surface of the body, and the black point is always present; so are the facial marks, though they be less conspicuous in the young specimens. The intestinal canal is 14 feet 2 inches long, or ten and a half times as long as the body. The cæcum is 20 inches long, very capacious, and sacculated. This species breeds in the rainy season, and seems to produce but one young at a time. In September the offspring are tolerably independent of their mother; but their flying membrane is much less developed than in maturity."

Mr. TEGETMEIER says: "The great peculiarity in the flying squirrels is the presence of a fold or duplicature of the skin extending from the fore to the hind leg, and between the two hinder legs and the tail. This is so admirably arranged that it does not in the slightest degree hinder the rapid progress of the animal in climbing from branch to branch, or affect in any manner the ordinary use of the limbs; but when the animal wishes to leap from great hights, as from the top of a lofty tree to the ground, it serves as a parachute, being extended by the stretching out of the limbs and tail so as to form a nearly plane surface, as shown in the smaller left-hand figure in the engraving, in which may also be noticed a curved extension of the membrane on the outer side of each fore paw. This extension is accomplished by the aid of an elastic rod of cartilage, which, when the animal is not using the membrane in its gliding flight, folds back along the outer side of the fore arm, and is only thrown into action when the parachute is expanded.

"Irrespective of these singular and special modifications of structure, the flying squirrel is a very interesting animal. We are accustomed to squirrels of small size and tolerably uniform coloration; whereas here we have an animal as large as a good-sized cat, and marked in a very elegant manner, the general color being an intense reddish chestnut, relieved by pale and dark markings on the face, tail, &c.

"In its food and general habits the Pteromys closely resembles our common squirrel, feeding chiefly on nuts and fruits, the former of which it cracks in the same manner as its English relative, holding them between the fore paws or with the nails of one paw flexed upon the palm. In habits it is rather nocturnal, preferring to sleep during the greater part of the day, and feed at dusk or in the evening. The eyes, like those of our own dormouse and many of the nocturnal-feeding rodents, are exceedingly prominent, the cornea being almost semi-globular in its convexity. The ears are large, and rounded on the outer margin, in this respect differing from the more commonly known animals of the genus Sciurus. When at rest the tail, which is much longer than the body, is brought over the back as far as the head, and the tip returned, as shown in the sketch, in which the artist has admirably rendered the attitude and expression of the animal.

ROBERT KENNICOTT, in his "Quadrupeds of Illinois" (see Vol. 2 Trans. Ill. State Ag. Soc.), describes our common flying squirrel, *Pteromys volucella*, and says it is as active as the true species, but is nocturnal; does not move by day, except in cloudy weather; seldom travels on the ground, but sails gracefully from tree to tree, running up toward the top of one, and alighting lower on the trunk of another. He says wherever it is found at all it exists in greater numbers than is generally supposed; that if in passing through the woods one strikes the sides of old hollow trees, he will frequently see numbers of them rush out of a hole, and sail off into the neighboring trees. It does not build nests of leaves among the branches like the true squirrels, though Mr. BRENDEL asserts that a female was observed by him to bring forth in a deserted bird's nest. Three to six young are produced at a birth. Their food is said to be similar to that of the true squirrel. It eats corn and other grain, though in inconsiderable quantity, since it does not willingly leave the trees in search of food.

LARGE FLYING SQUIRREL—Pteromys magnificus.

Where Toads are Appreciated.—Toads are said to be a regular article of trade in the English markets, selling readily at 25 cents apiece, for service in the gardens, where their usefulness as insect destroyers is appreciated.

The Orchard Oriole, a writer, ROBERTSON says, is too little known and appreciated by orchardists. It devours hosts of worms and noxious insects, and is the most industrious bird he knows.

MARRIAGE.

BY CHARLOTTE A. CORDNER.

Is it to clasp the hands and whisper vows that bind
Us to a life-long duty?
To walk some toilsome road, and then to find
But perished beauty?

Or is it to have two lives flow in one stream,
With scarce a prayerful murmur—
Upon whose waves the sunbeams sport and gleam,
To make the love grow firmer?

Yes—more than this: If, when life's dream is o'er,
One heart's between us,
And in its book we find, forevermore,
That naught can wean us.

Our Story-Teller.

EASY TO BE MISTAKEN.

JOHN RANDALL'S TROUBLE, AND WHAT HE LEARNED AND GAINED.

"WILL you let me have it, John?"

"No, Georgy, I can't."

John Randall uttered his refusal of his wife's request very decidedly, as if he felt the request was unreasonable; and yet there was an undercurrent of grieved impatience in his voice, and a look of perplexity and self-dissatisfaction in his eyes. He wanted to see his wife rise from the breakfast-table, and thereby signify her acquiescence in his decision, before he went off for his morning walk to the mill.

Georgie, however, did not rise. Her looks did not express acquiescence. She was a pretty woman—very pretty; tall, slight, very fair, with large, clear, steady eyes and profuse brown hair. Besides her beauty, she had an air of delicate, graceful composure rather peculiar, and a voice that suggested alto flute notes. For all this she was simply the wife of a master machinist in the great Haliburton Print Works of Millville, and mistress of one of the small, white factory tenements, whose long, orderly rows constituted Millville proper.

But Georgie did not belong to the factory element, although she had married into it. She had been brought up by a relative, upon whom she had been left dependent, and whom she called Aunt Appleton.

Aunt Appleton lived at the other end of Appleton—the west end—among the Haliburtons, the Dilloways, and the Verses.

Perhaps, under the circumstances, Georgie might have looked a little higher than John Randall. But then John was as good as gold—strong, steady, manly, true.

Aunt Appleton had the sense to rejoice at the perception of her pretty protege, and the generosity to give her a liberal outfit—her furniture, a complete wardrobe, a nice wedding.

It had been very agreeable to Georgy to have these things. She was fastidious to the core. She enjoyed advantages of position—her good clothes, her prestige among the other wives of the other officials in the print works. She was fastidious—perhaps a little too fastidious for her place.

John Randall had reached his last button—a somewhat shiny button on a somewhat shabby coat. He had neither time nor pretext for lingering. At this last moment his wife raised her eyes, clearly, unflinchingly, to his face.

"Why not?" she asked, in her own sweet voice.

It is never pleasant for a man to be called to an account—to an account about money (and of course it was money Georgy wanted) by a woman, and that woman his wife. John's face flushed a little; a hot retort pricked the very tip of his tongue, but he did not utter it. He was a very patient man, naturally; and then he had that deep, pure love for his pretty wife which overreaches all slight shocks.

"I have exceeded my salary every month since we were married, Georgy," he said. "The first of January will be here in a few weeks, and I shall not be able to meet all the bills that are due. I don't feel that we ought to trifle away a penny of money. I don't believe you do, either."

"I shall say no more about it," she returned. "I ought to wear a new pair of gloves to call on Paul's bride, but if you can't give them to me I must do without them."

John Randall's brain was fine enough to understand that this was not the acquiescence he wanted. He would like to indulge her, but there was the fact that, if he begun it, he should be always behindhand, always poor.

This was his fact. Georgy had hers, also—that she was always to be denied and disappointed. She didn't mind so much wearing the old gloves on this occasion; that which troubled her, which was wedging itself painfully into her convictions, was that she would have to give up all the little luxuries and elegancies that she so craved; that her future was to be a plain matter-of-fact routine, deprived of those gratifications in whose absence she felt a sort of moral starvation.

"It don't seem as if you ought to be disappointed, Georgy," said the husband, finally. "You know just what my salary is, and just how far it will go. We used to talk about saving something every year, so that I might better myself one of these days. I don't like to deny you."

"Never mind," she said, rising.

She was one of those women who say too little rather than too much.

John went off to his work. Bridget, the girl-of-all-work, came in to clear the table. Georgy dusted the parlor, and made the pudding, fed the canary, and then placed the sewing machine in the window, facing the dull, leaden light of the November day, and sat down to stitch wristbands. She had been married more than a year, and was making her first shirt for John. She was very thoughtful,—a dogged pain on her face all the while.

"Perhaps I shall stay to Aunt Appleton's to

tea," she said to her husband at the dinner-table. "If I do you will come for me, won't you?"

He reflected a moment.

"I told you last night, Georgy, that I should have to be from home an hour or two this evening. There is to be a meeting of the officials of the mill at half-past seven. I should be too tired to dress and go up to your aunt's afterwards."

"I had forgotten," she said quietly; so quietly that he thought she did not care.

When he was gone she went to her bedroom to arrange her toilet for the call. She put on the best she had, of course. She had a genius for dress; and, despite the mended gloves, she looked as stylish as she did pretty.

Just as she approached her aunt's gate old Mrs. Halliburton, in her velvets and steelest of steel-colored silks, was being handed from her carriage by her son. The Haliburtons were the owners of the mill in which John Randall was employed. Stephen, the only son, had just returned from five years' residence abroad. These two facts caused Georgy to scrutinize the mother and son somewhat closely; and, doing so, Stephen Haliburton raised his hat to her.
